Sect. 3. POLITICAL POWER, then, I take to be a RIGHT of making laws with penalties of death, and consequently all less penalties, for the regulating and preserving of property, and of employing the force of the community, in the execution of such laws, and in the defence of the commonwealth from foreign injury; and all this only for the public good.

CHAPTER. II.

OF THE STATE OF NATURE.

Sect. 4. TO understand political power right, and derive it from its original, we must consider, what state all men are naturally in, and that is, a state of perfect freedom to order their actions, and dispose of their possessions and persons, as they think fit, within the bounds of the law of nature, without asking leave, or depending upon the will of any other man.

A state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident, than that creatures of the same species and rank, promiscuously born to all the same advantages of nature, and the use of the same faculties, should also be equal one amongst another without subordination or subjection, unless the lord and master of them all should, by any manifest declaration of his will, set one above another, and confer on him, by an evident and clear appointment, an undoubted right to dominion and sovereignty.

Sect. 5. This equality of men by nature, the judicious Hooker looks upon as so evident in itself, and beyond all question, that he makes it the foundation of that obligation to mutual love amongst men, on which he builds the duties they owe one another, and from whence he derives the great maxims of justice and charity. His words are,

/# The like natural inducement hath brought men to know that it is no less their duty, to love others than themselves; for seeing those things which are equal, must needs all have one measure; if I cannot but wish to receive good, even as much at every man's hands, as any man can wish unto his own soul, how should I look to have any part of my desire herein satisfied, unless myself be careful to satisfy the like desire, which is undoubtedly in other men, being of one and the same nature? To have any thing offered them repugnant to this desire, must needs in all respects grieve them as much as me; so that if I do harm, I must look to suffer, there being no reason that others should shew greater measure of love to me, than they have by me shewed unto them: my desire therefore to be loved of my equals in nature as much as possible may be, imposeth upon me a natural duty of bearing to them-ward fully the like affection; from which relation of equality between ourselves and them that are as ourselves, what several rules and canons natural reason hath drawn, for direction of life, no man is ignorant, Eccl. Pol. Lib. 1.

#/

Sect. 6. But though this be a state of liberty, yet it is not a state of licence: though man in that state have an uncontroulable liberty to dispose of his person or possessions, yet he has not liberty to destroy himself, or so much as any creature in his possession, but where some nobler use than its bare preservation calls for it. The state of nature has a law of nature to govern it, which obliges every one: and reason, which is that law, teaches all mankind, who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions: for men being all the workmanship of one omnipotent, and infinitely wise maker; all the servants of one sovereign master, sent into the world by his order, and about his business; they are his property, whose workmanship they are, made to last during his, not one another's pleasure: and being furnished with like faculties, sharing all in one community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for our's. Every one, as he is bound to preserve himself, and not to quit his station wilfully, so by the like reason, when his own preservation comes not in competition, ought he, as much as he can, to preserve the rest of mankind, and may not, unless it be to do justice on an offender, take away, or impair the life, or what tends to the preservation of the life, the liberty, health, limb, or goods of another.

Sect. 7. And that all men may be restrained from invading others rights, and from doing hurt to one another, and the law of nature be observed, which willeth the peace and preservation of all mankind, the execution of the law of nature is, in that state, put into

every man's hands, whereby every one has a right to punish the transgressors of that law to such a degree, as may hinder its violation: for the law of nature would, as all other laws that concern men in this world be in vain, if there were no body that in the state of nature had a power to execute that law, and thereby preserve the innocent and restrain offenders. And if any one in the state of nature may punish another for any evil he has done, every one may do so: for in that state of perfect equality, where naturally there is no superiority or jurisdiction of one over another, what any may do in prosecution of that law, every one must needs have a right to do.

Sect. 8. And thus, in the state of nature, one man comes by a power over another; but yet no absolute or arbitrary power, to use a criminal, when he has got him in his hands, according to the passionate heats, or boundless extravagancy of his own will; but only to retribute to him, so far as calm reason and conscience dictate, what is proportionate to his transgression, which is so much as may serve for reparation and restraint: for these two are the only reasons, why one man may lawfully do harm to another, which is that we call punishment. In transgressing the law of nature, the offender declares himself to live by another rule than that of reason and common equity, which is that measure God has set to the actions of men, for their mutual security; and so he becomes dangerous to mankind, the tye, which is to secure them from injury and violence, being slighted and broken by him. Which being a trespass against the whole species, and the peace and safety of it, provided for by the law of nature, every man upon this score, by the right he hath to preserve mankind in general, may restrain, or where it is necessary, destroy things noxious to them, and so may bring such evil on any one, who hath transgressed that law, as may make him repent the doing of it, and thereby deter him, and by his example others, from doing the like mischief. And in the case, and upon this ground, EVERY MAN HATH A RIGHT TO PUNISH THE OFFENDER, AND BE EXECUTIONER OF THE LAW OF NATURE.

Sect. 9. I doubt not but this will seem a very strange doctrine to some men: but before they condemn it, I desire them to resolve me, by what right any prince or state can put to death, or punish an alien, for any crime he commits in their country. It is certain their laws, by virtue of any sanction they receive from the promulgated will of the legislative, reach not a stranger: they speak not to him, nor, if they did, is he bound to hearken to them. The legislative authority, by which they are in force over the subjects of that commonwealth, hath no power over him. Those who have the supreme power of making laws in England, France or Holland, are to an Indian, but like the rest of the world, men without authority: and therefore, if by the law of nature every man hath not a power to punish offences against it, as he soberly judges the case to require, I see not how the magistrates of any community can punish an alien of another country; since, in reference to him, they can have no more power than what every man naturally may have over another.

Sect, 10. Besides the crime which consists in violating the law, and varying from the right rule of reason, whereby a man so far becomes degenerate, and declares himself to quit the principles of human nature, and to be a noxious creature, there is commonly injury done to some person or other, and some other man receives damage by his transgression: in which case he who hath received any damage, has, besides the right of punishment common to him with other men, a particular right to seek reparation from him that has done it: and any other person, who finds it just, may also join with him that is injured, and assist him in recovering from the offender so much as may make satisfaction for the harm he has suffered.

Sect. 11. From these two distinct rights, the one of punishing the crime for restraint, and preventing the like offence, which right of punishing is in every body; the other of taking reparation, which belongs only to the injured party, comes it to pass that the magistrate, who by being magistrate hath the common right of punishing put into his hands, can often, where the public good demands not the execution of the law, remit the punishment of criminal offences by his own authority, but yet cannot remit the satisfaction due to any private man for the damage he has received. That, he who has suffered the damage has a right to demand in his own name, and he alone can remit: the damnified person has this power of appropriating to himself the goods or service of the offender, by right of self-preservation, as every man has a power to punish the crime, to prevent its being committed again, by the right he has of preserving all mankind, and doing all reasonable things he can in order to that end: and thus it is, that every man, in the state of nature, has a power to kill a murderer, both to deter others from doing the like injury, which no reparation can compensate, by the example of the punishment that attends it from every body, and also to secure men from the attempts of a criminal, who having renounced reason, the common rule and measure God hath given to mankind, hath, by the unjust violence and slaughter he hath committed upon one, declared war against all mankind, and therefore may be destroyed as a lion or a tyger, one of those wild savage beasts, with whom men can have no society nor security: and upon this is grounded that great law of nature, Whoso sheddeth man's blood, by man shall his blood be shed. And Cain was so fully convinced, that every one had a right to destroy such a criminal, that after the murder of his brother, he cries out, Every one that findeth me, shall slay me; so plain was it writ in the hearts of all mankind.

Sect. 12. By the same reason may a man in the state of nature punish the lesser breaches of that law. It will perhaps be demanded, with death? I answer, each transgression may be punished to that degree, and with so much severity, as will suffice to make it an ill bargain to the offender, give him cause to repent, and terrify others from doing the like. Every offence, that can be committed in the state of nature, may in the state of nature be also punished equally, and as far forth as it may, in a commonwealth: for though it would be besides my present purpose, to enter here into the particulars of the law of nature, or its measures of punishment; yet, it is certain there is such a law, and that too, as intelligible and plain to a rational creature, and a studier of that law, as the positive laws of commonwealths; nay, possibly plainer; as much as reason is easier to be understood, than the fancies and intricate contrivances of men, following contrary and hidden interests put into words; for so truly are a great part of the municipal laws of countries, which are only so far right, as they are founded on the law of nature, by which they are to be regulated and interpreted.

Sect. 13. To this strange doctrine, viz. That in the state of nature every one has the executive power of the law of nature, I doubt not but it will be objected, that it is unreasonable for men to be judges in their own cases, that self-love will make men partial to themselves and their friends: and on the other side, that ill nature, passion and revenge will carry them too far in punishing others; and hence nothing but confusion and disorder will follow, and that therefore God hath certainly appointed government to restrain the partiality and violence of men. I easily grant, that civil government is the proper remedy for the inconveniencies of the state of nature, which must certainly be great, where men may be judges in their own case, since it is easy to be imagined, that he who was so unjust as to do his brother an injury, will scarce be so just as to condemn himself for it: but I shall desire those who make this objection, to remember, that absolute monarchs are but men; and if government is to be the remedy of those evils, which necessarily follow from men's being judges in their own cases, and the state of nature is therefore not to be endured, I desire to know what kind of government that is, and how much better it is than the state of nature, where one man, commanding a multitude, has the liberty to be judge in his own case, and may do to all his subjects whatever he pleases, without the least liberty to any one to question or controul those who execute his pleasure? and in whatsoever he doth, whether led by reason, mistake or passion, must be submitted to? much better it is in the state of nature, wherein men are not bound to submit to the unjust will of another: and if he that judges, judges amiss in his own, or any other case, he is answerable for it to the rest of mankind.

Sect. 14. It is often asked as a mighty objection, where are, or ever were there any men in such a state of nature? To which it may suffice as an answer at present, that since all princes and rulers of independent governments all through the world, are in a state of nature, it is plain the world never was, nor ever will be, without numbers of men in that state. I have named all governors of independent communities, whether they are, or are not, in league with others: for it is not every compact that puts an end to the state of nature between men, but only this one of agreeing together mutually to enter into one community, and make one body politic; other promises, and compacts, men may make one with another, and yet still be in the state of nature. The promises and bargains for truck, &c. between the two men in the desert island, mentioned by Garcilasso de la Vega, in his history of Peru; or between a Swiss and an Indian, in the woods of America, are binding to them, though they are perfectly in a state of nature, in reference to one another: for truth and keeping of faith belongs to men, as men, and not as members of society.

Sect. 15. To those that say, there were never any men in the state of nature, I will not only oppose the authority of the judicious Hooker, Eccl. Pol. lib. i. sect. 10, where he says,

/# The laws which have been hitherto mentioned, i.e. the laws of nature, do bind men absolutely, even as they are men, although they have never any settled fellowship, never any solemn agreement amongst themselves what to do, or not to do: but forasmuch as we are not by ourselves sufficient to furnish ourselves with competent store of things, needful for such a life as our nature doth desire, a life fit for the dignity of man; therefore to supply those defects and imperfections which are in us, as living single and solely by ourselves, we are naturally induced to seek communion and fellowship with others: this was the cause of men's uniting themselves at first in politic societies.

#/

But I moreover affirm, that all men are naturally in that state, and remain so, till by their own consents they make themselves members of some politic society; and I doubt not in the sequel of this discourse, to make it very clear.

CHAPTER. III.

OF THE STATE OF WAR.

Sect. 16. THE state of war is a state of enmity and destruction: and therefore declaring by word or action, not a passionate and hasty, but a sedate settled design upon another man's life, puts him in a state of war with him against whom he has declared such an intention, and so has exposed his life to the other's power to be taken away by him, or any one that joins with him in his defence, and espouses his quarrel; it being reasonable and just, I should have a right to destroy that which threatens me with destruction: for, by the fundamental law of nature, man being to be preserved as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred: and one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a wolf or a lion; because such men are not under the ties of the commonlaw of reason, have no other rule, but that of force and violence, and so may be treated as beasts of prey, those dangerous and noxious creatures, that will be sure to destroy him whenever he falls into their power.

Sect. 17. And hence it is, that he who attempts to get another man into his absolute power, does thereby put himself into a state of war with him; it being to be understood as a declaration of a design upon his life: for I have reason to conclude, that he who would get me into his power without my consent, would use me as he pleased when he had got me there, and destroy me too when he had a fancy to it; for no body can desire to have me in his absolute power, unless it be to compel me by force to that which is against the right of my freedom, i.e. make me a slave. To be free from such force is the only security of my preservation; and reason bids me look on him, as an enemy to my preservation, who would take away that freedom which is the fence to it; so that he who makes an attempt to enslave me, thereby puts himself into a state of war with me. He that, in the state of nature, would take away the freedom that belongs to any one in that state, must necessarily be supposed to have a design to take away every thing else, that freedom being the foundation of all the rest; as he that, in the state of society, would take away the freedom belonging to those of that society or commonwealth, must be supposed to design to take away from them every thing else, and so be looked on as in a state of war.

Sect. 18. This makes it lawful for a man to kill a thief, who has not in the least hurt him, nor declared any design upon his life, any farther than, by the use of force, so to get him in his power, as to take away his money, or what he pleases, from him; because using force, where he has no right, to get me into his power, let his pretence be what it will, I have no reason to suppose, that he, who would take away my liberty, would not, when he had me in his power, take away every thing else. And therefore it is lawful for me to treat him as one who has put himself into a state of war with me, i.e. kill him if I can; for to that hazard does he justly expose himself, whoever introduces a state of war, and is aggressor in it.

Sect. 19. And here we have the plain difference between the state of nature and the state of war, which however some men have confounded, are as far distant, as a state of peace, good will, mutual assistance and preservation, and a state of enmity, malice, violence and mutual destruction, are one from another. Men living together according to reason, without a common superior on earth, with authority to judge between them, is properly the state of nature. But force, or a declared design of force, upon the person of another, where there is no common superior on earth to appeal to for relief, is the state of war: and it is the want of such an appeal gives a man the right of war even against an aggressor, tho' he be in society and a fellow subject. Thus a thief, whom I cannot harm, but by appeal to the law, for having stolen all that I am worth, I may kill, when he sets on me to rob me but of my horse or coat; because the law, which was made for my preservation, where it cannot interpose to secure my life from present force, which, if lost, is capable of no reparation, permits me my own defence, and the right of war, a liberty to kill the aggressor, because the aggressor allows not time to appeal to our common judge, nor the decision of the law, for remedy in a case where the mischief may be irreparable. Want of a common judge with authority, puts all men in a state of nature: force without right, upon a man's person, makes a state of war, both where there is, and is not, a common judge.

Sect. 20. But when the actual force is over, the state of war ceases between those that are in society, and are equally on both sides subjected to the fair determination of the law; because then there lies open the remedy of appeal for the past injury, and to prevent future harm: but where no such appeal is, as in the state of nature, for want of positive laws, and judges with authority to appeal to, the state of war once begun, continues, with a right to the innocent party to destroy the other whenever he can, until the aggressor offers peace, and desires reconciliation on such terms as may repair any wrongs he has already done, and secure the innocent for the future; nay, where an appeal to the law, and constituted judges, lies open, but the remedy is denied by a manifest perverting of justice, and a barefaced wresting of the laws to protect or indemnify the violence or injuries of some men, or party of men, there it is hard to imagine any thing but a state of war: for wherever violence is used, and injury done, though by hands appointed to administer justice, it is still violence and injury, however coloured with the name, pretences, or forms of law, the end whereof being to protect and redress the innocent, by an unbiassed application of it, to all who are under it; wherever that is not bona fide done, war is made upon the sufferers, who having no appeal on earth to right them, they are left to the only remedy in such cases, an

appeal to heaven.

Sect. 21. To avoid this state of war (wherein there is no appeal but to heaven, and wherein every the least difference is apt to end, where there is no authority to decide between the contenders) is one great reason of men's putting themselves into society, and quitting the state of nature: for where there is an authority, a power on earth, from which relief can be had by appeal, there the continuance of the state of war is excluded, and the controversy is decided by that power. Had there been any such court, any superior jurisdiction on earth, to determine the right between Jephtha and the Ammonites, they had never come to a state of war: but we see he was forced to appeal to heaven. The Lord the Judge (says he) be judge this day between the children of Israel and the children of Ammon, Judg. xi. 27. and then prosecuting, and relying on his appeal, he leads out his army to battle: and therefore in such controversies, where the question is put, who shall be judge? It cannot be meant, who shall decide the controversy; every one knows what Jephtha here tells us, that the Lord the Judge shall judge. Where there is no judge on earth, the appeal lies to God in heaven. That question then cannot mean, who shall judge, whether another hath put himself in a state of war with me, and whether I may, as Jephtha did, appeal to heaven in it? of that I myself can only be judge in my own conscience, as I will answer it, at the great day, to the supreme judge of all men.

CHAPTER. IV.

OF SLAVERY.

Sect. 22. THE natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. The liberty of man, in society, is to be under no other legislative power, but that established, by consent, in the commonwealth; nor under the dominion of any will, or restraint of any law, but what that legislative shall enact, according to the trust put in it. Freedom then is not what Sir Robert Filmer tells us, Observations, A. 55. a liberty for every one to do what he lists, to live as he pleases, and not to be tied by any laws: but freedom of men under government is, to have a standing rule to live by, common to every one of that society, and made by the legislative power erected in it; a liberty to follow my own will in all things, where the rule prescribes not; and not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man: as freedom of nature is, to be under no other restraint but the law of nature.

Sect. 23. This freedom from absolute, arbitrary power, is so necessary to, and closely joined with a man's preservation, that he cannot part with it, but by what forfeits his preservation and life together: for a man, not having the power of his own life, cannot, by compact, or his own consent, enslave himself to any one, nor put himself under the absolute, arbitrary power of another, to take away his life, when he pleases. No body can give more power than he has himself; and he that cannot take away his own life, cannot give another power over it. Indeed, having by his fault forfeited his own life, by some act that deserves death; he, to whom he has forfeited it, may (when he has him in his power) delay to take it, and make use of him to his own service, and he does him no injury by it: for, whenever he finds the hardship of his slavery outweigh the value of his life, it is in his power, by resisting the will of his master, to draw on himself the death he desires.

Sect. 24. This is the perfect condition of slavery, which is nothing else, but the state of war continued, between a lawful conqueror and a captive: for, if once compact enter between them, and make an agreement for a limited power on the one side, and obedience on the other, the state of war and slavery ceases, as long as the compact endures: for, as has been said, no man can, by agreement, pass over to another that which he hath not in himself, a power over his own life.

I confess, we find among the Jews, as well as other nations, that men did sell themselves; but, it is plain, this was only to drudgery, not to slavery: for, it is evident, the person sold was not under an absolute, arbitrary, despotical power: for the master could not have power to kill him, at any time, whom, at a certain time, he was obliged to let go free out of his service; and the master of such a servant was so far from having an arbitrary power over his life, that he could not, at pleasure, so much as maim him, but the loss of an eye, or tooth, set him free, Exod. xxi.

CHAPTER. V.

OF PROPERTY.

Sect. 25. Whether we consider natural reason, which tells us, that men, being once born, have a right to their preservation, and consequently to meat and drink, and such other things as nature affords for their subsistence: or revelation, which gives us an

account of those grants God made of the world to Adam, and to Noah, and his sons, it is very clear, that God, as king David says, Psal. cxv. 16. has given the earth to the children of men; given it to mankind in common. But this being supposed, it seems to some a very great difficulty, how any one should ever come to have a property in any thing: I will not content myself to answer, that if it be difficult to make out property, upon a supposition that God gave the world to Adam, and his posterity in common, it is impossible that any man, but one universal monarch, should have any property upon a supposition, that God gave the world to Adam, and his heirs in succession, exclusive of all the rest of his posterity. But I shall endeavour to shew, how men might come to have a property in several parts of that which God gave to mankind in common, and that without any express compact of all the commoners.

Sect. 26. God, who hath given the world to men in common, hath also given them reason to make use of it to the best advantage of life, and convenience. The earth, and all that is therein, is given to men for the support and comfort of their being. And tho' all the fruits it naturally produces, and beasts it feeds, belong to mankind in common, as they are produced by the spontaneous hand of nature; and no body has originally a private dominion, exclusive of the rest of mankind, in any of them, as they are thus in their natural state: yet being given for the use of men, there must of necessity be a means to appropriate them some way or other, before they can be of any use, or at all beneficial to any particular man. The fruit, or venison, which nourishes the wild Indian, who knows no enclosure, and is still a tenant in common, must be his, and so his, i.e. a part of him, that another can no longer have any right to it, before it can do him any good for the support of his life.

Sect. 27. Though the earth, and all inferior creatures, be common to all men, yet every man has a property in his own person: this no body has any right to but himself. The labour of his body, and the work of his hands, we may say, are properly his. Whatsoever then he removes out of the state that nature hath provided, and left it in, he hath mixed his labour with, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state nature hath placed it in, it hath by this labour something annexed to it, that excludes the common right of other men: for this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good, left in common for others.

Sect. 28. He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself. No body can deny but the nourishment is his. I ask then, when did they begin to be his? when he digested? or when he eat? or when he boiled? or when he brought them home? or when he picked them up? and it is plain, if the first gathering made them not his, nothing else could. That labour put a distinction between them and common: that added something to them more than nature, the common mother of all, had done; and so they became his private right. And will any one say, he had no right to those acorns or apples, he thus appropriated, because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in commons, which remain so by compact, that it is the taking any part of what is common, and removing it out of the state nature leaves it in, which begins the property; without which the common is of no use. And the taking of this or that part, does not depend on the express consent of all the commoners. Thus the grass my horse has bit; the turfs my servant has cut; and the ore I have digged in any place, where I have a right to them in common with others, become my property, without the assignation or consent of any body. The labour that was mine, removing them out of that common state they were in, hath fixed my property in them.

Sect. 29. By making an explicit consent of every commoner, necessary to any one's appropriating to himself any part of what is given in common, children or servants could not cut the meat, which their father or master had provided for them in common, without assigning to every one his peculiar part. Though the water running in the fountain be every one's, yet who can doubt, but that in the pitcher is his only who drew it out? His labour hath taken it out of the hands of nature, where it was common, and belonged equally to all her children, and hath thereby appropriated it to himself.

Sect. 30. Thus this law of reason makes the deer that Indian's who hath killed it; it is allowed to be his goods, who hath bestowed his labour upon it, though before it was the common right of every one. And amongst those who are counted the civilized part of mankind, who have made and multiplied positive laws to determine property, this original law of nature, for the beginning of property, in what was before common, still takes place; and by virtue thereof, what fish any one catches in the ocean, that great and still remaining common of mankind; or what ambergrise any one takes up here, is by the labour that removes it out of that common state nature left it in, made his property, who takes that pains about it. And even amongst us, the hare that any one is hunting, is thought his who pursues her during the chase: for being a beast that is still looked upon as common, and no man's private possession; whoever has employed so much labour about any of that kind, as to find and pursue her, has thereby removed her from the state of nature, wherein she was common, and hath begun a property.

Sect. 31. It will perhaps be objected to this, that if gathering the acorns, or other fruits of the earth, &c. makes a right to them, then any one may ingross as much as he will. To which I answer, Not so. The same law of nature, that does by this means give us property, does also bound that property too. God has given us all things richly, 1 Tim. vi. 12. is the voice of reason confirmed by inspiration. But how far has he given it us? To enjoy. As much as any one can make use of to any advantage of life before it spoils, so much he may by his labour fix a property in: whatever is beyond this, is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy. And thus, considering the plenty of natural provisions there was a long time in the world, and the few spenders; and to how small a part of that provision the industry of one man could extend itself, and ingross it to the prejudice of others; especially keeping within the bounds, set by reason, of what might serve for his use; there could be then little room for quarrels or contentions about property so established.

Sect. 32. But the chief matter of property being now not the fruits of the earth, and the beasts that subsist on it, but the earth itself; as that which takes in and carries with it all the rest; I think it is plain, that property in that too is acquired as the former. As much land as a man tills, plants, improves, cultivates, and can use the product of, so much is his property. He by his labour does, as it were, inclose it from the common. Nor will it invalidate his right, to say every body else has an equal title to it; and therefore he cannot appropriate, he cannot inclose, without the consent of all his fellow-commoners, all mankind. God, when he gave the world in common to all mankind, commanded man also to labour, and the penury of his condition required it of him. God and his reason commanded him to subdue the earth, i.e. improve it for the benefit of life, and therein lay out something upon it that was his own, his labour. He that in obedience to this command of God, subdued, tilled and sowed any part of it, thereby annexed to it something that was his property, which another had no title to, nor could without injury take from him.

Sect. 33. Nor was this appropriation of any parcel of land, by improving it, any prejudice to any other man, since there was still enough, and as good left; and more than the yet unprovided could use. So that, in effect, there was never the less left for others because of his enclosure for himself: for he that leaves as much as another can make use of, does as good as take nothing at all. No body could think himself injured by the drinking of another man, though he took a good draught, who had a whole river of the same water left him to quench his thirst: and the case of land and water, where there is enough of both, is perfectly the same.

Sect. 34. God gave the world to men in common; but since he gave it them for their benefit, and the greatest conveniencies of life they were capable to draw from it, it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational, (and labour was to be his title to it;) not to the fancy or covetousness of the quarrelsome and contentious. He that had as good left for his improvement, as was already taken up, needed not complain, ought not to meddle with what was already improved by another's labour: if he did, it is plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him in common with others to labour on, and whereof there was as good left, as that already possessed, and more than he knew what to do with, or his industry could reach to.

Sect. 35. It is true, in land that is common in England, or any other country, where there is plenty of people under government, who have money and commerce, no one can inclose or appropriate any part, without the consent of all his fellow-commoners; because this is left common by compact, i.e. by the law of the land, which is not to be violated. And though it be common, in respect of some men, it is not so to all mankind; but is the joint property of this country, or this parish. Besides, the remainder, after such enclosure, would not be as good to the rest of the commoners, as the whole was when they could all make use of the whole; whereas in the beginning and first peopling of the great common of the world, it was quite otherwise. The law man was under, was rather for appropriating. God commanded, and his wants forced him to labour. That was his property which could not be taken from him where-ever he had fixed it. And hence subduing or cultivating the earth, and having dominion, we see are joined together. The one gave title to the other. So that God, by commanding to subdue, gave authority so far to appropriate: and the condition of human life, which requires labour and materials to work on, necessarily introduces private possessions.

Sect. 36. The measure of property nature has well set by the extent of men's labour and the conveniencies of life: no man's labour could subdue, or appropriate all; nor could his enjoyment consume more than a small part; so that it was impossible for any man, this way, to intrench upon the right of another, or acquire to himself a property, to the prejudice of his neighbour, who would still have room for as good, and as large a possession (after the other had taken out his) as before it was appropriated. This measure did confine every man's possession to a very moderate proportion, and such as he might appropriate to himself, without injury to any body, in the first ages of the world, when men were more in danger to be lost, by wandering from their company, in the then vast wilderness of the earth, than to be straitened for want of room to plant in. And the same measure may be allowed still without prejudice to any body, as full as the world seems: for supposing a man, or family, in the state they were at first peopling of the world

by the children of Adam, or Noah; let him plant in some inland, vacant places of America, we shall find that the possessions he could make himself, upon the measures we have given, would not be very large, nor, even to this day, prejudice the rest of mankind, or give them reason to complain, or think themselves injured by this man's incroachment, though the race of men have now spread themselves to all the corners of the world, and do infinitely exceed the small number was at the beginning. Nay, the extent of ground is of so little value, without labour, that I have heard it affirmed, that in Spain itself a man may be permitted to plough, sow and reap, without being disturbed, upon land he has no other title to, but only his making use of it. But, on the contrary, the inhabitants think themselves beholden to him, who, by his industry on neglected, and consequently waste land, has increased the stock of corn, which they wanted. But be this as it will, which I lay no stress on; this I dare boldly affirm, that the same rule of propriety, (viz.) that every man should have as much as he could make use of, would hold still in the world, without straitening any body; since there is land enough in the world to suffice double the inhabitants, had not the invention of money, and the tacit agreement of men to put a value on it, introduced (by consent) larger possessions, and a right to them; which, how it has done, I shall by and by shew more at large.

Sect. 37. This is certain, that in the beginning, before the desire of having more than man needed had altered the intrinsic value of things, which depends only on their usefulness to the life of man; or had agreed, that a little piece of yellow metal, which would keep without wasting or decay, should be worth a great piece of flesh, or a whole heap of corn; though men had a right to appropriate, by their labour, each one of himself, as much of the things of nature, as he could use: yet this could not be much, nor to the prejudice of others, where the same plenty was still left to those who would use the same industry. To which let me add, that he who appropriates land to himself by his labour, does not lessen, but increase the common stock of mankind: for the provisions serving to the support of human life, produced by one acre of inclosed and cultivated land, are (to speak much within compass) ten times more than those which are yielded by an acre of land of an equal richness lying waste in common. And therefore he that incloses land, and has a greater plenty of the conveniencies of life from ten acres, than he could have from an hundred left to nature, may truly be said to give ninety acres to mankind: for his labour now supplies him with provisions out of ten acres, which were but the product of an hundred lying in common. I have here rated the improved land very low, in making its product but as ten to one, when it is much nearer an hundred to one: for I ask, whether in the wild woods and uncultivated waste of America, left to nature, without any improvement, tillage or husbandry, a thousand acres yield the needy and wretched inhabitants as many conveniencies of life, as ten acres of equally fertile land do in Devonshire, where they are well cultivated?

Before the appropriation of land, he who gathered as much of the wild fruit, killed, caught, or tamed, as many of the beasts, as he could; he that so imployed his pains about any of the spontaneous products of nature, as any way to alter them from the state which nature put them in, by placing any of his labour on them, did thereby acquire a propriety in them: but if they perished, in his possession, without their due use; if the fruits rotted, or the venison putrified, before he could spend it, he offended against the common law of nature, and was liable to be punished; he invaded his neighbour's share, for he had no right, farther than his use called for any of them, and they might serve to afford him conveniencies of life.

Sect. 38. The same measures governed the possession of land too: whatsoever he tilled and reaped, laid up and made use of, before it spoiled, that was his peculiar right; whatsoever he enclosed, and could feed, and make use of, the cattle and product was also his. But if either the grass of his enclosure rotted on the ground, or the fruit of his planting perished without gathering, and laying up, this part of the earth, notwithstanding his enclosure, was still to be looked on as waste, and might be the possession of any other. Thus, at the beginning, Cain might take as much ground as he could till, and make it his own land, and yet leave enough to Abel's sheep to feed on; a few acres would serve for both their possessions. But as families increased, and industry inlarged their stocks, their possessions inlarged with the need of them; but yet it was commonly without any fixed property in the ground they made use of, till they incorporated, settled themselves together, and built cities; and then, by consent, they came in time, to set out the bounds of their distinct territories, and agree on limits between them and their neighbours; and by laws within themselves, settled the properties of those of the same society: for we see, that in that part of the world which was first inhabited, and therefore like to be best peopled, even as low down as Abraham's time, they wandered with their flocks, and their herds, which was their substance, freely up and down; and this Abraham did, in a country where he was a stranger. Whence it is plain, that at least a great part of the land lay in common; that the inhabitants valued it not, nor claimed property in any more than they made use of. But when there was not room enough in the same place, for their herds to feed together, they by consent, as Abraham and Lot did, Gen. xiii. 5. separated and inlarged their pasture, where it best liked them. And for the same reason Esau went from his father, and his brother, and planted in mount Seir, Gen. xxxvi. 6.

Sect. 39. And thus, without supposing any private dominion, and property in Adam, over all the world, exclusive of all other men, which can no way be proved, nor any one's property be made out from it; but supposing the world given, as it was, to the children of men in common, we see how labour could make men distinct titles to several parcels of it, for their private uses; wherein there could be no doubt of right, no room for quarrel.

Sect. 40. Nor is it so strange, as perhaps before consideration it may appear, that the property of labour should be able to over-balance the community of land: for it is labour indeed that puts the difference of value on every thing; and let any one consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common, without any husbandry upon it, and he will find, that the improvement of labour makes the far greater part of the value. I think it will be but a very modest computation to say, that of the products of the earth useful to the life of man nine tenths are the effects of labour: nay, if we will rightly estimate things as they come to our use, and cast up the several expences about them, what in them is purely owing to nature, and what to labour, we shall find, that in most of them ninety-nine hundredths are wholly to be put on the account of labour.

Sect. 41. There cannot be a clearer demonstration of any thing, than several nations of the Americans are of this, who are rich in land, and poor in all the comforts of life; whom nature having furnished as liberally as any other people, with the materials of plenty, i.e. a fruitful soil, apt to produce in abundance, what might serve for food, raiment, and delight; yet for want of improving it by labour, have not one hundredth part of the conveniencies we enjoy: and a king of a large and fruitful territory there, feeds, lodges, and is clad worse than a day-labourer in England.

Sect. 42. To make this a little clearer, let us but trace some of the ordinary provisions of life, through their several progresses, before they come to our use, and see how much they receive of their value from human industry. Bread, wine and cloth, are things of daily use, and great plenty; yet notwithstanding, acorns, water and leaves, or skins, must be our bread, drink and cloathing, did not labour furnish us with these more useful commodities: for whatever bread is more worth than acorns, wine than water, and cloth or silk, than leaves, skins or moss, that is wholly owing to labour and industry; the one of these being the food and raiment which unassisted nature furnishes us with; the other, provisions which our industry and pains prepare for us, which how much they exceed the other in value, when any one hath computed, he will then see how much labour makes the far greatest part of the value of things we enjoy in this world: and the ground which produces the materials, is scarce to be reckoned in, as any, or at most, but a very small part of it; so little, that even amongst us, land that is left wholly to nature, that hath no improvement of pasturage, tillage, or planting, is called, as indeed it is, waste; and we shall find the benefit of it amount to little more than nothing.

This shews how much numbers of men are to be preferred to largeness of dominions; and that the increase of lands, and the right employing of them, is the great art of government: and that prince, who shall be so wise and godlike, as by established laws of liberty to secure protection and encouragement to the honest industry of mankind, against the oppression of power and narrowness of party, will quickly be too hard for his neighbours: but this by the by.

To return to the argument in hand.

Sect. 43. An acre of land, that bears here twenty bushels of wheat, and another in America, which, with the same husbandry, would do the like, are, without doubt, of the same natural intrinsic value: but yet the benefit mankind receives from the one in a year, is worth 5l. and from the other possibly not worth a penny, if all the profit an Indian received from it were to be valued, and sold here; at least, I may truly say, not one thousandth. It is labour then which puts the greatest part of value upon land, without which it would scarcely be worth any thing: it is to that we owe the greatest part of all its useful products; for all that the straw, bran, bread, of that acre of wheat, is more worth than the product of an acre of as good land, which lies waste, is all the effect of labour: for it is not barely the plough-man's pains, the reaper's and thresher's toil, and the baker's sweat, is to be counted into the bread we eat; the labour of those who broke the oxen, who digged and wrought the iron and stones, who felled and framed the timber employed about the plough, mill, oven, or any other utensils, which are a vast number, requisite to this corn, from its being feed to be sown to its being made bread, must all be charged on the account of labour, and received as an effect of that: nature and the earth furnished only the almost worthless materials, as in themselves. It would be a strange catalogue of things, that industry provided and made use of, about every loaf of bread, before it came to our use, if we could trace them; iron, wood, leather, bark, timber, stone, bricks, coals, lime, cloth, dying drugs, pitch, tar, masts, ropes, and all the materials made use of in the ship, that brought any of the commodities made use of by any of the workmen, to any part of the work; all which it would be almost impossible, at least too long, to reckon up.

Sect. 44. From all which it is evident, that though the things of nature are given in common, yet man, by being master of himself, and proprietor of his own person, and the actions or labour of it, had still in himself the great foundation of property; and that, which made up the great part of what he applied to the support or comfort of his being, when invention and arts had improved the conveniencies of life, was perfectly his own, and did not belong in common to others.

Sect. 45. Thus labour, in the beginning, gave a right of property, wherever any one was pleased to employ it upon what was common, which remained a long while the far greater part, and is yet more than mankind makes use of. Men, at first, for the most part, contented themselves with what unassisted nature offered to their necessities: and though afterwards, in some parts of the world, (where the increase of people and stock, with the use of money, had made land scarce, and so of some value) the several communities settled the bounds of their distinct territories, and by laws within themselves regulated the properties of the private men of their society, and so, by compact and agreement, settled the property which labour and industry began; and the leagues that have been made between several states and kingdoms, either expresly or tacitly disowning all claim and right to the land in the others possession, have, by common consent, given up their pretences to their natural common right, which originally they had to those countries, and so have, by positive agreement, settled a property amongst themselves, in distinct parts and parcels of the earth; yet there are still great tracts of ground to be found, which (the inhabitants thereof not having joined with the rest of mankind, in the consent of the use of their common money) lie waste, and are more than the people who dwell on it do, or can make use of, and so still lie in common; tho' this can scarce happen amongst that part of mankind that have consented to the use of money.

Sect. 46. The greatest part of things really useful to the life of man, and such as the necessity of subsisting made the first commoners of the world look after, as it doth the Americans now, are generally things of short duration; such as, if they are not consumed by use, will decay and perish of themselves: gold, silver and diamonds, are things that fancy or agreement hath put the value on, more than real use, and the necessary support of life. Now of those good things which nature hath provided in common, every one had a right (as hath been said) to as much as he could use, and property in all that he could effect with his labour; all that his industry could extend to, to alter from the state nature had put it in, was his. He that gathered a hundred bushels of acorns or apples, had thereby a property in them, they were his goods as soon as gathered. He was only to look, that he used them before they spoiled, else he took more than his share, and robbed others. And indeed it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to any body else, so that it perished not uselesly in his possession, these he also made use of. And if he also bartered away plums, that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted not the common stock; destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselesly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its colour; or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life he invaded not the right of others, he might heap up as much of these durable things as he pleased; the exceeding of the bounds of his just property not lying in the largeness of his possession, but the perishing of any thing uselesly in it.

Sect. 47. And thus came in the use of money, some lasting thing that men might keep without spoiling, and that by mutual consent men would take in exchange for the truly useful, but perishable supports of life.

Sect. 48. And as different degrees of industry were apt to give men possessions in different proportions, so this invention of money gave them the opportunity to continue and enlarge them: for supposing an island, separate from all possible commerce with the rest of the world, wherein there were but an hundred families, but there were sheep, horses and cows, with other useful animals, wholsome fruits, and land enough for corn for a hundred thousand times as many, but nothing in the island, either because of its commonness, or perishableness, fit to supply the place of money; what reason could any one have there to enlarge his possessions beyond the use of his family, and a plentiful supply to its consumption, either in what their own industry produced, or they could barter for like perishable, useful commodities, with others? Where there is not some thing, both lasting and scarce, and so valuable to be hoarded up, there men will not be apt to enlarge their possessions of land, were it never so rich, never so free for them to take: for I ask, what would a man value ten thousand, or an hundred thousand acres of excellent land, ready cultivated, and well stocked too with cattle, in the middle of the inland parts of America, where he had no hopes of commerce with other parts of the world, to draw money to him by the sale of the product? It would not be worth the enclosing, and we should see him give up again to the wild common of nature, whatever was more than would supply the conveniencies of life to be had there for him and his family.

Sect. 49. Thus in the beginning all the world was America, and more so than that is now; for no such thing as money was any where known. Find out something that hath the use and value of money amongst his neighbours, you shall see the same man will begin presently to enlarge his possessions.

Sect. 50. But since gold and silver, being little useful to the life of man in proportion to food, raiment, and carriage, has its value only from the consent of men, whereof labour yet makes, in great part, the measure, it is plain, that men have agreed to a disproportionate and unequal possession of the earth, they having, by a tacit and voluntary consent, found out, a way how a man may fairly possess more land than he himself can use the product of, by receiving in exchange for the overplus gold and silver, which may be hoarded up without injury to any one; these metals not spoiling or decaying in the hands of the possessor. This partage of things in an inequality of private possessions, men have made practicable out of the bounds of society, and without compact, only by putting a value on gold and silver, and tacitly agreeing in the use of money: for in governments, the laws regulate the right of property, and the possession of land is determined by positive constitutions.

Sect. 51. And thus, I think, it is very easy to conceive, without any difficulty, how labour could at first begin a title of property in the common things of nature, and how the spending it upon our uses bounded it. So that there could then be no reason of quarrelling about title, nor any doubt about the largeness of possession it gave. Right and conveniency went together; for as a man had a right to all he could employ his labour upon, so he had no temptation to labour for more than he could make use of. This left no room for controversy about the title, nor for encroachment on the right of others; what portion a man carved to himself, was easily seen; and it was useless, as well as dishonest, to carve himself too much, or take more than he needed.

CHAPTER. VI.

OF PATERNAL POWER.

Sect. 52. IT may perhaps be censured as an impertinent criticism, in a discourse of this nature, to find fault with words and names, that have obtained in the world: and yet possibly it may not be amiss to offer new ones, when the old are apt to lead men into mistakes, as this of paternal power probably has done, which seems so to place the power of parents over their children wholly in the father, as if the mother had no share in it; whereas, if we consult reason or revelation, we shall find, she hath an equal title. This may give one reason to ask, whether this might not be more properly called parental power? for whatever obligation nature and the right of generation lays on children, it must certainly bind them equal to both the concurrent causes of it. And accordingly we see the positive law of God every where joins them together, without distinction, when it commands the obedience of children, Honour thy father and thy mother, Exod. xx. 12. Whosoever curseth his father or his mother, Lev. xx. 9. Ye shall fear every man his mother and his father, Lev. xix. 3. Children, obey your parents, &c. Eph. vi. 1. is the stile of the Old and New Testament.

Sect. 53. Had but this one thing been well considered, without looking any deeper into the matter, it might perhaps have kept men from running into those gross mistakes, they have made, about this power of parents; which, however it might, without any great harshness, bear the name of absolute dominion, and regal authority, when under the title of paternal power it seemed appropriated to the father, would yet have founded but oddly, and in the very name shewn the absurdity, if this supposed absolute power over children had been called parental; and thereby have discovered, that it belonged to the mother too: for it will but very ill serve the turn of those men, who contend so much for the absolute power and authority of the fatherhood, as they call it, that the mother should have any share in it; and it would have but ill supported the monarchy they contend for, when by the very name it appeared, that that fundamental authority, from whence they would derive their government of a single person only, was not placed in one, but two persons jointly. But to let this of names pass.

Sect. 54. Though I have said above, Chap. II. That all men by nature are equal, I cannot be supposed to understand all sorts of equality: age or virtue may give men a just precedency: excellency of parts and merit may place others above the common level: birth may subject some, and alliance or benefits others, to pay an observance to those to whom nature, gratitude, or other respects, may have made it due: and yet all this consists with the equality, which all men are in, in respect of jurisdiction or dominion one over another; which was the equality I there spoke of, as proper to the business in hand, being that equal right, that every man hath, to his natural freedom, without being subjected to the will or authority of any other man.

Sect. 55. Children, I confess, are not born in this full state of equality, though they are born to it. Their parents have a sort of rule and jurisdiction over them, when they come into the world, and for some time after; but it is but a temporary one. The bonds of this subjection are like the swaddling clothes they are wrapt up in, and supported by, in the weakness of their infancy: age and reason as they grow up, loosen them, till at length they drop quite off, and leave a man at his own free disposal.

Sect. 56. Adam was created a perfect man, his body and mind in full possession of their strength and reason, and so was capable, from the first instant of his being to provide for his own support and preservation, and govern his actions according to the dictates of

the law of reason which God had implanted in him. From him the world is peopled with his descendants, who are all born infants, weak and helpless, without knowledge or understanding: but to supply the defects of this imperfect state, till the improvement of growth and age hath removed them, Adam and Eve, and after them all parents were, by the law of nature, under an obligation to preserve, nourish, and educate the children they had begotten; not as their own workmanship, but the workmanship of their own maker, the Almighty, to whom they were to be accountable for them.

Sect. 57. The law, that was to govern Adam, was the same that was to govern all his posterity, the law of reason. But his offspring having another way of entrance into the world, different from him, by a natural birth, that produced them ignorant and without the use of reason, they were not presently under that law; for no body can be under a law, which is not promulgated to him; and this law being promulgated or made known by reason only, he that is not come to the use of his reason, cannot be said to be under this law; and Adam's children, being not presently as soon as born under this law of reason, were not presently free: for law, in its true notion, is not so much the limitation as the direction of a free and intelligent agent to his proper interest, and prescribes no farther than is for the general good of those under that law: could they be happier without it, the law, as an useless thing, would of itself vanish; and that ill deserves the name of confinement which hedges us in only from bogs and precipices. So that, however it may be mistaken, the end of law is not to abolish or restrain, but to preserve and enlarge freedom: for in all the states of created beings capable of laws, where there is no law, there is no freedom: for liberty is, to be free from restraint and violence from others; which cannot be, where there is no law: but freedom is not, as we are told, a liberty for every man to do what he lists: (for who could be free, when every other man's humour might domineer over him?) but a liberty to dispose, and order as he lists, his person, actions, possessions, and his whole property, within the allowance of those laws under which he is, and therein not to be subject to the arbitrary will of another, but freely follow his own.

Sect. 58. The power, then, that parents have over their children, arises from that duty which is incumbent on them, to take care of their off-spring, during the imperfect state of childhood. To inform the mind, and govern the actions of their yet ignorant nonage, till reason shall take its place, and ease them of that trouble, is what the children want, and the parents are bound to: for God having given man an understanding to direct his actions, has allowed him a freedom of will, and liberty of acting, as properly belonging thereunto, within the bounds of that law he is under. But whilst he is in an estate, wherein he has not understanding of his own to direct his will, he is not to have any will of his own to follow: he that understands for him, must will for him too; he must prescribe to his will, and regulate his actions; but when he comes to the estate that made his father a freeman, the son is a freeman too.

Sect. 59. This holds in all the laws a man is under, whether natural or civil. Is a man under the law of nature? What made him free of that law? what gave him a free disposing of his property, according to his own will, within the compass of that law? I answer, a state of maturity wherein he might be supposed capable to know that law, that so he might keep his actions within the bounds of it. When he has acquired that state, he is presumed to know how far that law is to be his guide, and how far he may make use of his freedom, and so comes to have it; till then, some body else must guide him, who is presumed to know how far the law allows a liberty. If such a state of reason, such an age of discretion made him free, the same shall make his son free too. Is a man under the law of England? What made him free of that law? that is, to have the liberty to dispose of his actions and possessions according to his own will, within the permission of that law? A capacity of knowing that law; which is supposed by that law, at the age of one and twenty years, and in some cases sooner. If this made the father free, it shall make the son free too. Till then we see the law allows the son to have no will, but he is to be guided by the will of his father or guardian, who is to understand for him. And if the father die, and fail to substitute a deputy in his trust; if he hath not provided a tutor, to govern his son, during his minority, during his want of understanding, the law takes care to do it; some other must govern him, and be a will to him, till he hath attained to a state of freedom, and his understanding be fit to take the government of his will. But after that, the father and son are equally free as much as tutor and pupil after nonage; equally subjects of the same law together, without any dominion left in the father over the life, liberty, or estate of his son, whether they be only in the state and under the law of nature, or under the positive laws of an established government.

Sect. 60. But if, through defects that may happen out of the ordinary course of nature, any one comes not to such a degree of reason, wherein he might be supposed capable of knowing the law, and so living within the rules of it, he is never capable of being a free man, he is never let loose to the disposure of his own will (because he knows no bounds to it, has not understanding, its proper guide) but is continued under the tuition and government of others, all the time his own understanding is uncapable of that charge. And so lunatics and ideots are never set free from the government of their parents;

/# children, who are not as yet come unto those years whereat they may have; and innocents which are excluded by a natural defect from ever having; thirdly, madmen, which for the present cannot possibly have the use of right reason to guide themselves,

have for their guide, the reason that guideth other men which are tutors over them, to seek and procure their good for them, #/

says Hooker, Eccl. Pol. lib. i. sec. 7. All which seems no more than that duty, which God and nature has laid on man, as well as other creatures, to preserve their offspring, till they can be able to shift for themselves, and will scarce amount to an instance or proof of parents regal authority.

Sect. 61. Thus we are born free, as we are born rational; not that we have actually the exercise of either: age, that brings one, brings with it the other too. And thus we see how natural freedom and subjection to parents may consist together, and are both founded on the same principle. A child is free by his father's title, by his father's understanding, which is to govern him till he hath it of his own. The freedom of a man at years of discretion, and the subjection of a child to his parents, whilst yet short of that age, are so consistent, and so distinguishable, that the most blinded contenders for monarchy, by right of fatherhood, cannot miss this difference; the most obstinate cannot but allow their consistency: for were their doctrine all true, were the right heir of Adam now known, and by that title settled a monarch in his throne, invested with all the absolute unlimited power Sir Robert Filmer talks of; if he should die as soon as his heir were born, must not the child, notwithstanding he were never so free, never so much sovereign, be in subjection to his mother and nurse, to tutors and governors, till age and education brought him reason and ability to govern himself and others? The necessities of his life, the health of his body, and the information of his mind, would require him to be directed by the will of others, and not his own; and yet will any one think, that this restraint and subjection were inconsistent with, or spoiled him of that liberty or sovereignty he had a right to, or gave away his empire to those who had the government of his nonage? This government over him only prepared him the better and sooner for it. If any body should ask me, when my son is of age to be free? I shall answer, just when his monarch is of age to govern. But at what time, says the judicious Hooker, Eccl. Pol. l. i. sect. 6. a man may be said to have attained so far forth the use of reason, as sufficeth to make him capable of those laws whereby he is then bound to guide his actions: this is a great deal more easy for sense to discern, than for any one by skill and learning to determine.

Sect. 62. Common-wealths themselves take notice of, and allow, that there is a time when men are to begin to act like free men, and therefore till that time require not oaths of fealty, or allegiance, or other public owning of, or submission to the government of their countries.

Sect. 63. The freedom then of man, and liberty of acting according to his own will, is grounded on his having reason, which is able to instruct him in that law he is to govern himself by, and make him know how far he is left to the freedom of his own will. To turn him loose to an unrestrained liberty, before he has reason to guide him, is not the allowing him the privilege of his nature to be free; but to thrust him out amongst brutes, and abandon him to a state as wretched, and as much beneath that of a man, as their's. This is that which puts the authority into the parents hands to govern the minority of their children. God hath made it their business to employ this care on their offspring, and hath placed in them suitable inclinations of tenderness and concern to temper this power, to apply it, as his wisdom designed it, to the children's good, as long as they should need to be under it.

Sect. 64. But what reason can hence advance this care of the parents due to their off-spring into an absolute arbitrary dominion of the father, whose power reaches no farther, than by such a discipline, as he finds most effectual, to give such strength and health to their bodies, such vigour and rectitude to their minds, as may best fit his children to be most useful to themselves and others; and, if it be necessary to his condition, to make them work, when they are able, for their own subsistence. But in this power the mother too has her share with the father.

Sect. 65. Nay, this power so little belongs to the father by any peculiar right of nature, but only as he is guardian of his children, that when he quits his care of them, he loses his power over them, which goes along with their nourishment and education, to which it is inseparably annexed; and it belongs as much to the foster-father of an exposed child, as to the natural father of another. So little power does the bare act of begetting give a man over his issue; if all his care ends there, and this be all the title he hath to the name and authority of a father. And what will become of this paternal power in that part of the world, where one woman hath more than one husband at a time? or in those parts of America, where, when the husband and wife part, which happens frequently, the children are all left to the mother, follow her, and are wholly under her care and provision? If the father die whilst the children are young, do they not naturally every where owe the same obedience to their mother, during their minority, as to their father were he alive? and will any one say, that the mother hath a legislative power over her children? that she can make standing rules, which shall be of perpetual obligation, by which they ought to regulate all the concerns of their property, and bound their liberty all the course of their lives? or can she inforce the observation of them with capital punishments? for this is the proper power of the magistrate, of which the father hath not so much as the shadow. His command over his children is but temporary, and reaches not

their life or property: it is but a help to the weakness and imperfection of their nonage, a discipline necessary to their education: and though a father may dispose of his own possessions as he pleases, when his children are out of danger of perishing for want, yet his power extends not to the lives or goods, which either their own industry, or another's bounty has made their's; nor to their liberty neither, when they are once arrived to the infranchisement of the years of discretion. The father's empire then ceases, and he can from thence forwards no more dispose of the liberty of his son, than that of any other man: and it must be far from an absolute or perpetual jurisdiction, from which a man may withdraw himself, having license from divine authority to leave father and mother, and cleave to his wife.

Sect. 66. But though there be a time when a child comes to be as free from subjection to the will and command of his father, as the father himself is free from subjection to the will of any body else, and they are each under no other restraint, but that which is common to them both, whether it be the law of nature, or municipal law of their country; yet this freedom exempts not a son from that honour which he ought, by the law of God and nature, to pay his parents. God having made the parents instruments in his great design of continuing the race of mankind, and the occasions of life to their children; as he hath laid on them an obligation to nourish, preserve, and bring up their offspring; so he has laid on the children a perpetual obligation of honouring their parents, which containing in it an inward esteem and reverence to be shewn by all outward expressions, ties up the child from any thing that may ever injure or affront, disturb or endanger, the happiness or life of those from whom he received his; and engages him in all actions of defence, relief, assistance and comfort of those, by whose means he entered into being, and has been made capable of any enjoyments of life: from this obligation no state, no freedom can absolve children. But this is very far from giving parents a power of command over their children, or an authority to make laws and dispose as they please of their lives or liberties. It is one thing to owe honour, respect, gratitude and assistance; another to require an absolute obedience and submission. The honour due to parents, a monarch in his throne owes his mother; and yet this lessens not his authority, nor subjects him to her government.

Sect. 67. The subjection of a minor places in the father a temporary government, which terminates with the minority of the child: and the honour due from a child, places in the parents a perpetual right to respect, reverence, support and compliance too, more or less, as the father's care, cost, and kindness in his education, has been more or less. This ends not with minority, but holds in all parts and conditions of a man's life. The want of distinguishing these two powers, viz. that which the father hath in the right of tuition, during minority, and the right of honour all his life, may perhaps have caused a great part of the mistakes about this matter: for to speak properly of them, the first of these is rather the privilege of children, and duty of parents, than any prerogative of paternal power. The nourishment and education of their children is a charge so incumbent on parents for their children's good, that nothing can absolve them from taking care of it: and though the power of commanding and chastising them go along with it, yet God hath woven into the principles of human nature such a tenderness for their off-spring, that there is little fear that parents should use their power with too much rigour; the excess is seldom on the severe side, the strong byass of nature drawing the other way. And therefore God almighty when he would express his gentle dealing with the Israelites, he tells them, that though he chastened them, he chastened them as a man chastens his son, Deut. viii. 5. i.e. with tenderness and affection, and kept them under no severer discipline than what was absolutely best for them, and had been less kindness to have slackened. This is that power to which children are commanded obedience, that the pains and care of their parents may not be increased, or ill rewarded.

Sect. 68. On the other side, honour and support, all that which gratitude requires to return for the benefits received by and from them, is the indispensable duty of the child, and the proper privilege of the parents. This is intended for the parents advantage, as the other is for the child's; though education, the parents duty, seems to have most power, because the ignorance and infirmities of childhood stand in need of restraint and correction; which is a visible exercise of rule, and a kind of dominion. And that duty which is comprehended in the word honour, requires less obedience, though the obligation be stronger on grown, than younger children: for who can think the command, Children obey your parents, requires in a man, that has children of his own, the same submission to his father, as it does in his yet young children to him; and that by this precept he were bound to obey all his father's commands, if, out of a conceit of authority, he should have the indiscretion to treat him still as a boy?

Sect. 69. The first part then of paternal power, or rather duty, which is education, belongs so to the father, that it terminates at a certain season; when the business of education is over, it ceases of itself, and is also alienable before: for a man may put the tuition of his son in other hands; and he that has made his son an apprentice to another, has discharged him, during that time, of a great part of his obedience both to himself and to his mother. But all the duty of honour, the other part, remains never the less entire to them; nothing can cancel that: it is so inseparable from them both, that the father's authority cannot dispossess the mother of this right, nor can any man discharge his son from honouring her that bore him. But both these are very far from a power to make laws, and enforcing them with penalties, that may reach estate, liberty, limbs and life. The power of commanding ends with nonage; and

though, after that, honour and respect, support and defence, and whatsoever gratitude can oblige a man to, for the highest benefits he is naturally capable of, be always due from a son to his parents; yet all this puts no scepter into the father's hand, no sovereign power of commanding. He has no dominion over his son's property, or actions; nor any right, that his will should prescribe to his son's in all things; however it may become his son in many things, not very inconvenient to him and his family, to pay a deference to it.

Sect. 70. A man may owe honour and respect to an ancient, or wise man; defence to his child or friend; relief and support to the distressed; and gratitude to a benefactor, to such a degree, that all he has, all he can do, cannot sufficiently pay it: but all these give no authority, no right to any one, of making laws over him from whom they are owing. And it is plain, all this is due not only to the bare title of father; not only because, as has been said, it is owing to the mother too; but because these obligations to parents, and the degrees of what is required of children, may be varied by the different care and kindness, trouble and expence, which is often employed upon one child more than another.

Sect. 71. This shews the reason how it comes to pass, that parents in societies, where they themselves are subjects, retain a power over their children, and have as much right to their subjection, as those who are in the state of nature. Which could not possibly be, if all political power were only paternal, and that in truth they were one and the same thing: for then, all paternal power being in the prince, the subject could naturally have none of it. But these two powers, political and paternal, are so perfectly distinct and separate; are built upon so different foundations, and given to so different ends, that every subject that is a father, has as much a paternal power over his children, as the prince has over his: and every prince, that has parents, owes them as much filial duty and obedience, as the meanest of his subjects do to their's; and can therefore contain not any part or degree of that kind of dominion, which a prince or magistrate has over his subject.

Sect. 72. Though the obligation on the parents to bring up their children, and the obligation on children to honour their parents, contain all the power on the one hand, and submission on the other, which are proper to this relation, yet there is another power ordinarily in the father, whereby he has a tie on the obedience of his children; which tho' it be common to him with other men, yet the occasions of shewing it, almost constantly happening to fathers in their private families, and the instances of it elsewhere being rare, and less taken notice of, it passes in the world for a part of paternal jurisdiction. And this is the power men generally have to bestow their estates on those who please them best; the possession of the father being the expectation and inheritance of the children, ordinarily in certain proportions, according to the law and custom of each country; yet it is commonly in the father's power to bestow it with a more sparing or liberal hand, according as the behaviour of this or that child hath comported with his will and humour.

Sect. 73. This is no small tie on the obedience of children: and there being always annexed to the enjoyment of land, a submission to the government of the country, of which that land is a part; it has been commonly supposed, that a father could oblige his posterity to that government, of which he himself was a subject, and that his compact held them; whereas, it being only a necessary condition annexed to the land, and the inheritance of an estate which is under that government, reaches only those who will take it on that condition, and so is no natural tie or engagement, but a voluntary submission: for every man's children being by nature as free as himself, or any of his ancestors ever were, may, whilst they are in that freedom, choose what society they will join themselves to, what commonwealth they will put themselves under. But if they will enjoy the inheritance of their ancestors, they must take it on the same terms their ancestors had it, and submit to all the conditions annexed to such a possession. By this power indeed fathers oblige their children to obedience to themselves, even when they are past minority, and most commonly too subject them to this or that political power: but neither of these by any peculiar right of fatherhood, but by the reward they have in their hands to inforce and recompence such a compliance; and is no more power than what a French man has over an English man, who by the hopes of an estate he will leave him, will certainly have a strong tie on his obedience: and if, when it is left him, he will enjoy it, he must certainly take it upon the conditions annexed to the possession of land in that country where it lies, whether it be France or England.

Sect. 74. To conclude then, tho' the father's power of commanding extends no farther than the minority of his children, and to a degree only fit for the discipline and government of that age; and tho' that honour and respect, and all that which the Latins called piety, which they indispensably owe to their parents all their life-time, and in all estates, with all that support and defence is due to them, gives the father no power of governing, i.e. making laws and enacting penalties on his children; though by all this he has no dominion over the property or actions of his son: yet it is obvious to conceive how easy it was, in the first ages of the world, and in places still, where the thinness of people gives families leave to separate into unpossessed quarters, and they have room to remove or plant themselves in yet vacant habitations, for the father of the family to become the prince of it;* he had been a ruler

from the beginning of the infancy of his children: and since without some government it would be hard for them to live together, it was likeliest it should, by the express or tacit consent of the children when they were grown up, be in the father, where it seemed without any change barely to continue; when indeed nothing more was required to it, than the permitting the father to exercise alone, in his family, that executive power of the law of nature, which every free man naturally hath, and by that permission resigning up to him a monarchical power, whilst they remained in it. But that this was not by any paternal right, but only by the consent of his children, is evident from hence, that no body doubts, but if a stranger, whom chance or business had brought to his family, had there killed any of his children, or committed any other fact, he might condemn and put him to death, or other-wise have punished him, as well as any of his children; which it was impossible he should do by virtue of any paternal authority over one who was not his child, but by virtue of that executive power of the law of nature, which, as a man, he had a right to: and he alone could punish him in his family, where the respect of his children had laid by the exercise of such a power, to give way to the dignity and authority they were willing should remain in him, above the rest of his family.

(*It is no improbable opinion therefore, which the archphilosopher was of, that the chief person in every houshold was always, as it were, a king: so when numbers of housholds joined themselves in civil societies together, kings were the first kind of governors amongst them, which is also, as it seemeth, the reason why the name of fathers continued still in them, who, of fathers, were made rulers; as also the ancient custom of governors to do as Melchizedec, and being kings, to exercise the office of priests, which fathers did at the first, grew perhaps by the same occasion. Howbeit, this is not the only kind of regiment that has been received in the world. The inconveniences of one kind have caused sundry others to be devised; so that in a word, all public regiment, of what kind soever, seemeth evidently to have risen from the deliberate advice, consultation and composition between men, judging it convenient and behoveful; there being no impossibility in nature considered by itself, but that man might have lived without any public regiment, Hooker's Eccl. Pol. lib. i. sect. 10.)

Sect. 75. Thus it was easy, and almost natural for children, by a tacit, and scarce avoidable consent, to make way for the father's authority and government. They had been accustomed in their childhood to follow his direction, and to refer their little differences to him, and when they were men, who fitter to rule them? Their little properties, and less covetousness, seldom afforded greater controversies; and when any should arise, where could they have a fitter umpire than he, by whose care they had every one been sustained and brought up, and who had a tenderness for them all? It is no wonder that they made no distinction betwixt minority and full age; nor looked after one and twenty, or any other age that might make them the free disposers of themselves and fortunes, when they could have no desire to be out of their pupilage: the government they had been under, during it, continued still to be more their protection than restraint; and they could no where find a greater security to their peace, liberties, and fortunes, than in the rule of a father.

Sect. 76. Thus the natural fathers of families, by an insensible change, became the politic monarchs of them too: and as they chanced to live long, and leave able and worthy heirs, for several successions, or otherwise; so they laid the foundations of hereditary, or elective kingdoms, under several constitutions and manners, according as chance, contrivance, or occasions happened to mould them. But if princes have their titles in their fathers right, and it be a sufficient proof of the natural right of fathers to political authority, because they commonly were those in whose hands we find, de facto, the exercise of government: I say, if this argument be good, it will as strongly prove, that all princes, nay princes only, ought to be priests, since it is as certain, that in the beginning, the father of the family was priest, as that he was ruler in his own houshold.

CHAPTER. VII.

OF POLITICAL OR CIVIL SOCIETY.

Sect. 77. GOD having made man such a creature, that in his own judgment, it was not good for him to be alone, put him under strong obligations of necessity, convenience, and inclination to drive him into society, as well as fitted him with understanding and language to continue and enjoy it. The first society was between man and wife, which gave beginning to that between parents and children; to which, in time, that between master and servant came to be added: and though all these might, and commonly did meet together, and make up but one family, wherein the master or mistress of it had some sort of rule proper to a family; each of these, or all together, came short of political society, as we shall see, if we consider the different ends, ties, and bounds of each of these.

Sect. 78. Conjugal society is made by a voluntary compact between man and woman; and tho' it consist chiefly in such a communion and right in one another's bodies as is necessary to its chief end, procreation; yet it draws with it mutual support and assistance, and a communion of interests too, as necessary not only to unite their care and affection, but also necessary to their

common off-spring, who have a right to be nourished, and maintained by them, till they are able to provide for themselves.

Sect. 79. For the end of conjunction, between male and female, being not barely procreation, but the continuation of the species; thisconjunction betwixt male and female ought to last, even after procreation, so long as is necessary to the nourishment and support of the young ones, who are to be sustained by those that got them, till they are able to shift and provide for themselves. This rule, which the infinite wise maker hath set to the works of his hands, we find the inferior creatures steadily obey. In those viviparous animals which feed on grass, the conjunction between male and female lasts no longer than the very act of copulation; because the teat of the dam being sufficient to nourish the young, till it be able to feed on grass, the male only begets, but concerns not himself for the female or young, to whose sustenance he can contribute nothing. But in beasts of prey the conjunction lasts longer: because the dam not being able well to subsist herself, and nourish her numerous off-spring by her own prey alone, a more laborious, as well as more dangerous way of living, than by feeding on grass, the assistance of the male is necessary to the maintenance of their common family, which cannot subsist till they are able to prey for themselves, but by the joint care of male and female. The same is to be observed in all birds, (except some domestic ones, where plenty of food excuses the cock from feeding, and taking care of the young brood) whose young needing food in the nest, the cock and hen continue mates, till the young are able to use their wing, and provide for themselves.

Sect. 80. And herein I think lies the chief, if not the only reason, why the male and female in mankind are tied to a longer conjunction than other creatures, viz. because the female is capable of conceiving, and de facto is commonly with child again, and brings forth too a new birth, long before the former is out of a dependency for support on his parents help, and able to shift for himself, and has all the assistance is due to him from his parents: whereby the father, who is bound to take care for those he hath begot, is under an obligation to continue in conjugal society with the same woman longer than other creatures, whose young being able to subsist of themselves, before the time of procreation returns again, the conjugal bond dissolves of itself, and they are at liberty, till Hymen at his usual anniversary season summons them again to chuse new mates. Wherein one cannot but admire the wisdom of the great Creator, who having given to man foresight, and an ability to lay up for the future, as well as to supply the present necessity, hath made it necessary, that society of man and wife should be more lasting, than of male and female amongst other creatures; that so their industry might be encouraged, and their interest better united, to make provision and lay up goods for their common issue, which uncertain mixture, or easy and frequent solutions of conjugal society would mightily disturb.

Sect. 81. But tho' these are ties upon mankind, which make the conjugal bonds more firm and lasting in man, than the other species of animals; yet it would give one reason to enquire, why this compact, where procreation and education are secured, and inheritance taken care for, may not be made determinable, either by consent, or at a certain time, or upon certain conditions, as well as any other voluntary compacts, there being no necessity in the nature of the thing, nor to the ends of it, that it should always be for life; I mean, to such as are under no restraint of any positive law, which ordains all such contracts to be perpetual.

Sect. 82. But the husband and wife, though they have but one common concern, yet having different understandings, will unavoidably sometimes have different wills too; it therefore being necessary that the last determination, i. e. the rule, should be placed somewhere; it naturally falls to the man's share, as the abler and the stronger. But this reaching but to the things of their common interest and property, leaves the wife in the full and free possession of what by contract is her peculiar right, and gives the husband no more power over her life than she has over his; the power of the husband being so far from that of an absolute monarch, that the wife has in many cases a liberty to separate from him, where natural right, or their contract allows it; whether that contract be made by themselves in the state of nature, or by the customs or laws of the country they live in; and the children upon such separation fall to the father or mother's lot, as such contract does determine.

Sect. 83. For all the ends of marriage being to be obtained under politic government, as well as in the state of nature, the civil magistrate doth not abridge the right or power of either naturally necessary to those ends, viz. procreation and mutual support and assistance whilst they are together; but only decides any controversy that may arise between man and wife about them. If it were otherwise, and that absolute sovereignty and power of life and death naturally belonged to the husband, and were necessary to the society between man and wife, there could be no matrimony in any of those countries where the husband is allowed no such absolute authority. But the ends of matrimony requiring no such power in the husband, the condition of conjugal society put it not in him, it being not at all necessary to that state. Conjugal society could subsist and attain its ends without it; nay, community of goods, and the power over them, mutual assistance and maintenance, and other things belonging to conjugal society, might be varied and regulated by that contract which unites man and wife in that society, as far as may consist with procreation and the bringing up of children till they could shift for themselves; nothing being necessary to any society, that is not necessary to the ends for which it is made.

Sect. 84. The society betwixt parents and children, and the distinct rights and powers belonging respectively to them, I have treated of so largely, in the foregoing chapter, that I shall not here need to say any thing of it. And I think it is plain, that it is far different from a politic society.

Sect. 85. Master and servant are names as old as history, but given to those of far different condition; for a freeman makes himself a servant to another, by selling him, for a certain time, the service he undertakes to do, in exchange for wages he is to receive: and though this commonly puts him into the family of his master, and under the ordinary discipline thereof; yet it gives the master but a temporary power over him, and no greater than what is contained in the contract between them. But there is another sort of servants, which by a peculiar name we call slaves, who being captives taken in a just war, are by the right of nature subjected to the absolute dominion and arbitrary power of their masters. These men having, as I say, forfeited their lives, and with it their liberties, and lost their estates; and being in the state of slavery, not capable of any property, cannot in that state be considered as any part of civil society; the chief end whereof is the preservation of property.

Sect. 86. Let us therefore consider a master of a family with all these subordinate relations of wife, children, servants, and slaves, united under the domestic rule of a family; which, what resemblance soever it may have in its order, offices, and number too, with a little commonwealth, yet is very far from it, both in its constitution, power and end: or if it must be thought a monarchy, and the paterfamilias the absolute monarch in it, absolute monarchy will have but a very shattered and short power, when it is plain, by what has been said before, that the master of the family has a very distinct and differently limited power, both as to time and extent, over those several persons that are in it; for excepting the slave (and the family is as much a family, and his power as paterfamilias as great, whether there be any slaves in his family or no) he has no legislative power of life and death over any of them, and none too but what a mistress of a family may have as well as he. And he certainly can have no absolute power over the whole family, who has but a very limited one over every individual in it. But how a family, or any other society of men, differ from that which is properly political society, we shall best see, by considering wherein political society itself consists.

Sect. 87. Man being born, as has been proved, with a title to perfect freedom, and an uncontrouled enjoyment of all the rights and privileges of the law of nature, equally with any other man, or number of men in the world, hath by nature a power, not only to preserve his property, that is, his life, liberty and estate, against the injuries and attempts of other men; but to judge of, and punish the breaches of that law in others, as he is persuaded the offence deserves, even with death itself, in crimes where the heinousness of the fact, in his opinion, requires it. But because no political society can be, nor subsist, without having in itself the power to preserve the property, and in order thereunto, punish the offences of all those of that society; there, and there only is political society, where every one of the members hath quitted this natural power, resigned it up into the hands of the community in all cases that exclude him not from appealing for protection to the law established by it. And thus all private judgment of every particular member being excluded, the community comes to be umpire, by settled standing rules, indifferent, and the same to all parties; and by men having authority from the community, for the execution of those rules, decides all the differences that may happen between any members of that society concerning any matter of right; and punishes those offences which any member hath committed against the society, with such penalties as the law has established: whereby it is easy to discern, who are, and who are not, in political society together. Those who are united into one body, and have a common established law and judicature to appeal to, with authority to decide controversies between them, and punish offenders, are in civil society one with another: but those who have no such common appeal, I mean on earth, are still in the state of nature, each being, where there is no other, judge for himself, and executioner; which is, as I have before shewed it, the perfect state of nature.

Sect. 88. And thus the commonwealth comes by a power to set down what punishment shall belong to the several transgressions which they think worthy of it, committed amongst the members of that society, (which is the power of making laws) as well as it has the power to punish any injury done unto any of its members, by any one that is not of it, (which is the power of war and peace;) and all this for the preservation of the property of all the members of that society, as far as is possible. But though every man who has entered into civil society, and is become a member of any commonwealth, has thereby quitted his power to punish offences, against the law of nature, in prosecution of his own private judgment, yet with the judgment of offences, which he has given up to the legislative in all cases, where he can appeal to the magistrate, he has given a right to the commonwealth to employ his force, for the execution of the judgments of the commonwealth, whenever he shall be called to it; which indeed are his own judgments, they being made by himself, or his representative. And herein we have the original of the legislative and executive power of civil society, which is to judge by standing laws, how far offences are to be punished, when committed within the commonwealth; and also to determine, by occasional judgments founded on the present circumstances of the fact, how far injuries from without are to be vindicated; and in both these to employ all the force of all the members, when there shall be need.

Sect. 89. Where-ever therefore any number of men are so united into one society, as to quit every one his executive power of the law of nature, and to resign it to the public, there and there only is a political, or civil society. And this is done, where-ever any number of men, in the state of nature, enter into society to make one people, one body politic, under one supreme government; or else when any one joins himself to, and incorporates with any government already made: for hereby he authorizes the society, or which is all one, the legislative thereof, to make laws for him, as the public good of the society shall require; to the execution whereof, his own assistance (as to his own decrees) is due. And this puts men out of a state of nature into that of a commonwealth, by setting up a judge on earth, with authority to determine all the controversies, and redress the injuries that may happen to any member of the commonwealth; which judge is the legislative, or magistrates appointed by it. And where-ever there are any number of men, however associated, that have no such decisive power to appeal to, there they are still in the state of nature.

Sect. 90. Hence it is evident, that absolute monarchy, which by some men is counted the only government in the world, is indeed inconsistent with civil society, and so can be no form of civil-government at all: for the end of civil society, being to avoid, and remedy those inconveniencies of the state of nature, which necessarily follow from every man's being judge in his own case, by setting up a known authority, to which every one of that society may appeal upon any injury received, or controversy that may arise, and which every one of the society ought to obey;* where-ever any persons are, who have not such an authority to appeal to, for the decision of any difference between them, there those persons are still in the state of nature; and so is every absolute prince, in respect of those who are under his dominion.

(*The public power of all society is above every soul contained in the same society; and the principal use of that power is, to give laws unto all that are under it, which laws in such cases we must obey, unless there be reason shewed which may necessarily inforce, that the law of reason, or of God, doth enjoin the contrary, Hook. Eccl. Pol. l. i. sect. 16.)

Sect. 91. For he being supposed to have all, both legislative and executive power in himself alone, there is no judge to be found, no appeal lies open to any one, who may fairly, and indifferently, and with authority decide, and from whose decision relief and redress may be expected of any injury or inconviency, that may be suffered from the prince, or by his order: so that such a man, however intitled, Czar, or Grand Seignior, or how you please, is as much in the state of nature, with all under his dominion, as he is with the rest of mankind: for where-ever any two men are, who have no standing rule, and common judge to appeal to on earth, for the determination of controversies of right betwixt them, there they are still in the state of* nature, and under all the inconveniencies of it, with only this woful difference to the subject, or rather slave of an absolute prince: that whereas, in the ordinary state of nature, he has a liberty to judge of his right, and according to the best of his power, to maintain it; now, whenever his property is invaded by the will and order of his monarch, he has not only no appeal, as those in society ought to have, but as if he were degraded from the common state of rational creatures, is denied a liberty to judge of, or to defend his right; and so is exposed to all the misery and inconveniencies, that a man can fear from one, who being in the unrestrained state of nature, is yet corrupted with flattery, and armed with power.

(*To take away all such mutual grievances, injuries and wrongs, i.e. such as attend men in the state of nature, there was no way but only by growing into composition and agreement amongst themselves, by ordaining some kind of govemment public, and by yielding themselves subject thereunto, that unto whom they granted authority to rule and govem, by them the peace, tranquillity and happy estate of the rest might be procured. Men always knew that where force and injury was offered, they might be defenders of themselves; they knew that however men may seek their own commodity, yet if this were done with injury unto others, it was not to be suffered, but by all men, and all good means to be withstood. Finally, they knew that no man might in reason take upon him to determine his own right, and according to his own determination proceed in maintenance thereof, in as much as every man is towards himself, and them whom he greatly affects, partial; and therefore that strifes and troubles would be endless, except they gave their common consent, all to be ordered by some, whom they should agree upon, without which consent there would be no reason that one man should take upon him to be lord or judge over another, Hooker's Eccl. Pol. l. i. sect. 10.)

Sect. 92. For he that thinks absolute power purifies men's blood, and corrects the baseness of human nature, need read but the history of this, or any other age, to be convinced of the contrary. He that would have been insolent and injurious in the woods of America, would not probably be much better in a throne; where perhaps learning and religion shall be found out to justify all that he shall do to his subjects, and the sword presently silence all those that dare question it: for what the protection of absolute monarchy is, what kind of fathers of their countries it makes princes to be and to what a degree of happiness and security it carries civil society, where this sort of government is grown to perfection, he that will look into the late relation of Ceylon, may easily see.

Sect. 93. In absolute monarchies indeed, as well as other governments of the world, the subjects have an appeal to the law, and judges to decide any controversies, and restrain any violence that may happen betwixt the subjects themselves, one amongst another. This every one thinks necessary, and believes he deserves to be thought a declared enemy to society and mankind, who should go about to take it away. But whether this be from a true love of mankind and society, and such a charity as we owe all one to another, there is reason to doubt: for this is no more than what every man, who loves his own power, profit, or greatness, may and naturally must do, keep those animals from hurting, or destroying one another, who labour and drudge only for his pleasure and advantage; and so are taken care of, not out of any love the master has for them, but love of himself, and the profit they bring him: for if it be asked, what security, what fence is there, in such a state, against the violence and oppression of this absolute ruler? the very question can scarce be borne. They are ready to tell you, that it deserves death only to ask after safety. Betwixt subject and subject, they will grant, there must be measures, laws and judges, for their mutual peace and security: but as for the ruler, he ought to be absolute, and is above all such circumstances; because he has power to do more hurt and wrong, it is right when he does it. To ask how you may be guarded from harm, or injury, on that side where the strongest hand is to do it, is presently the voice of faction and rebellion: as if when men quitting the state of nature entered into society, they agreed that all of them but one, should be under the restraint of laws, but that he should still retain all the liberty of the state of nature, increased with power, and made licentious by impunity. This is to think, that men are so foolish, that they take care to avoid what mischiefs may be done them by pole-cats, or foxes; but are content, nay, think it safety, to be devoured by lions.

Sect. 94. But whatever flatterers may talk to amuse people's understandings, it hinders not men from feeling; and when they perceive, that any man, in what station soever, is out of the bounds of the civil society which they are of, and that they have no appeal on earth against any harm, they may receive from him, they are apt to think themselves in the state of nature, in respect of him whom they find to be so; and to take care, as soon as they can, to have that safety and security in civil society, for which it was first instituted, and for which only they entered into it. And therefore, though perhaps at first, (as shall be shewed more at large hereafter in the following part of this discourse) some one good and excellent man having got a pre-eminency amongst the rest, had this deference paid to his goodness and virtue, as to a kind of natural authority, that the chief rule, with arbitration of their differences, by a tacit consent devolved into his hands, without any other caution, but the assurance they had of his uprightness and wisdom; yet when time, giving authority, and (as some men would persuade us) sacredness of customs, which the negligent, and unforeseeing innocence of the first ages began, had brought in successors of another stamp, the people finding their properties not secure under the government, as then it was, (whereas government has no other end but the preservation of* property) could never be safe nor at rest, nor think themselves in civil society, till the legislature was placed in collective bodies of men, call them senate, parliament, or what you please. By which means every single person became subject, equally with other the meanest men, to those laws, which he himself, as part of the legislative, had established; nor could any one, by his own authority; avoid the force of the law, when once made; nor by any pretence of superiority plead exemption, thereby to license his own, or the miscarriages of any of his dependents.** No man in civil society can be exempted from the laws of it: for if any man may do what he thinks fit, and there be no appeal on earth, for redress or security against any harm he shall do; I ask, whether he be not perfectly still in the state of nature, and so can be no part or member of that civil society; unless any one will say, the state of nature and civil society are one and the same thing, which I have never yet found any one so great a patron of anarchy as to affirm.

(*At the first, when some certain kind of regiment was once appointed, it may be that nothing was then farther thought upon for the manner of goveming, but all permitted unto their wisdom and discretion, which were to rule, till by experience they found this for all parts very inconvenient, so as the thing which they had devised for a remedy, did indeed but increase the sore, which it should have cured. They saw, that to live by one man's will, became the cause of all men's misery. This constrained them to come unto laws, wherein all men might see their duty beforehand, and know the penalties of transgressing them. Hooker's Eccl. Pol. l. i. sect. 10.)

(**Civil law being the act of the whole body politic, doth therefore over-rule each several part of the same body. Hooker, ibid.)

CHAPTER. VIII.

OF THE BEGINNING OF POLITICAL SOCIETIES.

Sect. 95. MEN being, as has been said, by nature, all free, equal, and independent, no one can be put out of this estate, and subjected to the political power of another, without his own consent. The only way whereby any one divests himself of his natural liberty, and puts on the bonds of civil society, is by agreeing with other men to join and unite into a community for their comfortable,

safe, and peaceable living one amongst another, in a secure enjoyment of their properties, and a greater security against any, that are not of it. This any number of men may do, because it injures not the freedom of the rest; they are left as they were in the liberty of the state of nature. When any number of men have so consented to make one community or government, they are thereby presently incorporated, and make one body politic, wherein the majority have a right to act and conclude the rest.

Sect. 96. For when any number of men have, by the consent of every individual, made a community, they have thereby made that community one body, with a power to act as one body, which is only by the will and determination of the majority: for that which acts any community, being only the consent of the individuals of it, and it being necessary to that which is one body to move one way; it is necessary the body should move that way whither the greater force carries it, which is the consent of the majority: or else it is impossible it should act or continue one body, one community, which the consent of every individual that united into it, agreed that it should; and so every one is bound by that consent to be concluded by the majority. And therefore we see, that in assemblies, impowered to act by positive laws, where no number is set by that positive law which impowers them, the act of the majority passes for the act of the whole, and of course determines, as having, by the law of nature and reason, the power of the whole.

Sect. 97. And thus every man, by consenting with others to make one body politic under one government, puts himself under an obligation, to every one of that society, to submit to the determination of the majority, and to be concluded by it; or else this original compact, whereby he with others incorporates into one society, would signify nothing, and be no compact, if he be left free, and under no other ties than he was in before in the state of nature. For what appearance would there be of any compact? what new engagement if he were no farther tied by any decrees of the society, than he himself thought fit, and did actually consent to? This would be still as great a liberty, as he himself had before his compact, or any one else in the state of nature hath, who may submit himself, and consent to any acts of it if he thinks fit.

Sect. 98. For if the consent of the majority shall not, in reason, be received as the act of the whole, and conclude every individual; nothing but the consent of every individual can make any thing to be the act of the whole: but such a consent is next to impossible ever to be had, if we consider the infirmities of health, and avocations of business, which in a number, though much less than that of a commonwealth, will necessarily keep many away from the public assembly. To which if we add the variety of opinions, and contrariety of interests, which unavoidably happen in all collections of men, the coming into society upon such terms would be only like Cato's coming into the theatre, only to go out again. Such a constitution as this would make the mighty Leviathan of a shorter duration, than the feeblest creatures, and not let it outlast the day it was born in: which cannot be supposed, till we can think, that rational creatures should desire and constitute societies only to be dissolved: for where the majority cannot conclude the rest, there they cannot act as one body, and consequently will be immediately dissolved again.

Sect. 99. Whosoever therefore out of a state of nature unite into a community, must be understood to give up all the power, necessary to the ends for which they unite into society, to the majority of the community, unless they expresly agreed in any number greater than the majority. And this is done by barely agreeing to unite into one political society, which is all the compact that is, or needs be, between the individuals, that enter into, or make up a commonwealth. And thus that, which begins and actually constitutes any political society, is nothing but the consent of any number of freemen capable of a majority to unite and incorporate into such a society. And this is that, and that only, which did, or could give beginning to any lawful government in the world.

Sect. 100. To this I find two objections made. First, That there are no instances to be found in story, of a company of men independent, and equal one amongst another, that met together, and in this way began and set up a government.

Secondly, It is impossible of right, that men should do so, because all men being born under government, they are to submit to that, and are not at liberty to begin a new one.

Sect. 101. To the first there is this to answer, That it is not at all to be wondered, that history gives us but a very little account of men, that lived together in the state of nature. The inconveniences of that condition, and the love and want of society, no sooner brought any number of them together, but they presently united and incorporated, if they designed to continue together. And if we may not suppose men ever to have been in the state of nature, because we hear not much of them in such a state, we may as well suppose the armies of Salmanasser or Xerxes were never children, because we hear little of them, till they were men, and imbodied in armies. Government is every where antecedent to records, and letters seldom come in amongst a people till a long continuation of civil society has, by other more necessary arts, provided for their safety, ease, and plenty: and then they begin to look after the history of their founders, and search into their original, when they have outlived the memory of it: for it is with commonwealths as with particular persons, they are commonly ignorant of their own births and infancies: and if they know any

thing of their original, they are beholden for it, to the accidental records that others have kept of it. And those that we have, of the beginning of any polities in the world, excepting that of the Jews, where God himself immediately interposed, and which favours not at all paternal dominion, are all either plain instances of such a beginning as I have mentioned, or at least have manifest footsteps of it.

Sect. 102. He must shew a strange inclination to deny evident matter of fact, when it agrees not with his hypothesis, who will not allow, that the beginning of Rome and Venice were by the uniting together of several men free and independent one of another, amongst whom there was no natural superiority or subjection. And if Josephus Acosta's word may be taken, he tells us, that in many parts of America there was no government at all.

There are great and apparent conjectures, says he, that these men, speaking of those of Peru, for a long time had neither kings nor commonwealths, but lived in troops, as they do this day in Florida, the Cheriquanas, those of Brazil, and many other nations, which have no certain kings, but as occasion is offered, in peace or war, they choose their captains as they please, 1. i. c. 25.

If it be said, that every man there was born subject to his father, or the head of his family; that the subjection due from a child to a father took not away his freedom of uniting into what political society he thought fit, has been already proved. But be that as it will, these men, it is evident, were actually free; and whatever superiority some politicians now would place in any of them, they themselves claimed it not, but by consent were all equal, till by the same consent they set rulers over themselves. So that their politic societies all began from a voluntary union, and the mutual agreement of men freely acting in the choice of their governors, and forms of government.

Sect. 103. And I hope those who went away from Sparta with Palantus, mentioned by Justin, 1. iii. c. 4. will be allowed to have been freemen independent one of another, and to have set up a government over themselves, by their own consent. Thus I have given several examples, out of history, of people free and in the state of nature, that being met together incorporated and began a commonwealth. And if the want of such instances be an argument to prove that government were not, nor could not be so begun, I suppose the contenders for paternal empire were better let it alone, than urge it against natural liberty: for if they can give so many instances, out of history, of governments begun upon paternal right, I think (though at best an argument from what has been, to what should of right be, has no great force) one might, without any great danger, yield them the cause. But if I might advise them in the case, they would do well not to search too much into the original of governments, as they have begun de facto, lest they should find, at the foundation of most of them, something very little favourable to the design they promote, and such a power as they contend for.

Sect. 104. But to conclude, reason being plain on our side, that men are naturally free, and the examples of history shewing, that the governments of the world, that were begun in peace, had their beginning laid on that foundation, and were made by the consent of the people; there can be little room for doubt, either where the right is, or what has been the opinion, or practice of mankind, about the first erecting of governments.

Sect. 105. I will not deny, that if we look back as far as history will direct us, towards the original of commonwealths, we shall generally find them under the government and administration of one man. And I am also apt to believe, that where a family was numerous enough to subsist by itself, and continued entire together, without mixing with others, as it often happens, where there is much land, and few people, the government commonly began in the father: for the father having, by the law of nature, the same power with every man else to punish, as he thought fit, any offences against that law, might thereby punish his transgressing children, even when they were men, and out of their pupilage; and they were very likely to submit to his punishment, and all join with him against the offender, in their turns, giving him thereby power to execute his sentence against any transgression, and so in effect make him the law-maker, and governor over all that remained in conjunction with his family. He was fittest to be trusted; paternal affection secured their property and interest under his care; and the custom of obeying him, in their childhood, made it easier to submit to him, rather than to any other. If therefore they must have one to rule them, as government is hardly to be avoided amongst men that live together; who so likely to be the man as he that was their common father; unless negligence, cruelty, or any other defect of mind or body made him unfit for it? But when either the father died, and left his next heir, for want of age, wisdom, courage, or any other qualities, less fit for rule; or where several families met, and consented to continue together; there, it is not to be doubted, but they used their natural freedom, to set up him, whom they judged the ablest, and most likely, to rule well over them. Conformable hereunto we find the people of America, who (living out of the reach of the conquering swords, and spreading domination of the two great empires of Peru and Mexico) enjoyed their own natural freedom, though, caeteris paribus, they commonly prefer the heir of their deceased king; yet if they find him any way weak, or uncapable, they pass him by,

and set up the stoutest and bravest man for their ruler.

Sect. 106. Thus, though looking back as far as records give us any account of peopling the world, and the history of nations, we commonly find the government to be in one hand; yet it destroys not that which I affirm, viz. that the beginning of politic society depends upon the consent of the individuals, to join into, and make one society; who, when they are thus incorporated, might set up what form of government they thought fit. But this having given occasion to men to mistake, and think, that by nature government was monarchical, and belonged to the father, it may not be amiss here to consider, why people in the beginning generally pitched upon this form, which though perhaps the father's pre-eminency might, in the first institution of some commonwealths, give a rise to, and place in the beginning, the power in one hand; yet it is plain that the reason, that continued the form of government in a single person, was not any regard, or respect to paternal authority; since all petty monarchies, that is, almost all monarchies, near their original, have been commonly, at least upon occasion, elective.

Sect. 107. First then, in the beginning of things, the father's government of the childhood of those sprung from him, having accustomed them to the rule of one man, and taught them that where it was exercised with care and skill, with affection and love to those under it, it was sufficient to procure and preserve to men all the political happiness they sought for in society. It was no wonder that they should pitch upon, and naturally run into that form of government, which from their infancy they had been all accustomed to; and which, by experience, they had found both easy and safe. To which, if we add, that monarchy being simple, and most obvious to men, whom neither experience had instructed in forms of government, nor the ambition or insolence of empire had taught to beware of the encroachments of prerogative, or the inconveniences of absolute power, which monarchy in succession was apt to lay claim to, and bring upon them, it was not at all strange, that they should not much trouble themselves to think of methods of restraining any exorbitances of those to whom they had given the authority over them, and of balancing the power of government, by placing several parts of it in different hands. They had neither felt the oppression of tyrannical dominion, nor did the fashion of the age, nor their possessions, or way of living, (which afforded little matter for covetousness or ambition) give them any reason to apprehend or provide against it; and therefore it is no wonder they put themselves into such a frame of government, as was not only, as I said, most obvious and simple, but also best suited to their present state and condition; which stood more in need of defence against foreign invasions and injuries, than of multiplicity of laws. The equality of a simple poor way of living, confining their desires within the narrow bounds of each man's small property, made few controversies, and so no need of many laws to decide them, or variety of officers to superintend the process, or look after the execution of justice, where there were but few trespasses, and few offenders. Since then those, who like one another so well as to join into society, cannot but be supposed to have some acquaintance and friendship together, and some trust one in another; they could not but have greater apprehensions of others, than of one another: and therefore their first care and thought cannot but be supposed to be, how to secure themselves against foreign force. It was natural for them to put themselves under a frame of government which might best serve to that end, and chuse the wisest and bravest man to conduct them in their wars, and lead them out against their enemies, and in this chiefly be their ruler.

Sect. 108. Thus we see, that the kings of the Indians in America, which is still a pattern of the first ages in Asia and Europe, whilst the inhabitants were too few for the country, and want of people and money gave men no temptation to enlarge their possessions of land, or contest for wider extent of ground, are little more than generals of their armies; and though they command absolutely in war, yet at home and in time of peace they exercise very little dominion, and have but a very moderate sovereignty, the resolutions of peace and war being ordinarily either in the people, or in a council. Tho' the war itself, which admits not of plurality of governors, naturally devolves the command into the king's sole authority.

Sect. 109. And thus in Israel itself, the chief business of their judges, and first kings, seems to have been to be captains in war, and leaders of their armies; which (besides what is signified by going out and in before the people, which was, to march forth to war, and home again in the heads of their forces) appears plainly in the story of Jephtha. The Ammonites making war upon Israel, the Gileadites in fear send to Jephtha, a bastard of their family whom they had cast off, and article with him, if he will assist them against the Ammonites, to make him their ruler; which they do in these words, And the people made him head and captain over them, Judg. xi, 11. which was, as it seems, all one as to be judge. And he judged Israel, judg. xii. 7. that is, was their captain-general six years. So when Jotham upbraids the Shechemites with the obligation they had to Gideon, who had been their judge and ruler, he tells them, He fought for you, and adventured his life far, and delivered you out of the hands of Midian, Judg. ix. 17. Nothing mentioned of him but what he did as a general: and indeed that is all is found in his history, or in any of the rest of the judges. And Abimelech particularly is called king, though at most he was but their general. And when, being weary of the ill conduct of Samuel's sons, the children of Israel desired a king, like all the nations to judge them, and to go out before them, and to fight

their battles, I. Sam viii. 20. God granting their desire, says to Samuel, I will send thee a man, and thou shalt anoint him to be captain over my people Israel, that he may save my people out of the hands of the Philistines, ix. 16. As if the only business of a king had been to lead out their armies, and fight in their defence; and accordingly at his inauguration pouring a vial of oil upon him, declares to Saul, that the Lord had anointed him to be captain over his inheritance, x. 1. And therefore those, who after Saul's being solemnly chosen and saluted king by the tribes at Mispah, were unwilling to have him their king, made no other objection but this, How shall this man save us? v. 27. as if they should have said, this man is unfit to be our king, not having skill and conduct enough in war, to be able to defend us. And when God resolved to transfer the government to David, it is in these words, But now thy kingdom shall not continue: the Lord hath sought him a man after his own heart, and the Lord hath commanded him to be captain over his people, xiii. 14. As if the whole kingly authority were nothing else but to be their general: and therefore the tribes who had stuck to Saul's family, and opposed David's reign, when they came to Hebron with terms of submission to him, they tell him, amongst other arguments they had to submit to him as to their king, that he was in effect their king in Saul's time, and therefore they had no reason but to receive him as their king now. Also (say they) in time past, when Saul was king over us, thou wast he that reddest out and broughtest in Israel, and the Lord said unto thee, Thou shalt feed my people Israel, and thou shalt be a captain over Israel.

Sect. 110. Thus, whether a family by degrees grew up into a commonwealth, and the fatherly authority being continued on to the elder son, every one in his turn growing up under it, tacitly submitted to it, and the easiness and equality of it not offending any one, every one acquiesced, till time seemed to have confirmed it, and settled a right of succession by prescription: or whether several families, or the descendants of several families, whom chance, neighbourhood, or business brought together, uniting into society, the need of a general, whose conduct might defend them against their enemies in war, and the great confidence the innocence and sincerity of that poor but virtuous age, (such as are almost all those which begin governments, that ever come to last in the world) gave men one of another, made the first beginners of commonwealths generally put the rule into one man's hand, without any other express limitation or restraint, but what the nature of the thing, and the end of government required: which ever of those it was that at first put the rule into the hands of a single person, certain it is no body was intrusted with it but for the public good and safety, and to those ends, in the infancies of commonwealths, those who had it commonly used it. And unless they had done so, young societies could not have subsisted; without such nursing fathers tender and careful of the public weal, all governments would have sunk under the weakness and infirmities of their infancy, and the prince and the people had soon perished together.

Sect. 111. But though the golden age (before vain ambition, and amor sceleratus habendi, evil concupiscence, had corrupted men's minds into a mistake of true power and honour) had more virtue, and consequently better governors, as well as less vicious subjects, and there was then no stretching prerogative on the one side, to oppress the people; nor consequently on the other, any dispute about privilege, to lessen or restrain the power of the magistrate, and so no contest betwixt rulers and people about governors or government: yet, when ambition and luxury in future ages* would retain and increase the power, without doing the business for which it was given; and aided by flattery, taught princes to have distinct and separate interests from their people, men found it necessary to examine more carefully the original and rights of government; and to find out ways to restrain the exorbitances, and prevent the abuses of that power, which they having intrusted in another's hands only for their own good, they found was made use of to hurt them.

(*At first, when some certain kind of regiment was once approved, it may be nothing was then farther thought upon for the manner of governing, but all permitted unto their wisdom and discretion which were to rule, till by experience they found this for all parts very inconvenient, so as the thing which they had devised for a remedy, did indeed but increase the sore which it should have cured. They saw, that to live by one man's will, became the cause of all men's misery. This constrained them to come unto laws wherein all men might see their duty before hand, and know the penalties of transgressing them. Hooker's Eccl. Pol. l. i. sect. 10.)

Sect. 112. Thus we may see how probable it is, that people that were naturally free, and by their own consent either submitted to the government of their father, or united together out of different families to make a government, should generally put the rule into one man's hands, and chuse to be under the conduct of a single person, without so much as by express conditions limiting or regulating his power, which they thought safe enough in his honesty and prudence; though they never dreamed of monarchy being lure Divino, which we never heard of among mankind, till it was revealed to us by the divinity of this last age; nor ever allowed paternal power to have a right to dominion, or to be the foundation of all government. And thus much may suffice to shew, that as far as we have any light from history, we have reason to conclude, that all peaceful beginnings of government have been laid in the consent of the people. I say peaceful, because I shall have occasion in another place to speak of conquest, which some esteem a way of beginning of governments.

The other objection I find urged against the beginning of polities, in the way I have mentioned, is this, viz.

Sect. 113. That all men being born under government, some or other, it is impossible any of them should ever be free, and at liberty to unite together, and begin a new one, or ever be able to erect a lawful government.

If this argument be good; I ask, how came so many lawful monarchies into the world? for if any body, upon this supposition, can shew me any one man in any age of the world free to begin a lawful monarchy, I will be bound to shew him ten other free men at liberty, at the same time to unite and begin a new government under a regal, or any other form; it being demonstration, that if any one, born under the dominion of another, may be so free as to have a right to command others in a new and distinct empire, every one that is born under the dominion of another may be so free too, and may become a ruler, or subject, of a distinct separate government. And so by this their own principle, either all men, however born, are free, or else there is but one lawful prince, one lawful government in the world. And then they have nothing to do, but barely to shew us which that is; which when they have done, I doubt not but all mankind will easily agree to pay obedience to him.

Sect. 114. Though it be a sufficient answer to their objection, to shew that it involves them in the same difficulties that it doth those they use it against; yet I shall endeavour to discover the weakness of this argument a little farther. All men, say they, are born under government, and therefore they cannot be at liberty to begin a new one. Every one is born a subject to his father, or his prince, and is therefore under the perpetual tie of subjection and allegiance. It is plain mankind never owned nor considered any such natural subjection that they were born in, to one or to the other that tied them, without their own consents, to a subjection to them and their heirs.

Sect. 115. For there are no examples so frequent in history, both sacred and profane, as those of men withdrawing themselves, and their obedience, from the jurisdiction they were born under, and the family or community they were bred up in, and setting up new governments in other places; from whence sprang all that number of petty commonwealths in the beginning of ages, and which always multiplied, as long as there was room enough, till the stronger, or more fortunate, swallowed the weaker; and those great ones again breaking to pieces, dissolved into lesser dominions. All which are so many testimonies against paternal sovereignty, and plainly prove, that it was not the natural right of the father descending to his heirs, that made governments in the beginning, since it was impossible, upon that ground, there should have been so many little kingdoms; all must have been but only one universal monarchy, if men had not been at liberty to separate themselves from their families, and the government, be it what it will, that was set up in it, and go and make distinct commonwealths and other governments, as they thought fit.

Sect. 116. This has been the practice of the world from its first beginning to this day; nor is it now any more hindrance to the freedom of mankind, that they are born under constituted and ancient polities, that have established laws, and set forms of government, than if they were born in the woods, amongst the unconfined inhabitants, that run loose in them: for those, who would persuade us, that by being born under any government, we are naturally subjects to it, and have no more any title or pretence to the freedom of the state of nature, have no other reason (bating that of paternal power, which we have already answered) to produce for it, but only, because our fathers or progenitors passed away their natural liberty, and thereby bound up themselves and their posterity to a perpetual subjection to the government, which they themselves submitted to. It is true, that whatever engagements or promises any one has made for himself, he is under the obligation of them, but cannot, by any compact whatsoever, bind his children or posterity: for his son, when a man, being altogether as free as the father, any act of the father can no more give away the liberty of the son, than it can of any body else: he may indeed annex such conditions to the land, he enjoyed as a subject of any commonwealth, as may oblige his son to be of that community, if he will enjoy those possessions which were his father's; because that estate being his father's property, he may dispose, or settle it, as he pleases.

Sect. 117. And this has generally given the occasion to mistake in this matter; because commonwealths not permitting any part of their dominions to be dismembered, nor to be enjoyed by any but those of their community, the son cannot ordinarily enjoy the possessions of his father, but under the same terms his father did, by becoming a member of the society; whereby he puts himself presently under the government he finds there established, as much as any other subject of that commonwealth. And thus the consent of freemen, born under government, which only makes them members of it, being given separately in their turns, as each comes to be of age, and not in a multitude together; people take no notice of it, and thinking it not done at all, or not necessary, conclude they are naturally subjects as they are men.

Sect. 118. But, it is plain, governments themselves understand it otherwise; they claim no power over the son, because of that they had over the father; nor look on children as being their subjects, by their fathers being so. If a subject of England have a child, by an

English woman in France, whose subject is he? Not the king of England's; for he must have leave to be admitted to the privileges of it: nor the king of France's; for how then has his father a liberty to bring him away, and breed him as he pleases? and who ever was judged as a traytor or deserter, if he left, or warred against a country, for being barely born in it of parents that were aliens there? It is plain then, by the practice of governments themselves, as well as by the law of right reason, that a child is born a subject of no country or government. He is under his father's tuition and authority, till he comes to age of discretion; and then he is a freeman, at liberty what government he will put himself under, what body politic he will unite himself to: for if an Englishman's son, born in France, be at liberty, and may do so, it is evident there is no tie upon him by his father's being a subject of this kingdom; nor is he bound up by any compact of his ancestors. And why then hath not his son, by the same reason, the same liberty, though he be born any where else? Since the power that a father hath naturally over his children, is the same, where-ever they be born, and the ties of natural obligations, are not bounded by the positive limits of kingdoms and commonwealths.

Sect. 119. Every man being, as has been shewed, naturally free, and nothing being able to put him into subjection to any earthly power, but only his own consent; it is to be considered, what shall be understood to be a sufficient declaration of a man's consent, to make him subject to the laws of any government. There is a common distinction of an express and a tacit consent, which will concern our present case. No body doubts but an express consent, of any man entering into any society, makes him a perfect member of that society, a subject of that government. The difficulty is, what ought to be looked upon as a tacit consent, and how far it binds, i.e. how far any one shall be looked on to have consented, and thereby submitted to any government, where he has made no expressions of it at all. And to this I say, that every man, that hath any possessions, or enjoyment, of any part of the dominions of any government, doth thereby give his tacit consent, and is as far forth obliged to obedience to the laws of that government, during such enjoyment, as any one under it; whether this his possession be of land, to him and his heirs for ever, or a lodging only for a week; or whether it be barely travelling freely on the highway; and in effect, it reaches as far as the very being of any one within the territories of that government.

Sect. 120. To understand this the better, it is fit to consider, that every man, when he at first incorporates himself into any commonwealth, he, by his uniting himself thereunto, annexed also, and submits to the community, those possessions, which he has, or shall acquire, that do not already belong to any other government: for it would be a direct contradiction, for any one to enter into society with others for the securing and regulating of property; and yet to suppose his land, whose property is to be regulated by the laws of the society, should be exempt from the jurisdiction of that government, to which he himself, the proprietor of the land, is a subject. By the same act therefore, whereby any one unites his person, which was before free, to any commonwealth, by the same he unites his possessions, which were before free, to it also; and they become, both of them, person and possession, subject to the government and dominion of that commonwealth, as long as it hath a being. Whoever therefore, from thenceforth, by inheritance, purchase, permission, or otherways, enjoys any part of the land, so annexed to, and under the government of that commonwealth, must take it with the condition it is under; that is, of submitting to the government of the commonwealth, under whose jurisdiction it is, as far forth as any subject of it.

Sect. 121. But since the government has a direct jurisdiction only over the land, and reaches the possessor of it, (before he has actually incorporated himself in the society) only as he dwells upon, and enjoys that; the obligation any one is under, by virtue of such enjoyment, to submit to the government, begins and ends with the enjoyment; so that whenever the owner, who has given nothing but such a tacit consent to the government, will, by donation, sale, or otherwise, quit the said possession, he is at liberty to go and incorporate himself into any other commonwealth; or to agree with others to begin a new one, in vacuis locis, in any part of the world, they can find free and unpossessed: whereas he, that has once, by actual agreement, and any express declaration, given his consent to be of any commonwealth, is perpetually and indispensably obliged to be, and remain unalterably a subject to it, and can never be again in the liberty of the state of nature; unless, by any calamity, the government he was under comes to be dissolved; or else by some public act cuts him off from being any longer a member of it.

Sect. 122. But submitting to the laws of any country, living quietly, and enjoying privileges and protection under them, makes not a man a member of that society: this is only a local protection and homage due to and from all those, who, not being in a state of war, come within the territories belonging to any government, to all parts whereof the force of its laws extends. But this no more makes a man a member of that society, a perpetual subject of that commonwealth, than it would make a man a subject to another, in whose family he found it convenient to abide for some time; though, whilst he continued in it, he were obliged to comply with the laws, and submit to the government he found there. And thus we see, that foreigners, by living all their lives under another government, and enjoying the privileges and protection of it, though they are bound, even in conscience, to submit to its administration, as far forth as any denison; yet do not thereby come to be subjects or members of that commonwealth. Nothing can make any man so, but his

actually entering into it by positive engagement, and express promise and compact. This is that, which I think, concerning the beginning of political societies, and that consent which makes any one a member of any commonwealth.

CHAPTER. IX.

OF THE ENDS OF POLITICAL SOCIETY AND GOVERNMENT.

Sect. 123. IF man in the state of nature be so free, as has been said; if he be absolute lord of his own person and possessions, equal to the greatest, and subject to no body, why will he part with his freedom? why will he give up this empire, and subject himself to the dominion and controul of any other power? To which it is obvious to answer, that though in the state of nature he hath such a right, yet the enjoyment of it is very uncertain, and constantly exposed to the invasion of others: for all being kings as much as he, every man his equal, and the greater part no strict observers of equity and justice, the enjoyment of the property he has in this state is very unsafe, very unsecure. This makes him willing to quit a condition, which, however free, is full of fears and continual dangers: and it is not without reason, that he seeks out, and is willing to join in society with others, who are already united, or have a mind to unite, for the mutual preservation of their lives, liberties and estates, which I call by the general name, property.

Sect. 124. The great and chief end, therefore, of men's uniting into commonwealths, and putting themselves under government, is the preservation of their property. To which in the state of nature there are many things wanting.

First, There wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them: for though the law of nature be plain and intelligible to all rational creatures; yet men being biassed by their interest, as well as ignorant for want of study of it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

Sect. 125. Secondly, In the state of nature there wants a known and indifferent judge, with authority to determine all differences according to the established law: for every one in that state being both judge and executioner of the law of nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat, in their own cases; as well as negligence, and unconcernedness, to make them too remiss in other men's.

Sect. 126. Thirdly, In the state of nature there often wants power to back and support the sentence when right, and to give it due execution, They who by any injustice offended, will seldom fail, where they are able, by force to make good their injustice; such resistance many times makes the punishment dangerous, and frequently destructive, to those who attempt it.

Sect. 127. Thus mankind, notwithstanding all the privileges of the state of nature, being but in an ill condition, while they remain in it, are quickly driven into society. Hence it comes to pass, that we seldom find any number of men live any time together in this state. The inconveniencies that they are therein exposed to, by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take sanctuary under the established laws of government, and therein seek the preservation of their property. It is this makes them so willingly give up every one his single power of punishing, to be exercised by such alone, as shall be appointed to it amongst them; and by such rules as the community, or those authorized by them to that purpose, shall agree on. And in this we have the original right and rise of both the legislative and executive power, as well as of the governments and societies themselves.

Sect. 128. For in the state of nature, to omit the liberty he has of innocent delights, a man has two powers.

The first is to do whatsoever he thinks fit for the preservation of himself, and others within the permission of the law of nature: by which law, common to them all, he and all the rest of mankind are one community, make up one society, distinct from all other creatures. And were it not for the corruption and vitiousness of degenerate men, there would be no need of any other; no necessity that men should separate from this great and natural community, and by positive agreements combine into smaller and divided associations.

The other power a man has in the state of nature, is the power to punish the crimes committed against that law. Both these he gives up, when he joins in a private, if I may so call it, or particular politic society, and incorporates into any commonwealth, separate from the rest of mankind.

Sect. 129. The first power, viz. of doing whatsoever he thought for the preservation of himself, and the rest of mankind, he gives up to be regulated by laws made by the society, so far forth as the preservation of himself, and the rest of that society shall require;

which laws of the society in many things confine the liberty he had by the law of nature.

Sect. 130. Secondly, The power of punishing he wholly gives up, and engages his natural force, (which he might before employ in the execution of the law of nature, by his own single authority, as he thought fit) to assist the executive power of the society, as the law thereof shall require: for being now in a new state, wherein he is to enjoy many conveniencies, from the labour, assistance, and society of others in the same community, as well as protection from its whole strength; he is to part also with as much of his natural liberty, in providing for himself, as the good, prosperity, and safety of the society shall require; which is not only necessary, but just, since the other members of the society do the like.

Sect. 131. But though men, when they enter into society, give up the equality, liberty, and executive power they had in the state of nature, into the hands of the society, to be so far disposed of by the legislative, as the good of the society shall require; yet it being only with an intention in every one the better to preserve himself, his liberty and property; (for no rational creature can be supposed to change his condition with an intention to be worse) the power of the society, or legislative constituted by them, can never be supposed to extend farther, than the common good; but is obliged to secure every one's property, by providing against those three defects above mentioned, that made the state of nature so unsafe and uneasy. And so whoever has the legislative or supreme power of any commonwealth, is bound to govern by established standing laws, promulgated and known to the people, and not by extemporary decrees; by indifferent and upright judges, who are to decide controversies by those laws; and to employ the force of the community at home, only in the execution of such laws, or abroad to prevent or redress foreign injuries, and secure the community from inroads and invasion. And all this to be directed to no other end, but the peace, safety, and public good of the people.

CHAPTER. X.

OF THE FORMS OF A COMMON-WEALTH.

Sect. 132. THE majority having, as has been shewed, upon men's first uniting into society, the whole power of the community naturally in them, may employ all that power in making laws for the community from time to time, and executing those laws by officers of their own appointing; and then the form of the government is a perfect democracy: or else may put the power of making laws into the hands of a few select men, and their heirs or successors; and then it is an oligarchy: or else into the hands of one man, and then it is a monarchy: if to him and his heirs, it is an hereditary monarchy: if to him only for life, but upon his death the power only of nominating a successor to return to them; an elective monarchy. And so accordingly of these the community may make compounded and mixed forms of government, as they think good. And if the legislative power be at first given by the majority to one or more persons only for their lives, or any limited time, and then the supreme power to revert to them again; when it is so reverted, the community may dispose of it again anew into what hands they please, and so constitute a new form of government: for the form of government depending upon the placing the supreme power, which is the legislative, it being impossible to conceive that an inferior power should prescribe to a superior, or any but the supreme make laws, according as the power of making laws is placed, such is the form of the commonwealth.

Sect. 133. By commonwealth, I must be understood all along to mean, not a democracy, or any form of government, but any independent community, which the Latines signified by the word civitas, to which the word which best answers in our language, is commonwealth, and most properly expresses such a society of men, which community or city in English does not; for there may be subordinate communities in a government; and city amongst us has a quite different notion from commonwealth: and therefore, to avoid ambiguity, I crave leave to use the word commonwealth in that sense, in which I find it used by king James the first; and I take it to be its genuine signification; which if any body dislike, I consent with him to change it for a better.

CHAPTER. XI.

OF THE EXTENT OF THE LEGISLATIVE POWER.

Sect. 134. THE great end of men's entering into society, being the enjoyment of their properties in peace and safety, and the great instrument and means of that being the laws established in that society; the first and fundamental positive law of all commonwealths is the establishing of the legislative power; as the first and fundamental natural law, which is to govern even the legislative itself, is the preservation of the society, and (as far as will consist with the public good) of every person in it. This legislative is not only the supreme power of the commonwealth, but sacred and unalterable in the hands where the community have

once placed it; nor can any edict of any body else, in what form soever conceived, or by what power soever backed, have the force and obligation of a law, which has not its sanction from that legislative which the public has chosen and appointed: for without this the law could not have that, which is absolutely necessary to its being a law,* the consent of the society, over whom no body can have a power to make laws, but by their own consent, and by authority received from them; and therefore all the obedience, which by the most solemn ties any one can be obliged to pay, ultimately terminates in this supreme power, and is directed by those laws which it enacts: nor can any oaths to any foreign power whatsoever, or any domestic subordinate power, discharge any member of the society from his obedience to the legislative, acting pursuant to their trust; nor oblige him to any obedience contrary to the laws so enacted, or farther than they do allow; it being ridiculous to imagine one can be tied ultimately to obey any power in the society, which is not the supreme.

(*The lawful power of making laws to command whole politic societies of men, belonging so properly unto the same intire societies, that for any prince or potentate of what kind soever upon earth, to exercise the same of himself, and not by express commission immediately and personally received from God, or else by authority derived at the first from their consent, upon whose persons they impose laws, it is no better than mere tyranny. Laws they are not therefore which public approbation hath not made so. Hooker's Eccl. Pol. l. i. sect. 10.

Of this point therefore we are to note, that such men naturally have no full and perfect power to command whole politic multitudes of men, therefore utterly without our consent, we could in such sort be at no man's commandment living. And to be commanded we do consent, when that society, whereof we be a part, hath at any time before consented, without revoking the same after by the like universal agreement. Laws therefore human, of what kind so ever, are available by consent. Ibid.)

Sect. 135. Though the legislative, whether placed in one or more, whether it be always in being, or only by intervals, though it be the supreme power in every commonwealth; yet:

First, It is not, nor can possibly be absolutely arbitrary over the lives and fortunes of the people: for it being but the joint power of every member of the society given up to that person, or assembly, which is legislator; it can be no more than those persons had in a state of nature before they entered into society, and gave up to the community: for no body can transfer to another more power than he has in himself; and no body has an absolute arbitrary power over himself, or over any other, to destroy his own life, or take away the life or property of another. A man, as has been proved, cannot subject himself to the arbitrary power of another; and having in the state of nature no arbitrary power over the life, liberty, or possession of another, but only so much as the law of nature gave him for the preservation of himself, and the rest of mankind; this is all he doth, or can give up to the commonwealth, and by it to the legislative power, so that the legislative can have no more than this. Their power, in the utmost bounds of it, is limited to the public good of the society. It is a power, that hath no other end but preservation, and therefore can never have a right to destroy, enslave, or designedly to impoverish the subjects.* The obligations of the law of nature cease not in society, but only in many cases are drawn closer, and have by human laws known penalties annexed to them, to inforce their observation. Thus the law of nature stands as an eternal rule to all men, legislators as well as others. The rules that they make for other men's actions, must, as well as their own and other men's actions, be conformable to the law of nature, i.e. to the will of God, of which that is a declaration, and the fundamental law of nature being the preservation of mankind, no human sanction can be good, or valid against it.

(*Two foundations there are which bear up public societies; the one a natural inclination, whereby all men desire sociable life and fellowship; the other an order, expresly or secretly agreed upon, touching the manner of their union in living together: the latter is that which we call the law of a common-weal, the very soul of a politic body, the parts whereof are by law animated, held together, and set on work in such actions as the common good requireth. Laws politic, ordained for external order and regiment amongst men, are never framed as they should be, unless presuming the will of man to be inwardly obstinate, rebellious, and averse from all obedience to the sacred laws of his nature; in a word, unless presuming man to be, in regard of his depraved mind, little better than a wild beast, they do accordingly provide, notwithstanding, so to frame his outward actions, that they be no hindrance unto the common good, for which societies are instituted. Unless they do this, they are not perfect. Hooker's Eccl. Pol. l. i. sect. 10.)

Sect. 136. Secondly, The legislative, or supreme authority, cannot assume to its self a power to rule by extemporary arbitrary decrees, but is bound to dispense justice, and decide the rights of the subject by promulgated standing laws, and known authorized judges:* for the law of nature being unwritten, and so no where to be found but in the minds of men, they who through passion or interest shall miscite, or misapply it, cannot so easily be convinced of their mistake where there is no established judge: and so it serves not, as it ought, to determine the rights, and fence the properties of those that live under it, especially where every one is judge, interpreter, and executioner of it too, and that in his own case: and he that has right on his side, having ordinarily but his own

single strength, hath not force enough to defend himself from injuries, or to punish delinquents. To avoid these inconveniences, which disorder men's propperties in the state of nature, men unite into societies, that they may have the united strength of the whole society to secure and defend their properties, and may have standing rules to bound it, by which every one may know what is his. To this end it is that men give up all their natural power to the society which they enter into, and the community put the legislative power into such hands as they think fit, with this trust, that they shall be governed by declared laws, or else their peace, quiet, and property will still be at the same uncertainty, as it was in the state of nature.

(*Human laws are measures in respect of men whose actions they must direct, howbeit such measures they are as have also their higher rules to be measured by, which rules are two, the law of God, and the law of nature; so that laws human must be made according to the general laws of nature, and without contradiction to any positive law of scripture, otherwise they are ill made. Hooker's Eccl. Pol. l. iii. sect. 9.

To constrain men to any thing inconvenient doth seem unreasonable. Ibid. l. i. sect. 10.)

Sect. 137. Absolute arbitrary power, or governing without settled standing laws, can neither of them consist with the ends of society and government, which men would not quit the freedom of the state of nature for, and tie themselves up under, were it not to preserve their lives, liberties and fortunes, and by stated rules of right and property to secure their peace and quiet. It cannot be supposed that they should intend, had they a power so to do, to give to any one, or more, an absolute arbitrary power over their persons and estates, and put a force into the magistrate's hand to execute his unlimited will arbitrarily upon them. This were to put themselves into a worse condition than the state of nature, wherein they had a liberty to defend their right against the injuries of others, and were upon equal terms of force to maintain it, whether invaded by a single man, or many in combination. Whereas by supposing they have given up themselves to the absolute arbitrary power and will of a legislator, they have disarmed themselves, and armed him, to make a prey of them when he pleases; he being in a much worse condition, who is exposed to the arbitrary power of one man, who has the command of 100,000, than he that is exposed to the arbitrary power of 100,000 single men; no body being secure, that his will, who has such a command, is better than that of other men, though his force be 100,000 times stronger. And therefore, whatever form the commonwealth is under, the ruling power ought to govern by declared and received laws, and not by extemporary dictates and undetermined resolutions: for then mankind will be in a far worse condition than in the state of nature, if they shall have armed one, or a few men with the joint power of a multitude, to force them to obey at pleasure the exorbitant and unlimited decrees of their sudden thoughts, or unrestrained, and till that moment unknown wills, without having any measures set down which may guide and justify their actions: for all the power the government has, being only for the good of the society, as it ought not to be arbitrary and at pleasure, so it ought to be exercised by established and promulgated laws; that both the people may know their duty, and be safe and secure within the limits of the law; and the rulers too kept within their bounds, and not be tempted, by the power they have in their hands, to employ it to such purposes, and by such measures, as they would not have known, and own not willingly.

Sect. 138. Thirdly, The supreme power cannot take from any man any part of his property without his own consent: for the preservation of property being the end of government, and that for which men enter into society, it necessarily supposes and requires, that the people should have property, without which they must be supposed to lose that, by entering into society, which was the end for which they entered into it; too gross an absurdity for any man to own. Men therefore in society having property, they have such a right to the goods, which by the law of the community are their's, that no body hath a right to take their substance or any part of it from them, without their own consent: without this they have no property at all; for I have truly no property in that, which another can by right take from me, when he pleases, against my consent. Hence it is a mistake to think, that the supreme or legislative power of any commonwealth, can do what it will, and dispose of the estates of the subject arbitrarily, or take any part of them at pleasure. This is not much to be feared in governments where the legislative consists, wholly or in part, in assemblies which are variable, whose members, upon the dissolution of the assembly, are subjects under the common laws of their country, equally with the rest. But in governments, where the legislative is in one lasting assembly always in being, or in one man, as in absolute monarchies, there is danger still, that they will think themselves to have a distinct interest from the rest of the community; and so will be apt to increase their own riches and power, by taking what they think fit from the people: for a man's property is not at all secure, tho' there be good and equitable laws to set the bounds of it between him and his fellow subjects, if he who commands those subjects have power to take from any private man, what part he pleases of his property, and use and dispose of it as he thinks good.

Sect. 139. But government, into whatsoever hands it is put, being, as I have before shewed, intrusted with this condition, and for this end, that men might have and secure their properties; the prince, or senate, however it may have power to make laws, for the

regulating of property between the subjects one amongst another, yet can never have a power to take to themselves the whole, or any part of the subjects property, without their own consent: for this would be in effect to leave them no property at all. And to let us see, that even absolute power, where it is necessary, is not arbitrary by being absolute, but is still limited by that reason, and confined to those ends, which required it in some cases to be absolute, we need look no farther than the common practice of martial discipline: for the preservation of the army, and in it of the whole commonwealth, requires an absolute obedience to the command of every superior officer, and it is justly death to disobey or dispute the most dangerous or unreasonable of them; but yet we see, that neither the serjeant, that could command a soldier to march up to the mouth of a cannon, or stand in a breach, where he is almost sure to perish, can command that soldier to give him one penny of his money; nor the general, that can condemn him to death for deserting his post, or for not obeying the most desperate orders, can yet, with all his absolute power of life and death, dispose of one farthing of that soldier's estate, or seize one jot of his goods; whom yet he can command any thing, and hang for the least disobedience; because such a blind obedience is necessary to that end, for which the commander has his power, viz. the preservation of the rest; but the disposing of his goods has nothing to do with it.

Sect. 140. It is true, governments cannot be supported without great charge, and it is fit every one who enjoys his share of the protection, should pay out of his estate his proportion for the maintenance of it. But still it must be with his own consent, i.e. the consent of the majority, giving it either by themselves, or their representatives chosen by them: for if any one shall claim a power to lay and levy taxes on the people, by his own authority, and without such consent of the people, he thereby invades the fundamental law of property, and subverts the end of government: for what property have I in that, which another may by right take, when he pleases, to himself?

Sect. 141. Fourthly, The legislative cannot transfer the power of making laws to any other hands: for it being but a delegated power from the people, they who have it cannot pass it over to others. The people alone can appoint the form of the commonwealth, which is by constituting the legislative, and appointing in whose hands that shall be. And when the people have said, We will submit to rules, and be governed by laws made by such men, and in such forms, no body else can say other men shall make laws for them; nor can the people be bound by any laws, but such as are enacted by those whom they have chosen, and authorized to make laws for them. The power of the legislative, being derived from the people by a positive voluntary grant and institution, can be no other than what that positive grant conveyed, which being only to make laws, and not to make legislators, the legislative can have no power to transfer their authority of making laws, and place it in other hands.

Sect. 142. These are the bounds which the trust, that is put in them by the society, and the law of God and nature, have set to the legislative power of every commonwealth, in all forms of government.

First, They are to govern by promulgated established laws, not to be varied in particular cases, but to have one rule for rich and poor, for the favourite at court, and the country man at plough.

Secondly, These laws also ought to be designed for no other end ultimately, but the good of the people.

Thirdly, They must not raise taxes on the property of the people, without the consent of the people, given by themselves, or their deputies. And this properly concerns only such governments where the legislative is always in being, or at least where the people have not reserved any part of the legislative to deputies, to be from time to time chosen by themselves.

Fourthly, The legislative neither must nor can transfer the power of making laws to any body else, or place it any where, but where the people have.

CHAPTER. XII.

OF THE LEGISLATIVE, EXECUTIVE, AND FEDERATIVE POWER OF THE COMMON-WEALTH.

Sect. 143. THE legislative power is that, which has a right to direct how the force of the commonwealth shall be employed for preserving the community and the members of it. But because those laws which are constantly to be executed, and whose force is always to continue, may be made in a little time; therefore there is no need, that the legislative should be always in being, not having always business to do. And because it may be too great a temptation to human frailty, apt to grasp at power, for the same persons, who have the power of making laws, to have also in their hands the power to execute them, whereby they may exempt themselves from obedience to the laws they make, and suit the law, both in its making, and execution, to their own private advantage, and thereby come to have a distinct interest from the rest of the community, contrary to the end of society and

government: therefore in wellordered commonwealths, where the good of the whole is so considered, as it ought, the legislative power is put into the hands of divers persons, who duly assembled, have by themselves, or jointly with others, a power to make laws, which when they have done, being separated again, they are themselves subject to the laws they have made; which is a new and near tie upon them, to take care, that they make them for the public good.

Sect. 144. But because the laws, that are at once, and in a short time made, have a constant and lasting force, and need a perpetual execution, or an attendance thereunto; therefore it is necessary there should be a power always in being, which should see to the execution of the laws that are made, and remain in force. And thus the legislative and executive power come often to be separated.

Sect. 145. There is another power in every commonwealth, which one may call natural, because it is that which answers to the power every man naturally had before he entered into society: for though in a commonwealth the members of it are distinct persons still in reference to one another, and as such as governed by the laws of the society; yet in reference to the rest of mankind, they make one body, which is, as every member of it before was, still in the state of nature with the rest of mankind. Hence it is, that the controversies that happen between any man of the society with those that are out of it, are managed by the public; and an injury done to a member of their body, engages the whole in the reparation of it. So that under this consideration, the whole community is one body in the state of nature, in respect of all other states or persons out of its community.

Sect. 146. This therefore contains the power of war and peace, leagues and alliances, and all the transactions, with all persons and communities without the commonwealth, and may be called federative, if any one pleases. So the thing be understood, I am indifferent as to the name.

Sect. 147. These two powers, executive and federative, though they be really distinct in themselves, yet one comprehending the execution of the municipal laws of the society within its self, upon all that are parts of it; the other the management of the security and interest of the public without, with all those that it may receive benefit or damage from, yet they are always almost united. And though this federative power in the well or ill management of it be of great moment to the commonwealth, yet it is much less capable to be directed by antecedent, standing, positive laws, than the executive; and so must necessarily be left to the prudence and wisdom of those, whose hands it is in, to be managed for the public good: for the laws that concern subjects one amongst another, being to direct their actions, may well enough precede them. But what is to be done in reference to foreigners, depending much upon their actions, and the variation of designs and interests, must be left in great part to the prudence of those, who have this power committed to them, to be managed by the best of their skill, for the advantage of the commonwealth.

Sect. 148. Though, as I said, the executive and federative power of every community be really distinct in themselves, yet they are hardly to be separated, and placed at the same time, in the hands of distinct persons: for both of them requiring the force of the society for their exercise, it is almost impracticable to place the force of the commonwealth in distinct, and not subordinate hands; or that the executive and federative power should be placed in persons, that might act separately, whereby the force of the public would be under different commands: which would be apt some time or other to cause disorder and ruin.

CHAPTER. XIII.

OF THE SUBORDINATION OF THE POWERS OF THE COMMON-WEALTH.

Sect. 149. THOUGH in a constituted commonwealth, standing upon its own basis, and acting according to its own nature, that is, acting for the preservation of the community, there can be but one supreme power, which is the legislative, to which all the rest are and must be subordinate, yet the legislative being only a fiduciary power to act for certain ends, there remains still in the people a supreme power to remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them: for all power given with trust for the attaining an end, being limited by that end, whenever that end is manifestly neglected, or opposed, the trust must necessarily be forfeited, and the power devolve into the hands of those that gave it, who may place it anew where they shall think best for their safety and security. And thus the community perpetually retains a supreme power of saving themselves from the attempts and designs of any body, even of their legislators, whenever they shall be so foolish, or so wicked, as to lay and carry on designs against the liberties and properties of the subject: for no man or society of men, having a power to deliver up their preservation, or consequently the means of it, to the absolute will and arbitrary dominion of another; when ever any one shall go about to bring them into such a slavish condition, they will always have a right to preserve, what they have not a power to part with; and to rid themselves of those, who invade this fundamental, sacred, and unalterable law of self-preservation, for which

they entered into society. And thus the community may be said in this respect to be always the supreme power, but not as considered under any form of government, because this power of the people can never take place till the government be dissolved.

Sect. 150. In all cases, whilst the government subsists, the legislative is the supreme power: for what can give laws to another, must needs be superior to him; and since the legislative is no otherwise legislative of the society, but by the right it has to make laws for all the parts, and for every member of the society, prescribing rules to their actions, and giving power of execution, where they are transgressed, the legislative must needs be the supreme, and all other powers, in any members or parts of the society, derived from and subordinate to it.

Sect. 151. In some commonwealths, where the legislative is not always in being, and the executive is vested in a single person, who has also a share in the legislative; there that single person in a very tolerable sense may also be called supreme: not that he has in himself all the supreme power, which is that of law-making; but because he has in him the supreme execution, from whom all inferior magistrates derive all their several subordinate powers, or at least the greatest part of them: having also no legislative superior to him, there being no law to be made without his consent, which cannot be expected should ever subject him to the other part of the legislative, he is properly enough in this sense supreme. But yet it is to be observed, that tho' oaths of allegiance and fealty are taken to him, it is not to him as supreme legislator, but as supreme executor of the law, made by a joint power of him with others; allegiance being nothing but an obedience according to law, which when he violates, he has no right to obedience, nor can claim it otherwise than as the public person vested with the power of the law, and so is to be considered as the image, phantom, or representative of the commonwealth, acted by the will of the society, declared in its laws; and thus he has no will, no power, but that of the law. But when he quits this representation, this public will, and acts by his own private will, he degrades himself, and is but a single private person without power, and without will, that has any right to obedience; the members owing no obedience but to the public will of the society.

Sect. 152. The executive power, placed any where but in a person that has also a share in the legislative, is visibly subordinate and accountable to it, and may be at pleasure changed and displaced; so that it is not the supreme executive power, that is exempt from subordination, but the supreme executive power vested in one, who having a share in the legislative, has no distinct superior legislative to be subordinate and accountable to, farther than he himself shall join and consent; so that he is no more subordinate than he himself shall think fit, which one may certainly conclude will be but very little. Of other ministerial and subordinate powers in a commonwealth, we need not speak, they being so multiplied with infinite variety, in the different customs and constitutions of distinct commonwealths, that it is impossible to give a particular account of them all. Only thus much, which is necessary to our present purpose, we may take notice of concerning them, that they have no manner of authority, any of them, beyond what is by positive grant and commission delegated to them, and are all of them accountable to some other power in the commonwealth.

Sect. 153. It is not necessary, no, nor so much as convenient, that the legislative should be always in being; but absolutely necessary that the executive power should, because there is not always need of new laws to be made, but always need of execution of the laws that are made. When the legislative hath put the execution of the laws, they make, into other hands, they have a power still to resume it out of those hands, when they find cause, and to punish for any maladministration against the laws. The same holds also in regard of the federative power, that and the executive being both ministerial and subordinate to the legislative, which, as has been shewed, in a constituted commonwealth is the supreme. The legislative also in this case being supposed to consist of several persons, (for if it be a single person, it cannot but be always in being, and so will, as supreme, naturally have the supreme executive power, together with the legislative) may assemble, and exercise their legislature, at the times that either their original constitution, or their own adjournment, appoints, or when they please; if neither of these hath appointed any time, or there be no other way prescribed to convoke them: for the supreme power being placed in them by the people, it is always in them, and they may exercise it when they please, unless by their original constitution they are limited to certain seasons, or by an act of their supreme power they have adjourned to a certain time; and when that time comes, they have a right to assemble and act again.

Sect. 154. If the legislative, or any part of it, be made up of representatives chosen for that time by the people, which afterwards return into the ordinary state of subjects, and have no share in the legislature but upon a new choice, this power of chusing must also be exercised by the people, either at certain appointed seasons, or else when they are summoned to it; and in this latter case the power of convoking the legislative is ordinarily placed in the executive, and has one of these two limitations in respect of time: that either the original constitution requires their assembling and acting at certain intervals, and then the executive power does nothing but ministerially issue directions for their electing and assembling, according to due forms; or else it is left to his prudence to call them by new elections, when the occasions or exigencies of the public require the amendment of old, or making of new laws,

or the redress or prevention of any inconveniencies, that lie on, or threaten the people.

Sect. 155. It may be demanded here, What if the executive power, being possessed of the force of the commonwealth, shall make use of that force to hinder the meeting and acting of the legislative, when the original constitution, or the public exigencies require it? I say, using force upon the people without authority, and contrary to the trust put in him that does so, is a state of war with the people, who have a right to reinstate their legislative in the exercise of their power: for having erected a legislative, with an intent they should exercise the power of making laws, either at certain set times, or when there is need of it, when they are hindered by any force from what is so necessary to the society, and wherein the safety and preservation of the people consists, the people have a right to remove it by force. In all states and conditions, the true remedy of force without authority, is to oppose force to it. The use of force without authority, always puts him that uses it into a state of war, as the aggressor, and renders him liable to be treated accordingly.

Sect. 156. The power of assembling and dismissing the legislative, placed in the executive, gives not the executive a superiority over it, but is a fiduciary trust placed in him, for the safety of the people, in a case where the uncertainty and variableness of human affairs could not bear a steady fixed rule: for it not being possible, that the first framers of the government should, by any foresight, be so much masters of future events, as to be able to prefix so just periods of return and duration to the assemblies of the legislative, in all times to come, that might exactly answer all the exigencies of the commonwealth; the best remedy could be found for this defect, was to trust this to the prudence of one who was always to be present, and whose business it was to watch over the public good. Constant frequent meetings of the legislative, and long continuations of their assemblies, without necessary occasion, could not but be burdensome to the people, and must necessarily in time produce more dangerous inconveniencies, and yet the quick turn of affairs might be sometimes such as to need their present help: any delay of their convening might endanger the public; and sometimes too their business might be so great, that the limited time of their sitting might be too short for their work, and rob the public of that benefit which could be had only from their mature deliberation. What then could be done in this case to prevent the community from being exposed some time or other to eminent hazard, on one side or the other, by fixed intervals and periods, set to the meeting and acting of the legislative, but to intrust it to the prudence of some, who being present, and acquainted with the state of public affairs, might make use of this prerogative for the public good? and where else could this be so well placed as in his hands, who was intrusted with the execution of the laws for the same end? Thus supposing the regulation of times for the assembling and sitting of the legislative, not settled by the original constitution, it naturally fell into the hands of the executive, not as an arbitrary power depending on his good pleasure, but with this trust always to have it exercised only for the public weal, as the occurrences of times and change of affairs might require. Whether settled periods of their convening, or a liberty left to the prince for convoking the legislative, or perhaps a mixture of both, hath the least inconvenience attending it, it is not my business here to inquire, but only to shew, that though the executive power may have the prerogative of convoking and dissolving such conventions of the legislative, yet it is not thereby superior to it.

Sect. 157. Things of this world are in so constant a flux, that nothing remains long in the same state. Thus people, riches, trade, power, change their stations, flourishing mighty cities come to ruin, and prove in times neglected desolate corners, whilst other unfrequented places grow into populous countries, filled with wealth and inhabitants. But things not always changing equally, and private interest often keeping up customs and privileges, when the reasons of them are ceased, it often comes to pass, that in governments, where part of the legislative consists of representatives chosen by the people, that in tract of time this representation becomes very unequal and disproportionate to the reasons it was at first established upon. To what gross absurdities the following of custom, when reason has left it, may lead, we may be satisfied, when we see the bare name of a town, of which there remains not so much as the ruins, where scarce so much housing as a sheepcote, or more inhabitants than a shepherd is to be found, sends as many representatives to the grand assembly of law-makers, as a whole county numerous in people, and powerful in riches. This strangers stand amazed at, and every one must confess needs a remedy; tho' most think it hard to find one, because the constitution of the legislative being the original and supreme act of the society, antecedent to all positive laws in it, and depending wholly on the people, no inferior power can alter it. And therefore the people, when the legislative is once constituted, having, in such a government as we have been speaking of, no power to act as long as the government stands; this inconvenience is thought incapable of a remedy.

Sect. 158. Salus populi suprema lex, is certainly so just and fundamental a rule, that he, who sincerely follows it, cannot dangerously err. If therefore the executive, who has the power of convoking the legislative, observing rather the true proportion, than fashion of representation, regulates, not by old custom, but true reason, the number of members, in all places that have a right to be distinctly represented, which no part of the people however incorporated can pretend to, but in proportion to the assistance

which it affords to the public, it cannot be judged to have set up a new legislative, but to have restored the old and true one, and to have rectified the disorders which succession of time had insensibly, as well as inevitably introduced: For it being the interest as well as intention of the people, to have a fair and equal representative; whoever brings it nearest to that, is an undoubted friend to, and establisher of the government, and cannot miss the consent and approbation of the community; prerogative being nothing but a power, in the hands of the prince, to provide for the public good, in such cases, which depending upon unforeseen and uncertain occurrences, certain and unalterable laws could not safely direct; whatsoever shall be done manifestly for the good of the people, and the establishing the government upon its true foundations, is, and always will be, just prerogative, The power of erecting new corporations, and therewith new representatives, carries with it a supposition, that in time the measures of representation might vary, and those places have a just right to be represented which before had none; and by the same reason, those cease to have a right, and be too inconsiderable for such a privilege, which before had it. 'Tis not a change from the present state, which perhaps corruption or decay has introduced, that makes an inroad upon the government, but the tendency of it to injure or oppress the people, and to set up one part or party, with a distinction from, and an unequal subjection of the rest. Whatsoever cannot but be acknowledged to be of advantage to the society, and people in general, upon just and lasting measures, will always, when done, justify itself; and whenever the people shall chuse their representatives upon just and undeniably equal measures, suitable to the original frame of the government, it cannot be doubted to be the will and act of the society, whoever permitted or caused them so to do.

CHAPTER. XIV.

OF PREROGATIVE.

Sect. 159. WHERE the legislative and executive power are in distinct hands, (as they are in all moderated monarchies, and well-framed governments) there the good of the society requires, that several things should be left to the discretion of him that has the executive power: for the legislators not being able to foresee, and provide by laws, for all that may be useful to the community, the executor of the laws having the power in his hands, has by the common law of nature a right to make use of it for the good of the society, in many cases, where the municipal law has given no direction, till the legislative can conveniently be assembled to provide for it. Many things there are, which the law can by no means provide for; and those must necessarily be left to the discretion of him that has the executive power in his hands, to be ordered by him as the public good and advantage shall require: nay, it is fit that the laws themselves should in some cases give way to the executive power, or rather to this fundamental law of nature and government, viz. That as much as may be, all the members of the society are to be preserved: for since many accidents may happen, wherein a strict and rigid observation of the laws may do harm; (as not to pull down an innocent man's house to stop the fire, when the next to it is burning) and a man may come sometimes within the reach of the law, which makes no distinction of persons, by an action that may deserve reward and pardon; 'tis fit the ruler should have a power, in many cases, to mitigate the severity of the law, and pardon some offenders: for the end of government being the preservation of all, as much as may be, even the guilty are to be spared, where it can prove no prejudice to the innocent.

Sect. 160. This power to act according to discretion, for the public good, without the prescription of the law, and sometimes even against it, is that which is called prerogative: for since in some governments the lawmaking power is not always in being, and is usually too numerous, and so too slow, for the dispatch requisite to execution; and because also it is impossible to foresee, and so by laws to provide for, all accidents and necessities that may concern the public, or to make such laws as will do no harm, if they are executed with an inflexible rigour, on all occasions, and upon all persons that may come in their way; therefore there is a latitude left to the executive power, to do many things of choice which the laws do not prescribe.

Sect. 161. This power, whilst employed for the benefit of the community, and suitably to the trust and ends of the government, is undoubted prerogative, and never is questioned: for the people are very seldom or never scrupulous or nice in the point; they are far from examining prerogative, whilst it is in any tolerable degree employed for the use it was meant, that is, for the good of the people, and not manifestly against it: but if there comes to be a question between the executive power and the people, about a thing claimed as a prerogative; the tendency of the exercise of such prerogative to the good or hurt of the people, will easily decide that question.

Sect. 162. It is easy to conceive, that in the infancy of governments, when commonwealths differed little from families in number of people, they differed from them too but little in number of laws: and the governors, being as the fathers of them, watching over them for their good, the government was almost all prerogative. A few established laws served the turn, and the discretion and care of

the ruler supplied the rest. But when mistake or flattery prevailed with weak princes to make use of this power for private ends of their own, and not for the public good, the people were fain by express laws to get prerogative determined in those points wherein they found disadvantage from it: and thus declared limitations of prerogative were by the people found necessary in cases which they and their ancestors had left, in the utmost latitude, to the wisdom of those princes who made no other but a right use of it, that is, for the good of their people.

Sect. 163. And therefore they have a very wrong notion of government, who say, that the people have encroached upon the prerogative, when they have got any part of it to be defined by positive laws: for in so doing they have not pulled from the prince any thing that of right belonged to him, but only declared, that that power which they indefinitely left in his or his ancestors hands, to be exercised for their good, was not a thing which they intended him when he used it otherwise: for the end of government being the good of the community, whatsoever alterations are made in it, tending to that end, cannot be an encroachment upon any body, since no body in government can have a right tending to any other end: and those only are encroachments which prejudice or hinder the public good. Those who say otherwise, speak as if the prince had a distinct and separate interest from the good of the community, and was not made for it; the root and source from which spring almost all those evils and disorders which happen in kingly governments. And indeed, if that be so, the people under his government are not a society of rational creatures, entered into a community for their mutual good; they are not such as have set rulers over themselves, to guard, and promote that good; but are to be looked on as an herd of inferior creatures under the dominion of a master, who keeps them and works them for his own pleasure or profit. If men were so void of reason, and brutish, as to enter into society upon such terms, prerogative might indeed be, what some men would have it, an arbitrary power to do things hurtful to the people.

Sect. 164. But since a rational creature cannot be supposed, when free, to put himself into subjection to another, for his own harm; (though, where he finds a good and wise ruler, he may not perhaps think it either necessary or useful to set precise bounds to his power in all things) prerogative can be nothing but the people's permitting their rulers to do several things, of their own free choice, where the law was silent, and sometimes too against the direct letter of the law, for the public good; and their acquiescing in it when so done: for as a good prince, who is mindful of the trust put into his hands, and careful of the good of his people, cannot have too much prerogative, that is, power to do good; so a weak and ill prince, who would claim that power which his predecessors exercised without the direction of the law, as a prerogative belonging to him by right of his office, which he may exercise at his pleasure, to make or promote an interest distinct from that of the public, gives the people an occasion to claim their right, and limit that power, which, whilst it was exercised for their good, they were content should be tacitly allowed.

Sect. 165. And therefore he that will look into the history of England, will find, that prerogative was always largest in the hands of our wisest and best princes; because the people, observing the whole tendency of their actions to be the public good, contested not what was done without law to that end: or, if any human frailty or mistake (for princes are but men, made as others) appeared in some small declinations from that end; yet 'twas visible, the main of their conduct tended to nothing but the care of the public. The people therefore, finding reason to be satisfied with these princes, whenever they acted without, or contrary to the letter of the law, acquiesced in what they did, and, without the least complaint, let them inlarge their prerogative as they pleased, judging rightly, that they did nothing herein to the prejudice of their laws, since they acted conformable to the foundation and end of all laws, the public good.

Sect. 166. Such god-like princes indeed had some title to arbitrary power by that argument, that would prove absolute monarchy the best government, as that which God himself governs the universe by; because such kings partake of his wisdom and goodness. Upon this is founded that saying, That the reigns of good princes have been always most dangerous to the liberties of their people: for when their successors, managing the government with different thoughts, would draw the actions of those good rulers into precedent, and make them the standard of their prerogative, as if what had been done only for the good of the people was a right in them to do, for the harm of the people, if they so pleased; it has often occasioned contest, and sometimes public disorders, before the people could recover their original right, and get that to be declared not to be prerogative, which truly was never so; since it is impossible that any body in the society should ever have a right to do the people harm; though it be very possible, and reasonable, that the people should not go about to set any bounds to the prerogative of those kings, or rulers, who themselves transgressed not the bounds of the public good: for prerogative is nothing but the power of doing public good without a rule.

Sect. 167. The power of calling parliaments in England, as to precise time, place, and duration, is certainly a prerogative of the king, but still with this trust, that it shall be made use of for the good of the nation, as the exigencies of the times, and variety of occasions, shall require: for it being impossible to foresee which should always be the fittest place for them to assemble in, and what the best season; the choice of these was left with the executive power, as might be most subservient to the public good, and

best suit the ends of parliaments.

Sect. 168. The old question will be asked in this matter of prerogative, But who shall be judge when this power is made a right use of one answer: between an executive power in being, with such a prerogative, and a legislative that depends upon his will for their convening, there can be no judge on earth; as there can be none between the legislative and the people, should either the executive, or the legislative, when they have got the power in their hands, design, or go about to enslave or destroy them. The people have no other remedy in this, as in all other cases where they have no judge on earth, but to appeal to heaven: for the rulers, in such attempts, exercising a power the people never put into their hands, (who can never be supposed to consent that any body should rule over them for their harm) do that which they have not a right to do. And where the body of the people, or any single man, is deprived of their right, or is under the exercise of a power without right, and have no appeal on earth, then they have a liberty to appeal to heaven, whenever they judge the cause of sufficient moment. And therefore, though the people cannot be judge, so as to have, by the constitution of that society, any superior power, to determine and give effective sentence in the case; yet they have, by a law antecedent and paramount to all positive laws of men, reserved that ultimate determination to themselves which belongs to all mankind, where there lies no appeal on earth, viz. to judge, whether they have just cause to make their appeal to heaven. And this judgment they cannot part with, it being out of a man's power so to submit himself to another, as to give him a liberty to destroy him; God and nature never allowing a man so to abandon himself, as to neglect his own preservation: and since he cannot take away his own life, neither can he give another power to take it. Nor let any one think, this lays a perpetual foundation for disorder; for this operates not, till the inconveniency is so great, that the majority feel it, and are weary of it, and find a necessity to have it amended. But this the executive power, or wise princes, never need come in the danger of: and it is the thing, of all others, they have most need to avoid, as of all others the most perilous.

CHAPTER. XV.

OF PATERNAL, POLITICAL, AND DESPOTICAL POWER, CONSIDERED TOGETHER.

Sect. 169. THOUGH I have had occasion to speak of these separately before, yet the great mistakes of late about government, having, as I suppose, arisen from confounding these distinct powers one with another, it may not, perhaps, be amiss to consider them here together.

Sect. 170. First, then, Paternal or parental power is nothing but that which parents have over their children, to govern them for the children's good, till they come to the use of reason, or a state of knowledge, wherein they may be supposed capable to understand that rule, whether it be the law of nature, or the municipal law of their country, they are to govern themselves by: capable, I say, to know it, as well as several others, who live as freemen under that law. The affection and tenderness which God hath planted in the breast of parents towards their children, makes it evident, that this is not intended to be a severe arbitrary government, but only for the help, instruction, and preservation of their offspring. But happen it as it will, there is, as I have proved, no reason why it should be thought to extend to life and death, at any time, over their children, more than over any body else; neither can there be any pretence why this parental power should keep the child, when grown to a man, in subjection to the will of his parents, any farther than having received life and education from his parents, obliges him to respect, honour, gratitude, assistance and support, all his life, to both father and mother. And thus, 'tis true, the paternal is a natural government, but not at all extending itself to the ends and jurisdictions of that which is political. The power of the father doth not reach at all to the property of the child, which is only in his own disposing.

Sect. 171. Secondly, Political power is that power, which every man having in the state of nature, has given up into the hands of the society, and therein to the governors, whom the society hath set over itself, with this express or tacit trust, that it shall be employed for their good, and the preservation of their property: now this power, which every man has in the state of nature, and which he parts with to the society in all such cases where the society can secure him, is to use such means, for the preserving of his own property, as he thinks good, and nature allows him; and to punish the breach of the law of nature in others, so as (according to the best of his reason) may most conduce to the preservation of himself, and the rest of mankind. So that the end and measure of this power, when in every man's hands in the state of nature, being the preservation of all of his society, that is, all mankind in general, it can have no other end or measure, when in the hands of the magistrate, but to preserve the members of that society in their lives, liberties, and possessions; and so cannot be an absolute, arbitrary power over their lives and fortunes, which are as much as possible to be preserved; but a power to make laws, and annex such penalties to them, as may tend to the preservation of the whole, by cutting off those parts, and those only, which are so corrupt, that they threaten the sound and healthy, without which no

severity is lawful. And this power has its original only from compact and agreement, and the mutual consent of those who make up the community.

Sect. 172. Thirdly, Despotical power is an absolute, arbitrary power one man has over another, to take away his life, whenever he pleases. This is a power, which neither nature gives, for it has made no such distinction between one man and another; nor compact can convey: for man not having such an arbitrary power over his own life, cannot give another man such a power over it; but it is the effect only of forfeiture, which the aggressor makes of his own life, when he puts himself into the state of war with another: for having quitted reason, which God hath given to be the rule betwixt man and man, and the common bond whereby human kind is united into one fellowship and society; and having renounced the way of peace which that teaches, and made use of the force of war, to compass his unjust ends upon another, where he has no right; and so revolting from his own kind to that of beasts, by making force, which is their's, to be his rule of right, he renders himself liable to be destroyed by the injured person, and the rest of mankind, that will join with him in the execution of justice, as any other wild beast, or noxious brute, with whom mankind can have neither society nor security*. And thus captives, taken in a just and lawful war, and such only, are subject to a despotical power, which, as it arises not from compact, so neither is it capable of any, but is the state of war continued: for what compact can be made with a man that is not master of his own life? what condition can he perform? and if he be once allowed to be master of his own life, the despotical, arbitrary power of his master ceases. He that is master of himself, and his own life, has a right too to the means of preserving it; so that as soon as compact enters, slavery ceases, and he so far quits his absolute power, and puts an end to the state of war, who enters into conditions with his captive.

(*Another copy corrected by Mr. Locke, has it thus, Noxious brute that is destructive to their being.)

Sect. 173. Nature gives the first of these, viz. paternal power to parents for the benefit of their children during their minority, to supply their want of ability, and understanding how to manage their property. (By property I must be understood here, as in other places, to mean that property which men have in their persons as well as goods.) Voluntary agreement gives the second, viz. political power to governors for the benefit of their subjects, to secure them in the possession and use of their properties. And forfeiture gives the third despotical power to lords for their own benefit, over those who are stripped of all property.

Sect. 174. He, that shall consider the distinct rise and extent, and the different ends of these several powers, will plainly see, that paternal power comes as far short of that of the magistrate, as despotical exceeds it; and that absolute dominion, however placed, is so far from being one kind of civil society, that it is as inconsistent with it, as slavery is with property. Paternal power is only where minority makes the child incapable to manage his property; political, where men have property in their own disposal; and despotical, over such as have no property at all.

CHAPTER. XVI.

OF CONQUEST.

Sect. 175. THOUGH governments can originally have no other rise than that before mentioned, nor polities be founded on any thing but the consent of the people; yet such have been the disorders ambition has filled the world with, that in the noise of war, which makes so great a part of the history of mankind, this consent is little taken notice of: and therefore many have mistaken the force of arms for the consent of the people, and reckon conquest as one of the originals of government. But conquest is as far from setting up any government, as demolishing an house is from building a new one in the place. Indeed, it often makes way for a new frame of a commonwealth, by destroying the former; but, without the consent of the people, can never erect a new one.

Sect. 176. That the aggressor, who puts himself into the state of war with another, and unjustly invades another man's right, can, by such an unjust war, never come to have a right over the conquered, will be easily agreed by all men, who will not think, that robbers and pyrates have a right of empire over whomsoever they have force enough to master; or that men are bound by promises, which unlawful force extorts from them. Should a robber break into my house, and with a dagger at my throat make me seal deeds to convey my estate to him, would this give him any title? Just such a title, by his sword, has an unjust conqueror, who forces me into submission. The injury and the crime is equal, whether committed by the wearer of a crown, or some petty villain. The title of the offender, and the number of his followers, make no difference in the offence, unless it be to aggravate it. The only difference is, great robbers punish little ones, to keep them in their obedience; but the great ones are rewarded with laurels and triumphs, because they are too big for the weak hands of justice in this world, and have the power in their own possession, which should punish offenders. What is my remedy against a robber, that so broke into my house? Appeal to the law for justice. But perhaps

justice is denied, or I am crippled and cannot stir, robbed and have not the means to do it. If God has taken away all means of seeking remedy, there is nothing left but patience. But my son, when able, may seek the relief of the law, which I am denied: he or his son may renew his appeal, till he recover his right. But the conquered, or their children, have no court, no arbitrator on earth to appeal to. Then they may appeal, as Jephtha did, to heaven, and repeat their appeal till they have recovered the native right of their ancestors, which was, to have such a legislative over them, as the majority should approve, and freely acquiesce in. If it be objected, This would cause endless trouble; I answer, no more than justice does, where she lies open to all that appeal to her. He that troubles his neighbour without a cause, is punished for it by the justice of the court he appeals to: and he that appeals to heaven must be sure he has right on his side; and a right too that is worth the trouble and cost of the appeal, as he will answer at a tribunal that cannot be deceived, and will be sure to retribute to every one according to the mischiefs he hath created to his fellow subjects; that is, any part of mankind: from whence it is plain, that he that conquers in an unjust war can thereby have no title to the subjection and obedience of the conquered.

Sect. 177. But supposing victory favours the right side, let us consider a conqueror in a lawful war, and see what power he gets, and over whom.

First, It is plain he gets no power by his conquest over those that conquered with him. They that fought on his side cannot suffer by the conquest, but must at least be as much freemen as they were before. And most commonly they serve upon terms, and on condition to share with their leader, and enjoy a part of the spoil, and other advantages that attend the conquering sword; or at least have a part of the subdued country bestowed upon them. And the conquering people are not, I hope, to be slaves by conquest, and wear their laurels only to shew they are sacrifices to their leaders triumph. They that found absolute monarchy upon the title of the sword, make their heroes, who are the founders of such monarchies, arrant Draw-can-sirs, and forget they had any officers and soldiers that fought on their side in the battles they won, or assisted them in the subduing, or shared in possessing, the countries they mastered. We are told by some, that the English monarchy is founded in the Norman conquest, and that our princes have thereby a title to absolute dominion: which if it were true, (as by the history it appears otherwise) and that William had a right to make war on this island; yet his dominion by conquest could reach no farther than to the Saxons and Britons, that were then inhabitants of this country. The Normans that came with him, and helped to conquer, and all descended from them, are freemen, and no subjects by conquest; let that give what dominion it will. And if I, or any body else, shall claim freedom, as derived from them, it will be very hard to prove the contrary: and it is plain, the law, that has made no distinction between the one and the other, intends not there should be any difference in their freedom or privileges.

Sect. 178. But supposing, which seldom happens, that the conquerors and conquered never incorporate into one people, under the same laws and freedom; let us see next what power a lawful conqueror has over the subdued: and that I say is purely despotical. He has an absolute power over the lives of those who by an unjust war have forfeited them; but not over the lives or fortunes of those who engaged not in the war, nor over the possessions even of those who were actually engaged in it.

Sect. 179. Secondly, I say then the conqueror gets no power but only over those who have actually assisted, concurred, or consented to that unjust force that is used against him: for the people having given to their governors no power to do an unjust thing, such as is to make an unjust war, (for they never had such a power in themselves) they ought not to be charged as guilty of the violence and unjustice that is committed in an unjust war, any farther than they actually abet it; no more than they are to be thought guilty of any violence or oppression their governors should use upon the people themselves, or any part of their fellow subjects, they having empowered them no more to the one than to the other. Conquerors, it is true, seldom trouble themselves to make the distinction, but they willingly permit the confusion of war to sweep all together: but yet this alters not the right; for the conquerors power over the lives of the conquered, being only because they have used force to do, or maintain an injustice, he can have that power only over those who have concurred in that force; all the rest are innocent; and he has no more title over the people of that country, who have done him no injury, and so have made no forfeiture of their lives, than he has over any other, who, without any injuries or provocations, have lived upon fair terms with him.

Sect. 180. Thirdly, The power a conqueror gets over those he overcomes in a just war, is perfectly despotical: he has an absolute power over the lives of those, who, by putting themselves in a state of war, have forfeited them; but he has not thereby a right and title to their possessions. This I doubt not, but at first sight will seem a strange doctrine, it being so quite contrary to the practice of the world; there being nothing more familiar in speaking of the dominion of countries, than to say such an one conquered it; as if conquest, without any more ado, conveyed a right of possession. But when we consider, that the practice of the strong and powerful, how universal soever it may be, is seldom the rule of right, however it be one part of the subjection of the conquered, not to argue against the conditions cut out to them by the conquering sword.

Sect. 181. Though in all war there be usually a complication of force and damage, and the aggressor seldom fails to harm the estate, when he uses force against the persons of those he makes war upon; yet it is the use of force only that puts a man into the state of war: for whether by force he begins the injury, or else having quietly, and by fraud, done the injury, he refuses to make reparation, and by force maintains it, (which is the same thing, as at first to have done it by force) it is the unjust use of force that makes the war: for he that breaks open my house, and violently turns me out of doors; or having peaceably got in, by force keeps me out, does in effect the same thing; supposing we are in such a state, that we have no common judge on earth, whom I may appeal to, and to whom we are both obliged to submit: for of such I am now speaking. It is the unjust use of force then, that puts a man into the state of war with another; and thereby he that is guilty of it makes a forfeiture of his life: for quitting reason, which is the rule given between man and man, and using force, the way of beasts, he becomes liable to be destroyed by him he uses force against, as any savage ravenous beast, that is dangerous to his being.

Sect. 182. But because the miscarriages of the father are no faults of the children, and they may be rational and peaceable, notwithstanding the brutishness and injustice of the father; the father, by his miscarriages and violence, can forfeit but his own life, but involves not his children in his guilt or destruction. His goods, which nature, that willeth the preservation of all mankind as much as is possible, hath made to belong to the children to keep them from perishing, do still continue to belong to his children: for supposing them not to have joined in the war, either thro' infancy, absence, or choice, they have done nothing to forfeit them: nor has the conqueror any right to take them away, by the bare title of having subdued him that by force attempted his destruction; though perhaps he may have some right to them, to repair the damages he has sustained by the war, and the defence of his own right; which how far it reaches to the possessions of the conquered, we shall see by and by. So that he that by conquest has a right over a man's person to destroy him if he pleases, has not thereby a right over his estate to possess and enjoy it: for it is the brutal force the aggressor has used, that gives his adversary a right to take away his life, and destroy him if he pleases, as a noxious creature; but it is damage sustained that alone gives him title to another man's goods: for though I may kill a thief that sets on me in the highway, yet I may not (which seems less) take away his money, and let him go: this would be robbery on my side. His force, and the state of war he put himself in, made him forfeit his life, but gave me no title to his goods. The right then of conquest extends only to the lives of those who joined in the war, not to their estates, but only in order to make reparation for the damages received, and the charges of the war, and that too with reservation of the right of the innocent wife and children.

Sect. 183. Let the conqueror have as much justice on his side, as could be supposed, he has no right to seize more than the vanquished could forfeit: his life is at the victor's mercy; and his service and goods he may appropriate, to make himself reparation; but he cannot take the goods of his wife and children; they too had a title to the goods he enjoyed, and their shares in the estate he possessed: for example, I in the state of nature (and all commonwealths are in the state of nature one with another) have injured another man, and refusing to give satisfaction, it comes to a state of war, wherein my defending by force what I had gotten unjustly, makes me the aggressor. I am conquered: my life, it is true, as forfeit, is at mercy, but not my wife's and children's. They made not the war, nor assisted in it. I could not forfeit their lives; they were not mine to forfeit. My wife had a share in my estate; that neither could I forfeit. And my children also, being born of me, had a right to be maintained out of my labour or substance. Here then is the case: the conqueror has a title to reparation for damages received, and the children have a title to their father's estate for their subsistence: for as to the wife's share, whether her own labour, or compact, gave her a title to it, it is plain, her husband could not forfeit what was her's. What must be done in the case? I answer; the fundamental law of nature being, that all, as much as may be, should be preserved, it follows, that if there be not enough fully to satisfy both, viz, for the conqueror's losses, and children's maintenance, he that hath, and to spare, must remit something of his full satisfaction, and give way to the pressing and preferable title of those who are in danger to perish without it.

Sect. 184. But supposing the charge and damages of the war are to be made up to the conqueror, to the utmost farthing; and that the children of the vanquished, spoiled of all their father's goods, are to be left to starve and perish; yet the satisfying of what shall, on this score, be due to the conqueror, will scarce give him a title to any country he shall conquer: for the damages of war can scarce amount to the value of any considerable tract of land, in any part of the world, where all the land is possessed, and none lies waste. And if I have not taken away the conqueror's land, which, being vanquished, it is impossible I should; scarce any other spoil I have done him can amount to the value of mine, supposing it equally cultivated, and of an extent any way coming near what I had overrun of his. The destruction of a year's product or two (for it seldom reaches four or five) is the utmost spoil that usually can be done: for as to money, and such riches and treasure taken away, these are none of nature's goods, they have but a fantastical imaginary value: nature has put no such upon them: they are of no more account by her standard, than the wampompeke of the Americans to an European prince, or the silver money of Europe would have been formerly to an American. And five years product

is not worth the perpetual inheritance of land, where all is possessed, and none remains waste, to be taken up by him that is disseized: which will be easily granted, if one do but take away the imaginary value of money, the disproportion being more than between five and five hundred; though, at the same time, half a year's product is more worth than the inheritance, where there being more land than the inhabitants possess and make use of, any one has liberty to make use of the waste: but there conquerors take little care to possess themselves of the lands of the vanquished, No damage therefore, that men in the state of nature (as all princes and governments are in reference to one another) suffer from one another, can give a conqueror power to dispossess the posterity of the vanquished, and turn them out of that inheritance, which ought to be the possession of them and their descendants to all generations. The conqueror indeed will be apt to think himself master: and it is the very condition of the subdued not to be able to dispute their right. But if that be all, it gives no other title than what bare force gives to the stronger over the weaker: and, by this reason, he that is strongest will have a right to whatever he pleases to seize on.

Sect. 185. Over those then that joined with him in the war, and over those of the subdued country that opposed him not, and the posterity even of those that did, the conqueror, even in a just war, hath, by his conquest, no right of dominion: they are free from any subjection to him, and if their former government be dissolved, they are at liberty to begin and erect another to themselves.

Sect. 186. The conqueror, it is true, usually, by the force he has over them, compels them, with a sword at their breasts, to stoop to his conditions, and submit to such a government as he pleases to afford them; but the enquiry is, what right he has to do so? If it be said, they submit by their own consent, then this allows their own consent to be necessary to give the conqueror a title to rule over them. It remains only to be considered, whether promises extorted by force, without right, can be thought consent, and how far they bind. To which I shall say, they bind not at all; because whatsoever another gets from me by force, I still retain the right of, and he is obliged presently to restore. He that forces my horse from me, ought presently to restore him, and I have still a right to retake him. By the same reason, he that forced a promise from me, ought presently to restore it, i.e. quit me of the obligation of it; or I may resume it myself, i.e. chuse whether I will perform it: for the law of nature laying an obligation on me only by the rules she prescribes, cannot oblige me by the violation of her rules: such is the extorting any thing from me by force. Nor does it at all alter the case to say, I gave my promise, no more than it excuses the force, and passes the right, when I put my hand in my pocket, and deliver my purse myself to a thief, who demands it with a pistol at my breast.

Sect. 187. From all which it follows, that the government of a conqueror, imposed by force on the subdued, against whom he had no right of war, or who joined not in the war against him, where he had right, has no obligation upon them.

Sect. 188. But let us suppose, that all the men of that community, being all members of the same body politic, may be taken to have joined in that unjust war wherein they are subdued, and so their lives are at the mercy of the conqueror.

Sect. 189. I say this concerns not their children who are in their minority: for since a father hath not, in himself, a power over the life or liberty of his child, no act of his can possibly forfeit it. So that the children, whatever may have happened to the fathers, are freemen, and the absolute power of the conqueror reaches no farther than the persons of the men that were subdued by him, and dies with them: and should he govern them as slaves, subjected to his absolute arbitrary power, he has no such right of dominion over their children. He can have no power over them but by their own consent, whatever he may drive them to say or do; and he has no lawfull authority, whilst force, and not choice, compels them to submission.

Sect. 190. Every man is born with a double right: first, a right of freedom to his person, which no other man has a power over, but the free disposal of it lies in himself. Secondly, a right, before any other man, to inherit with his brethren his father's goods.

Sect. 191. By the first of these, a man is naturally free from subjection to any government, tho' he be born in a place under its jurisdiction; but if he disclaim the lawful government of the country he was born in, he must also quit the right that belonged to him by the laws of it, and the possessions there descending to him from his ancestors, if it were a government made by their consent.

Sect. 192. By the second, the inhabitants of any country, who are descended, and derive a title to their estates from those who are subdued, and had a government forced upon them against their free consents, retain a right to the possession of their ancestors, though they consent not freely to the government, whose hard conditions were by force imposed on the possessors of that country: for the first conqueror never having had a title to the land of that country, the people who are the descendants of, or claim under those who were forced to submit to the yoke of a government by constraint, have always a right to shake it off, and free themselves from the usurpation or tyranny which the sword hath brought in upon them, till their rulers put them under such a frame of government as they willingly and of choice consent to. Who doubts but the Grecian Christians, descendants of the ancient possessors of that country, may justly cast off the Turkish yoke, which they have so long groaned under, whenever they have an

opportunity to do it? For no government can have a right to obedience from a people who have not freely consented to it; which they can never be supposed to do, till either they are put in a full state of liberty to chuse their government and governors, or at least till they have such standing laws, to which they have by themselves or their representatives given their free consent, and also till they are allowed their due property, which is so to be proprietors of what they have, that no body can take away any part of it without their own consent, without which, men under any government are not in the state of freemen, but are direct slaves under the force of war.

Sect. 193. But granting that the conqueror in a just war has a right to the estates, as well as power over the persons, of the conquered; which, it is plain, he hath not: nothing of absolute power will follow from hence, in the continuance of the government; because the descendants of these being all freemen, if he grants them estates and possessions to inhabit his country, (without which it would be worth nothing) whatsoever he grants them, they have, so far as it is granted, property in. The nature whereof is, that without a man's own consent it cannot be taken from him.

Sect. 194. Their persons are free by a native right, and their properties, be they more or less, are their own, and at their own dispose, and not at his; or else it is no property. Supposing the conqueror gives to one man a thousand acres, to him and his heirs for ever; to another he lets a thousand acres for his life, under the rent of 50_l_. or 500_l_. per ann. has not the one of these a right to his thousand acres for ever, and the other, during his life, paying the said rent? and hath not the tenant for life a property in all that he gets over and above his rent, by his labour and industry during the said term, supposing it be double the rent? Can any one say, the king, or conqueror, after his grant, may by his power of conqueror take away all, or part of the land from the heirs of one, or from the other during his life, he paying the rent? or can he take away from either the goods or money they have got upon the said land, at his pleasure? If he can, then all free and voluntary contracts cease, and are void in the world; there needs nothing to dissolve them at any time, but power enough: and all the grants and promises of men in power are but mockery and collusion: for can there be any thing more ridiculous than to say, I give you and your's this for ever, and that in the surest and most solemn way of conveyance can be devised; and yet it is to be understood, that I have right, if I please, to take it away from you again to morrow?

Sect. 195. I will not dispute now whether princes are exempt from the laws of their country; but this I am sure, they owe subjection to the laws of God and nature. No body, no power, can exempt them from the obligations of that eternal law. Those are so great, and so strong, in the case of promises, that omnipotency itself can be tied by them. Grants, promises, and oaths, are bonds that hold the Almighty: whatever some flatterers say to princes of the world, who all together, with all their people joined to them, are, in comparison of the great God, but as a drop of the bucket, or a dust on the balance, inconsiderable, nothing!

Sect. 196. The short of the case in conquest is this: the conqueror, if he have a just cause, has a despotical right over the persons of all, that actually aided, and concurred in the war against him, and a right to make up his damage and cost out of their labour and estates, so he injure not the right of any other. Over the rest of the people, if there were any that consented not to the war, and over the children of the captives themselves, or the possessions of either, he has no power; and so can have, by virtue of conquest, no lawful title himself to dominion over them, or derive it to his posterity; but is an aggressor, if he attempts upon their properties, and thereby puts himself in a state of war against them, and has no better a right of principality, he, nor any of his successors, than Hingar, or Hubba, the Danes, had here in England; or Spartacus, had he conquered Italy, would have had; which is to have their yoke cast off, as soon as God shall give those under their subjection courage and opportunity to do it. Thus, notwithstanding whatever title the kings of Assyria had over Judah, by the sword, God assisted Hezekiah to throw off the dominion of that conquering empire. And the lord was with Hezekiah, and he prospered; wherefore he went forth, and he rebelled against the king of Assyria, and served him not, 2 Kings xviii. 7. Whence it is plain, that shaking off a power, which force, and not right, hath set over any one, though it hath the name of rebellion, yet is no offence before God, but is that which he allows and countenances, though even promises and covenants, when obtained by force, have intervened: for it is very probable, to any one that reads the story of Ahaz and Hezekiah attentively, that the Assyrians subdued Ahaz, and deposed him, and made Hezekiah king in his father's lifetime; and that Hezekiah by agreement had done him homage, and paid him tribute all this time.

CHAPTER. XVII.

OF USURPATION.

Sect. 197. AS conquest may be called a foreign usurpation, so usurpation is a kind of domestic conquest, with this difference, that an usurper can never have right on his side, it being no usurpation, but where one is got into the possession of what another has right to. This, so far as it is usurpation, is a change only of persons, but not of the forms and rules of the government: for if the

usurper extend his power beyond what of right belonged to the lawful princes, or governors of the commonwealth, it is tyranny added to usurpation.

Sect. 198. In all lawful governments, the designation of the persons, who are to bear rule, is as natural and necessary a part as the form of the government itself, and is that which had its establishment originally from the people; the anarchy being much alike, to have no form of government at all; or to agree, that it shall be monarchical, but to appoint no way to design the person that shall have the power, and be the monarch. Hence all commonwealths, with the form of government established, have rules also of appointing those who are to have any share in the public authority, and settled methods of conveying the right to them: for the anarchy is much alike, to have no form of government at all; or to agree that it shall be monarchical, but to appoint no way to know or design the person that shall have the power, and be the monarch. Whoever gets into the exercise of any part of the power, by other ways than what the laws of the community have prescribed, hath no right to be obeyed, though the form of the commonwealth be still preserved; since he is not the person the laws have appointed, and consequently not the person the people have consented to. Nor can such an usurper, or any deriving from him, ever have a title, till the people are both at liberty to consent, and have actually consented to allow, and confirm in him the power he hath till then usurped.

CHAPTER. XVIII.

OF TYRANNY.

Sect. 199. AS usurpation is the exercise of power, which another hath a right to; so tyranny is the exercise of power beyond right, which no body can have a right to. And this is making use of the power any one has in his hands, not for the good of those who are under it, but for his own private separate advantage. When the governor, however intitled, makes not the law, but his will, the rule; and his commands and actions are not directed to the preservation of the properties of his people, but the satisfaction of his own ambition, revenge, covetousness, or any other irregular passion.

Sect. 200. If one can doubt this to be truth, or reason, because it comes from the obscure hand of a subject, I hope the authority of a king will make it pass with him. King James the first, in his speech to the parliament, 1603, tells them thus,

/# I will ever prefer the weal of the public, and of the whole commonwealth, in making of good laws and constitutions, to any particular and private ends of mine; thinking ever the wealth and weal of the commonwealth to be my greatest weal and worldly felicity; a point wherein a lawful king doth directly differ from a tyrant: for I do acknowledge, that the special and greatest point of difference that is between a rightful king and an usurping tyrant, is this, that whereas the proud and ambitious tyrant doth think his kingdom and people are only ordained for satisfaction of his desires and unreasonable appetites, the righteous and just king doth by the contrary acknowledge himself to be ordained for the procuring of the wealth and property of his people. #/

And again, in his speech to the parliament, 1609, he hath these words:

/# The king binds himself by a double oath, to the observation of the fundamental laws of his kingdom; tacitly, as by being a king, and so bound to protect as well the people, as the laws of his kingdom; and expressly, by his oath at his coronation, so as every just king, in a settled kingdom, is bound to observe that paction made to his people, by his laws, in framing his government agreeable thereunto, according to that paction which God made with Noah after the deluge. Hereafter, seed-time and harvest, and cold and heat, and summer and winter, and day and night, shall not cease while the earth remaineth. And therefore a king governing in a settled kingdom, leaves to be a king, and degenerates into a tyrant, as soon as he leaves off to rule according to his laws. #/

And a little after,

/# Therefore all kings that are not tyrants, or perjured, will be glad to bound themselves within the limits of their laws; and they that persuade them the contrary, are vipers, and pests both against them and the commonwealth. #/

Thus that learned king, who well understood the notion of things, makes the difference betwixt a king and a tyrant to consist only in this, that one makes the laws the bounds of his power, and the good of the public, the end of his government; the other makes all give way to his own will and appetite.

Sect. 201. It is a mistake, to think this fault is proper only to monarchies; other forms of government are liable to it, as well as that: for wherever the power, that is put in any hands for the government of the people, and the preservation of their properties, is

applied to other ends, and made use of to impoverish, harass, or subdue them to the arbitrary and irregular commands of those that have it; there it presently becomes tyranny, whether those that thus use it are one or many. Thus we read of the thirty tyrants at Athens, as well as one at Syracuse; and the intolerable dominion of the Decemviri at Rome was nothing better.

Sect. 202. Where-ever law ends, tyranny begins, if the law be transgressed to another's harm; and whosoever in authority exceeds the power given him by the law, and makes use of the force he has under his command, to compass that upon the subject, which the law allows not, ceases in that to be a magistrate; and, acting without authority, may be opposed, as any other man, who by force invades the right of another. This is acknowledged in subordinate magistrates. He that hath authority to seize my person in the street, may be opposed as a thief and a robber, if he endeavours to break into my house to execute a writ, notwithstanding that I know he has such a warrant, and such a legal authority, as will impower him to arrest me abroad. And why this should not hold in the highest, as well as in the most inferior magistrate, I would gladly be informed. Is it reasonable, that the eldest brother, because he has the greatest part of his father's estate, should thereby have a right to take away any of his younger brothers portions? or that a rich man, who possessed a whole country, should from thence have a right to seize, when he pleased, the cottage and garden of his poor neighbour? The being rightfully possessed of great power and riches, exceedingly beyond the greatest part of the sons of Adam, is so far from being an excuse, much less a reason, for rapine and oppression, which the endamaging another without authority is, that it is a great aggravation of it: for the exceeding the bounds of authority is no more a right in a great, than in a petty officer; no more justifiable in a king than a constable; but is so much the worse in him, in that he has more trust put in him, has already a much greater share than the rest of his brethren, and is supposed, from the advantages of his education, employment, and counsellors, to be more knowing in the measures of right and wrong.

Sect. 203. May the commands then of a prince be opposed? may he be resisted as often as any one shall find himself aggrieved, and but imagine he has not right done him? This will unhinge and overturn all polities, and, instead of government and order, leave nothing but anarchy and confusion.

Sect. 204. To this I answer, that force is to be opposed to nothing, but to unjust and unlawful force; whoever makes any opposition in any other case, draws on himself a just condemnation both from God and man; and so no such danger or confusion will follow, as is often suggested: for,

Sect. 205. First, As, in some countries, the person of the prince by the law is sacred; and so, whatever he commands or does, his person is still free from all question or violence, not liable to force, or any judicial censure or condemnation. But yet opposition may be made to the illegal acts of any inferior officer, or other commissioned by him; unless he will, by actually putting himself into a state of war with his people, dissolve the government, and leave them to that defence which belongs to every one in the state of nature: for of such things who can tell what the end will be? and a neighbour kingdom has shewed the world an odd example. In all other cases the sacredness of the person exempts him from all inconveniencies, whereby he is secure, whilst the government stands, from all violence and harm whatsoever; than which there cannot be a wiser constitution: for the harm he can do in his own person not being likely to happen often, nor to extend itself far; nor being able by his single strength to subvert the laws, nor oppress the body of the people, should any prince have so much weakness, and ill nature as to be willing to do it, the inconveniency of some particular mischiefs, that may happen sometimes, when a heady prince comes to the throne, are well recompensed by the peace of the public, and security of the government, in the person of the chief magistrate, thus set out of the reach of danger: it being safer for the body, that some few private men should be sometimes in danger to suffer, than that the head of the republic should be easily, and upon slight occasions, exposed.

Sect. 206. Secondly, But this privilege, belonging only to the king's person, hinders not, but they may be questioned, opposed, and resisted, who use unjust force, though they pretend a commission from him, which the law authorizes not; as is plain in the case of him that has the king's writ to arrest a man, which is a full commission from the king; and yet he that has it cannot break open a man's house to do it, nor execute this command of the king upon certain days, nor in certain places, though this commission have no such exception in it; but they are the limitations of the law, which if any one transgress, the king's commission excuses him not: for the king's authority being given him only by the law, he cannot impower any one to act against the law, or justify him, by his commission, in so doing; the commission, or command of any magistrate, where he has no authority, being as void and insignificant, as that of any private man; the difference between the one and the other, being that the magistrate has some authority so far, and to such ends, and the private man has none at all: for it is not the commission, but the authority, that gives the right of acting; and against the laws there can be no authority. But, notwithstanding such resistance, the king's person and authority are still both secured, and so no danger to governor or government.

Sect. 207. Thirdly, Supposing a government wherein the person of the chief magistrate is not thus sacred; yet this doctrine of the lawfulness of resisting all unlawful exercises of his power, will not upon every slight occasion indanger him, or imbroil the government: for where the injured party may be relieved, and his damages repaired by appeal to the law, there can be no pretence for force, which is only to be used where a man is intercepted from appealing to the law: for nothing is to be accounted hostile force, but where it leaves not the remedy of such an appeal; and it is such force alone, that puts him that uses it into a state of war, and makes it lawful to resist him. A man with a sword in his hand demands my purse in the high-way, when perhaps I have not twelve pence in my pocket: this man I may lawfully kill. To another I deliver 100 pounds to hold only whilst I alight, which he refuses to restore me, when I am got up again, but draws his sword to defend the possession of it by force, if I endeavour to retake it. The mischief this man does me is a hundred, or possibly a thousand times more than the other perhaps intended me (whom I killed before he really did me any); and yet I might lawfully kill the one, and cannot so much as hurt the other lawfully. The reason whereof is plain; because the one using force, which threatened my life, I could not have time to appeal to the law to secure it: and when it was gone, it was too late to appeal. The law could not restore life to my dead carcass: the loss was irreparable; which to prevent, the law of nature gave me a right to destroy him, who had put himself into a state of war with me, and threatened my destruction. But in the other case, my life not being in danger, I may have the benefit of appealing to the law, and have reparation for my 100 pounds that way.

Sect. 208. Fourthly, But if the unlawful acts done by the magistrate be maintained (by the power he has got), and the remedy which is due by law, be by the same power obstructed; yet the right of resisting, even in such manifest acts of tyranny, will not suddenly, or on slight occasions, disturb the government: for if it reach no farther than some private men's cases, though they have a right to defend themselves, and to recover by force what by unlawful force is taken from them; yet the right to do so will not easily engage them in a contest, wherein they are sure to perish; it being as impossible for one, or a few oppressed men to disturb the government, where the body of the people do not think themselves concerned in it, as for a raving mad-man, or heady malcontent to overturn a well settled state; the people being as little apt to follow the one, as the other.

Sect. 209. But if either these illegal acts have extended to the majority of the people; or if the mischief and oppression has lighted only on some few, but in such cases, as the precedent, and consequences seem to threaten all; and they are persuaded in their consciences, that their laws, and with them their estates, liberties, and lives are in danger, and perhaps their religion too; how they will be hindered from resisting illegal force, used against them, I cannot tell. This is an inconvenience, I confess, that attends all governments whatsoever, when the governors have brought it to this pass, to be generally suspected of their people; the most dangerous state which they can possibly put themselves in, wherein they are the less to be pitied, because it is so easy to be avoided; it being as impossible for a governor, if he really means the good of his people, and the preservation of them, and their laws together, not to make them see and feel it, as it is for the father of a family, not to let his children see he loves, and takes care of them.

Sect. 210. But if all the world shall observe pretences of one kind, and actions of another; arts used to elude the law, and the trust of prerogative (which is an arbitrary power in some things left in the prince's hand to do good, not harm to the people) employed contrary to the end for which it was given: if the people shall find the ministers and subordinate magistrates chosen suitable to such ends, and favoured, or laid by, proportionably as they promote or oppose them: if they see several experiments made of arbitrary power, and that religion underhand favoured, (tho' publicly proclaimed against) which is readiest to introduce it; and the operators in it supported, as much as may be; and when that cannot be done, yet approved still, and liked the better: if a long train of actions shew the councils all tending that way; how can a man any more hinder himself from being persuaded in his own mind, which way things are going; or from casting about how to save himself, than he could from believing the captain of the ship he was in, was carrying him, and the rest of the company, to Algiers, when he found him always steering that course, though cross winds, leaks in his ship, and want of men and provisions did often force him to turn his course another way for some time, which he steadily returned to again, as soon as the wind, weather, and other circumstances would let him?

CHAPTER. XIX.

OF THE DISSOLUTION OF GOVERNMENT.

Sect. 211. HE that will with any clearness speak of the dissolution of government, ought in the first place to distinguish between the dissolution of the society and the dissolution of the government. That which makes the community, and brings men out of the loose state of nature, into one politic society, is the agreement which every one has with the rest to incorporate, and act as one body, and

so be one distinct commonwealth. The usual, and almost only way whereby this union is dissolved, is the inroad of foreign force making a conquest upon them: for in that case, (not being able to maintain and support themselves, as one intire and independent body) the union belonging to that body which consisted therein, must necessarily cease, and so every one return to the state he was in before, with a liberty to shift for himself, and provide for his own safety, as he thinks fit, in some other society. Whenever the society is dissolved, it is certain the government of that society cannot remain. Thus conquerors swords often cut up governments by the roots, and mangle societies to pieces, separating the subdued or scattered multitude from the protection of, and dependence on, that society which ought to have preserved them from violence. The world is too well instructed in, and too forward to allow of, this way of dissolving of governments, to need any more to be said of it; and there wants not much argument to prove, that where the society is dissolved, the government cannot remain; that being as impossible, as for the frame of an house to subsist when the materials of it are scattered and dissipated by a whirl-wind, or jumbled into a confused heap by an earthquake.

Sect. 212. Besides this over-turning from without, governments are dissolved from within.

First, When the legislative is altered. Civil society being a state of peace, amongst those who are of it, from whom the state of war is excluded by the umpirage, which they have provided in their legislative, for the ending all differences that may arise amongst any of them, it is in their legislative, that the members of a commonwealth are united, and combined together into one coherent living body. This is the soul that gives form, life, and unity, to the commonwealth: from hence the several members have their mutual influence, sympathy, and connexion: and therefore, when the legislative is broken, or dissolved, dissolution and death follows: for the essence and union of the society consisting in having one will, the legislative, when once established by the majority, has the declaring, and as it were keeping of that will. The constitution of the legislative is the first and fundamental act of society, whereby provision is made for the continuation of their union, under the direction of persons, and bonds of laws, made by persons authorized thereunto, by the consent and appointment of the people, without which no one man, or number of men, amongst them, can have authority of making laws that shall be binding to the rest. When any one, or more, shall take upon them to make laws, whom the people have not appointed so to do, they make laws without authority, which the people are not therefore bound to obey; by which means they come again to be out of subjection, and may constitute to themselves a new legislative, as they think best, being in full liberty to resist the force of those, who without authority would impose any thing upon them. Every one is at the disposure of his own will, when those who had, by the delegation of the society, the declaring of the public will, are excluded from it, and others usurp the place, who have no such authority or delegation.

Sect. 213. This being usually brought about by such in the commonwealth who misuse the power they have; it is hard to consider it aright, and know at whose door to lay it, without knowing the form of government in which it happens. Let us suppose then the legislative placed in the concurrence of three distinct persons.

(1). A single hereditary person, having the constant, supreme, executive power, and with it the power of convoking and dissolving the other two within certain periods of time.

(2). An assembly of hereditary nobility.

(3). An assembly of representatives chosen, pro tempore, by the people. Such a form of government supposed, it is evident,

Sect. 214. First, That when such a single person, or prince, sets up his own arbitrary will in place of the laws, which are the will of the society, declared by the legislative, then the legislative is changed: for that being in effect the legislative, whose rules and laws are put in execution, and required to be obeyed; when other laws are set up, and other rules pretended, and inforced, than what the legislative, constituted by the society, have enacted, it is plain that the legislative is changed. Whoever introduces new laws, not being thereunto authorized by the fundamental appointment of the society, or subverts the old, disowns and overturns the power by which they were made, and so sets up a new legislative.

Sect. 215. Secondly, When the prince hinders the legislative from assembling in its due time, or from acting freely, pursuant to those ends for which it was constituted, the legislative is altered: for it is not a certain number of men, no, nor their meeting, unless they have also freedom of debating, and leisure of perfecting, what is for the good of the society, wherein the legislative consists: when these are taken away or altered, so as to deprive the society of the due exercise of their power, the legislative is truly altered; for it is not names that constitute governments, but the use and exercise of those powers that were intended to accompany them; so that he, who takes away the freedom, or hinders the acting of the legislative in its due seasons, in effect takes away the legislative, and puts an end to the government.

Sect. 216. Thirdly, When, by the arbitrary power of the prince, the electors, or ways of election, are altered, without the consent, and contrary to the common interest of the people, there also the legislative is altered: for, if others than those whom the society hath authorized thereunto, do chuse, or in another way than what the society hath prescribed, those chosen are not the legislative appointed by the people.

Sect. 217. Fourthly, The delivery also of the people into the subjection of a foreign power, either by the prince, or by the legislative, is certainly a change of the legislative, and so a dissolution of the government: for the end why people entered into society being to be preserved one intire, free, independent society, to be governed by its own laws; this is lost, whenever they are given up into the power of another.

Sect. 218. Why, in such a constitution as this, the dissolution of the government in these cases is to be imputed to the prince, is evident; because he, having the force, treasure and offices of the state to employ, and often persuading himself, or being flattered by others, that as supreme magistrate he is uncapable of controul; he alone is in a condition to make great advances toward such changes, under pretence of lawful authority, and has it in his hands to terrify or suppress opposers, as factious, seditious, and enemies to the government: whereas no other part of the legislative, or people, is capable by themselves to attempt any alteration of the legislative, without open and visible rebellion, apt enough to be taken notice of, which, when it prevails, produces effects very little different from foreign conquest. Besides, the prince in such a form of government, having the power of dissolving the other parts of the legislative, and thereby rendering them private persons, they can never in opposition to him, or without his concurrence, alter the legislative by a law, his consent being necessary to give any of their decrees that sanction. But yet, so far as the other parts of the legislative any way contribute to any attempt upon the government, and do either promote, or not, what lies in them, hinder such designs, they are guilty, and partake in this, which is certainly the greatest crime which men can partake of one towards another.

Sec. 219.There is one way more whereby such a government may be dissolved, and that is: When he who has the supreme executive power, neglects and abandons that charge, so that the laws already made can no longer be put in execution. This is demonstratively to reduce all to anarchy, and so effectually to dissolve the government: for laws not being made for themselves, but to be, by their execution, the bonds of the society, to keep every part of the body politic in its due place and function; when that totally ceases, the government visibly ceases, and the people become a confused multitude, without order or connexion. Where there is no longer the administration of justice, for the securing of men’s rights, nor any remaining power within the community to direct the force, or provide for the necessities of the public, there certainly is no government left. Where the laws cannot be executed, it is all one as if there were no laws; and a government without laws is, I suppose, a mystery in politics, unconceivable to human capacity, and inconsistent with human society.

Sect. 220. In these and the like cases, when the government is dissolved, the people are at liberty to provide for themselves, by erecting a new legislative, differing from the other, by the change of persons, or form, or both, as they shall find it most for their safety and good: for the society can never, by the fault of another, lose the native and original right it has to preserve itself, which can only be done by a settled legislative, and a fair and impartial execution of the laws made by it. But the state of mankind is not so miserable that they are not capable of using this remedy, till it be too late to look for any. To tell people they may provide for themselves, by erecting a new legislative, when by oppression, artifice, or being delivered over to a foreign power, their old one is gone, is only to tell them, they may expect relief when it is too late, and the evil is past cure. This is in effect no more than to bid them first be slaves, and then to take care of their liberty; and when their chains are on, tell them, they may act like freemen. This, if barely so, is rather mockery than relief; and men can never be secure from tyranny, if there be no means to escape it till they are perfectly under it: and therefore it is, that they have not only a right to get out of it, but to prevent it.

Sect. 221. There is therefore, secondly, another way whereby governments are dissolved, and that is, when the legislative, or the prince, either of them, act contrary to their trust.

First, The legislative acts against the trust reposed in them, when they endeavour to invade the property of the subject, and to make themselves, or any part of the community, masters, or arbitrary disposers of the lives, liberties, or fortunes of the people.

Sect. 222. The reason why men enter into society, is the preservation of their property; and the end why they chuse and authorize a legislative, is, that there may be laws made, and rules set, as guards and fences to the properties of all the members of the society, to limit the power, and moderate the dominion, of every part and member of the society: for since it can never be supposed to be the will of the society, that the legislative should have a power to destroy that which every one designs to secure, by entering into

society, and for which the people submitted themselves to legislators of their own making; whenever the legislators endeavour to take away, and destroy the property of the people, or to reduce them to slavery under arbitrary power, they put themselves into a state of war with the people, who are thereupon absolved from any farther obedience, and are left to the common refuge, which God hath provided for all men, against force and violence. Whensoever therefore the legislative shall transgress this fundamental rule of society; and either by ambition, fear, folly or corruption, endeavour to grasp themselves, or put into the hands of any other, an absolute power over the lives, liberties, and estates of the people; by this breach of trust they forfeit the power the people had put into their hands for quite contrary ends, and it devolves to the people, who have a right to resume their original liberty, and, by the establishment of a new legislative, (such as they shall think fit) provide for their own safety and security, which is the end for which they are in society. What I have said here, concerning the legislative in general, holds true also concerning the supreme executor, who having a double trust put in him, both to have a part in the legislative, and the supreme execution of the law, acts against both, when he goes about to set up his own arbitrary will as the law of the society. He acts also contrary to his trust, when he either employs the force, treasure, and offices of the society, to corrupt the representatives, and gain them to his purposes; or openly preengages the electors, and prescribes to their choice, such, whom he has, by sollicitations, threats, promises, or otherwise, won to his designs; and employs them to bring in such, who have promised before-hand what to vote, and what to enact. Thus to regulate candidates and electors, and new-model the ways of election, what is it but to cut up the government by the roots, and poison the very fountain of public security? for the people having reserved to themselves the choice of their representatives, as the fence to their properties, could do it for no other end, but that they might always be freely chosen, and so chosen, freely act, and advise, as the necessity of the commonwealth, and the public good should, upon examination, and mature debate, be judged to require. This, those who give their votes before they hear the debate, and have weighed the reasons on all sides, are not capable of doing. To prepare such an assembly as this, and endeavour to set up the declared abettors of his own will, for the true representatives of the people, and the law-makers of the society, is certainly as great a breach of trust, and as perfect a declaration of a design to subvert the government, as is possible to be met with. To which, if one shall add rewards and punishments visibly employed to the same end, and all the arts of perverted law made use of, to take off and destroy all that stand in the way of such a design, and will not comply and consent to betray the liberties of their country, it will be past doubt what is doing. What power they ought to have in the society, who thus employ it contrary to the trust went along with it in its first institution, is easy to determine; and one cannot but see, that he, who has once attempted any such thing as this, cannot any longer be trusted.

Sect. 223. To this perhaps it will be said, that the people being ignorant, and always discontented, to lay the foundation of government in the unsteady opinion and uncertain humour of the people, is to expose it to certain ruin; and no government will be able long to subsist, if the people may set up a new legislative, whenever they take offence at the old one. To this I answer, Quite the contrary. People are not so easily got out of their old forms, as some are apt to suggest. They are hardly to be prevailed with to amend the acknowledged faults in the frame they have been accustomed to. And if there be any original defects, or adventitious ones introduced by time, or corruption; it is not an easy thing to get them changed, even when all the world sees there is an opportunity for it. This slowness and aversion in the people to quit their old constitutions, has, in the many revolutions which have been seen in this kingdom, in this and former ages, still kept us to, or, after some interval of fruitless attempts, still brought us back again to our old legislative of king, lords and commons: and whatever provocations have made the crown be taken from some of our princes heads, they never carried the people so far as to place it in another line.

Sect. 224. But it will be said, this hypothesis lays a ferment for frequent rebellion. To which I answer,

First, No more than any other hypothesis: for when the people are made miserable, and find themselves exposed to the ill usage of arbitrary power, cry up their governors, as much as you will, for sons of Jupiter; let them be sacred and divine, descended, or authorized from heaven; give them out for whom or what you please, the same will happen. The people generally ill treated, and contrary to right, will be ready upon any occasion to ease themselves of a burden that sits heavy upon them. They will wish, and seek for the opportunity, which in the change, weakness and accidents of human affairs, seldom delays long to offer itself. He must have lived but a little while in the world, who has not seen examples of this in his time; and he must have read very little, who cannot produce examples of it in all sorts of governments in the world.

Sect. 225. Secondly, I answer, such revolutions happen not upon every little mismanagement in public affairs. Great mistakes in the ruling part, many wrong and inconvenient laws, and all the slips of human frailty, will be born by the people without mutiny or murmur. But if a long train of abuses, prevarications and artifices, all tending the same way, make the design visible to the people, and they cannot but feel what they lie under, and see whither they are going; it is not to be wondered, that they should then rouze themselves, and endeavour to put the rule into such hands which may secure to them the ends for which government was at first

erected; and without which, ancient names, and specious forms, are so far from being better, that they are much worse, than the state of nature, or pure anarchy; the inconveniencies being all as great and as near, but the remedy farther off and more difficult.

Sect. 226. Thirdly, I answer, that this doctrine of a power in the people of providing for their safety a-new, by a new legislative, when their legislators have acted contrary to their trust, by invading their property, is the best fence against rebellion, and the probablest means to hinder it: for rebellion being an opposition, not to persons, but authority, which is founded only in the constitutions and laws of the government; those, whoever they be, who by force break through, and by force justify their violation of them, are truly and properly rebels: for when men, by entering into society and civil-government, have excluded force, and introduced laws for the preservation of property, peace, and unity amongst themselves, those who set up force again in opposition to the laws, do rebellare, that is, bring back again the state of war, and are properly rebels: which they who are in power, (by the pretence they have to authority, the temptation of force they have in their hands, and the flattery of those about them) being likeliest to do; the properest way to prevent the evil, is to shew them the danger and injustice of it, who are under the greatest temptation to run into it.

Sect. 227. In both the fore-mentioned cases, when either the legislative is changed, or the legislators act contrary to the end for which they were constituted; those who are guilty are guilty of rebellion: for if any one by force takes away the established legislative of any society, and the laws by them made, pursuant to their trust, he thereby takes away the umpirage, which every one had consented to, for a peaceable decision of all their controversies, and a bar to the state of war amongst them. They, who remove, or change the legislative, take away this decisive power, which no body can have, but by the appointment and consent of the people; and so destroying the authority which the people did, and no body else can set up, and introducing a power which the people hath not authorized, they actually introduce a state of war, which is that of force without authority: and thus, by removing the legislative established by the society, (in whose decisions the people acquiesced and united, as to that of their own will) they untie the knot, and expose the people a-new to the state of war, And if those, who by force take away the legislative, are rebels, the legislators themselves, as has been shewn, can be no less esteemed so; when they, who were set up for the protection, and preservation of the people, their liberties and properties, shall by force invade and endeavour to take them away; and so they putting themselves into a state of war with those who made them the protectors and guardians of their peace, are properly, and with the greatest aggravation, rebellantes, rebels.

Sect. 228. But if they, who say it lays a foundation for rebellion, mean that it may occasion civil wars, or intestine broils, to tell the people they are absolved from obedience when illegal attempts are made upon their liberties or properties, and may oppose the unlawful violence of those who were their magistrates, when they invade their properties contrary to the trust put in them; and that therefore this doctrine is not to be allowed, being so destructive to the peace of the world: they may as well say, upon the same ground, that honest men may not oppose robbers or pirates, because this may occasion disorder or bloodshed. If any mischief come in such cases, it is not to be charged upon him who defends his own right, but on him that invades his neighbours. If the innocent honest man must quietly quit all he has, for peace sake, to him who will lay violent hands upon it, I desire it may be considered, what a kind of peace there will be in the world, which consists only in violence and rapine; and which is to be maintained only for the benefit of robbers and oppressors. Who would not think it an admirable peace betwix the mighty and the mean, when the lamb, without resistance, yielded his throat to be torn by the imperious wolf? Polyphemus's den gives us a perfect pattern of such a peace, and such a government, wherein Ulysses and his companions had nothing to do, but quietly to suffer themselves to be devoured. And no doubt Ulysses, who was a prudent man, preached up passive obedience, and exhorted them to a quiet submission, by representing to them of what concernment peace was to mankind; and by shewing the inconveniences might happen, if they should offer to resist Polyphemus, who had now the power over them.

Sect. 229. The end of government is the good of mankind; and which is best for mankind, that the people should be always exposed to the boundless will of tyranny, or that the rulers should be sometimes liable to be opposed, when they grow exorbitant in the use of their power, and employ it for the destruction, and not the preservation of the properties of their people?

Sect. 230. Nor let any one say, that mischief can arise from hence, as often as it shall please a busy head, or turbulent spirit, to desire the alteration of the government. It is true, such men may stir, whenever they please; but it will be only to their own just ruin and perdition: for till the mischief be grown general, and the ill designs of the rulers become visible, or their attempts sensible to the greater part, the people, who are more disposed to suffer than right themselves by resistance, are not apt to stir. The examples of particular injustice, or oppression of here and there an unfortunate man, moves them not. But if they universally have a persuation, grounded upon manifest evidence, that designs are carrying on against their liberties, and the general course and tendency of things cannot but give them strong suspicions of the evil intention of their governors, who is to be blamed for it? Who can help it, if they, who might avoid it, bring themselves into this suspicion? Are the people to be blamed, if they have the sense of rational

creatures, and can think of things no otherwise than as they find and feel them? And is it not rather their fault, who put things into such a posture, that they would not have them thought to be as they are? I grant, that the pride, ambition, and turbulency of private men have sometimes caused great disorders in commonwealths, and factions have been fatal to states and kingdoms. But whether the mischief hath oftener begun in the peoples wantonness, and a desire to cast off the lawful authority of their rulers, or in the rulers insolence, and endeavours to get and exercise an arbitrary power over their people; whether oppression, or disobedience, gave the first rise to the disorder, I leave it to impartial history to determine. This I am sure, whoever, either ruler or subject, by force goes about to invade the rights of either prince or people, and lays the foundation for overturning the constitution and frame of any just government, is highly guilty of the greatest crime, I think, a man is capable of, being to answer for all those mischiefs of blood, rapine, and desolation, which the breaking to pieces of governments bring on a country. And he who does it, is justly to be esteemed the common enemy and pest of mankind, and is to be treated accordingly.

Sect. 231. That subjects or foreigners, attempting by force on the properties of any people, may be resisted with force, is agreed on all hands. But that magistrates, doing the same thing, may be resisted, hath of late been denied: as if those who had the greatest privileges and advantages by the law, had thereby a power to break those laws, by which alone they were set in a better place than their brethren: whereas their offence is thereby the greater, both as being ungrateful for the greater share they have by the law, and breaking also that trust, which is put into their hands by their brethren.

Sect. 232. Whosoever uses force without right, as every one does in society, who does it without law, puts himself into a state of war with those against whom he so uses it; and in that state all former ties are cancelled, all other rights cease, and every one has a right to defend himself, and to resist the aggressor. This is so evident, that Barclay himself, that great assertor of the power and sacredness of kings, is forced to confess, That it is lawful for the people, in some cases, to resist their king; and that too in a chapter, wherein he pretends to shew, that the divine law shuts up the people from all manner of rebellion. Whereby it is evident, even by his own doctrine, that, since they may in some cases resist, all resisting of princes is not rebellion. His words are these. Quod siquis dicat, Ergone populus tyrannicae crudelitati & furori jugulum semper praebebit? Ergone multitude civitates suas fame, ferro, & flamma vastari, seque, conjuges, & liberos fortunae ludibrio & tyranni libidini exponi, inque omnia vitae pericula omnesque miserias & molestias a rege deduci patientur? Num illis quod omni animantium generi est a natura tributum, denegari debet, ut sc. vim vi repellant, seseq; ab injuria, tueantur? Huic breviter responsum sit, Populo universo negari defensionem, quae juris naturalis est, neque ultionem quae praeter naturam est adversus regem concedi debere. Quapropter si rex non in singulares tantum personas aliquot privatum odium exerceat, sed corpus etiam reipublicae, cujus ipse caput est, i.e. totum populum, vel insignem aliquam ejus partem immani & intoleranda saevitia seu tyrannide divexet; populo, quidem hoc casu resistendi ac tuendi se ab injuria potestas competit, sed tuendi se tantum, non enim in principem invadendi: & restituendae injuriae illatae, non recedendi a debita reverentia propter acceptam injuriam. Praesentem denique impetum propulsandi non vim praeteritam ulciscenti jus habet. Horum enim alterum a natura est, ut vitam scilicet corpusque tueamur. Alterum vero contra naturam, ut inferior de superiori supplicium sumat. Quod itaque populus malum, antequam factum sit, impedire potest, ne fiat, id postquam factum est, in regem authorem sceleris vindicare non potest: populus igitur hoc amplius quam privatus quispiam habet: quod huic, vel ipsis adversariis judicibus, excepto Buchanano, nullum nisi in patientia remedium superest. Cum ille si intolerabilis tyrannus est (modicum enim ferre omnino debet) resistere cum reverentia possit, Barclay contra Monarchom. 1. iii. c. 8.

In English thus:

Sect. 233. But if any one should ask, Must the people then always lay themselves open to the cruelty and rage of tyranny? Must they see their cities pillaged, and laid in ashes, their wives and children exposed to the tyrant’s lust and fury, and themselves and families reduced by their king to ruin, and all the miseries of want and oppression, and yet sit still? Must men alone be debarred the common privilege of opposing force with force, which nature allows so freely to all other creatures for their preservation from injury? I answer: Self-defence is a part of the law of nature; nor can it be denied the community, even against the king himself: but to revenge themselves upon him, must by no means be allowed them; it being not agreeable to that law. Wherefore if the king shall shew an hatred, not only to some particular persons, but sets himself against the body of the commonwealth, whereof he is the head, and shall, with intolerable ill usage, cruelly tyrannize over the whole, or a considerable part of the people, in this case the people have a right to resist and defend themselves from injury: but it must be with this caution, that they only defend themselves, but do not attack their prince: they may repair the damages received, but must not for any provocation exceed the bounds of due reverence and respect. They may repulse the present attempt, but must not revenge past violences: for it is natural for us to defend life and limb, but that an inferior should punish a superior, is against nature. The mischief which is designed them, the people may prevent before it be done; but when it is done, they must not revenge it on the king, though author of the villany. This therefore is

the privilege of the people in general, above what any private person hath; that particular men are allowed by our adversaries themselves (Buchanan only excepted) to have no other remedy but patience; but the body of the people may with respect resist intolerable tyranny; for when it is but moderate, they ought to endure it.

Sect. 234. Thus far that great advocate of monarchical power allows of resistance.

Sect. 235. It is true, he has annexed two limitations to it, to no purpose:

First, He says, it must be with reverence.

Secondly, It must be without retribution, or punishment; and the reason he gives is, because an inferior cannot punish a superior. First, How to resist force without striking again, or how to strike with reverence, will need some skill to make intelligible. He that shall oppose an assault only with a shield to receive the blows, or in any more respectful posture, without a sword in his hand, to abate the confidence and force of the assailant, will quickly be at an end of his resistance, and will find such a defence serve only to draw on himself the worse usage. This is as ridiculous a way of resisting, as juvenal thought it of fighting; ubi tu pulsas, ego vapulo tantum. And the success of the combat will be unavoidably the same he there describes it:

/*[4] -----Libertas pauperis haec est: Pulsatus rogat, et pugnis concisus, adorat, Ut liceat paucis cum dentibus inde reverti. */

This will always be the event of such an imaginary resistance, where men may not strike again. He therefore who may resist, must be allowed to strike. And then let our author, or any body else, join a knock on the head, or a cut on the face, with as much reverence and respect as he thinks fit. He that can reconcile blows and reverence, may, for aught I know, desire for his pains, a civil, respectful cudgeling where-ever he can meet with it.

Secondly, As to his second, An inferior cannot punish a superior; that is true, generally speaking, whilst he is his superior. But to resist force with force, being the state of war that levels the parties, cancels all former relation of reverence, respect, and superiority: and then the odds that remains, is, that he, who opposes the unjust agressor, has this superiority over him, that he has a right, when he prevails, to punish the offender, both for the breach of the peace, and all the evils that followed upon it. Barclay therefore, in another place, more coherently to himself, denies it to be lawful to resist a king in any case. But he there assigns two cases, whereby a king may un-king himself. His words are,

Quid ergo, nulline casus incidere possunt quibus populo sese erigere atque in regem impotentius dominantem arma capere & invadere jure suo suaque authoritate liceat? Nulli certe quamdiu rex manet. Semper enim ex divinis id obstat, Regem honorificato; & qui potestati resistit, Dei ordinationi resisit: non alias igitur in eum populo potestas est quam si id committat propter quod ipso jure rex esse desinat. Tunc enim se ipse principatu exuit atque in privatis constituit liber: hoc modo populus & superior efficitur, reverso ad eum sc. jure illo quod ante regem inauguratum in interregno habuit. At sunt paucorum generum commissa ejusmodi quae hunc effectum pariunt. At ego cum plurima animo perlustrem, duo tantum invenio, duos, inquam, casus quibus rex ipso facto ex rege non regem se facit & omni honore & dignitate regali atque in subditos potestate destituit; quorum etiam meminit Winzerus. Horum unus est, Si regnum disperdat, quemadmodum de Nerone fertur, quod is nempe senatum populumque Romanum, atque adeo urbem ipsam ferro flammaque vastare, ac novas sibi sedes quaerere decrevisset. Et de Caligula, quod palam denunciarit se neque civem neque principem senatui amplius fore, inque animo habuerit interempto utriusque ordinis electissimo quoque Alexandriam commigrare, ac ut populum uno ictu interimeret, unam ei cervicem optavit. Talia cum rex aliquis meditator & molitur serio, omnem regnandi curam & animum ilico abjicit, ac proinde imperium in subditos amittit, ut dominus servi pro derelicto habiti dominium.

Sect. 236. Alter casus est, Si rex in alicujus clientelam se contulit, ac regnum quod liberum a majoribus & populo traditum accepit, alienae ditioni mancipavit. Nam tunc quamvis forte non ea mente id agit populo plane ut incommodet: tamen quia quod praecipuum est regiae dignitatis amifit, ut summus scilicet in regno secundum Deum sit, & solo Deo inferior, atque populum etiam totum ignorantem vel invitum, cujus libertatem sartam & tectam conservare debuit, in alterius gentis ditionem & potestatem dedidit; hac velut quadam regni ab alienatione effecit, ut nec quod ipse in regno imperium habuit retineat, nec in eum cui collatum voluit, juris quicquam transferat; atque ita eo facto liberum jam & suae potestatis populum relinquit, cujus rei exemplum unum annales Scotici suppeditant. Barclay contra Monarchom. 1. iii. c. 16.

Which in English runs thus:

Sect. 237. What then, can there no case happen wherein the people may of right, and by their own authority, help themselves, take arms, and set upon their king, imperiously domineering over them? None at all, whilst he remains a king. Honour the king, and he

that resists the power, resists the ordinance of God; are divine oracles that will never permit it, The people therefore can never come by a power over him, unless he does something that makes him cease to be a king: for then he divests himself of his crown and dignity, and returns to the state of a private man, and the people become free and superior, the power which they had in the interregnum, before they crowned him king, devolving to them again. But there are but few miscarriages which bring the matter to this state. After considering it well on all sides, I can find but two. Two cases there are, I say, whereby a king, ipso facto, becomes no king, and loses all power and regal authority over his people; which are also taken notice of by Winzerus.

The first is, If he endeavour to overturn the government, that is, if he have a purpose and design to ruin the kingdom and commonwealth, as it is recorded of Nero, that he resolved to cut off the senate and people of Rome, lay the city waste with fire and sword, and then remove to some other place. And of Caligula, that he openly declared, that he would be no longer a head to the people or senate, and that he had it in his thoughts to cut off the worthiest men of both ranks, and then retire to Alexandria: and he wisht that the people had but one neck, that he might dispatch them all at a blow, Such designs as these, when any king harbours in his thoughts, and seriously promotes, he immediately gives up all care and thought of the commonwealth; and consequently forfeits the power of governing his subjects, as a master does the dominion over his slaves whom he hath abandoned.

Sect. 238. The other case is, When a king makes himself the dependent of another, and subjects his kingdom which his ancestors left him, and the people put free into his hands, to the dominion of another: for however perhaps it may not be his intention to prejudice the people; yet because he has hereby lost the principal part of regal dignity, viz. to be next and immediately under God, supreme in his kingdom; and also because he betrayed or forced his people, whose liberty he ought to have carefully preserved, into the power and dominion of a foreign nation. By this, as it were, alienation of his kingdom, he himself loses the power he had in it before, without transferring any the least right to those on whom he would have bestowed it; and so by this act sets the people free, and leaves them at their own disposal. One example of this is to be found in the Scotch Annals.

Sect. 239. In these cases Barclay, the great champion of absolute monarchy, is forced to allow, that a king may be resisted, and ceases to be a king. That is, in short, not to multiply cases, in whatsoever he has no authority, there he is no king, and may be resisted: for wheresoever the authority ceases, the king ceases too, and becomes like other men who have no authority. And these two cases he instances in, differ little from those above mentioned, to be destructive to governments, only that he has omitted the principle from which his doctrine flows: and that is, the breach of trust, in not preserving the form of government agreed on, and in not intending the end of government itself, which is the public good and preservation of property. When a king has dethroned himself, and put himself in a state of war with his people, what shall hinder them from prosecuting him who is no king, as they would any other man, who has put himself into a state of war with them, Barclay, and those of his opinion, would do well to tell us. This farther I desire may be taken notice of out of Barclay, that he says, The mischief that is designed them, the people may prevent before it be done: whereby he allows resistance when tyranny is but in design. Such designs as these (says he) when any king harbours in his thoughts and seriously promotes, he immediately gives up all care and thought of the commonwealth; so that, according to him, the neglect of the public good is to be taken as an evidence of such design, or at least for a sufficient cause of resistance. And the reason of all, he gives in these words, Because he betrayed or forced his people, whose liberty he ought carefully to have preserved. What he adds, into the power and dominion of a foreign nation, signifies nothing, the fault and forfeiture lying in the loss of their liberty, which he ought to have preserved, and not in any distinction of the persons to whose dominion they were subjected. The peoples right is equally invaded, and their liberty lost, whether they are made slaves to any of their own, or a foreign nation; and in this lies the injury, and against this only have they the right of defence. And there are instances to be found in all countries, which shew, that it is not the change of nations in the persons of their governors, but the change of government, that gives the offence. Bilson, a bishop of our church, and a great stickler for the power and prerogative of princes, does, if I mistake not, in his treatise of Christian subjection, acknowledge, that princes may forfeit their power, and their title to the obedience of their subjects; and if there needed authority in a case where reason is so plain, I could send my reader to Bracton, Fortescue, and the author of the Mirrour, and others, writers that cannot be suspected to be ignorant of our government, or enemies to it. But I thought Hooker alone might be enough to satisfy those men, who relying on him for their ecclesiastical polity, are by a strange fate carried to deny those principles upon which he builds it. Whether they are herein made the tools of cunninger workmen, to pull down their own fabric, they were best look. This I am sure, their civil policy is so new, so dangerous, and so destructive to both rulers and people, that as former ages never could bear the broaching of it; so it may be hoped, those to come, redeemed from the impositions of these Egyptian under-task-masters, will abhor the memory of such servile flatterers, who, whilst it seemed to serve their turn, resolved all government into absolute tyranny, and would have all men born to, what their mean souls fitted them for, slavery.

Sect. 240. Here, it is like, the common question will be made, Who shall be judge, whether the prince or legislative act contrary to their trust? This, perhaps, ill-affected and factious men may spread amongst the people, when the prince only makes use of his due prerogative. To this I reply, The people shall be judge; for who shall be judge whether his trustee or deputy acts well, and according to the trust reposed in him, but he who deputes him, and must, by having deputed him, have still a power to discard him, when he fails in his trust? If this be reasonable in particular cases of private men, why should it be otherwise in that of the greatest moment, where the welfare of millions is concerned, and also where the evil, if not prevented, is greater, and the redress very difficult, dear, and dangerous?

Sect. 241. But farther, this question, (Who shall be judge?) cannot mean, that there is no judge at all: for where there is no judicature on earth, to decide controversies amongst men, God in heaven is judge. He alone, it is true, is judge of the right. But every man is judge for himself, as in all other cases, so in this, whether another hath put himself into a state of war with him, and whether he should appeal to the Supreme Judge, as Jeptha did.

Sect. 242. If a controversy arise betwixt a prince and some of the people, in a matter where the law is silent, or doubtful, and the thing be of great consequence, I should think the proper umpire, in such a case, should be the body of the people: for in cases where the prince hath a trust reposed in him, and is dispensed from the common ordinary rules of the law; there, if any men find themselves aggrieved, and think the prince acts contrary to, or beyond that trust, who so proper to judge as the body of the people, (who, at first, lodged that trust in him) how far they meant it should extend? But if the prince, or whoever they be in the administration, decline that way of determination, the appeal then lies no where but to heaven; force between either persons, who have no known superior on earth, or which permits no appeal to a judge on earth, being properly a state of war, wherein the appeal lies only to heaven; and in that state the injured party must judge for himself, when he will think fit to make use of that appeal, and put himself upon it.

Sect. 243. To conclude, The power that every individual gave the society, when he entered into it, can never revert to the individuals again, as long as the society lasts, but will always remain in the community; because without this there can be no community, no commonwealth, which is contrary to the original agreement: so also when the society hath placed the legislative in any assembly of men, to continue in them and their successors, with direction and authority for providing such successors, the legislative can never revert to the people whilst that government lasts; because having provided a legislative with power to continue for ever, they have given up their political power to the legislative, and cannot resume it. But if they have set limits to the duration of their legislative, and made this supreme power in any person, or assembly, only temporary; or else, when by the miscarriages of those in authority, it is forfeited; upon the forfeiture, or at the determination of the time set, it reverts to the society, and the people have a right to act as supreme, and continue the legislative in themselves; or erect a new form, or under the old form place it in new hands, as they think good.

The Communist Manifesto

by Karl Marx and Friedrich Engels

[From the English edition of 1888, edited by Friedrich Engels]

Contents

I. BOURGEOIS AND PROLETARIANS II. PROLETARIANS AND COMMUNISTS III. SOCIALIST AND COMMUNIST LITERATURE IV. POSITION OF THE COMMUNISTS IN RELATION TO THE VARIOUS EXISTING OPPOSITION PARTIES

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot, French Radicals and German police-spies.

Where is the party in opposition that has not been decried as Communistic by its opponents in power? Where is the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the Spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London, and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

I. BOURGEOIS AND PROLETARIANS

The history of all hitherto existing societies is the history of class struggles.

Freeman and slave, patrician and plebeian, lord and serf, guild-master and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary re-constitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history, we find almost everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the Middle Ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

The modern bourgeois society that has sprouted from the ruins of feudal society has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones. Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, into two great classes, directly facing each other: Bourgeoisie and Proletariat.

From the serfs of the Middle Ages sprang the chartered burghers of the earliest towns. From these burgesses the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape, opened up fresh ground for the rising bourgeoisie. The East-Indian and Chinese markets, the colonisation of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element

in the tottering feudal society, a rapid development.

The feudal system of industry, under which industrial production was monopolised by closed guilds, now no longer sufficed for the growing wants of the new markets. The manufacturing system took its place. The guild-masters were pushed on one side by the manufacturing middle class; division of labour between the different corporate guilds vanished in the face of division of labour in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionised industrial production. The place of manufacture was taken by the giant, Modern Industry, the place of the industrial middle class, by industrial millionaires, the leaders of whole industrial armies, the modern bourgeois.

Modern industry has established the world-market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its time, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class. An oppressed class under the sway of the feudal nobility, an armed and self-governing association in the mediaeval commune; here independent urban republic (as in Italy and Germany), there taxable “third estate” of the monarchy (as in France), afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against the nobility, and, in fact, corner-stone of the great monarchies in general, the bourgeoisie has at last, since the establishment of Modern Industry and of the world-market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie.

The bourgeoisie, historically, has played a most revolutionary part.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his “natural superiors,” and has left remaining no other nexus between man and man than naked self-interest, than callous “cash payment.” It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless and indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honoured and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage labourers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigour in the Middle Ages, which Reactionists so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man’s activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals; it has conducted expeditions that put in the shade all former Exoduses of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form, was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses, his real conditions of life, and his relations with his kind.

The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connexions everywhere.

The bourgeoisie has through its exploitation of the world-market given a cosmopolitan character to production and consumption in every country. To the great chagrin of Reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilised nations, by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrow-mindedness become more and more impossible, and from the numerous national and local literatures, there arises a world literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all, even the most barbarian, nations into civilisation. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls, with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate. It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilisation into their midst, _i.e_., to become bourgeois themselves. In one word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as compared with the rural, and has thus rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on the civilised ones, nations of peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated production, and has concentrated property in a few hands. The necessary consequence of this was political centralisation. Independent, or but loosely connected provinces, with separate interests, laws, governments and systems of taxation, became lumped together into one nation, with one government, one code of laws, one national class-interest, one frontier and one customs-tariff. The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalisation of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labour?

We see then: the means of production and of exchange, on whose foundation the bourgeoisie built itself up, were generated in feudal society. At a certain stage in the development of these means of production and of exchange, the conditions under which feudal society produced and exchanged, the feudal organisation of agriculture and manufacturing industry, in one word, the feudal relations of property became no longer compatible with the already developed productive forces; they became so many fetters. They had to be burst asunder; they were burst asunder.

Into their place stepped free competition, accompanied by a social and political constitution adapted to it, and by the economical and political sway of the bourgeois class.

A similar movement is going on before our own eyes. Modern bourgeois society with its relations of production, of exchange and of property, a society that has conjured up such gigantic means of production and of exchange, is like the sorcerer, who is no longer able to control the powers of the nether world whom he has called up by his spells. For many a decade past the history of industry and commerce is but the history of the revolt of modern productive forces against modern conditions of production, against the property relations that are the conditions for the existence of the bourgeoisie and of its rule. It is enough to mention the commercial crises that by their periodical return put on its trial, each time more threateningly, the existence of the entire bourgeois society. In these crises a great part not only of the existing products, but also of the previously created productive forces, are periodically destroyed. In these crises there breaks out an epidemic that, in all earlier epochs, would have seemed an absurdity—the epidemic of over-production. Society suddenly finds itself put back into a state of momentary barbarism; it appears as if a famine, a universal war of devastation had cut off the supply of every means of subsistence; industry and commerce seem to be destroyed; and why? Because there is too much civilisation, too much means of subsistence, too much industry, too much commerce. The productive forces at the disposal of society no longer tend to further the development of the conditions of bourgeois property; on the contrary,

they have become too powerful for these conditions, by which they are fettered, and so soon as they overcome these fetters, they bring disorder into the whole of bourgeois society, endanger the existence of bourgeois property. The conditions of bourgeois society are too narrow to comprise the wealth created by them. And how does the bourgeoisie get over these crises? On the one hand inforced destruction of a mass of productive forces; on the other, by the conquest of new markets, and by the more thorough exploitation of the old ones. That is to say, by paving the way for more extensive and more destructive crises, and by diminishing the means whereby crises are prevented.

The weapons with which the bourgeoisie felled feudalism to the ground are now turned against the bourgeoisie itself.

But not only has the bourgeoisie forged the weapons that bring death to itself; it has also called into existence the men who are to wield those weapons—the modern working class—the proletarians.

In proportion as the bourgeoisie, _i.e_., capital, is developed, in the same proportion is the proletariat, the modern working class, developed—a class of labourers, who live only so long as they find work, and who find work only so long as their labour increases capital. These labourers, who must sell themselves piece-meal, are a commodity, like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market.

Owing to the extensive use of machinery and to division of labour, the work of the proletarians has lost all individual character, and consequently, all charm for the workman. He becomes an appendage of the machine, and it is only the most simple, most monotonous, and most easily acquired knack, that is required of him. Hence, the cost of production of a workman is restricted, almost entirely, to the means of subsistence that he requires for his maintenance, and for the propagation of his race. But the price of a commodity, and therefore also of labour, is equal to its cost of production. In proportion therefore, as the repulsiveness of the work increases, the wage decreases. Nay more, in proportion as the use of machinery and division of labour increases, in the same proportion the burden of toil also increases, whether by prolongation of the working hours, by increase of the work exacted in a given time or by increased speed of the machinery, etc.

Modern industry has converted the little workshop of the patriarchal master into the great factory of the industrial capitalist. Masses of labourers, crowded into the factory, are organised like soldiers. As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they slaves of the bourgeois class, and of the bourgeois State; they are daily and hourly enslaved by the machine, by the over-looker, and, above all, by the individual bourgeois manufacturer himself. The more openly this despotism proclaims gain to be its end and aim, the more petty, the more hateful and the more embittering it is.

The less the skill and exertion of strength implied in manual labour, in other words, the more modern industry becomes developed, the more is the labour of men superseded by that of women. Differences of age and sex have no longer any distinctive social validity for the working class. All are instruments of labour, more or less expensive to use, according to their age and sex.

No sooner is the exploitation of the labourer by the manufacturer, so far at an end, that he receives his wages in cash, than he is set upon by the other portions of the bourgeoisie, the landlord, the shopkeeper, the pawnbroker, etc.

The lower strata of the middle class—the small tradespeople, shopkeepers, retired tradesmen generally, the handicraftsmen and peasants—all these sink gradually into the proletariat, partly because their diminutive capital does not suffice for the scale on which Modern Industry is carried on, and is swamped in the competition with the large capitalists, partly because their specialized skill is rendered worthless by the new methods of production. Thus the proletariat is recruited from all classes of the population.

The proletariat goes through various stages of development. With its birth begins its struggle with the bourgeoisie. At first the contest is carried on by individual labourers, then by the workpeople of a factory, then by the operatives of one trade, in one locality, against the individual bourgeois who directly exploits them. They direct their attacks not against the bourgeois conditions of production, but against the instruments of production themselves; they destroy imported wares that compete with their labour, they smash to pieces machinery, they set factories ablaze, they seek to restore by force the vanished status of the workman of the Middle Ages.

At this stage the labourers still form an incoherent mass scattered over the whole country, and broken up by their mutual competition. If anywhere they unite to form more compact bodies, this is not yet the consequence of their own active union, but of the union of the bourgeoisie, which class, in order to attain its own political ends, is compelled to set the whole proletariat in motion, and is moreover yet, for a time, able to do so. At this stage, therefore, the proletarians do not fight their enemies, but the enemies of

their enemies, the remnants of absolute monarchy, the landowners, the non-industrial bourgeois, the petty bourgeoisie. Thus the whole historical movement is concentrated in the hands of the bourgeoisie; every victory so obtained is a victory for the bourgeoisie.

But with the development of industry the proletariat not only increases in number; it becomes concentrated in greater masses, its strength grows, and it feels that strength more. The various interests and conditions of life within the ranks of the proletariat are more and more equalised, in proportion as machinery obliterates all distinctions of labour, and nearly everywhere reduces wages to the same low level. The growing competition among the bourgeois, and the resulting commercial crises, make the wages of the workers ever more fluctuating. The unceasing improvement of machinery, ever more rapidly developing, makes their livelihood more and more precarious; the collisions between individual workmen and individual bourgeois take more and more the character of collisions between two classes. Thereupon the workers begin to form combinations (Trades Unions) against the bourgeois; they club together in order to keep up the rate of wages; they found permanent associations in order to make provision beforehand for these occasional revolts. Here and there the contest breaks out into riots.

Now and then the workers are victorious, but only for a time. The real fruit of their battles lies, not in the immediate result, but in the ever-expanding union of the workers. This union is helped on by the improved means of communication that are created by modern industry and that place the workers of different localities in contact with one another. It was just this contact that was needed to centralise the numerous local struggles, all of the same character, into one national struggle between classes. But every class struggle is a political struggle. And that union, to attain which the burghers of the Middle Ages, with their miserable highways, required centuries, the modern proletarians, thanks to railways, achieve in a few years.

This organisation of the proletarians into a class, and consequently into a political party, is continually being upset again by the competition between the workers themselves. But it ever rises up again, stronger, firmer, mightier. It compels legislative recognition of particular interests of the workers, by taking advantage of the divisions among the bourgeoisie itself. Thus the ten-hours' bill in England was carried.

Altogether collisions between the classes of the old society further, in many ways, the course of development of the proletariat. The bourgeoisie finds itself involved in a constant battle. At first with the aristocracy; later on, with those portions of the bourgeoisie itself, whose interests have become antagonistic to the progress of industry; at all times, with the bourgeoisie of foreign countries. In all these battles it sees itself compelled to appeal to the proletariat, to ask for its help, and thus, to drag it into the political arena. The bourgeoisie itself, therefore, supplies the proletariat with its own instruments of political and general education, in other words, it furnishes the proletariat with weapons for fighting the bourgeoisie.

Further, as we have already seen, entire sections of the ruling classes are, by the advance of industry, precipitated into the proletariat, or are at least threatened in their conditions of existence. These also supply the proletariat with fresh elements of enlightenment and progress.

Finally, in times when the class struggle nears the decisive hour, the process of dissolution going on within the ruling class, in fact within the whole range of society, assumes such a violent, glaring character, that a small section of the ruling class cuts itself adrift, and joins the revolutionary class, the class that holds the future in its hands. Just as, therefore, at an earlier period, a section of the nobility went over to the bourgeoisie, so now a portion of the bourgeoisie goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole.

Of all the classes that stand face to face with the bourgeoisie today, the proletariat alone is a really revolutionary class. The other classes decay and finally disappear in the face of Modern Industry; the proletariat is its special and essential product. The lower middle class, the small manufacturer, the shopkeeper, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle class. They are therefore not revolutionary, but conservative. Nay more, they are reactionary, for they try to roll back the wheel of history. If by chance they are revolutionary, they are so only in view of their impending transfer into the proletariat, they thus defend not their present, but their future interests, they desert their own standpoint to place themselves at that of the proletariat.

The "dangerous class," the social scum, that passively rotting mass thrown off by the lowest layers of old society, may, here and there, be swept into the movement by a proletarian revolution; its conditions of life, however, prepare it far more for the part of a bribed tool of reactionary intrigue.

In the conditions of the proletariat, those of old society at large are already virtually swamped. The proletarian is without property; his relation to his wife and children has no longer anything in common with the bourgeois family-relations; modern industrial labour, modern subjection to capital, the same in England as in France, in America as in Germany, has stripped him of every trace of national character. Law, morality, religion, are to him so many bourgeois prejudices, behind which lurk in ambush just as many bourgeois interests.

All the preceding classes that got the upper hand, sought to fortify their already acquired status by subjecting society at large to their conditions of appropriation. The proletarians cannot become masters of the productive forces of society, except by abolishing their own previous mode of appropriation, and thereby also every other previous mode of appropriation. They have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for, and insurances of, individual property.

All previous historical movements were movements of minorities, or in the interests of minorities. The proletarian movement is the self-conscious, independent movement of the immense majority, in the interests of the immense majority. The proletariat, the lowest stratum of our present society, cannot stir, cannot raise itself up, without the whole superincumbent strata of official society being sprung into the air.

Though not in substance, yet in form, the struggle of the proletariat with the bourgeoisie is at first a national struggle. The proletariat of each country must, of course, first of all settle matters with its own bourgeoisie.

In depicting the most general phases of the development of the proletariat, we traced the more or less veiled civil war, raging within existing society, up to the point where that war breaks out into open revolution, and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat.

Hitherto, every form of society has been based, as we have already seen, on the antagonism of oppressing and oppressed classes. But in order to oppress a class, certain conditions must be assured to it under which it can, at least, continue its slavish existence. The serf, in the period of serfdom, raised himself to membership in the commune, just as the petty bourgeois, under the yoke of feudal absolutism, managed to develop into a bourgeois. The modern laborer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth. And here it becomes evident, that the bourgeoisie is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an over-riding law. It is unfit to rule because it is incompetent to assure an existence to its slave within his slavery, because it cannot help letting him sink into such a state, that it has to feed him, instead of being fed by him. Society can no longer live under this bourgeoisie, in other words, its existence is no longer compatible with society.

The essential condition for the existence, and for the sway of the bourgeois class, is the formation and augmentation of capital; the condition for capital is wage-labour. Wage-labour rests exclusively on competition between the laborers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces, above all, is its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable.

II. PROLETARIANS AND COMMUNISTS

In what relation do the Communists stand to the proletarians as a whole?

The Communists do not form a separate party opposed to other working-class parties.

They have no interests separate and apart from those of the proletariat as a whole.

They do not set up any sectarian principles of their own, by which to shape and mould the proletarian movement.

The Communists are distinguished from the other working-class parties by this only: (1) In the national struggles of the proletarians of the different countries, they point out and bring to the front the common interests of the entire proletariat, independently of all nationality. (2) In the various stages of development which the struggle of the working class against the bourgeoisie has to pass through, they always and everywhere represent the interests of the movement as a whole.

The Communists, therefore, are on the one hand, practically, the most advanced and resolute section of the working-class parties of every country, that section which pushes forward all others; on the other hand, theoretically, they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the ultimate general results of the proletarian movement.

The immediate aim of the Communist is the same as that of all the other proletarian parties: formation of the proletariat into a class, overthrow of the bourgeois supremacy, conquest of political power by the proletariat.

The theoretical conclusions of the Communists are in no way based on ideas or principles that have been invented, or discovered, by this or that would-be universal reformer. They merely express, in general terms, actual relations springing from an existing class struggle, from a historical movement going on under our very eyes. The abolition of existing property relations is not at all a distinctive feature of Communism.

All property relations in the past have continually been subject to historical change consequent upon the change in historical conditions.

The French Revolution, for example, abolished feudal property in favour of bourgeois property.

The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products, that is based on class antagonisms, on the exploitation of the many by the few.

In this sense, the theory of the Communists may be summed up in the single sentence: Abolition of private property.

We Communists have been reproached with the desire of abolishing the right of personally acquiring property as the fruit of a man’s own labour, which property is alleged to be the groundwork of all personal freedom, activity and independence.

Hard-won, self-acquired, self-earned property! Do you mean the property of the petty artisan and of the small peasant, a form of property that preceded the bourgeois form? There is no need to abolish that; the development of industry has to a great extent already destroyed it, and is still destroying it daily.

Or do you mean modern bourgeois private property?

But does wage-labour create any property for the labourer? Not a bit. It creates capital, i.e., that kind of property which exploits wage-labour, and which cannot increase except upon condition of begetting a new supply of wage-labour for fresh exploitation. Property, in its present form, is based on the antagonism of capital and wage-labour. Let us examine both sides of this antagonism.

To be a capitalist, is to have not only a purely personal, but a social _status_ in production. Capital is a collective product, and only by the united action of many members, nay, in the last resort, only by the united action of all members of society, can it be set in motion.

Capital is, therefore, not a personal, it is a social power.

When, therefore, capital is converted into common property, into the property of all members of society, personal property is not thereby transformed into social property. It is only the social character of the property that is changed. It loses its class-character.

Let us now take wage-labour.

The average price of wage-labour is the minimum wage, _i.e_., that quantum of the means of subsistence, which is absolutely requisite in bare existence as a labourer. What, therefore, the wage-labourer appropriates by means of his labour, merely suffices to prolong and reproduce a bare existence. We by no means intend to abolish this personal appropriation of the products of labour, an appropriation that is made for the maintenance and reproduction of human life, and that leaves no surplus wherewith to command the labour of others. All that we want to do away with, is the miserable character of this appropriation, under which the labourer lives merely to increase capital, and is allowed to live only in so far as the interest of the ruling class requires it.

In bourgeois society, living labour is but a means to increase accumulated labour. In Communist society, accumulated labour is but a means to widen, to enrich, to promote the existence of the labourer.

In bourgeois society, therefore, the past dominates the present; in Communist society, the present dominates the past. In bourgeois society capital is independent and has individuality, while the living person is dependent and has no individuality.

And the abolition of this state of things is called by the bourgeois, abolition of individuality and freedom! And rightly so. The abolition of bourgeois individuality, bourgeois independence, and bourgeois freedom is undoubtedly aimed at.

By freedom is meant, under the present bourgeois conditions of production, free trade, free selling and buying.

But if selling and buying disappears, free selling and buying disappears also. This talk about free selling and buying, and all the other “brave words” of our bourgeoisie about freedom in general, have a meaning, if any, only in contrast with restricted selling and buying, with the fettered traders of the Middle Ages, but have no meaning when opposed to the Communistic abolition of buying and selling, of the bourgeois conditions of production, and of the bourgeoisie itself.

You are horrified at our intending to do away with private property. But in your existing society, private property is already done away with for nine-tenths of the population; its existence for the few is solely due to its non-existence in the hands of those nine-tenths. You reproach us, therefore, with intending to do away with a form of property, the necessary condition for whose existence is the non-existence of any property for the immense majority of society.

In one word, you reproach us with intending to do away with your property. Precisely so; that is just what we intend.

From the moment when labour can no longer be converted into capital, money, or rent, into a social power capable of being monopolised, _i.e_., from the moment when individual property can no longer be transformed into bourgeois property, into capital, from that moment, you say individuality vanishes.

You must, therefore, confess that by “individual” you mean no other person than the bourgeois, than the middle-class owner of property. This person must, indeed, be swept out of the way, and made impossible.

Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation.

It has been objected that upon the abolition of private property all work will cease, and universal laziness will overtake us.

According to this, bourgeois society ought long ago to have gone to the dogs through sheer idleness; for those of its members who work, acquire nothing, and those who acquire anything, do not work. The whole of this objection is but another expression of the tautology: that there can no longer be any wage-labour when there is no longer any capital.

All objections urged against the Communistic mode of producing and appropriating material products, have, in the same way, been urged against the Communistic modes of producing and appropriating intellectual products. Just as, to the bourgeois, the disappearance of class property is the disappearance of production itself, so the disappearance of class culture is to him identical with the disappearance of all culture.

That culture, the loss of which he laments, is, for the enormous majority, a mere training to act as a machine.

But don’t wrangle with us so long as you apply, to our intended abolition of bourgeois property, the standard of your bourgeois notions of freedom, culture, law, etc. Your very ideas are but the outgrowth of the conditions of your bourgeois production and bourgeois property, just as your jurisprudence is but the will of your class made into a law for all, a will, whose essential character and direction are determined by the economical conditions of existence of your class.

The selfish misconception that induces you to transform into eternal laws of nature and of reason, the social forms springing from your present mode of production and form of property—historical relations that rise and disappear in the progress of production—this misconception you share with every ruling class that has preceded you. What you see clearly in the case of ancient property, what you admit in the case of feudal property, you are of course forbidden to admit in the case of your own bourgeois form of property.

Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists.

On what foundation is the present family, the bourgeois family, based? On capital, on private gain. In its completely developed form this family exists only among the bourgeoisie. But this state of things finds its complement in the practical absence of the family among the proletarians, and in public prostitution.

The bourgeois family will vanish as a matter of course when its complement vanishes, and both will vanish with the vanishing of capital.

Do you charge us with wanting to stop the exploitation of children by their parents? To this crime we plead guilty.

But, you will say, we destroy the most hallowed of relations, when we replace home education by social.

And your education! Is not that also social, and determined by the social conditions under which you educate, by the intervention, direct or indirect, of society, by means of schools, etc.? The Communists have not invented the intervention of society in education; they do but seek to alter the character of that intervention, and to rescue education from the influence of the ruling class.

The bourgeois clap-trap about the family and education, about the hallowed co-relation of parent and child, becomes all the more disgusting, the more, by the action of Modern Industry, all family ties among the proletarians are torn asunder, and their children transformed into simple articles of commerce and instruments of labour.

But you Communists would introduce community of women, screams the whole bourgeoisie in chorus.

The bourgeois sees in his wife a mere instrument of production. He hears that the instruments of production are to be exploited in common, and, naturally, can come to no other conclusion than that the lot of being common to all will likewise fall to the women.

He has not even a suspicion that the real point is to do away with the status of women as mere instruments of production.

For the rest, nothing is more ridiculous than the virtuous indignation of our bourgeois at the community of women which, they pretend, is to be openly and officially established by the Communists. The Communists have no need to introduce community of women; it has existed almost from time immemorial.

Our bourgeois, not content with having the wives and daughters of their proletarians at their disposal, not to speak of common prostitutes, take the greatest pleasure in seducing each other's wives.

Bourgeois marriage is in reality a system of wives in common and thus, at the most, what the Communists might possibly be reproached with, is that they desire to introduce, in substitution for a hypocritically concealed, an openly legalised community of women. For the rest, it is self-evident that the abolition of the present system of production must bring with it the abolition of the community of women springing from that system, _i.e_., of prostitution both public and private.

The Communists are further reproached with desiring to abolish countries and nationality.

The working men have no country. We cannot take from them what they have not got. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself _the_ nation, it is, so far, itself national, though not in the bourgeois sense of the word.

National differences and antagonisms between peoples are daily more and more vanishing, owing to the development of the bourgeoisie, to freedom of commerce, to the world-market, to uniformity in the mode of production and in the conditions of life corresponding thereto.

The supremacy of the proletariat will cause them to vanish still faster. United action, of the leading civilised countries at least, is one of the first conditions for the emancipation of the proletariat.

In proportion as the exploitation of one individual by another is put an end to, the exploitation of one nation by another will also be put an end to. In proportion as the antagonism between classes within the nation vanishes, the hostility of one nation to another will come to an end.

The charges against Communism made from a religious, a philosophical, and, generally, from an ideological standpoint, are not deserving of serious examination.

Does it require deep intuition to comprehend that man's ideas, views and conceptions, in one word, man's consciousness, changes with every change in the conditions of his material existence, in his social relations and in his social life?

What else does the history of ideas prove, than that intellectual production changes its character in proportion as material production is changed? The ruling ideas of each age have ever been the ideas of its ruling class.

When people speak of ideas that revolutionise society, they do but express the fact, that within the old society, the elements of a new one have been created, and that the dissolution of the old ideas keeps even pace with the dissolution of the old conditions of existence.

When the ancient world was in its last throes, the ancient religions were overcome by Christianity. When Christian ideas succumbed in the 18th century to rationalist ideas, feudal society fought its death battle with the then revolutionary bourgeoisie. The ideas of religious liberty and freedom of conscience merely gave expression to the sway of free competition within the domain of knowledge.

“Undoubtedly,” it will be said, “religious, moral, philosophical and juridical ideas have been modified in the course of historical development. But religion, morality philosophy, political science, and law, constantly survived this change.”

“There are, besides, eternal truths, such as Freedom, Justice, etc. that are common to all states of society. But Communism abolishes eternal truths, it abolishes all religion, and all morality, instead of constituting them on a new basis; it therefore acts in contradiction to all past historical experience.”

What does this accusation reduce itself to? The history of all past society has consisted in the development of class antagonisms, antagonisms that assumed different forms at different epochs.

But whatever form they may have taken, one fact is common to all past ages, viz., the exploitation of one part of society by the other. No wonder, then, that the social consciousness of past ages, despite all the multiplicity and variety it displays, moves within certain common forms, or general ideas, which cannot completely vanish except with the total disappearance of class antagonisms.

The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas.

But let us have done with the bourgeois objections to Communism.

We have seen above, that the first step in the revolution by the working class, is to raise the proletariat to the position of ruling as to win the battle of democracy.

The proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production in the hands of the State, _i.e_., of the proletariat organised as the ruling class; and to increase the total of productive forces as rapidly as possible.

Of course, in the beginning, this cannot be effected except by means of despotic inroads on the rights of property, and on the conditions of bourgeois production; by means of measures, therefore, which appear economically insufficient and untenable, but which, in the course of the movement, outstrip themselves, necessitate further inroads upon the old social order, and are unavoidable as a means of entirely revolutionising the mode of production.

These measures will of course be different in different countries.

Nevertheless in the most advanced countries, the following will be pretty generally applicable.

1. Abolition of property in land and application of all rents of land to public purposes.

2. A heavy progressive or graduated income tax.

3. Abolition of all right of inheritance.

4. Confiscation of the property of all emigrants and rebels.

5. Centralisation of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly.

6. Centralisation of the means of communication and transport in the hands of the State.

7. Extension of factories and instruments of production owned by the State; the bringing into cultivation of waste-lands, and the improvement of the soil generally in accordance with a common plan.

8. Equal liability of all to labour. Establishment of industrial armies, especially for agriculture.

9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country, by a more equable distribution of the population over the country.

10. Free education for all children in public schools. Abolition of children's factory labour in its present form. Combination of education with industrial production, &c., &c.

When, in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organised power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organise itself as a class, if, by means of a revolution, it makes itself the ruling class, and, as such, sweeps away by force the old conditions of production, then it will, along with these conditions, have swept away the conditions for the existence of class antagonisms and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all.

III. SOCIALIST AND COMMUNIST LITERATURE

1. REACTIONARY SOCIALISM

A. Feudal Socialism

Owing to their historical position, it became the vocation of the aristocracies of France and England to write pamphlets against modern bourgeois society. In the French revolution of July 1830, and in the English reform agitation, these aristocracies again succumbed to the hateful upstart. Thenceforth, a serious political contest was altogether out of the question. A literary battle alone remained possible. But even in the domain of literature the old cries of the restoration period had become impossible.

In order to arouse sympathy, the aristocracy were obliged to lose sight, apparently, of their own interests, and to formulate their indictment against the bourgeoisie in the interest of the exploited working class alone. Thus the aristocracy took their revenge by singing lampoons on their new master, and whispering in his ears sinister prophecies of coming catastrophe.

In this way arose Feudal Socialism: half lamentation, half lampoon; half echo of the past, half menace of the future; at times, by its bitter, witty and incisive criticism, striking the bourgeoisie to the very heart's core; but always ludicrous in its effect, through total incapacity to comprehend the march of modern history.

The aristocracy, in order to rally the people to them, waved the proletarian alms-bag in front for a banner. But the people, so often as it joined them, saw on their hindquarters the old feudal coats of arms, and deserted with loud and irreverent laughter.

One section of the French Legitimists and "Young England" exhibited this spectacle.

In pointing out that their mode of exploitation was different to that of the bourgeoisie, the feudalists forget that they exploited under circumstances and conditions that were quite different, and that are now antiquated. In showing that, under their rule, the modern proletariat never existed, they forget that the modern bourgeoisie is the necessary offspring of their own form of society.

For the rest, so little do they conceal the reactionary character of their criticism that their chief accusation against the bourgeoisie amounts to this, that under the bourgeois _regime_ a class is being developed, which is destined to cut up root and branch the old order of society.

What they upbraid the bourgeoisie with is not so much that it creates a proletariat, as that it creates a _revolutionary_ proletariat.

In political practice, therefore, they join in all coercive measures against the working class; and in ordinary life, despite their high falutin phrases, they stoop to pick up the golden apples dropped from the tree of industry, and to barter truth, love, and honour for traffic in wool, beetroot-sugar, and potato spirits.

As the parson has ever gone hand in hand with the landlord, so has Clerical Socialism with Feudal Socialism.

Nothing is easier than to give Christian asceticism a Socialist tinge. Has not Christianity declaimed against private property, against marriage, against the State? Has it not preached in the place of these, charity and poverty, celibacy and mortification of the flesh,

monastic life and Mother Church? Christian Socialism is but the holy water with which the priest consecrates the heart-burnings of the aristocrat.

B. Petty-Bourgeois Socialism

The feudal aristocracy was not the only class that was ruined by the bourgeoisie, not the only class whose conditions of existence pined and perished in the atmosphere of modern bourgeois society. The mediaeval burgesses and the small peasant proprietors were the precursors of the modern bourgeoisie. In those countries which are but little developed, industrially and commercially, these two classes still vegetate side by side with the rising bourgeoisie.

In countries where modern civilisation has become fully developed, a new class of petty bourgeois has been formed, fluctuating between proletariat and bourgeoisie and ever renewing itself as a supplementary part of bourgeois society. The individual members of this class, however, are being constantly hurled down into the proletariat by the action of competition, and, as modern industry develops, they even see the moment approaching when they will completely disappear as an independent section of modern society, to be replaced, in manufactures, agriculture and commerce, by overlookers, bailiffs and shopmen.

In countries like France, where the peasants constitute far more than half of the population, it was natural that writers who sided with the proletariat against the bourgeoisie, should use, in their criticism of the bourgeois _regime_, the standard of the peasant and petty bourgeois, and from the standpoint of these intermediate classes should take up the cudgels for the working class. Thus arose petty-bourgeois Socialism. Sismondi was the head of this school, not only in France but also in England.

This school of Socialism dissected with great acuteness the contradictions in the conditions of modern production. It laid bare the hypocritical apologies of economists. It proved, incontrovertibly, the disastrous effects of machinery and division of labour; the concentration of capital and land in a few hands; overproduction and crises; it pointed out the inevitable ruin of the petty bourgeois and peasant, the misery of the proletariat, the anarchy in production, the crying inequalities in the distribution of wealth, the industrial war of extermination between nations, the dissolution of old moral bonds, of the old family relations, of the old nationalities.

In its positive aims, however, this form of Socialism aspires either to restoring the old means of production and of exchange, and with them the old property relations, and the old society, or to cramping the modern means of production and of exchange, within the framework of the old property relations that have been, and were bound to be, exploded by those means. In either case, it is both reactionary and Utopian.

Its last words are: corporate guilds for manufacture, patriarchal relations in agriculture.

Ultimately, when stubborn historical facts had dispersed all intoxicating effects of self-deception, this form of Socialism ended in a miserable fit of the blues.

C. German, or “True,” Socialism

The Socialist and Communist literature of France, a literature that originated under the pressure of a bourgeoisie in power, and that was the expression of the struggle against this power, was introduced into Germany at a time when the bourgeoisie, in that country, had just begun its contest with feudal absolutism.

German philosophers, would-be philosophers, and _beaux esprits_, eagerly seized on this literature, only forgetting, that when these writings immigrated from France into Germany, French social conditions had not immigrated along with them. In contact with German social conditions, this French literature lost all its immediate practical significance, and assumed a purely literary aspect. Thus, to the German philosophers of the eighteenth century, the demands of the first French Revolution were nothing more than the demands of “Practical Reason” in general, and the utterance of the will of the revolutionary French bourgeoisie signified in their eyes the law of pure Will, of Will as it was bound to be, of true human Will generally.

The world of the German _literati_ consisted solely in bringing the new French ideas into harmony with their ancient philosophical conscience, or rather, in annexing the French ideas without deserting their own philosophic point of view.

This annexation took place in the same way in which a foreign language is appropriated, namely, by translation.

It is well known how the monks wrote silly lives of Catholic Saints _over_ the manuscripts on which the classical works of ancient heathendom had been written. The German _literati_ reversed this process with the profane French literature. They wrote their philosophical nonsense beneath the French original. For instance, beneath the French criticism of the economic functions of money, they wrote “Alienation of Humanity,” and beneath the French criticism of the bourgeois State they wrote “dethronement of the Category of the General,” and so forth.

The introduction of these philosophical phrases at the back of the French historical criticisms they dubbed “Philosophy of Action,” “True Socialism,” “German Science of Socialism,” “Philosophical Foundation of Socialism,” and so on.

The French Socialist and Communist literature was thus completely emasculated. And, since it ceased in the hands of the German to express the struggle of one class with the other, he felt conscious of having overcome “French one-sidedness” and of representing, not true requirements, but the requirements of truth; not the interests of the proletariat, but the interests of Human Nature, of Man in general, who belongs to no class, has no reality, who exists only in the misty realm of philosophical fantasy.

This German Socialism, which took its schoolboy task so seriously and solemnly, and extolled its poor stock-in-trade in such mountebank fashion, meanwhile gradually lost its pedantic innocence.

The fight of the German, and especially, of the Prussian bourgeoisie, against feudal aristocracy and absolute monarchy, in other words, the liberal movement, became more earnest.

By this, the long wished-for opportunity was offered to “True” Socialism of confronting the political movement with the Socialist demands, of hurling the traditional anathemas against liberalism, against representative government, against bourgeois competition, bourgeois freedom of the press, bourgeois legislation, bourgeois liberty and equality, and of preaching to the masses that they had nothing to gain, and everything to lose, by this bourgeois movement. German Socialism forgot, in the nick of time, that the French criticism, whose silly echo it was, presupposed the existence of modern bourgeois society, with its corresponding economic conditions of existence, and the political constitution adapted thereto, the very things whose attainment was the object of the pending struggle in Germany.

To the absolute governments, with their following of parsons, professors, country squires and officials, it served as a welcome scarecrow against the threatening bourgeoisie.

It was a sweet finish after the bitter pills of floggings and bullets with which these same governments, just at that time, dosed the German working-class risings.

While this “True” Socialism thus served the governments as a weapon for fighting the German bourgeoisie, it, at the same time, directly represented a reactionary interest, the interest of the German Philistines. In Germany the _petty bourgeois_ class, a _relique_ of the sixteenth century, and since then constantly cropping up again under various forms, is the real social basis of the existing state of things.

To preserve this class is to preserve the existing state of things in Germany. The industrial and political supremacy of the bourgeoisie threatens it with certain destruction; on the one hand, from the concentration of capital; on the other, from the rise of a revolutionary proletariat. “True” Socialism appeared to kill these two birds with one stone. It spread like an epidemic.

The robe of speculative cobwebs, embroidered with flowers of rhetoric, steeped in the dew of sickly sentiment, this transcendental robe in which the German Socialists wrapped their sorry “eternal truths,” all skin and bone, served to wonderfully increase the sale of their goods amongst such a public. And on its part, German Socialism recognised, more and more, its own calling as the bombastic representative of the petty-bourgeois Philistine.

It proclaimed the German nation to be the model nation, and the German petty Philistine to be the typical man. To every villainous meanness of this model man it gave a hidden, higher, Socialistic interpretation, the exact contrary of its real character. It went to the extreme length of directly opposing the “brutally destructive” tendency of Communism, and of proclaiming its supreme and impartial contempt of all class struggles. With very few exceptions, all the so-called Socialist and Communist publications that now (1847) circulate in Germany belong to the domain of this foul and enervating literature.

2. CONSERVATIVE, OR BOURGEOIS, SOCIALISM

A part of the bourgeoisie is desirous of redressing social grievances, in order to secure the continued existence of bourgeois society.

To this section belong economists, philanthropists, humanitarians, improvers of the condition of the working class, organisers of charity, members of societies for the prevention of cruelty to animals, temperance fanatics, hole-and-corner reformers of every imaginable kind. This form of Socialism has, moreover, been worked out into complete systems.

We may cite Proudhon's _Philosophie de la Misère_ as an example of this form.

The Socialistic bourgeois want all the advantages of modern social conditions without the struggles and dangers necessarily resulting therefrom. They desire the existing state of society minus its revolutionary and disintegrating elements. They wish for a bourgeoisie without a proletariat. The bourgeoisie naturally conceives the world in which it is supreme to be the best; and bourgeois Socialism develops this comfortable conception into various more or less complete systems. In requiring the proletariat to carry out such a system, and thereby to march straightway into the social New Jerusalem, it but requires in reality, that the proletariat should remain within the bounds of existing society, but should cast away all its hateful ideas concerning the bourgeoisie.

A second and more practical, but less systematic, form of this Socialism sought to depreciate every revolutionary movement in the eyes of the working class, by showing that no mere political reform, but only a change in the material conditions of existence, in economic relations, could be of any advantage to them. By changes in the material conditions of existence, this form of Socialism, however, by no means understands abolition of the bourgeois relations of production, an abolition that can be effected only by a revolution, but administrative reforms, based on the continued existence of these relations; reforms, therefore, that in no respect affect the relations between capital and labour, but, at the best, lessen the cost, and simplify the administrative work, of bourgeois government.

Bourgeois Socialism attains adequate expression, when, and only when, it becomes a mere figure of speech.

Free trade: for the benefit of the working class. Protective duties: for the benefit of the working class. Prison Reform: for the benefit of the working class. This is the last word and the only seriously meant word of bourgeois Socialism.

It is summed up in the phrase: the bourgeois is a bourgeois—for the benefit of the working class.

3. CRITICAL-UTOPIAN SOCIALISM AND COMMUNISM

We do not here refer to that literature which, in every great modern revolution, has always given voice to the demands of the proletariat, such as the writings of Babeuf and others.

The first direct attempts of the proletariat to attain its own ends, made in times of universal excitement, when feudal society was being overthrown, these attempts necessarily failed, owing to the then undeveloped state of the proletariat, as well as to the absence of the economic conditions for its emancipation, conditions that had yet to be produced, and could be produced by the impending bourgeois epoch alone. The revolutionary literature that accompanied these first movements of the proletariat had necessarily a reactionary character. It inculcated universal asceticism and social levelling in its crudest form.

The Socialist and Communist systems properly so called, those of Saint-Simon, Fourier, Owen and others, spring into existence in the early undeveloped period, described above, of the struggle between proletariat and bourgeoisie (see Section 1. Bourgeois and Proletarians).

The founders of these systems see, indeed, the class antagonisms, as well as the action of the decomposing elements, in the prevailing form of society. But the proletariat, as yet in its infancy, offers to them the spectacle of a class without any historical initiative or any independent political movement.

Since the development of class antagonism keeps even pace with the development of industry, the economic situation, as they find it, does not as yet offer to them the material conditions for the emancipation of the proletariat. They therefore search after a new social science, after new social laws, that are to create these conditions.

Historical action is to yield to their personal inventive action, historically created conditions of emancipation to fantastic ones, and the gradual, spontaneous class-organisation of the proletariat to the organisation of society specially contrived by these inventors. Future history resolves itself, in their eyes, into the propaganda and the practical carrying out of their social plans.

In the formation of their plans they are conscious of caring chiefly for the interests of the working class, as being the most suffering class. Only from the point of view of being the most suffering class does the proletariat exist for them.

The undeveloped state of the class struggle, as well as their own surroundings, causes Socialists of this kind to consider themselves far superior to all class antagonisms. They want to improve the condition of every member of society, even that of the most favoured. Hence, they habitually appeal to society at large, without distinction of class; nay, by preference, to the ruling class. For how can people, when once they understand their system, fail to see in it the best possible plan of the best possible state of society?

Hence, they reject all political, and especially all revolutionary, action; they wish to attain their ends by peaceful means, and endeavour, by small experiments, necessarily doomed to failure, and by the force of example, to pave the way for the new social Gospel.

Such fantastic pictures of future society, painted at a time when the proletariat is still in a very undeveloped state and has but a fantastic conception of its own position correspond with the first instinctive yearnings of that class for a general reconstruction of society.

But these Socialist and Communist publications contain also a critical element. They attack every principle of existing society. Hence they are full of the most valuable materials for the enlightenment of the working class. The practical measures proposed in them—such as the abolition of the distinction between town and country, of the family, of the carrying on of industries for the account of private individuals, and of the wage system, the proclamation of social harmony, the conversion of the functions of the State into a mere superintendence of production, all these proposals, point solely to the disappearance of class antagonisms which were, at that time, only just cropping up, and which, in these publications, are recognised in their earliest, indistinct and undefined forms only. These proposals, therefore, are of a purely Utopian character.

The significance of Critical-Utopian Socialism and Communism bears an inverse relation to historical development. In proportion as the modern class struggle develops and takes definite shape, this fantastic standing apart from the contest, these fantastic attacks on it, lose all practical value and all theoretical justification. Therefore, although the originators of these systems were, in many respects, revolutionary, their disciples have, in every case, formed mere reactionary sects. They hold fast by the original views of their masters, in opposition to the progressive historical development of the proletariat. They, therefore, endeavour, and that consistently, to deaden the class struggle and to reconcile the class antagonisms. They still dream of experimental realisation of their social Utopias, of founding isolated “phalansteres,” of establishing “Home Colonies,” of setting up a “Little Icaria”—duodecimo editions of the New Jerusalem—and to realise all these castles in the air, they are compelled to appeal to the feelings and purses of the bourgeois. By degrees they sink into the category of the reactionary conservative Socialists depicted above, differing from these only by more systematic pedantry, and by their fanatical and superstitious belief in the miraculous effects of their social science.

They, therefore, violently oppose all political action on the part of the working class; such action, according to them, can only result from blind unbelief in the new Gospel.

The Owenites in England, and the Fourierists in France, respectively, oppose the Chartists and the “Réformistes.”

IV. POSITION OF THE COMMUNISTS IN RELATION TO THE VARIOUS EXISTING OPPOSITION PARTIES

Section II has made clear the relations of the Communists to the existing working-class parties, such as the Chartists in England and the Agrarian Reformers in America.

The Communists fight for the attainment of the immediate aims, for the enforcement of the momentary interests of the working class; but in the movement of the present, they also represent and take care of the future of that movement. In France the Communists ally themselves with the Social-Democrats, against the conservative and radical bourgeoisie, reserving, however, the right to take up a critical position in regard to phrases and illusions traditionally handed down from the great Revolution.

In Switzerland they support the Radicals, without losing sight of the fact that this party consists of antagonistic elements, partly of Democratic Socialists, in the French sense, partly of radical bourgeois.

In Poland they support the party that insists on an agrarian revolution as the prime condition for national emancipation, that party which fomented the insurrection of Cracow in 1846.

In Germany they fight with the bourgeoisie whenever it acts in a revolutionary way, against the absolute monarchy, the feudal squirearchy, and the petty bourgeoisie.

But they never cease, for a single instant, to instil into the working class the clearest possible recognition of the hostile antagonism between bourgeoisie and proletariat, in order that the German workers may straightaway use, as so many weapons against the bourgeoisie, the social and political conditions that the bourgeoisie must necessarily introduce along with its supremacy, and in order that, after the fall of the reactionary classes in Germany, the fight against the bourgeoisie itself may immediately begin.

The Communists turn their attention chiefly to Germany, because that country is on the eve of a bourgeois revolution that is bound to be carried out under more advanced conditions of European civilisation, and with a much more developed proletariat, than that of England was in the seventeenth, and of France in the eighteenth century, and because the bourgeois revolution in Germany will be but the prelude to an immediately following proletarian revolution.

In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things.

In all these movements they bring to the front, as the leading question in each, the property question, no matter what its degree of development at the time.

Finally, they labour everywhere for the union and agreement of the democratic parties of all countries.

The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communistic revolution. The proletarians have nothing to lose but their chains. They have a world to win.

WORKING MEN OF ALL COUNTRIES, UNITE!

The Red Record: Tabulated Statistics and Alleged Causes of Lynching in the United States

By Ida B. Wells-Barnett

1895

[Transcriber's Note: This pamphlet was first published in 1895 but was subsequently reprinted. It's not apparent if the curiosities in spelling date back to the original or were introduced later; they have been retained as found, and the reader is left to decide. Please verify with another source before quoting this material.]

PREFACE

HON. FREDERICK DOUGLASS'S LETTER

DEAR MISS WELLS:

Let me give you thanks for your faithful paper on the lynch abomination now generally practiced against colored people in the South. There has been no word equal to it in convincing power. I have spoken, but my word is feeble in comparison. You give us what you know and testify from actual knowledge. You have dealt with the facts with cool, painstaking fidelity, and left those naked and uncontradicted facts to speak for themselves.

Brave woman! you have done your people and mine a service which can neither be weighed nor measured. If the American conscience were only half alive, if the American church and clergy were only half Christianized, if American moral sensibility were not hardened by persistent infliction of outrage and crime against colored people, a scream of horror, shame, and indignation would rise to Heaven wherever your pamphlet shall be read.

But alas! even crime has power to reproduce itself and create conditions favorable to its own existence. It sometimes seems we are deserted by earth and Heaven--yet we must still think, speak and work, and trust in the power of a merciful God for final deliverance.

Very truly and gratefully yours, FREDERICK DOUGLASS Cedar Hill, Anacostia, D.C.

THE CASE STATED

The student of American sociology will find the year 1894 marked by a pronounced awakening of the public conscience to a system of anarchy and outlawry which had grown during a series of ten years to be so common, that scenes of unusual brutality failed to have any visible effect upon the humane sentiments of the people of our land.

Beginning with the emancipation of the Negro, the inevitable result of unbribled power exercised for two and a half centuries, by the white man over the Negro, began to show itself in acts of conscienceless outlawry. During the slave regime, the Southern white man owned the Negro body and soul. It was to his interest to dwarf the soul and preserve the body. Vested with unlimited power over his slave, to subject him to any and all kinds of physical punishment, the white man was still restrained from such punishment as tended to injure the slave by abating his physical powers and thereby reducing his financial worth. While slaves were scourged mercilessly, and in countless cases inhumanly treated in other respects, still the white owner rarely permitted his anger to go so far as to take a life, which would entail upon him a loss of several hundred dollars. The slave was rarely killed, he was too valuable; it was easier and quite as effective, for discipline or revenge, to sell him "Down South."

But Emancipation came and the vested interests of the white man in the Negro's body were lost. The white man had no right to scourge the emancipated Negro, still less has he a right to kill him. But the Southern white people had been educated so long in that school of practice, in which might makes right, that they disdained to draw strict lines of action in dealing with the Negro. In slave times the Negro was kept subservient and submissive by the frequency and severity of the scourging, but, with freedom, a new system of intimidation came into vogue; the Negro was not only whipped and scourged; he was killed.

Not all nor nearly all of the murders done by white men, during the past thirty years in the South, have come to light, but the statistics as gathered and preserved by white men, and which have not been questioned, show that during these years more than ten thousand Negroes have been killed in cold blood, without the formality of judicial trial and legal execution. And yet, as evidence of the absolute impunity with which the white man dares to kill a Negro, the same record shows that during all these years, and for all these murders only three white men have been tried, convicted, and executed. As no white man has been lynched for the murder of colored people, these three executions are the only instances of the death penalty being visited upon white men for murdering Negroes.

Naturally enough the commission of these crimes began to tell upon the public conscience, and the Southern white man, as a tribute to the nineteenth-century civilization, was in a manner compelled to give excuses for his barbarism. His excuses have adapted themselves to the emergency, and are aptly outlined by that greatest of all Negroes, Frederick Douglass, in an article of recent date, in which he shows that there have been three distinct eras of Southern barbarism, to account for which three distinct excuses have been made.

The first excuse given to the civilized world for the murder of unoffending Negroes was the necessity of the white man to repress and stamp out alleged "race riots." For years immediately succeeding the war there was an appalling slaughter of colored people, and the wires usually conveyed to northern people and the world the intelligence, first, that an insurrection was being planned by Negroes, which, a few hours later, would prove to have been vigorously resisted by white men, and controlled with a resulting loss of several killed and wounded. It was always a remarkable feature in these insurrections and riots that only Negroes were killed during the rioting, and that all the white men escaped unharmed.

From 1865 to 1872, hundreds of colored men and women were mercilessly murdered and the almost invariable reason assigned was that they met their death by being alleged participants in an insurrection or riot. But this story at last wore itself out. No insurrection ever materialized; no Negro rioter was ever apprehended and proven guilty, and no dynamite ever recorded the black man's protest against oppression and wrong. It was too much to ask thoughtful people to believe this transparent story, and the southern white people at last made up their minds that some other excuse must be had.

Then came the second excuse, which had its birth during the turbulent times of reconstruction. By an amendment to the Constitution the Negro was given the right of franchise, and, theoretically at least, his ballot became his invaluable emblem of citizenship. In a government "of the people, for the people, and by the people," the Negro's vote became an important factor in all

matters of state and national politics. But this did not last long. The southern white man would not consider that the Negro had any right which a white man was bound to respect, and the idea of a republican form of government in the southern states grew into general contempt. It was maintained that "This is a white man's government," and regardless of numbers the white man should rule. "No Negro domination" became the new legend on the sanguinary banner of the sunny South, and under it rode the Ku Klux Klan, the Regulators, and the lawless mobs, which for any cause chose to murder one man or a dozen as suited their purpose best. It was a long, gory campaign; the blood chills and the heart almost loses faith in Christianity when one thinks of Yazoo, Hamburg, Edgefield, Copiah, and the countless massacres of defenseless Negroes, whose only crime was the attempt to exercise their right to vote.

But it was a bootless strife for colored people. The government which had made the Negro a citizen found itself unable to protect him. It gave him the right to vote, but denied him the protection which should have maintained that right. Scourged from his home; hunted through the swamps; hung by midnight raiders, and openly murdered in the light of day, the Negro clung to his right of franchise with a heroism which would have wrung admiration from the hearts of savages. He believed that in that small white ballot there was a subtle something which stood for manhood as well as citizenship, and thousands of brave black men went to their graves, exemplifying the one by dying for the other.

The white man's victory soon became complete by fraud, violence, intimidation and murder. The franchise vouchsafed to the Negro grew to be a "barren ideality," and regardless of numbers, the colored people found themselves voiceless in the councils of those whose duty it was to rule. With no longer the fear of "Negro Domination" before their eyes, the white man's second excuse became valueless. With the Southern governments all subverted and the Negro actually eliminated from all participation in state and national elections, there could be no longer an excuse for killing Negroes to prevent "Negro Domination."

Brutality still continued; Negroes were whipped, scourged, exiled, shot and hung whenever and wherever it pleased the white man so to treat them, and as the civilized world with increasing persistency held the white people of the South to account for its outlawry, the murderers invented the third excuse--that Negroes had to be killed to avenge their assaults upon women. There could be framed no possible excuse more harmful to the Negro and more unanswerable if true in its sufficiency for the white man.

Humanity abhors the assailant of womanhood, and this charge upon the Negro at once placed him beyond the pale of human sympathy. With such unanimity, earnestness and apparent candor was this charge made and reiterated that the world has accepted the story that the Negro is a monster which the Southern white man has painted him. And today, the Christian world feels, that while lynching is a crime, and lawlessness and anarchy the certain precursors of a nation's fall, it can not by word or deed, extend sympathy or help to a race of outlaws, who might mistake their plea for justice and deem it an excuse for their continued wrongs.

The Negro has suffered much and is willing to suffer more. He recognizes that the wrongs of two centuries can not be righted in a day, and he tries to bear his burden with patience for today and be hopeful for tomorrow. But there comes a time when the veriest worm will turn, and the Negro feels today that after all the work he has done, all the sacrifices he has made, and all the suffering he has endured, if he did not, now, defend his name and manhood from this vile accusation, he would be unworthy even of the contempt of mankind. It is to this charge he now feels he must make answer.

If the Southern people in defense of their lawlessness, would tell the truth and admit that colored men and women are lynched for almost any offense, from murder to a misdemeanor, there would not now be the necessity for this defense. But when they intentionally, maliciously and constantly belie the record and bolster up these falsehoods by the words of legislators, preachers, governors and bishops, then the Negro must give to the world his side of the awful story.

A word as to the charge itself. In considering the third reason assigned by the Southern white people for the butchery of blacks, the question must be asked, what the white man means when he charges the black man with rape. Does he mean the crime which the statutes of the civilized states describe as such? Not by any means. With the Southern white man, any mesalliance existing between a white woman and a colored man is a sufficient foundation for the charge of rape. The Southern white man says that it is impossible for a voluntary alliance to exist between a white woman and a colored man, and therefore, the fact of an alliance is a proof of force. In numerous instances where colored men have have been lynched on the charge of rape, it was positively known at the time of lynching, and indisputably proven after the victim's death, that the relationship sustained between the man and woman was voluntary and clandestine, and that in no court of law could even the charge of assault have been successfully maintained.

It was for the assertion of this fact, in the defense of her own race, that the writer hereof became an exile; her property destroyed and her return to her home forbidden under penalty of death, for writing the following editorial which was printed in her paper, the _Free Speech,_ in Memphis, Tenn., May 21,1892:

Eight Negroes lynched since last issue of the _Free Speech_ one at Little Rock, Ark., last Saturday morning where the citizens broke(?) into the penitentiary and got their man; three near Anniston, Ala., one near New Orleans; and three at Clarksville, Ga., the last three for killing a white man, and five on the same old racket--the new alarm about raping white women. The same programme of hanging, then shooting bullets into the lifeless bodies was carried out to the letter. Nobody in this section of the country believes the old threadbare lie that Negro men rape white women. If Southern white men are not careful, they will overreach themselves and public sentiment will have a reaction; a conclusion will then be reached which will be very damaging to the moral reputation of their women.

But threats cannot suppress the truth, and while the Negro suffers the soul deformity, resultant from two and a half centuries of slavery, he is no more guilty of this vilest of all vile charges than the white man who would blacken his name.

During all the years of slavery, no such charge was ever made, not even during the dark days of the rebellion, when the white man, following the fortunes of war went to do battle for the maintenance of slavery. While the master was away fighting to forge the fetters upon the slave, he left his wife and children with no protectors save the Negroes themselves. And yet during those years of trust and peril, no Negro proved recreant to his trust and no white man returned to a home that had been dispoiled.

Likewise during the period of alleged "insurrection," and alarming "race riots," it never occurred to the white man, that his wife and children were in danger of assault. Nor in the Reconstruction era, when the hue and cry was against "Negro Domination," was there ever a thought that the domination would ever contaminate a fireside or strike to death the virtue of womanhood. It must appear strange indeed, to every thoughtful and candid man, that more than a quarter of a century elapsed before the Negro began to show signs of such infamous degeneration.

In his remarkable apology for lynching, Bishop Haygood, of Georgia, says: "No race, not the most savage, tolerates the rape of woman, but it may be said without reflection upon any other people that the Southern people are now and always have been most sensitive concerning the honor of their women--their mothers, wives, sisters and daughters." It is not the purpose of this defense to say one word against the white women of the South. Such need not be said, but it is their misfortune that the chivalrous white men of that section, in order to escape the deserved execration of the civilized world, should shield themselves by their cowardly and infamously false excuse, and call into question that very honor about which their distinguished priestly apologist claims they are most sensitive. To justify their own barbarism they assume a chivalry which they do not possess. True chivalry respects all womanhood, and no one who reads the record, as it is written in the faces of the million mulattoes in the South, will for a minute conceive that the southern white man had a very chivalrous regard for the honor due the women of his own race or respect for the womanhood which circumstances placed in his power. That chivalry which is "most sensitive concerning the honor of women" can hope for but little respect from the civilized world, when it confines itself entirely to the women who happen to be white. Virtue knows no color line, and the chivalry which depends upon complexion of skin and texture of hair can command no honest respect.

When emancipation came to the Negroes, there arose in the northern part of the United States an almost divine sentiment among the noblest, purest and best white women of the North, who felt called to a mission to educate and Christianize the millions of southern exslaves. From every nook and corner of the North, brave young white women answered that call and left their cultured homes, their happy associations and their lives of ease, and with heroic determination went to the South to carry light and truth to the benighted blacks. It was a heroism no less than that which calls for volunteers for India, Africa and the Isles of the sea. To educate their unfortunate charges; to teach them the Christian virtues and to inspire in them the moral sentiments manifest in their own lives, these young women braved dangers whose record reads more like fiction than fact. They became social outlaws in the South. The peculiar sensitiveness of the southern white men for women, never shed its protecting influence about them. No friendly word from their own race cheered them in their work; no hospitable doors gave them the companionship like that from which they had come. No chivalrous white man doffed his hat in honor or respect. They were "Nigger teachers"--unpardonable offenders in the social ethics of the South, and were insulted, persecuted and ostracised, not by Negroes, but by the white manhood which boasts of its chivalry toward women.

And yet these northern women worked on, year after year, unselfishly, with a heroism which amounted almost to martyrdom. Threading their way through dense forests, working in schoolhouse, in the cabin and in the church, thrown at all times and in all

places among the unfortunate and lowly Negroes, whom they had come to find and to serve, these northern women, thousands and thousands of them, have spent more than a quarter of a century in giving to the colored people their splendid lessons for home and heart and soul. Without protection, save that which innocence gives to every good woman, they went about their work, fearing no assault and suffering none. Their chivalrous protectors were hundreds of miles away in their northern homes, and yet they never feared any "great dark-faced mobs," they dared night or day to "go beyond their own roof trees." They never complained of assaults, and no mob was ever called into existence to avenge crimes against them. Before the world adjudges the Negro a moral monster, a vicious assailant of womanhood and a menace to the sacred precincts of home, the colored people ask the consideration of the silent record of gratitude, respect, protection and devotion of the millions of the race in the South, to the thousands of northern white women who have served as teachers and missionaries since the war.

The Negro may not have known what chivalry was, but he knew enough to preserve inviolate the womanhood of the South which was entrusted to his hands during the war. The finer sensibilities of his soul may have been crushed out by years of slavery, but his heart was full of gratitude to the white women of the North, who blessed his home and inspired his soul in all these years of freedom. Faithful to his trust in both of these instances, he should now have the impartial ear of the civilized world, when he dares to speak for himself as against the infamy wherewith he stands charged.

It is his regret, that, in his own defense, he must disclose to the world that degree of dehumanizing brutality which fixes upon America the blot of a national crime. Whatever faults and failings other nations may have in their dealings with their own subjects or with other people, no other civilized nation stands condemned before the world with a series of crimes so peculiarly national. It becomes a painful duty of the Negro to reproduce a record which shows that a large portion of the American people avow anarchy, condone murder and defy the contempt of civilization. These pages are written in no spirit of vindictiveness, for all who give the subject consideration must concede that far too serious is the condition of that civilized government in which the spirit of unrestrained outlawry constantly increases in violence, and casts its blight over a continually growing area of territory. We plead not for the colored people alone, but for all victims of the terrible injustice which puts men and women to death without form of law. During the year 1894, there were 132 persons executed in the United States by due form of law, while in the same year, 197 persons were put to death by mobs who gave the victims no opportunity to make a lawful defense. No comment need be made upon a condition of public sentiment responsible for such alarming results.

The purpose of the pages which follow shall be to give the record which has been made, not by colored men, but that which is the result of compilations made by white men, of reports sent over the civilized world by white men in the South. Out of their own mouths shall the murderers be condemned. For a number of years the _Chicago Tribune_, admittedly one of the leading journals of America, has made a specialty of the compilation of statistics touching upon lynching. The data compiled by that journal and published to the world January 1, 1894, up to the present time has not been disputed. In order to be safe from the charge of exaggeration, the incidents hereinafter reported have been confined to those vouched for by the Tribune.

LYNCH-LAW STATISTICS

From the record published in the _Chicago Tribune_, January 1, 1894, the following computation of lynching statistics is made referring only to the colored victims of Lynch Law during the year 1893:

ARSON

Sept. 15, Paul Hill, Carrollton, Ala.; Sept. 15, Paul Archer, Carrollton, Ala.; Sept. 15, William Archer, Carrollton, Ala.; Sept. 15, Emma Fair, Carrollton, Ala.

SUSPECTED ROBBERY

Dec. 23, unknown negro, Fannin, Miss.

ASSAULT

Dec. 25, Calvin Thomas, near Brainbridge, Ga.

ATTEMPTED ASSAULT

Dec. 28, Tillman Green, Columbia, La.

INCENDIARISM

Jan. 26, Patrick Wells, Quincy, Fla.; Feb. 9, Frank Harrell, Dickery, Miss.; Feb. 9, William Filder, Dickery, Miss.

ATTEMPTED RAPE

Feb. 21, Richard Mays, Springville, Mo.; Aug. 14, Dug Hazleton, Carrollton, Ga.; Sept. 1, Judge McNeil, Cadiz, Ky.; Sept. 11, Frank Smith, Newton, Miss.; Sept. 16, William Jackson, Nevada, Mo.; Sept. 19, Riley Gulley, Pine Apple, Ala.; Oct. 9, John Davis, Shorterville, Ala.; Nov. 8, Robert Kennedy, Spartansburg, S.C.

BURGLARY

Feb. 16, Richard Forman, Granada, Miss.

WIFE BEATING

Oct. 14, David Jackson, Covington, La.

ATTEMPTED MURDER

Sept. 21, Thomas Smith, Roanoke, Va.

ATTEMPTED ROBBERY

Dec. 12, four unknown negroes, near Selma, Ala.

RACE PREJUDICE

Jan. 30, Thomas Carr, Kosciusko, Miss.; Feb. 7, William Butler, Hickory Creek, Texas; Aug. 27, Charles Tart, Lyons Station, Miss.; Dec. 7, Robert Greenwood, Cross county, Ark.; July 14, Allen Butler, Lawrenceville, Ill.

THIEVES

Oct. 24, two unknown negroes, Knox Point, La.

ALLEGED BARN BURNING

Nov. 4, Edward Wagner, Lynchburg, Va.; Nov. 4, William Wagner, Lynchburg, Va.; Nov. 4, Samuel Motlow, Lynchburg, Va.; Nov. 4, Eliza Motlow, Lynchburg, Va.

ALLEGED MURDER

Jan. 21, Robert Landry, St. James Parish, La.; Jan. 21, Chicken George, St. James Parish, La.; Jan. 21, Richard Davis, St. James Parish, La.; Dec. 8, Benjamin Menter, Berlin, Ala.; Dec. 8, Robert Wilkins, Berlin, Ala.; Dec. 8, Joseph Gevhens, Berlin, Ala.

ALLEGED COMPLICITY IN MURDER

OFFENSES CHARGED ARE AS FOLLOWS

Rape, 39; attempted rape, 8; alleged rape, 4; suspicion of rape, 1; murder, 44; alleged murder, 6; alleged complicity in murder, 4; murderous assault, 1; attempted murder, 1; attempted robbery, 4; arson, 4; incendiarism, 3; alleged stock poisoning, 1; poisoning wells, 2; alleged poisoning wells, 5; burglary, 1; wife beating, 1; self-defense, 1; suspected robbery, 1; assault and battery, 1; insulting whites, 2; malpractice, 1; alleged barn burning, 4; stealing, 2; unknown offense, 4; no offense, 1; race prejudice, 4; total, 159.

LYNCHINGS BY STATES

Alabama, 25; Arkansas, 7; Florida, 7; Georgia, 24; Indian Territory, 1; Illinois, 3; Kansas, 2; Kentucky, 8; Louisiana, 18; Mississippi, 17; Missouri, 3; New York, 1; South Carolina, 15; Tennessee, 10; Texas, 8; Virginia, 10.

RECORD FOR THE YEAR 1892

While it is intended that the record here presented shall include specially the lynchings of 1893, it will not be amiss to give the record for the year preceding. The facts contended for will always appear manifest--that not one-third of the victims lynched were charged with rape, and further that the charges made embraced a range of offenses from murders to misdemeanors.

In 1892 there were 241 persons lynched. The entire number is divided among the following states:

Alabama, 22; Arkansas, 25; California, 3; Florida, 11; Georgia, 17; Idaho, 8; Illinois, 1; Kansas, 3; Kentucky, 9; Louisiana, 29; Maryland, 1; Mississippi, 16; Missouri, 6; Montana, 4; New York, 1; North Carolina, 5; North Dakota, 1; Ohio, 3; South Carolina, 5; Tennessee, 28; Texas, 15; Virginia, 7; West Virginia, 5; Wyoming, 9; Arizona Territory, 3; Oklahoma, 2.

Of this number 160 were of Negro descent. Four of them were lynched in New York, Ohio and Kansas; the remainder were murdered in the South. Five of this number were females. The charges for which they were lynched cover a wide range. They are as follows:

Rape, 46; murder, 58; rioting, 3; race prejudice, 6; no cause given, 4; incendiarism, 6; robbery, 6; assault and battery, 1; attempted rape, 11; suspected robbery, 4; larceny, 1; self-defense, 1; insulting women, 2; desperadoes, 6; fraud, 1; attempted murder, 2; no offense stated, boy and girl, 2.

In the case of the boy and girl above referred to, their father, named Hastings, was accused of the murder of a white man; his fourteen-year-old daughter and sixteen-year-old son were hanged and their bodies filled with bullets, then the father was also lynched. This was in November, 1892, at Jonesville, Louisiana.

LYNCHING IMBECILES

(An Arkansas Butchery)

The only excuse which capital punishment attempts to find is upon the theory that the criminal is past the power of reformation and his life is a constant menace to the community. If, however, he is mentally unbalanced, irresponsible for his acts, there can be no more inhuman act conceived of than the wilful sacrifice of his life. So thoroughly is that principle grounded in the law, that all civilized society surrounds human life with a safeguard, which prevents the execution of a criminal who is insane, even if sane at the time of his criminal act. Should he become insane after its commission the law steps in and protects him during the period of his insanity. But Lynch Law has no such regard for human life. Assuming for itself an absolute supremacy over the law of the land, it has time and again dyed its hands in the blood of men who were imbeciles. Two or three noteworthy cases will suffice to show with what inhuman ferocity irresponsible men have been put to death by this system of injustice.

An instance occurred during the year 1892 in Arkansas, a report of which is given in full in the _Arkansas Democrat_, published at Little Rock, in that state, on the eleventh day of February of that year. The paper mentioned is perhaps one of the leading weeklies in that state and the account given in detail has every mark of a careful and conscientious investigation. The victims of this tragedy were a colored man, named Hamp Biscoe, his wife and a thirteen-year-old son. Hamp Biscoe, it appears, was a hard working, thrifty farmer, who lived near England, Arkansas, upon a small farm with his family. The investigation of the tragedy was conducted by a resident of Arkansas named R.B. Caries, a white man, who furnished the account to the _Arkansas Democrat_ over his own signature. He says the original trouble which led to the lynching was a quarrel between Biscoe and a white man about a debt. About six years after Biscoe preempted his land, a white man made a demand of $100 upon him for services in showing him the land and making the sale. Biscoe denied the service and refused to pay the demand. The white man, however, brought suit, obtained judgment for the hundred dollars and Biscoe's farm was sold to pay the judgment.

The suit, judgment and subsequent legal proceedings appear to have driven Biscoe almost crazy and brooding over his wrongs he grew to be a confirmed imbecile. He would allow but few men, white or colored, to come upon his place, as he suspected every stranger to be planning to steal his farm. A week preceding the tragedy, a white man named Venable, whose farm adjoined Biscoe's, let down the fence and proceeded to drive through Biscoe's field. The latter saw him; grew very excited, cursed him and drove him from his farm with bitter oaths and violent threats. Venable went away and secured a warrant for Biscoe's arrest. This warrant was placed in the hands of a constable named John Ford, who took a colored deputy and two white men out to Biscoe's farm to make the arrest. When they arrived at the house Biscoe refused to be arrested and warned them he would shoot if they persisted in their attempt to arrest him. The warning was unheeded by Ford, who entered upon the premises, when Biscoe, true to his word, fired upon him. The load tore a part of his clothes from his body, one shot going through his arm and entering his breast. After he had fallen, Ford drew his revolver and shot Biscoe in the head and his wife through the arm. The Negro deputy then began firing and struck Biscoe in the small of the back. Ford's wound was not dangerous and in a few days he was able to be around again. Biscoe, however, was so severely shot that he was unable to stand after the firing was over.

Two other white men hearing the exchange of shots went to the rescue of the officers, forced open the door of Biscoe's cabin and arrested him, his wife and thirteen-year-old son, and took them, together with a babe at the breast, to a small frame house near the depot and put them under guard. The subsequent proceedings were briefly told by Mr. Carlee in the columns of the _Arkansas Democrat_ above mentioned, from whose account the following excerpt is taken:

It was rumored here that the Negroes were to be lynched that night, but I do not think it was generally credited, as it was not believed that Ford was greatly hurt and the Negro was held to be fatally injured and crazy at that. But that night, about 8 o'clock, a party of perhaps twelve or fifteen men, a number of whom were known to the guards, came to the house and told the Negro guards they would take care of the prisoners now, and for them to leave; as they did not obey at once they were persuaded to leave with words that did not admit of delay.

The woman began to cry and said, "You intend to kill us to get our money." They told her to hush (she was heavy with child and had a child at her breast) as they intended to give her a nice present. The guards heard no more, but hastened to a Negro church near by and urged the preacher to go up and stop the mob. A few minutes after, the shooting began, perhaps about forty shots being fired. The white men then left rapidly and the Negroes went to the house. Hamp Biscoe and his wife were killed, the baby had a slight wound across the upper lip; the boy was still alive and lived until after midnight, talking rationally and telling who did the shooting.

He said when they came in and shot his father, he attempted to run out of doors and a young man shot him in the bowels and that he fell. He saw another man shoot his mother and a taller young man, whom he did not know, shoot his father. After they had killed them, the young man who had shot his mother pulled off her stockings and took $220 in currency that she had hid there. The men then came to the door where the boy was lying and one of them turned him over and put his pistol to his breast and shot him again. This is the story the dying boy told as near as I can get it. It is quite singular that the guards and those who had conversed with him were not required to testify. The woman was known to have the money as she had exposed it that day. She also had $36 in silver, which the plunderer of the body did not get. The Negro was undoubtedly insane and had been for several years. The citizens of this community condemn the murder and have no sympathy with it. The Negro was a well-to-do farmer, but had become crazed because he was convinced some plot had been made to steal his land and only a few days ago declared that he expected to die in defense of his home in a short time and he did not care how soon. The killing of a woman with the child at her breast and in her condition, and also a young boy, was extremely brutal. As for Hamp Biscoe he was dangerous and should long have been confined in the insane asylum. Such were the facts as near as I can get them and you can use them as you see fit, but I would prefer you would suppress the names charged by the Negroes with the killing.

Perhaps the civilized world will think, that with all these facts laid before the public, by a writer who signs his name to his communication, in a land where grand juries are sworn to investigate, where judges and juries are sworn to administer the law and sheriffs are paid to execute the decrees of the courts, and where, in fact, every instrument of civilization is supposed to work for the common good of all citizens, that this matter was duly investigated, the criminals apprehended and the punishment meted out to the murderers. But this is a mistake; nothing of the kind was done or attempted. Six months after the publication, above referred to, an investigator, writing to find out what had been done in the matter, received the following reply:

OFFICE OF S.S. GLOVER, SHERIFF AND COLLECTOR, LONOKE COUNTY.

Lonoke, Ark., 9-12-1892

Geo. Washington, Esq., Chicago, Ill.

DEAR SIR:--The parties who killed Hamp Briscoe February the ninth, have never been arrested. The parties are still in the county. It was done by some of the citizens, and those who know will not tell.

S.S. GLOVER, Sheriff

Thus acts the mob with the victim of its fury, conscious that it will never be called to an account. Not only is this true, but the moral support of those who are chosen by the people to execute the law, is frequently given to the support of lawlessness and mob violence. The press and even the pulpit, in the main either by silence or open apology, have condoned and encouraged this state of anarchy.

TORTURED AND BURNED IN TEXAS

Never In the history of civilization has any Christian people stooped to such shocking brutality and indescribable barbarism as that which characterized the people of Paris, Texas, and adjacent communities on the first of February, 1893. The cause of this awful outbreak of human passion was the murder of a four-year-old child, daughter of a man named Vance. This man, Vance, had been a police officer in Paris for years, and was known to be a man of bad temper, overbearing manner and given to harshly treating the prisoners under his care. He had arrested Smith and, it is said, cruelly mistreated him. Whether or not the murder of his child was an art of fiendish revenge, it has not been shown, but many persons who know of the incident have suggested that the secret of the attack on the child lay in a desire for revenge against its father.

In the same town there lived a Negro, named Henry Smith, a well-known character, a kind of roustabout, who was generally considered a harmless, weak-minded fellow, not capable of doing any important work, but sufficiently able to do chores and odd jobs around the houses of the white people who cared to employ him. A few days before the final tragedy, this man, Smith, was accused of murdering Myrtle Vance. The crime of murder was of itself bad enough, and to prove that against Smith would have been amply sufficient in Texas to have committed him to the gallows, but the finding of the child so exasperated the father and his friends, that they at once shamefully exaggerated the facts and declared that the babe had been ruthlessly assaulted and then killed. The truth was bad enough, but the white people of the community made it a point to exaggerate every detail of the awful affair, and to inflame the public mind so that nothing less than immediate and violent death would satisfy the populace. As a matter of fact, the child was not brutally assaulted as the world has been told in excuse for the awful barbarism of that day. Persons who

saw the child after its death, have stated, under the most solemn pledge to truth, that there was no evidence of such an assault as was published at that time, only a slight abrasion and discoloration was noticeable and that mostly about the neck. In spite of this fact, so eminent a man as Bishop Haygood deliberately and, it must also appear, maliciously falsified the fact by stating that the child was torn limb from limb, or to quote his own words, "First outraged with demoniacal cruelty and then taken by her heels and torn asunder in the mad wantonness of gorilla ferocity."

Nothing is farther from the truth than that statement. It is a coldblooded, deliberate, brutal falsehood which this Christian(?) Bishop uses to bolster up the infamous plea that the people of Paris were driven to insanity by learning that the little child had been viciously assaulted, choked to death, and then torn to pieces by a demon in human form. It was a brutal murder, but no more brutal than hundreds of murders which occur in this country, and which have been equalled every year in fiendishness and brutality, and for which the death penalty is prescribed by law and inflicted only after the person has been legally adjudged guilty of the crime. Those who knew Smith, believe that Vance had at some time given him cause to seek revenge and that this fearful crime was the outgrowth of his attempt to avenge himself of some real or fancied wrong. That the murderer was known as an imbecile, had no effect whatever upon the people who thirsted for his blood. They determined to make an example of him and proceeded to carry out their purpose with unspeakably greater ferocity than that which characterized the half-crazy object of their revenge.

For a day or so after the child was found in the woods, Smith remained in the vicinity as if nothing had happened, and when finally becoming aware that he was suspected, he made an attempt to escape. He was apprehended, however, not far from the scene of his crime and the news flashed across the country that the white Christian people of Paris, Texas and the communities thereabout had deliberately determined to lay aside all forms of law and inaugurate an entirely new form of punishment for the murder. They absolutely refused to make any inquiry as to the sanity or insanity of their prisoner, but set the day and hour when in the presence of assembled thousands they put their helpless victim to the stake, tortured him, and then burned him to death for the delectation and satisfaction of Christian people.

Lest it might be charged that any description of the deeds of that day are exaggerated, a white man's description which was published in the white journals of this country is used. The _New York Sun_ of February 2, 1893, contains an account, from which we make the following excerpt:

PARIS, Tex., Feb. 1, 1893.--Henry Smith, the negro ravisher of four-year-old Myrtle Vance, has expiated in part his awful crime by death at the stake. Ever since the perpetration of his awful crime this city and the entire surrounding country has been in a wild frenzy of excitement. When the news came last night that he had been captured at Hope, Ark., that he had been identified by B.B. Sturgeon, James T. Hicks, and many other of the Paris searching party, the city was wild with joy over the apprehension of the brute. Hundreds of people poured into the city from the adjoining country and the word passed from lip to lip that the punishment of the fiend should fit the crime that death by fire was the penalty Smith should pay for the most atrocious murder and terrible outrage in Texas history. Curious and sympathizing alike, they came on train and wagons, on horse, and on foot to see if the frail mind of a man could think of a way to sufficiently punish the perpetrator of so terrible a crime. Whisky shops were closed, unruly mobs were dispersed, schools were dismissed by a proclamation from the mayor, and everything was done in a business-like manner.

MEETING OF CITIZENS

About 2 o'clock Friday a mass meeting was called at the courthouse and captains appointed to search for the child. She was found mangled beyond recognition, covered with leaves and brush as above mentioned. As soon as it was learned upon the recovery of the body that the crime was so atrocious the whole town turned out in the chase. The railroads put up bulletins offering free transportation to all who would join in the search. Posses went in every direction, and not a stone was left unturned. Smith was tracked to Detroit on foot, where he jumped on a freight train and left for his old home in Hempstead county, Arkansas. To this county he was tracked and yesterday captured at Clow, a flag station on the Arkansas & Louisiana railway about twenty miles north of Hope. Upon being questioned the fiend denied everything, but upon being stripped for examination his undergarments were seen to be spattered with blood and a part of his shirt was torn off. He was kept under heavy guard at Hope last night, and later on confessed the crime.

This morning he was brought through Texarkana, where 5,000 people awaited the train, anxious to see a man who had received the fate of Ed. Coy. At that place speeches were made by prominent Paris citizens, who asked that the prisoner be not molested by Texarkana people, but that the guard be allowed to deliver him up to the outraged and indignant citizens of Paris. Along the road the train gathered strength from the various towns, the people crowded upon the platforms and tops of coaches anxious to see the

lynching and the negro who was soon to be delivered to an infuriated mob.

BURNED AT THE STAKE

Arriving here at 12 o'clock the train was met by a surging mass of humanity 10,000 strong. The negro was placed upon a carnival float in mockery of a king upon his throne, and, followed by an immense crowd, was escorted through the city so that all might see the most inhuman monster known in current history. The line of march was up Main Street to the square, around the square down Clarksville street to Church Street, thence to the open prairies about 300 yards from the Texas & Pacific depot. Here Smith was placed upon a scaffold, six feet square and ten feet high, securely bound, within the view of all beholders. Here the victim was tortured for fifty minutes by red-hot iron brands thrust against his quivering body. Commencing at the feet the brands were placed against him inch by inch until they were thrust against the face. Then, being apparently dead, kerosene was poured upon him, cottonseed hulls placed beneath him and set on fire. In less time than it takes to relate it, the tortured man was wafted beyond the grave to another fire, hotter and more terrible than the one just experienced.

Curiosity seekers have carried away already all that was left of the memorable event, even to pieces of charcoal. The cause of the crime was that Henry Vance when a deputy policeman, in the course of his duty was called to arrest Henry Smith for being drunk and disorderly. The Negro was unruly, and Vance was forced to use his club. The Negro swore vengeance, and several times assaulted Vance. In his greed for revenge, last Thursday, he grabbed up the little girl and committed the crime. The father is prostrated with grief and the mother now lies at death's door, but she has lived to see the slayer of her innocent babe suffer the most horrible death that could be conceived.

TORTURE BEYOND DESCRIPTION

Words to describe the awful torture inflicted upon Smith cannot be found. The Negro, for a long time after starting on the journey to Paris, did not realize his plight. At last when he was told that he must die by slow torture he begged for protection. His agony was awful. He pleaded and writhed in bodily and mental pain. Scarcely had the train reached Paris than this torture commenced. His clothes were torn off piecemeal and scattered in the crowd, people catching the shreds and putting them away as mementos. The child's father, her brother, and two uncles then gathered about the Negro as he lay fastened to the torture platform and thrust hot irons into his quivering flesh. It was horrible--the man dying by slow torture in the midst of smoke from his own burning flesh. Every groan from the fiend, every contortion of his body was cheered by the thickly packed crowd of 10,000 persons. The mass of beings 600 yards in diameter, the scaffold being the center. After burning the feet and legs, the hot irons--plenty of fresh ones being at hand--were rolled up and down Smith's stomach, back, and arms. Then the eyes were burned out and irons were thrust down his throat.

The men of the Vance family having wreaked vengeance, the crowd piled all kinds of combustible stuff around the scaffold, poured oil on it and set it afire. The Negro rolled and tossed out of the mass, only to be pushed back by the people nearest him. He tossed out again, and was roped and pulled back. Hundreds of people turned away, but the vast crowd still looked calmly on. People were here from every part of this section. They came from Dallas, Fort Worth, Sherman, Denison, Bonham, Texarkana, Fort Smith, Ark., and a party of fifteen came from Hempstead county, Arkansas, where he was captured. Every train that came in was loaded to its utmost capacity, and there were demands at many points for special trains to bring the people here to see the unparalleled punishment for an unparalleled crime. When the news of the burning went over the country like wildfire, at every country town anvils boomed forth the announcement.

SHOULD HAVE BEEN IN AN ASYLUM

It may not be amiss in connection with this awful affair, in proof of our assertion that Smith was an imbecile, to give the testimony of a well-known colored minister, who lived at Paris, Texas, at the time of the lynching. He was a witness of the awful scenes there enacted, and attempted, in the name of God and humanity, to interfere in the programme. He barely escaped with his life, was driven out of the city and became an exile because of his actions. Reverend King was in New York about the middle of February, and he was there interviewed for a daily paper for that city, and we quote his account as an eye witness of the affair. Said he:

I was ridden out of Paris on a rail because I was the only man in Lamar county to raise my voice against the lynching of Smith. I opposed the illegal measures before the arrival of Henry Smith as a prisoner, and I was warned that I might meet his fate if I was not careful; but the sense of justice made me bold, and when I saw the poor wretch trembling with fear, and got so near him that I could hear his teeth chatter, I determined to stand by him to the last.

I hated him for his crime, but two crimes do not make a virtue; and in the brief conversation I had with Smith I was more firmly convinced than ever that he was irresponsible.

I had known Smith for years, and there were times when Smith was out of his head for weeks. Two years ago I made an effort to have him put in an asylum, but the white people were trying to fasten the murder of a young colored girl upon him, and would not listen. For days before the murder of the little Vance girl, Smith was out of his head and dangerous. He had just undergone an attack of delirium tremens and was in no condition to be allowed at large. He realized his condition, for I spoke with him not three weeks ago, and in answer to my exhortations, he promised to reform. The next time I saw him was on the day of his execution.

"Drink did it! drink did it," he sobbed. Then bowing his face in his hands, he asked: "Is it true, did I kill her? Oh, my God, my God!" For a moment he seemed to forget the awful fate that awaited him, and his body swayed to and fro with grief. Some one seized me by the shoulder and hurled me back, and Smith fell writhing to the ground in terror as four men seized his arms to drag him to the float on which he was to be exhibited before he was finally burned at the stake.

I followed the procession and wept aloud as I saw little children of my own race follow the unfortunate man and taunt him with jeers. Even at the stake, children of both sexes and colors gathered in groups, and when the father of the murdered child raised the hissing iron with which he was about to torture the helpless victim, the children became as frantic as the grown people and struggled forward to obtain places of advantage.

It was terrible. One little tot scarcely older than little Myrtle Vance clapped her baby hands as her father held her on his shoulders above the heads of the people.

"For God's sake," I shouted, "send the children home."

"No, no," shouted a hundred maddened voices; "let them learn a lesson."

I love children, but as I looked about the little faces distorted with passion and the bloodshot eyes of the cruel parents who held them high in their arms, I thanked God that I have none of my own.

As the hot iron sank deep into poor Henry's flesh a hideous yell rent the air, and, with a sound as terrible as the cry, of lost souls on judgment day, 20,000 maddened people took up the victim's cry of agony and a prolonged howl of maddened glee rent the air.

No one was himself now. Every man, woman and child in that awful crowd was worked up to a greater frenzy than that which actuated Smith's horrible crime. The people were capable of any new atrocity now, and as Smith's yells became more and more frequent, it was difficult to hold the crowd back, so anxious were the savages to participate in the sickening tortures.

For half an hour I tried to pray as the beads of agony rolled down my forehead and bathed my face.

For an instant a hush spread over the people. I could stand no more, and with a superhuman effort dashed through the compact mass of humanity and stood at the foot of the burning scaffold.

"In the name of God," I cried, "I command you to cease this torture."

The heavy butt of a Winchester rifle descended on my head and I fell to the ground. Rough hands seized me and angry men bore me away, and I was thankful.

At the outskirts of the crowd I was attacked again, and then several men, no doubt glad to get away from the fearful place, escorted me to my home, where I was allowed to take a small amount of clothing. A jeering crowd gathered without, and when I appeared at the door ready hands seized me and I was placed upon a rail, and, with curses and oaths, taken to the railway station and placed upon a train. As the train moved out some one thrust a roll of bills into my hand and said, "God bless you, but it was no use."

When asked if he should ever return to Paris, Mr. King said: "I shall never go south again. The impressions of that awful day will stay with me forever."

LYNCHING OF INNOCENT MEN

(Lynched on Account of Relationship)

If no other reason appealed to the sober sense of the American people to check the growth of Lynch Law, the absolute unreliability and recklessness of the mob in inflicting punishment for crimes done, should do so. Several instances of this spirit have occurred in the year past. In Louisiana, near New Orleans, in July, 1893, Roselius Julian, a colored man, shot and killed a white judge, named Victor Estopinal. The cause of the shooting has never been definitely ascertained. It is claimed that the Negro resented an insult to his wife, and the killing of the white man was an act of a Negro (who dared) to defend his home. The judge was killed in the court house, and Julian, heavily armed, made his escape to the swamps near the city. He has never been apprehended, nor has any information ever been gleaned as to his whereabouts. A mob determined to secure the fugitive murderer and burn him alive. The swamps were hunted through and through in vain, when, being unable to wreak their revenge upon the murderer, the mob turned its attention to his unfortunate relatives. Dispatches from New Orleans, dated September 19, 1893, described the affair as follows:

Posses were immediately organized and the surrounding country was scoured, but the search was fruitless so far as the real criminal was concerned. The mother, three brothers and two sisters of the Negro were arrested yesterday at the Black Ridge in the rear of the city by the police and taken to the little jail on Judge Estopinal's place about Southport, because of the belief that they were succoring the fugitive.

About 11 o'clock twenty-five men, some armed with rifles and shotguns, came up to the jail. They unlocked the door and held a conference among themselves as to what they should do. Some were in favor of hanging the five, while others insisted that only two of the brothers should be strung up. This was finally agreed to, and the two doomed negroes were hurried to a pasture one hundred yards distant, and there asked to take their last chance of saving their lives by making a confession, but the Negroes made no reply. They were then told to kneel down and pray. One did so, the other remained standing, but both prayed fervently. The taller Negro was then hoisted up. The shorter Negro stood gazing at the horrible death of his brother without flinching. Five minutes later he was also hanged. The mob decided to take the remaining brother out to Camp Parapet and hang him there. The other two were to be taken out and flogged, with an order to get out of the parish in less than half an hour. The third brother, Paul, was taken out to the camp, which is about a mile distant in the interior, and there he was hanged to a tree.

Another young man, who was in no way related to Julian, who perhaps did not even know the man and who was entirely innocent of any offense in connection therewith, was murdered by the same mob. The same paper says:

During the search for Julian on Saturday one branch of the posse visited the house of a Negro family in the neighborhood of Camp Parapet, and failing to find the object of their search, tried to induce John Willis, a young Negro, to disclose the whereabouts of Julian. He refused to do so, or could not do so, and was kicked to death by the gang.

AN INDIANA CASE

Almost equal to the ferocity of the mob which killed the three brothers, Julian and the unoffending, John Willis, because of the murder of Judge Estopinal, was the action of a mob near Vincennes, Ind. In this case a wealthy colored man, named Allen Butler, who was well known in the community, and enjoyed the confidence and respect of the entire country, was made the victim of a mob and hung because his son had become unduly intimate with a white girl who was a servant around his house. There was no pretense that the facts were otherwise than as here stated. The woman lived at Butler's house as a servant, and she and Butler's son fell in love with each other, and later it was found that the girl was in a delicate condition. It was claimed, but with how much truth no one has ever been able to tell, that the father had procured an abortion, or himself had operated on the girl, and that she had left the house to go back to her home. It was never claimed that the father was in any way responsible for the action of his son, but the authorities procured the arrest of both father and son, and at the preliminary examination the father gave bail to appear before the Grand Jury when it should convene. On the same night, however, the mob took the matter in hand and with the intention of hanging the son. It assembled near Sumner, while the boy, who had been unable to give bail, was lodged in jail at Lawrenceville. As it was impossible to reach Lawrenceville and hang the son, the leaders of the mob concluded they would go to Butler's house and hang him. Butler was found at his home, taken out by the mob and hung to a tree. This was in the lawabiding state of Indiana, which furnished the United States its last president and which claims all the honor, pride and glory of northern civilization. None of the leaders of the mob were apprehended, and no steps whatever were taken to bring the murderers to justice.

KILLED FOR HIS STEPFATHER'S CRIME

An account has been given of the cremation of Henry Smith, at Paris, Texas, for the murder of the infant child of a man named Vance. It would appear that human ferocity was not sated when it vented itself upon a human being by burning his eyes out, by

thrusting a red-hot iron down his throat, and then by burning his body to ashes. Henry Smith, the victim of these savage orgies, was beyond all the power of torture, but a few miles outside of Paris, some members of the community concluded that it would be proper to kill a stepson named William Butler as a partial penalty for the original crime. This young man, against whom no word has ever been said, and who was in fact an orderly, peaceable boy, had been watched with the severest scrutiny by members of the mob who believed he knew something of the whereabouts of Smith. He declared from the very first that he did not know where his stepfather was, which statement was well proven to be a fact after the discovery of Smith in Arkansas, whence he had fled through swamps and woods and unfrequented places. Yet Butler was apprehended, placed under arrest, and on the night of February 6, taken out on Hickory Creek, five miles southeast of Paris, and hung for his stepfather's crime. After his body was suspended in the air, the mob filled it with bullets.

LYNCHED BECAUSE THE JURY ACQUITTED HIM

The entire system of the judiciary of this country is in the hands of white people. To this add the fact of the inherent prejudice against colored people, and it will be clearly seen that a white jury is certain to find a Negro prisoner guilty if there is the least evidence to warrant such a finding.

Meredith Lewis was arrested in Roseland, La., in July of last year. A white jury found him not guilty of the crime of murder wherewith he stood charged. This did not suit the mob. A few nights after the verdict was rendered, and he declared to be innocent, a mob gathered in his vicinity and went to his house. He was called, and suspecting nothing, went outside. He was seized and hurried off to a convenient spot and hanged by the neck until he was dead for the murder of a woman of which the jury had said he was innocent.

LYNCHED AS A SCAPEGOAT

Wednesday, July 5, about 10 o'clock in the morning, a terrible crime was committed within four miles of Wickliffe, Ky. Two girls, Mary and Ruby Ray, were found murdered a short distance from their home. The news of this terrible cowardly murder of two helpless young girls spread like wild fire, and searching parties scoured the territory surrounding Wickliffe and Bardwell. Two of the searching party, the Clark brothers, saw a man enter the Dupoyster cornfield; they got their guns and fired at the fleeing figure, but without effect; he got away, but they said he was a white man or nearly so. The search continued all day without effect, save the arrest of two or three strange Negroes. A bloodhound was brought from the penitentiary and put on the trail which he followed from the scene of the murder to the river and into the boat of a fisherman named Gordon. Gordon stated that he had ferried one man and only one across the river about about half past six the evening of July 5; that his passenger sat in front of him, and he was a white man or a very bright mulatto, who could not be told from a white man. The bloodhound was put across the river in the boat, and he struck a trail again at Bird's Point on the Missouri side, ran about three hundred yards to the cottage of a white farmer named Grant and there lay down refusing to go further.

Thursday morning a brakesman on a freight train going out of Sikeston, Mo., discovered a Negro stealing a ride; he ordered him off and had hot words which terminated in a fight. The brakesman had the Negro arrested. When arrested, between 11 and 12 o'clock, he had on a dark woolen shirt, light pants and coat, and no vest. He had twelve dollars in paper, two silver dollars and ninety-five cents in change; he had also four rings in his pockets, a knife and a razor which were rusted and stained. The Sikeston authorities immediately jumped to the conclusion that this man was the murderer for whom the Kentuckians across the river were searching. They telegraphed to Bardwell that their prisoner had on no coat, but wore a blue vest and pants which would perhaps correspond with the coat found at the scene of the murder, and that the names of the murdered girls were in the rings found in his possession.

As soon as this news was received, the sheriffs of Ballard and Carlisle counties and a posse(?) of thirty well-armed and determined Kentuckians, who had pledged their word the prisoner should be taken back to the scene of the supposed crime, to be executed there if proved to be the guilty man, chartered a train and at nine o'clock Thursday night started for Sikeston. Arriving there two hours later, the sheriff at Sikeston, who had no warrant for the prisoner's arrest and detention, delivered him into the hands of the mob without authority for so doing, and accompanied them to Bird's Point. The prisoner gave his name as Miller, his home at Springfield, and said he had never been in Kentucky in his life, but the sheriff turned him over to the mob to be taken to Wickliffe, that Frank Gordon, the fisherman, who had put a man across the river might identify him.

In other words, the protection of the law was withdrawn from C.J. Miller, and he was given to a mob by this sheriff at Sikeston, who knew that the prisoner's life depended on one man's word. After an altercation with the train men, who wanted another $50 for

taking the train back to Bird's Point, the crowd arrived there at three o'clock, Friday morning. Here was anchored _The Three States_, a ferryboat plying between Wickliffe, Ky, Cairo, Ill., and Bird's Point, Mo. This boat left Cairo at twelve o'clock, Thursday, with nearly three hundred of Cairo's best(?) citizens and thirty kegs of beer on board. This was consumed while the crowd and the bloodhound waited for the prisoner.

When the prisoner was on board _The Three States_ the dog was turned loose, and after moving aimlessly around, followed the crowd to where Miller sat handcuffed and there stopped. The crowd closed in on the pair and insisted that the brute had identified him because of that action. When the boat reached Wickliffe, Gordon, the fisherman, was called on to say whether the prisoner was the man he ferried over the river the day of the murder.

[Illustration: Lynching of C.J. Miller, at Bardwell, Kentucky, July 7, 1893.]

The sheriff of Ballard County informed him, sternly that if the prisoner was not the man, he (the fisherman) would be held responsible as knowing who the guilty man was. Gordon stated before, that the man he ferried across was a white man or a bright colored man; Miller was a dark brown skinned man, with kinky hair, "neither yellow nor black," says the _Cairo Evening Telegram_ of Friday, July 7. The fisherman went up to Miller from behind, looked at him without speaking for fully five minutes, then slowly said, "Yes, that's the man I crossed over." This was about six o'clock, Friday morning, and the crowd wished to hang Miller then and there. But Mr. Ray, the father of the girls, insisted that he be taken to Bardwell, the county seat of Ballard, and twelve miles inland. He said he thought a white man committed the crime, and that he was not satisfied that was the man. They took him to Bardwell and at ten o'clock, this same excited, unauthorized mob undertook to determine Miller's guilt. One of the Clark brothers who shot at a fleeing man in the Dupoyster cornfield, said the prisoner was the same man; the other said he was not, but the testimony of the first was accepted. A colored woman who had said she gave breakfast to a colored man clad in a blue flannel suit the morning of the murder, said positively that she had never seen Miller before. The gold rings found in his possession had no names in them, as had been asserted, and Mr. Ray said they did not belong to his daughters. Meantime a funeral pyre for the purpose of burning Miller to death had been erected in the center of the village. While the crowd swayed by passion was clamoring that he be burnt, Miller stepped forward and made the following statement: "My name is C.J. Miller. I am from Springfield, Ill.; my wife lives at 716 N. 2d Street. I am here among you today, looked upon as one of the most brutal men before the people. I stand here surrounded by men who are excited, men who are not willing to let the law take its course, and as far as the crime is concerned, I have committed no crime, and certainly no crime gross enough to deprive me of my life and liberty to walk upon the green earth."

A telegram was sent to the chief of the police at Springfield, Ill., asking if one C.J. Miller lived there. An answer in the negative was returned. A few hours after, it was ascertained that a man named Miller, and his wife, did live at the number the prisoner gave in his speech, but the information came to Bardwell too late to do the prisoner any good. Miller was taken to jail, every stitch of clothing literally torn from his body and examined again. On the lower left side of the bosom of his shirt was found a dark reddish spot about the size of a dime. Miller said it was paint which he had gotten on him at Jefferson Barracks. This spot was only on the right side, and could not be seen from the under side at all, thus showing it had not gone through the cloth as blood or any liquid substance would do.

Chief-of-Police Mahaney, of Cairo, Ill., was with the prisoner, and he took his knife and scraped at the spot, particles of which came off in his hand. Miller told them to take his clothes to any expert, and if the spot was shown to be blood, they might do anything they wished with him. They took his clothes away and were gone some time. After a while they were brought back and thrown into the cell without a word. It is needless to say that if the spot had been found to be blood, that fact would have been announced, and the shirt retained as evidence. Meanwhile numbers of rough, drunken men crowded into the cell and tried to force a confession of the deed from the prisoner's lips. He refused to talk save to reiterate his innocence. To Mr. Mahaney, who talked seriously and kindly to him, telling him the mob meant to burn and torture him at three o'clock, Miller said: "Burning and torture here lasts but a little while, but if I die with a lie on my soul, I shall be tortured forever. I am innocent." For more than three hours, all sorts of pressure in the way of threats, abuse and urging, was brought to bear to force him to confess to the murder and thus justify the mob in its deed of murder. Miller remained firm; but as the hour drew near, and the crowd became more impatient, he asked for a priest. As none could be procured, he then asked for a Methodist minister, who came, prayed with the doomed man, baptized him and exhorted Miller to confess. To keep up the flagging spirits of the dense crowd around the jail, the rumor went out more than once, that Miller had confessed. But the solemn assurance of the minister, chief-of-police, and leading editor--who were with Miller all along--is that this rumor is absolutely false.

At three o'clock the mob rushed to the jail to secure the prisoner. Mr. Ray had changed his mind about the promised burning; he was still in doubt as to the prisoner's guilt. He again addressed the crowd to that effect, urging them not to burn Miller, and the mob heeded him so far, that they compromised on hanging instead of burning, which was agreed to by Mr. Ray. There was a loud yell, and a rush was made for the prisoner. He was stripped naked, his clothing literally torn from his body, and his shirt was tied around his loins. Some one declared the rope was a "white man's death," and a log-chain, nearly a hundred feet in length, weighing over one hundred pounds, was placed round Miller's neck and body, and he was led and dragged through the streets of the village in that condition followed by thousands of people. He fainted from exhaustion several times, but was supported to the platform where they first intended burning him.

The chain was hooked around his neck, a man climbed the telegraph pole and the other end of the chain was passed up to him and made fast to the cross-arm. Others brought a long forked stick which Miller was made to straddle. By this means he was raised several feet from the ground and then let fall. The first fall broke his neck, but he was raised in this way and let fall a second time. Numberless shots were fired into the dangling body, for most of that crowd were heavily armed, and had been drinking all day.

Miller's body hung thus exposed from three to five o'clock, during which time, several photographs of him as he hung dangling at the end of the chain were taken, and his toes and fingers were cut off. His body was taken down, placed on the platform, the torch applied, and in a few moments there was nothing left of C.J. Miller save a few bones and ashes. Thus perished another of the many victims of Lynch Law, but it is the honest and sober belief of many who witnessed the scene that an innocent man has been barbarously and shockingly put to death in the glare of the nineteenth-century civilization, by those who profess to believe in Christianity, law and order.

5

LYNCHED FOR ANYTHING OR NOTHING

(_Lynched for Wife Beating_)

In nearly all communities wife beating is punishable with a fine, and in no community is it made a felony. Dave Jackson, of Abita, La., was a colored man who had beaten his wife. He had not killed her, nor seriously wounded her, but as Louisiana lynchers had not filled out their quota of crimes, his case was deemed of sufficient importance to apply the method of that barbarous people. He was in the custody of the officials, but the mob went to the jail and took him out in front of the prison and hanged him by the neck until he was dead. This was in Nov. 1893.

HANGED FOR STEALING HOGS

Details are very meagre of a lynching which occurred near Knox Point, La., on the twenty-fourth of October, 1893. Upon one point, however, there was no uncertainty, and that is, that the persons lynched were Negroes. It was claimed that they had been stealing hogs, but even this claim had not been subjected to the investigation of a court. That matter was not considered necessary. A few of the neighbors who had lost hogs suspected these men were responsible for their loss, and made up their minds to furnish an example for others to be warned by. The two men were secured by a mob and hanged.

LYNCHED FOR NO OFFENSE

Perhaps the most characteristic feature of this record of lynch law for the year 1893, is the remarkable fact that five human beings were lynched and that the matter was considered of so little importance that the powerful press bureaus of the country did not consider the matter of enough importance to ascertain the causes for which they were hanged. It tells the world, with perhaps greater emphasis than any other feature of the record, that Lynch Law has become so common in the United States that the finding of the dead body of a Negro, suspended between heaven and earth to the limb of a tree, is of so slight importance that neither the civil authorities nor press agencies consider the matter worth investigating. July 21, in Shelby County, Tenn., a colored man by the name of Charles Martin was lynched. July 30, at Paris, Mo., a colored man named William Steen shared the same fate. December 28, Mack Segars was announced to have been lynched at Brantley, Alabama. August 31, at Yarborough, Texas, and on September 19, at Houston, a colored man was found lynched, but so little attention was paid to the matter that not only was no record made as to why these last two men were lynched, but even their names were not given. The dispatches simply stated that an unknown Negro was found lynched in each case.

There are friends of humanity who feel their souls shrink from any compromise with murder, but whose deep and abiding reverence for womanhood causes them to hesitate in giving their support to this crusade against Lynch Law, out of fear that they may encourage the miscreants whose deeds are worse than murder. But to these friends it must appear certain that these five men could not have been guilty of any terrible crime. They were simply lynched by parties of men who had it in their power to kill them, and who chose to avenge some fancied wrong by murder, rather than submit their grievances to court.

LYNCHED BECAUSE THEY WERE SAUCY

At Moberly, Mo., February 18 and at Fort Madison, S.C., June 2, both in 1892, a record was made in the line of lynching which should certainly appeal to every humanitarian who has any regard for the sacredness of human life. John Hughes, of Moberly, and Isaac Lincoln, of Fort Madison, and Will Lewis in Tullahoma, Tenn., suffered death for no more serious charge than that they "were saucy to white people." In the days of slavery it was held to be a very serious matter for a colored person to fail to yield the sidewalk at the demand of a white person, and it will not be surprising to find some evidence of this intolerance existing in the days of freedom. But the most that could be expected as a penalty for acting or speaking saucily to a white person would be a slight physical chastisement to make the Negro "know his place" or an arrest and fine. But Missouri, Tennessee and South Carolina chose to make precedents in their cases and as a result both men, after being charged with their offense and apprehended, were taken by a mob and lynched. The civil authorities, who in either case would have been very quick to satisfy the aggrieved white people had they complained and brought the prisoners to court, by imposing proper penalty upon them, did not feel it their duty to make any investigation after the Negroes were killed. They were dead and out of the way and as no one would be called upon to render an account for their taking off, the matter was dismissed from the public mind.

LYNCHED FOR A QUARREL

One of the most notable instances of lynching for the year 1893, occurred about the twentieth of September. It was notable for the fact that the mayor of the city exerted every available power to protect the victim of the lynching from the mob. In his splendid endeavor to uphold the law, the mayor called out the troops, and the result was a deadly fight between the militia and mob, nine of the mob being killed. The trouble occurred at Roanoke, Va. It is frequently claimed that lynchings occur only in sparsely settled districts, and, in fact, it is a favorite plea of governors and reverend apologists to couple two arrant falsehoods, stating that lynchings occur only because of assaults upon white women, and that these assaults occur and the lynchings follow in thinly inhabited districts where the power of the law is entirely inadequate to meet the emergency. This Roanoke case is a double refutation, for it not only disproves the alleged charge that the Negro assaulted a white woman, as was telegraphed all over the country at the time, but it also shows conclusively that even in one of the largest cities of the old state of Virginia, one of the original thirteen colonies, which prides itself of being the mother of presidents, it was possible for a lynching to occur in broad daylight under circumstances of revolting savagery.

When the news first came from Roanoke of the contemplated lynching, it was stated that a big burly Negro had assaulted a white woman, that he had been apprehended and that the citizens were determined to summarily dispose of his case. Mayor Trout was a man who believed in maintaining the majesty of the law, and who at once gave notice that no lynching would be permitted in Roanoke, and that the Negro, whose name was Smith, being in the custody of the law, should be dealt with according to law; but the mob did not pay any attention to the brave words of the mayor. It evidently thought that it was only another case of swagger, such as frequently characterizes lynching episodes. Mayor Trout, finding immense crowds gathering about the city, and fearing an attempt to lynch Smith, called out the militia and stationed them at the jail.

It was known that the woman refused to accuse Smith of assaulting her, and that his offense consisted in quarreling with her about the change of money in a transaction in which he bought something from her market booth. Both parties lost their temper, and the result was a row from which Smith had to make his escape. At once the old cry was sounded that the woman had been assaulted, and in a few hours all the town was wild with people thirsting for the assailant's blood. The further incidents of that day may well be told by a dispatch from Roanoke under date of the twenty-first of September and published in the _Chicago Record_. It says:

It is claimed by members of the military company that they frequently warned the mob to keep away from the jail, under penalty of being shot. Capt. Bird told them he was under orders to protect the prisoner whose life the mob so eagerly sought, and come what may he would not allow him to be taken by the mob. To this the crowd replied with hoots and derisive jeers. The rioters appeared to become frenzied at the determined stand taken by the men and Captain Bird, and finally a crowd of excited men made a rush for the side door of the jail. The captain directed his men to drive the would-be lynchers back.

At this moment the mob opened fire on the soldiers. This appeared for a moment to startle the captain and his men. But it was only for a moment. Then he coolly gave the command: "Ready! aim! fire!" The company obeyed to the instant, and poured a volley of bullets into that part of the mob which was trying to batter down the side door of the jail.

The rioters fell back before the fire of the militia, leaving one man writhing in the agonies of death at the doorstep. There was a lull for a moment. Then the word was quickly passed through the throng in front of the jail and down the street that a man was killed. Then there was an awful rush toward the little band of soldiers. Excited men were yelling like demons.

The fight became general, and ere it was ended nine men were dead and more than forty wounded.

This stubborn stand on behalf of law and order disconcerted the crowd and it fell back in disorder. It did not long remain inactive but assembled again for a second assault. Having only a small band of militia, and knowing they would be absolutely at the mercy of the thousands who were gathering to wreak vengeance upon them, the mayor ordered them to disperse and go to their homes, and he himself, having been wounded, was quietly conveyed out of the city.

The next day the mob grew in numbers and its rage increased in its intensity. There was no longer any doubt that Smith, innocent as he was of any crime, would be killed, for with the mayor out of the city and the governor of the state using no effort to control the mob, it was only a question of a few hours when the assault would be repeated and its victim put to death. All this happened as per programme. The description of that morning's carnival appeared in the paper above quoted and reads as follows:

A squad of twenty men took the negro Smith from three policemen just before five o'clock this morning and hanged him to a hickory limb on Ninth Avenue, in the residence section of the city. They riddled his body with bullets and put a placard on it saying: "This is Mayor Trout's friend." A coroner's jury of Bismel was summoned and viewed the body and rendered a verdict of death at the hands of unknown men. Thousands of persons visited the scene of the lynching between daylight and eight o'clock when the body was cut down. After the jury had completed its work the body was placed in the hands of officers, who were unable to keep back the mob. Three hundred men tried to drag the body through the streets of the town, but the Rev. Dr. Campbell of the First Presbyterian church and Capt. R.B. Moorman, with pleas and by force prevented them.

Capt. Moorman hired a wagon and the body was put in it. It was then conveyed to the bank of the Roanoke, about two miles from the scene of the lynching. Here the body was dragged from the wagon by ropes for about 200 yards and burned. Piles of dry brushwood were brought, and the body was placed upon it, and more brushwood piled on the body, leaving only the head bare. The whole pile was then saturated with coal oil and a match was applied. The body was consumed within an hour. The cremation was witnessed by several thousand people. At one time the mob threatened to burn the Negro in Mayor Trout's yard.

Thus did the people of Roanoke, Va., add this measure of proof to maintain our contention that it is only necessary to charge a Negro with a crime in order to secure his certain death. It was well known in the city before he was killed that he had not assaulted the woman with whom he had had the trouble, but he dared to have an altercation with a white woman, and he must pay the penalty. For an offense which would not in any civilized community have brought upon him a punishment greater than a fine of a few dollars, this unfortunate Negro was hung, shot and burned.

SUSPECTED, INNOCENT AND LYNCHED

Five persons, Benjamin Jackson, his wife, Mahala Jackson, his mother-in-law, Lou Carter, Rufus Bigley, were lynched near Quincy, Miss., the charge against them being suspicion of well poisoning. It appears from the newspaper dispatches at that time that a family by the name of Woodruff was taken ill in September of 1892. As a result of their illness one or more of the family are said to have died, though that matter is not stated definitely. It was suspected that the cause of their illness was the existence of poison in the water, some miscreant having placed poison in the well. Suspicion pointed to a colored man named Benjamin Jackson who was at once arrested. With him also were arrested his wife and mother-in-law and all were held on the same charge.

The matter came up for judicial investigation, but as might have been expected, the white people concluded it was unnecessary to wait the result of the investigation--that it was preferable to hang the accused first and try him afterward. By this method of procedure, the desired result was always obtained--the accused was hanged. Accordingly Benjamin Jackson was taken from the officers by a crowd of about two hundred people, while the inquest was being held, and hanged. After the killing of Jackson, the inquest was continued to ascertain the possible connection of the other persons charged with the crime. Against the wife and mother-in-law of the unfortunate man there was not the slightest evidence and the coroner's jury was fair enough to give them their

liberty. They were declared innocent and returned to their homes. But this did not protect the women from the demands of the Christian white people of that section of the country. In any other land and with any other people, the fact that these two accused persons were women would have pleaded in their favor for protection and fair play, but that had no weight with the Mississippi Christians nor the further fact that a jury of white men had declared them innocent. The hanging of one victim on an unproven charge did not begin to satisfy the mob in its bloodthirsty demands and the result was that even after the women had been discharged, they were at once taken in charge by a mob, which hung them by the neck until they were dead.

Still the mob was not satisfied. During the coroner's investigation the name of a fourth person, Rufus Bigley, was mentioned. He was acquainted with the Jacksons and that fact, together with some testimony adduced at the inquest, prompted the mob to decide that he should die also. Search was at once made for him and the next day he was apprehended. He was not given over into the hands of the civil authorities for trial nor did the coroner's inquest find that he was guilty, but the mob was quite sufficient in itself. After finding Bigley, he was strung up to a tree and his body left hanging, where it was found next day. It may be remarked here in passing that this instance of the moral degradation of the people of Mississippi did not excite any interest in the public at large. American Christianity heard of this awful affair and read of its details and neither press nor pulpit gave the matter more than a passing comment. Had it occurred in the wilds of interior Africa, there would have been an outcry from the humane people of this country against the savagery which would so mercilessly put men and women to death. But it was an evidence of American civilization to be passed by unnoticed, to be denied or condoned as the requirements of any future emergency might determine.

LYNCHED FOR AN ATTEMPTED ASSAULT

With only a little more aggravation than that of Smith who quarreled at Roanoke with the market woman, was the assault which operated as the incentive to a most brutal lynching in Memphis, Tenn. Memphis is one of the queen cities of the south, with a population of about seventy thousand souls--easily one of the twenty largest, most progressive and wealthiest cities of the United States. And yet in its streets there occurred a scene of shocking savagery which would have disgraced the Congo. No woman was harmed, no serious indignity suffered. Two women driving to town in a wagon, were suddenly accosted by Lee Walker. He claimed that he demanded something to eat. The women claimed that he attempted to assault them. They gave such an alarm that he ran away. At once the dispatches spread over the entire country that a big, burly Negro had brutally assaulted two women. Crowds began to search for the alleged fiend. While hunting him they shot another Negro dead in his tracks for refusing to stop when ordered to do so. After a few days Lee Walker was found, and put in jail in Memphis until the mob there was ready for him.

The _Memphis Commercial_ of Sunday, July 23, contains a full account of the tragedy from which the following extracts are made:

At 12 o'clock last night, Lee Walker, who attempted to outrage Miss Mollie McCadden, last Tuesday morning, was taken from the county jail and hanged to a telegraph pole just north of the prison. All day rumors were afloat that with nightfall an attack would be made upon the jail, and as everyone anticipated that a vigorous resistance would be made, a conflict between the mob and the authorities was feared.

At 10 o'clock Capt. O'Haver, Sergt. Horan and several patrolmen were on hand, but they could do nothing with the crowd. An attack by the mob was made on the door in the south wall, and it yielded. Sheriff McLendon and several of his men threw themselves into the breach, but two or three of the storming party shoved by. They were seized by the police, but were not subdued, the officers refraining from using their clubs. The entire mob might at first have been dispersed by ten policemen who would use their clubs, but the sheriff insisted that no violence be done.

The mob got an iron rail and used it as a battering ram against the lobby doors. Sheriff McLendon tried to stop them, and some one of the mob knocked him down with a chair. Still he counseled moderation and would not order his deputies and the police to disperse the crowd by force. The pacific policy of the sheriff impressed the mob with the idea that the officers were afraid, or at least would do them no harm, and they redoubled their efforts, urged on by a big switchman. At 12 o'clock the door of the prison was broken in with a rail.

As soon as the rapist was brought out of the door calls were heard for a rope; then someone shouted, "Burn him!" But there was no time to make a fire. When Walker got into the lobby a dozen of the men began beating and stabbing him. He was half dragged, half carried to the corner of Front Street and the alley between Sycamore and Mill, and hung to a telegraph pole.

Walker made a desperate resistance. Two men entered his cell first and ordered him to come forth. He refused, and they failing to drag him out, others entered. He scratched and bit his assailants, wounding several of them severely with his teeth. The mob

retaliated by striking and cutting him with fists and knives. When he reached the steps leading down to the door he made another stand and was stabbed again and again. By the time he reached the lobby his power to resist was gone, and he was shoved along through the mob of yelling, cursing men and boys, who beat, spat upon and slashed the wretch-like demon. One of the leaders of the mob fell, and the crowd walked ruthlessly over him. He was badly hurt--a jawbone fractured and internal injuries inflicted. After the lynching friends took charge of him.

The mob proceeded north on Front Street with the victim, stopping at Sycamore Street to get a rope from a grocery. "Take him to the iron bridge on Main Street," yelled several men. The men who had hold of the Negro were in a hurry to finish the job, however, and when they reached the telephone pole at the corner of Front Street and the first alley north of Sycamore they stopped. A hastily improvised noose was slipped over the Negro's head, and several young men mounted a pile of lumber near the pole and threw the rope over one of the iron stepping pins. The Negro was lifted up until his feet were three feet above the ground, the rope was made taut, and a corpse dangled in midair. A big fellow who helped lead the mob pulled the Negro's legs until his neck cracked. The wretch's clothes had been torn off, and, as he swung, the man who pulled his legs mutilated the corpse.

One or two knife cuts, more or less, made little difference in the appearance of the dead rapist, however, for before the rope was around his neck his skin was cut almost to ribbons. One pistol shot was fired while the corpse was hanging. A dozen voices protested against the use of firearms, and there was no more shooting. The body was permitted to hang for half an hour, then it was cut down and the rope divided among those who lingered around the scene of the tragedy. Then it was suggested that the corpse be burned, and it was done. The entire performance, from the assault on the jail to the burning of the dead Negro was witnessed by a score or so of policemen and as many deputy sheriffs, but not a hand was lifted to stop the proceedings after the jail door yielded.

As the body hung to the telegraph pole, blood streaming down from the knife wounds in his neck, his hips and lower part of his legs also slashed with knives, the crowd hurled expletives at him, swung the body so that it was dashed against the pole, and, so far from the ghastly sight proving trying to the nerves, the crowd looked on with complaisance, if not with real pleasure. The Negro died hard. The neck was not broken, as the body was drawn up without being given a fall, and death came by strangulation. For fully ten minutes after he was strung up the chest heaved occasionally, and there were convulsive movements of the limbs. Finally he was pronounced dead, and a few minutes later Detective Richardson climbed on a pile of staves and cut the rope. The body fell in a ghastly heap, and the crowd laughed at the sound and crowded around the prostrate body, a few kicking the inanimate carcass.

Detective Richardson, who is also a deputy coroner, then proceeded to impanel the following jury of inquest: J.S. Moody, A.C. Waldran, B.J. Childs, J.N. House, Nelson Bills, T.L. Smith, and A. Newhouse. After viewing the body the inquest was adjourned without any testimony being taken until 9 o'clock this morning. The jury will meet at the coroner's office, 51 Beale Street, upstairs, and decide on a verdict. If no witnesses are forthcoming, the jury will be able to arrive at a verdict just the same, as all members of it saw the lynching. Then someone raised the cry of "Burn him!" It was quickly taken up and soon resounded from a hundred throats. Detective Richardson, for a long time, single-handed, stood the crowd off. He talked and begged the men not to bring disgrace on the city by burning the body, arguing that all the vengeance possible had been wrought.

While this was going on a small crowd was busy starting a fire in the middle of the street. The material was handy. Some bundles of staves were taken from the adjoining lumber yard for kindling. Heavier wood was obtained from the same source, and coal oil from a neighboring grocery. Then the cries of "Burn him! Burn him!" were redoubled.

Half a dozen men seized the naked body. The crowd cheered. They marched to the fire, and giving the body a swing, it was landed in the middle of the fire. There was a cry for more wood, as the fire had begun to die owing to the long delay. Willing hands procured the wood, and it was piled up on the Negro, almost, for a time, obscuring him from view. The head was in plain view, as also were the limbs, and one arm which stood out high above the body, the elbow crooked, held in that position by a stick of wood. In a few moments the hands began to swell, then came great blisters over all the exposed parts of the body; then in places the flesh was burned away and the bones began to show through. It was a horrible sight, one which, perhaps, none there had ever witnessed before. It proved too much for a large part of the crowd and the majority of the mob left very shortly after the burning began.

But a large number stayed, and were not a bit set back by the sight of a human body being burned to ashes. Two or three white women, accompanied by their escorts, pushed to the front to obtain an unobstructed view, and looked on with astonishing coolness and nonchalance. One man and woman brought a little girl, not over twelve years old, apparently their daughter, to view a scene

which was calculated to drive sleep from the child's eyes for many nights, if not to produce a permanent injury to her nervous system. The comments of the crowd were varied. Some remarked on the efficacy of this style of cure for rapists, others rejoiced that men's wives and daughters were now safe from this wretch. Some laughed as the flesh cracked and blistered, and while a large number pronounced the burning of a dead body as a useless episode, not in all that throng was a word of sympathy heard for the wretch himself.

The rope that was used to hang the Negro, and also that which was used to lead him from the jail, were eagerly sought by relic hunters. They almost fought for a chance to cut off a piece of rope, and in an incredibly short time both ropes had disappeared and were scattered in the pockets of the crowd in sections of from an inch to six inches long. Others of the relic hunters remained until the ashes cooled to obtain such ghastly relics as the teeth, nails, and bits of charred skin of the immolated victim of his own lust. After burning the body the mob tied a rope around the charred trunk and dragged it down Main Street to the courthouse, where it was hanged to a center pole. The rope broke and the corpse dropped with a thud, but it was again hoisted, the charred legs barely touching the ground. The teeth were knocked out and the fingernails cut off as souvenirs. The crowd made so much noise that the police interfered. Undertaker Walsh was telephoned for, who took charge of the body and carried it to his establishment, where it will be prepared for burial in the potter's field today.

[Illustration: Facsimile of back of photograph. W.R. MARTIN, Traveling Photographer. (Handwritten: This S.O.B. was hung at Clanton Ala. Friday Aug 21st/91 for murdering a little boy in cold blood for 35¢ in cash. He is a good specimen of your "Black Christian hung by White Heathens" [illegible] of the Committee.)]

A prelude to this exhibition of nineteenth-century barbarism was the following telegram received by the _Chicago Inter Ocean_, at 2 o'clock, Saturday afternoon--ten hours before the lynching:

MEMPHIS TENN., July 22, To _Inter-Ocean_, Chicago.

Lee Walker, colored man, accused of raping white women, in jail here, will be taken out and burned by whites tonight. Can you send Miss Ida Wells to write it up? Answer. R.M. Martin, with _Public Ledger_.

The _Public Ledger_ is one of the oldest evening daily papers in Memphis, and this telegram shows that the intentions of the mob were well known long before they were executed. The personnel of the mob is given by the _Memphis Appeal-Avalanche_. It says, "At first it seemed as if a crowd of roughs were the principals, but as it increased in size, men in all walks of life figured as leaders, although the majority were young men."

This was the punishment meted out to a Negro, charged, not with rape, but attempted assault, and without any proof as to his guilt, for the women were not given a chance to identify him. It was only a little less horrible than the burning alive of Henry Smith, at Paris, Texas, February 1, 1893, or that of Edward Coy, in Texarkana, Texas, February 20, 1892. Both were charged with assault on white women, and both were tied to the stake and burned while yet alive, in the presence of ten thousand persons. In the case of Coy, the white woman in the case applied the match, even while the victim protested his innocence.

The cut which is here given is the exact reproduction of the photograph taken at the scene of the lynching at Clanton, Alabama, August, 1891. The cause for which the man was hanged is given in the words of the mob which were written on the back of the photograph, and they are also given. This photograph was sent to Judge A.W. Tourgee, of Mayville, N.Y.

In some of these cases the mob affects to believe in the Negro's guilt. The world is told that the white woman in the case identifies him, or the prisoner "confesses." But in the lynching which took place in Barnwell County, South Carolina, April 24, 1893, the mob's victim, John Peterson, escaped and placed himself under Governor Tillman's protection; not only did he declare his innocence, but offered to prove an alibi, by white witnesses. Before his witnesses could be brought, the mob arrived at the Governor's mansion and demanded the prisoner. He was given up, and although the white woman in the case said he was not the man, he was hanged twenty-four hours after, and over a thousand bullets fired into his body, on the declaration that "a crime had been committed and someone had to hang for it."

It has been claimed that the Southern white women have been slandered because, in defending the Negro race from the charge that all colored men, who are lynched, only pay penalty for assaulting women. It is certain that lynching mobs have not only refused to give the Negro a chance to defend himself, but have killed their victim with a full knowledge that the relationship of the alleged assailant with the woman who accused him, was voluntary and clandestine. As a matter of fact, one of the prime causes of the Lynch Law agitation has been a necessity for defending the Negro from this awful charge against him. This defense has been necessary because the apologists for outlawry insist that in no case has the accusing woman been a willing consort of her paramour, who is lynched because overtaken in wrong. It is well known, however, that such is the case. In July of this year, 1894, John Paul Bocock, a Southern white man living in New York, and assistant editor of the _New York Tribune_, took occasion to defy the publication of any instance where the lynched Negro was the victim of a white woman's falsehood. Such cases are not rare, but the press and people conversant with the facts, almost invariably suppress them.

The _New York Sun_ of July 30,1894, contained a synopsis of interviews with leading congressmen and editors of the South. Speaker Crisp, of the House of Representatives, who was recently a Judge of the Supreme Court of Georgia, led in declaring that lynching seldom or never took place, save for vile crime against women and children. Dr. Hass, editor of the leading organ of the Methodist Church South, published in its columns that it was his belief that more than three hundred women had been assaulted by Negro men within three months. When asked to prove his charges, or give a single case upon which his "belief" was founded, he said that he could do so, but the details were unfit for publication. No other evidence but his "belief" could be adduced to substantiate this grave charge, yet Bishop Haygood, in the _Forum_ of October, 1893, quotes this "belief" in apology for lynching, and voluntarily adds: "It is my opinion that this is an underestimate." The "opinion" of this man, based upon a "belief," had greater weight coming from a man who has posed as a friend to "Our Brother in Black," and was accepted as authority. An interview of Miss Frances E. Willard, the great apostle of temperance, the daughter of abolitionists and a personal friend and helper of many individual colored people, has been quoted in support of the utterance of this calumny against a weak and defenseless race. In the _New York Voice_ of October 23, 1890, after a tour in the South, where she was told all these things by the "best white people," she said: "The grogshop is the Negro's center of power. Better whisky and more of it is the rallying cry of great, dark-faced mobs. The colored race multiplies like the locusts of Egypt. The grogshop is its center of power. The safety of woman, of childhood, the home, is menaced in a thousand localities at this moment, so that men dare not go beyond the sight of their own roof-tree."

These charges so often reiterated, have had the effect of fastening the odium upon the race of a peculiar propensity for this foul crime. The Negro is thus forced to a defense of his good name, and this chapter will be devoted to the history of some of the cases where assault upon white women by Negroes is charged. He is not the aggressor in this fight, but the situation demands that the facts be given, and they will speak for themselves. Of the 1,115 Negro men, women and children hanged, shot and roasted alive from January 1, 1882, to January 1, 1894, inclusive, only 348 of that number were charged with rape. Nearly 700 of these persons were lynched for any other reason which could be manufactured by a mob wishing to indulge in a lynching bee.

A WHITE WOMAN'S FALSEHOOD

The _Cleveland, Ohio, Gazette_, January 16, 1892, gives an account of one of these cases of "rape."

Mrs. J.C. Underwood, the wife of a minister of Elyria, Ohio, accused an Afro-American of rape. She told her husband that during his absence in 1888, stumping the state for the Prohibition Party, the man came to the kitchen door, forced his way in the house and insulted her. She tried to drive him out with a heavy poker, but he overpowered and chloroformed her, and when she revived her clothing was torn and she was in a horrible condition. She did not know the man, but could identify him. She subsequently pointed out William Offett, a married man, who was arrested, and, being in Ohio, was granted a trial.

The prisoner vehemently denied the charge of rape, but confessed he went to Mrs. Underwood's residence at her invitation and was criminally intimate with her at her request. This availed him nothing against the sworn testimony of a minister's wife, a lady of the highest respectability. He was found guilty, and entered the penitentiary, December 14, 1888, for fifteen years. Sometime afterwards the woman's remorse led her to confess to her husband that the man was innocent. These are her words: "I met Offett at the postoffice. It was raining. He was polite to me, and as I had several bundles in my arms he offered to carry them home for me, which he did. He had a strange fascination for me, and I invited him to call on me. He called, bringing chestnuts and candy for the children. By this means we got them to leave us alone in the room. Then I sat on his lap. He made a proposal to me and I readily consented. Why I did so I do not know, but that I did is true. He visited me several times after that and each time I was indiscreet. I did not care after the first time. In fact I could not have resisted, and had no desire to resist."

When asked by her husband why she told him she had been outraged, she said: "I had several reasons for telling you. One was the neighbors saw the fellow here, another was, I was afraid I had contracted a loathsome disease, and still another was that I feared I might give birth to a Negro baby. I hoped to save my reputation by telling you a deliberate lie." Her husband, horrified by the confession, had Offett, who had already served four years, released and secured a divorce.

There have been many such cases throughout the South, with the difference that the Southern white men in insensate fury wreak their vengeance without intervention of law upon the Negro who consorts with their women.

TRIED TO MANUFACTURE AN OUTRAGE

The _Memphis (Tenn.) Ledger_, of June 8, 1892, has the following:

If Lillie Bailey, a rather pretty white girl, seventeen years of age, who is now at the city hospital, would be somewhat less reserved about her disgrace there would be some very nauseating details in the story of her life. She is the mother of a little coon. The truth might reveal fearful depravity or the evidence of a rank outrage. She will not divulge the name of the man who has left such black evidence of her disgrace, and in fact says it is a matter in which there can be no interest to the outside world. She came to Memphis nearly three months ago, and was taken in at the Woman's Refuge in the southern part of the city. She remained there until a few weeks ago when the child was born. The ladies in charge of the Refuge were horrified. The girl was at once sent to the city hospital, where she has been since May 30. She is a country girl. She came to Memphis from her father's farm, a short distance from Hernando, Miss. Just when she left there she would not say. In fact she says she came to Memphis from Arkansas, and says her home is in that state. She is rather good looking, has blue eyes, a low forehead and dark red hair. The ladies at the Woman's Refuge do not know anything about the girl further than what they learned when she was an inmate of the institution; and she would not tell much. When the child was born an attempt was made to get the girl to reveal the name of the Negro who had disgraced her, she obstinately refused and it was impossible to elicit any information from her on the subject.

Note the wording: "The truth might reveal fearful depravity or rank outrage." If it had been a white child or if Lillie Bailey had told a pitiful story of Negro outrage, it would have been a case of woman's weakness or assault and she could have remained at the Woman's Refuge. But a Negro child and to withhold its father's name and thus prevent the killing of another Negro "rapist" was a case of "fearful depravity." Had she revealed the father's name, he would have been lynched and his taking off charged to an assault upon a white woman.

BURNED ALIVE FOR ADULTERY

In Texarkana, Arkansas, Edward Coy was accused of assaulting a white woman. The press dispatches of February 18, 1892, told in detail how he was tied to a tree, the flesh cut from his body by men and boys, and after coal oil was poured over him, the woman he had assaulted gladly set fire to him, and 15,000 persons saw him burn to death. October 1, the _Chicago Inter Ocean_ contained the following account of that horror from the pen of the "Bystander" Judge Albion W. Tourgee--as the result of his investigations:

1. The woman who was paraded as victim of violence was of bad character; her husband was a drunkard and a gambler.

2. She was publicly reported and generally known to have been criminally intimate with Coy for more than a year previous.

3. She was compelled by threats, if not by violence, to make the charge against the victim.

4. When she came to apply the match Coy asked her if she would burn him after they had "been sweethearting" so long.

5. A large majority of the "superior" white men prominent in the affair are the reputed fathers of mulatto children.

These are not pleasant facts, but they are illustrative of the vital phase of the so-called race question, which should properly be designated an earnest inquiry as to the best methods by which religion, science, law and political power may be employed to excuse injustice, barbarity and crime done to a people because of race and color. There can be no possible belief that these people were inspired by any consuming zeal to vindicate God's law against miscegenationists of the most practical sort. The woman was a willing partner in the victim's guilt, and being of the "superior" race must naturally have been more guilty.

NOT IDENTIFIED BUT LYNCHED

February 11, 1893, there occurred in Shelby County, Tennessee, the fourth Negro lynching within fifteen months. The three first were lynched in the city of Memphis for firing on white men in self-defense. This Negro, Richard Neal, was lynched a few miles from the city limits, and the following is taken from the _Memphis (Tenn.) Scimitar_:

As the _Scimitar_ stated on Saturday the Negro, Richard Neal, who raped Mrs. Jack White near Forest Hill, in this county, was lynched by a mob of about 200 white citizens of the neighborhood. Sheriff McLendon, accompanied by Deputies Perkins, App and Harvey and a _Scimitar_ reporter, arrived on the scene of the execution about 3:30 in the afternoon. The body was suspended from the first limb of a post oak tree by a new quarter-inch grass rope. A hangman's knot, evidently tied by an expert, fitted snugly under the left ear of the corpse, and a new hame string pinioned the victim's arms behind him. His legs were not tied. The body was perfectly limber when the Sheriff's posse cut it down and retained enough heat to warm the feet of Deputy Perkins, whose road cart was converted into a hearse. On arriving with the body at Forest Hill the Sheriff made a bargain with a stalwart young man with a blonde mustache and deep blue eyes, who told the _Scimitar_ reporter that he was the leader of the mob, to haul the body to Germantown for $3.

When within half-a-mile of Germantown the Sheriff and posse were overtaken by Squire McDonald of Collierville, who had come down to hold the inquest. The Squire had his jury with him, and it was agreed for the convenience of all parties that he should proceed with the corpse to Germantown and conduct the inquiry as to the cause of death. He did so, and a verdict of death from hanging by parties unknown was returned in due form.

The execution of Neal was done deliberately and by the best people of the Collierville, Germantown and Forest Hill neighborhoods, without passion or exhibition of anger.

He was arrested on Friday about ten o'clock, by Constable Bob Cash, who carried him before Mrs. White. She said: "I think he is the man. I am almost certain of it. If he isn't the man he is exactly like him."

The Negro's coat was torn also, and there were other circumstances against him. The committee returned and made its report, and the chairman put the question of guilt or innocence to a vote.

All who thought the proof strong enough to warrant execution were invited to cross over to the other side of the road. Everybody but four or five negroes crossed over.

The committee then placed Neal on a mule with his arms tied behind him, and proceeded to the scene of the crime, followed by the mob. The rope, with a noose already prepared, was tied to the limb nearest the spot where the unpardonable sin was committed, and the doomed man's mule was brought to a standstill beneath it.

Then Neal confessed. He said he was the right man, but denied that he used force or threats to accomplish his purpose. It was a matter of purchase, he claimed, and said the price paid was twenty-five cents. He warned the colored men present to beware of white women and resist temptation, for to yield to their blandishments or to the passions of men, meant death.

While he was speaking, Mrs. White came from her home and calling Constable Cash to one side, asked if he could not save the Negro's life. The reply was, "No," and Mrs. White returned to the house.

When all was in readiness, the husband of Neal's victim leaped upon the mule's back and adjusted the rope around the Negro's neck. No cap was used, and Neal showed no fear, nor did he beg for mercy. The mule was struck with a whip and bounded out from under Neal, leaving him suspended in the air with his feet about three feet from the ground.

DELIVERED TO THE MOB BY THE GOVERNOR OF THE STATE

John Peterson, near Denmark, S.C., was suspected of rape, but escaped, went to Columbia, and placed himself under Gov. Tillman's protection, declaring he too could prove an alibi by white witnesses. A white reporter hearing his declaration volunteered to find these witnesses, and telegraphed the governor that he would be in Columbia with them on Monday. In the meantime the mob at Denmark, learning Peterson's whereabouts, went to the governor and demanded the prisoner. Gov. Tillman, who had during his canvass for reelection the year before, declared that he would lead a mob to lynch a Negro that assaulted a white woman, gave Peterson up to the mob. He was taken back to Denmark, and the white girl in the case as positively declared that he was not the man. But the verdict of the mob was that "the crime had been committed and somebody had to hang for it, and if he, Peterson, was not guilty of that he was of some other crime," and he was hung, and his body riddled with 1,000 bullets.

LYNCHED AS A WARNING

Alabama furnishes a case in point. A colored man named Daniel Edwards, lived near Selma, Alabama, and worked for a family of a farmer near that place. This resulted in an intimacy between the young man and a daughter of the householder, which finally developed in the disgrace of the girl. After the birth of the child, the mother disclosed the fact that Edwards was its father. The relationship had been sustained for more than a year, and yet this colored man was apprehended, thrown into jail from whence he was taken by a mob of one hundred neighbors and hung to a tree and his body riddled with bullets. A dispatch which describes the lynching, ends as follows. "Upon his back was found pinned this morning the following: 'Warning to all Negroes that are too intimate with white girls. This the work of one hundred best citizens of the South Side.'"

There can be no doubt from the announcement made by this "one hundred best citizens" that they understood full well the character of the relationship which existed between Edwards and the girl, but when the dispatches were sent out, describing the affair, it was claimed that Edwards was lynched for rape.

SUPPRESSING THE TRUTH

In a county in Mississippi during the month of July the Associated Press dispatches sent out a report that the sheriff's eight-year-old daughter had been assaulted by a big, black, burly brute who had been promptly lynched. The facts which have since been investigated show that the girl was more than eighteen years old and that she was discovered by her father in this young man's room who was a servant on the place. But these facts the Associated Press has not given to the world, nor did the same agency acquaint the world with the fact that a Negro youth who was lynched in Tuscumbia, Ala., the same year on the same charge told the white girl who accused him before the mob, that he had met her in the woods often by appointment. There is a young mulatto in one of the State prisons of the South today who is there by charge of a young white woman to screen herself. He is a college graduate and had been corresponding with, and clandestinely visiting her until he was surprised and run out of her room en deshabille by her father. He was put in prison in another town to save his life from the mob and his lawyer advised that it were better to save his life by pleading guilty to charges made and being sentenced for years, than to attempt a defense by exhibiting the letters written him by this girl. In the latter event, the mob would surely murder him, while there was a chance for his life by adopting the former course. Names, places and dates are not given for the same reason.

The excuse has come to be so safe, it is not surprising that a Philadelphia girl, beautiful and well educated, and of good family, should make a confession published in all the daily papers of that city October, 1894, that she had been stealing for some time, and that to cover one of her thefts, she had said she had been bound and gagged in her father's house by a colored man, and money stolen therefrom by him. Had this been done in many localities, it would only have been necessary for her to "identify" the first Negro in that vicinity, to have brought about another lynching bee.

A VILE SLANDER WITH SCANT RETRACTION

The following published in the _Cleveland (Ohio) Leader_ of Oct. 23, 1894, only emphasizes our demand that a fair trial shall be given those accused of crime, and the protection of the law be extended until time for a defense be granted.

The sensational story sent out last night from Hicksville that a Negro had outraged a little four-year-old girl proves to be a base canard. The correspondents who went into the details should have taken the pains to investigate, and the officials should have known more of the matter before they gave out such grossly exaggerated information.

The Negro, Charles O'Neil, had been working for a couple of women and, it seems, had worked all winter without being remunerated. There is a little girl, and the girl's mother and grandmother evidently started the story with idea of frightening the Negro out of the country and thus balancing accounts. The town was considerably wrought up and for a time things looked serious. The accused had a preliminary hearing today and not an iota of evidence was produced to indicate that such a crime had been committed, or that he had even attempted such an outrage. The village marshal was frightened nearly out of his wits and did little to quiet the excitement last night.

The affair was an outrage on the Negro, at the expense of innocent childhood, a brainless fabrication from start to finish.

The original story was sent throughout this country and England, but the _Cleveland Leader_, so far as known, is the only journal which has published these facts in refutation of the slander so often published against the race. Not only is it true that many of the alleged cases of rape against the Negro, are like the foregoing, but the same crime committed by white men against Negro women

and girls, is never punished by mob or the law. A leading journal in South Carolina openly said some months ago that "it is not the same thing for a white man to assault a colored woman as for a colored man to assault a white woman, because the colored woman had no finer feelings nor virtue to be outraged!" Yet colored women have always had far more reason to complain of white men in this respect than ever white women have had of Negroes.

ILLINOIS HAS A LYNCHING

In the month of June, 1893, the proud commonwealth of Illinois joined the ranks of Lynching States. Illinois, which gave to the world the immortal heroes, Lincoln, Grant and Logan, trailed its banner of justice in the dust--dyed its hands red in the blood of a man not proven guilty of crime.

June 3,1893, the country about Decatur, one of the largest cities of the state was startled with the cry that a white woman had been assaulted by a colored tramp. Three days later a colored man named Samuel Bush was arrested and put in jail. A white man testified that Bush, on the day of the assault, asked him where he could get a drink and he pointed to the house where the farmer's wife was subsequently said to have been assaulted. Bush said he went to the well but did not go near the house, and did not assault the woman. After he was arrested the alleged victim did not see him to identify him--he was presumed to be guilty.

The citizens determined to kill him. The mob gathered, went to the jail, met with no resistance, took the suspected man, dragged him out tearing every stitch of clothing from his body, then hanged him to a telegraph pole. The grand jury refused to indict the lynchers though the names of over twenty persons who were leaders in the mob were well known. In fact twenty-two persons were indicted, but the grand jurors and the prosecuting attorney disagreed as to the form of the indictments, which caused the jurors to change their minds. All indictments were reconsidered and the matter was dropped. Not one of the dozens of men prominent in that murder have suffered a whit more inconvenience for the butchery of that man, than they would have suffered for shooting a dog.

COLOR LINE JUSTICE

In Baltimore, Maryland, a gang of white ruffians assaulted a respectable colored girl who was out walking with a young man of her own race. They held her escort and outraged the girl. It was a deed dastardly enough to arouse Southern blood, which gives its horror of rape as excuse for lawlessness, but she was a colored woman. The case went to the courts and they were acquitted.

In Nashville, Tennessee, there was a white man, Pat Hanifan, who outraged a little colored girl, and from the physical injuries received she was ruined for life. He was jailed for six months, discharged, and is now a detective in that city. In the same city, last May, a white man outraged a colored girl in a drug store. He was arrested and released on bail at the trial. It was rumored that five hundred colored men had organized to lynch him. Two hundred and fifty white citizens armed themselves with Winchesters and guarded him. A cannon was placed in front of his home, and the Buchanan Rifles (State Militia) ordered to the scene for his protection. The colored mob did not show up. Only two weeks before, Eph. Grizzard, who had only been charged with rape upon a white woman, had been taken from the jail, with Governor Buchanan and the police and militia standing by, dragged through the streets in broad daylight, knives plunged into him at every step, and with every fiendish cruelty that a frenzied mob could devise, he was at last swung out on the bridge with hands cut to pieces as he tried to climb up the stanchions. A naked, bloody example of the bloodthirstiness of the nineteenth-century civilization of the Athens of the South! No cannon nor military were called out in his defense. He dared to visit a white woman.

At the very moment when these civilized whites were announcing their determination "to protect their wives and daughters," by murdering Grizzard, a white man was in the same jail for raping eight-year-old Maggie Reese, a colored girl. He was not harmed. The "honor" of grown women who were glad enough to be supported by the Grizzard boys and Ed. Coy, as long as the liaison was not known, needed protection; they were white. The outrage upon helpless childhood needed no avenging in this case; she was black.

A white man in Guthrie, Oklahoma Territory, two months after inflicted such injuries upon another colored girl that she died. He was not punished, but an attempt was made in the same town in the month of June to lynch a colored man who visited a white woman.

In Memphis, Tennessee, in the month of June, Ellerton L. Dorr, who is the husband of Russell Hancock's widow, was arrested for attempted rape on Mattie Cole, a neighbor's cook; he was only prevented from accomplishing his purpose by the appearance of Mattie's employer. Dorr's friends say he was drunk and, not responsible for his actions. The grand jury refused to indict him and he was discharged.

In Tallahassee, Florida, a colored girl, Charlotte Gilliam, was assaulted by white men. Her father went to have a warrant for their arrest issued, but the judge refused to issue it.

In Bowling Green, Virginia, Moses Christopher, a colored lad, was charged with assault, September 10. He was indicted, tried, convicted and sentenced to death in one day. In the same state at Danville, two weeks before--August 29, Thomas J. Penn, a white man, committed a criminal assault upon Lina Hanna, a twelve-year-old colored girl, but he has not been tried, certainly not killed either by the law or the mob.

In Surrey county, Virginia, C.L. Brock, a white man, criminally assaulted a ten-year-old colored girl, and threatened to kill her if she told. Notwithstanding, she confessed to her aunt, Mrs. Alice Bates, and the white brute added further crime by killing Mrs. Bates when she upbraided him about his crime upon her niece. He emptied the contents of his revolver into her body as she lay. Brock has never been apprehended, and no effort has been made to do so by the legal authorities.

But even when punishment is meted out by law to white villians for this horrible crime, it is seldom or never that capital punishment is invoked. Two cases just clipped from the daily papers will suffice to show how this crime is punished when committed by white offenders and black.

LOUISVILLE, KY., October 19.--Smith Young, colored, was today sentenced to be hanged. Young criminally assaulted a six-year-old child about six months ago.

Jacques Blucher, the Pontiac Frenchman who was arrested at that place for a criminal assault on his daughter Fanny on July 29 last, pleaded nolo contendere when placed on trial at East Greenwich, near Providence, R.I., Tuesday, and was sentenced to five years in State Prison.

Charles Wilson was convicted of assault upon seven-year-old Mamie Keys in Philadelphia, in October, and sentenced to ten years in prison. He was white. Indianapolis courts sentenced a white man in September to eight years in prison for assault upon a twelve-year-old white girl.

April 24, 1893, a lynching was set for Denmark, S.C., on the charge of rape. A white girl accused a Negro of assault, and the mob was about to lynch him. A few hours before the lynching three reputable white men rode into the town and solemnly testified that the accused Negro was at work with them 25 miles away on the day and at the hour the crime had been committed. He was accordingly set free. A white person's word is taken as absolutely for as against a Negro.

7

THE CRUSADE JUSTIFIED

(Appeal from America to the World)

It has been urged in criticism of the movement appealing to the English people for sympathy and support in our crusade against Lynch Law that our action was unpatriotic, vindictive and useless. It is not a part of the plan of this pamphlet to make any defense for that crusade nor to indict any apology for the motives which led to the presentation of the facts of American lynchings to the world at large. To those who are not willfully blind and unjustly critical, the record of more than a thousand lynchings in ten years is enough to justify any peaceable movement tending to ameliorate the conditions which led to this unprecedented slaughter of human beings.

If America would not hear the cry of men, women and children whose dying groans ascended to heaven praying for relief, not only for them but for others who might soon be treated as they, then certainly no fair-minded person can charge disloyalty to those who make an appeal to the civilization of the world for such sympathy and help as it is possible to extend. If stating the facts of these lynchings, as they appeared from time to time in the white newspapers of America--the news gathered by white correspondents, compiled by white press bureaus and disseminated among white people--shows any vindictiveness, then the mind which so charges is not amenable to argument.

But it is the desire of this pamphlet to urge that the crusade started and thus far continued has not been useless, but has been blessed with the most salutary results. The many evidences of the good results can not here be mentioned, but the thoughtful student of the situation can himself find ample proof. There need not here be mentioned the fact that for the first time since lynching began, has there been any occasion for the governors of the several states to speak out in reference to these crimes against law

and order.

No matter how heinous the act of the lynchers may have been, it was discussed only for a day or so and then dismissed from the attention of the public. In one or two instances the governor has called attention to the crime, but the civil processes entirely failed to bring the murderers to justice. Since the crusade against lynching was started, however, governors of states, newspapers, senators and representatives and bishops of churches have all been compelled to take cognizance of the prevalence of this crime and to speak in one way or another in the defense of the charge against this barbarism in the United States. This has not been because there was any latent spirit of justice voluntarily asserting itself, especially in those who do the lynching, but because the entire American people now feel, both North and South, that they are objects in the gaze of the civilized world and that for every lynching humanity asks that America render its account to civilization and itself.

AWFUL BARBARISM IGNORED

Much has been said during the months of September and October of 1894 about the lynching of six colered men who on suspicion of incendiarism were made the victims of a most barbarous massacre.

They were arrested, one by one, by officers of the law; they were handcuffed and chained together and by the officers of the law loaded in a wagon and deliberately driven into an ambush where a mob of lynchers awaited them. At the time and upon the chosen spot, in the darkness of the night and far removed from the habitation of any human soul, the wagon was halted and the mob fired upon the six manacled men, shooting them to death as no humane person would have shot dogs. Chained together as they were, in their awful struggles after the first volley, the victims tumbled out of the wagon upon the ground and there in the mud, struggling in their death throes, the victims were made the target of the murderous shotguns, which fired into the writhing, struggling, dying mass of humanity, until every spark of life was gone. Then the officers of the law who had them in charge, drove away to give the alarm and to tell the world that they had been waylaid and their prisoners forcibly taken from them and killed.

It has been claimed that the prompt, vigorous and highly commendable steps of the governor of the State of Tennessee and the judge having jurisdiction over the crime, and of the citizens of Memphis generally, was the natural revolt of the humane conscience in that section of the country, and the determination of honest and honorable men to rid the community of such men as those who were guilty of this terrible massacre. It has further been claimed that this vigorous uprising of the people and this most commendably prompt action of the civil authorities, is ample proof that the American people will not tolerate the lynching of innocent men, and that in cases where brutal lynchings have not been promptly dealt with, the crimes on the part of the victims were such as to put them outside the pale of humanity and that the world considered their death a necessary sacrifice for the good of all.

But this line of argument can in no possible way be truthfully sustained. The lynching of the six men in 1894, barbarous as it was, was in no way more barbarous than took nothing more than a passing notice. It was only the other lynchings which preceded it, and of which the public fact that the attention of the civilized world has been called to lynching in America which made the people of Tennessee feel the absolute necessity for a prompt, vigorous and just arraignment of all the murderers connected with that crime. Lynching is no longer "Our Problem," it is the problem of the civilized world, and Tennessee could not afford to refuse the legal measures which Christianity demands shall be used for the punishment of crime.

MEMPHIS THEN AND NOW

Only two years prior to the massacre of the six men near Memphis, that same city took part in a massacre in every way as bloody and brutal as that of September last. It was the murder of three young colored men and who were known to be among the most honorable, reliable, worthy and peaceable colored citizens of the community. All of them were engaged in the mercantile business, being members of a corporation which conducted a large grocery store, and one of the three being a letter carrier in the employ of the government. These three men were arrested for resisting an attack of a mob upon their store, in which melee none of the assailants, who had armed themselves for their devilish deeds by securing court processes, were killed or even seriously injured. But these three men were put in jail, and on three or four nights after their incarceration a mob of less than a dozen men, by collusion with the civil authorities, entered the jail, took the three men from the custody of the law and shot them to death. Memphis knew of this awful crime, knew then and knows today who the men were who committed it, and yet not the first step was ever taken to apprehend the guilty wretches who walk the streets today with the brand of murder upon their foreheads, but as safe from harm as the most upright citizen of that community. Memphis would have been just as calm and complacent and self-satisfied over the murder of the six colored men in 1894 as it was over these three colored men in 1892, had it not recognized the fact that to escape

the brand of barbarism it had not only to speak its denunciation but to act vigorously in vindication of its name.

AN ALABAMA HORROR IGNORED

A further instance of this absolute disregard of every principle of justice and the indifference to the barbarism of Lynch Law may be cited here, and is furnished by white residents in the city of Carrolton, Alabama. Several cases of arson had been discovered, and in their search for the guilty parties, suspicion was found to rest upon three men and a woman. The four suspects were Paul Hill, Paul Archer, William Archer, his brother, and a woman named Emma Fair. The prisoners were apprehended, earnestly asserted their innocence, but went to jail without making any resistance. They claimed that they could easily prove their innocence upon trial.

One would suspect that the civilization which defends itself against the barbarisms of Lynch Law by stating that it lynches human beings only when they are guilty of awful attacks upon women and children, would have been very careful to have given these four prisoners, who were simply charged with arson, a fair trial, to which they were entitled upon every principle of law and humanity. Especially would this seem to be the case when if is considered that one of the prisoners charged was a woman, and if the nineteenth century has shown any advancement upon any lines of human action, it is preeminently shown in its reverence, respect and protection of its womanhood. But the people of Alabama failed to have any regard for womanhood whatever.

The three men and the woman were put in jail to await trial. A few days later it was rumored that they were to be subjects of Lynch Law, and, sure enough, at night a mob of lynchers went to the jail, not to avenge any awful crime against womanhood, but to kill four people who had been suspected of setting a house on fire. They were caged in their cells, helpless and defenseless; they were at the mercy of civilized white Americans, who, armed with shotguns, were there to maintain the majesty of American law. And most effectively was their duty done by these splendid representatives of Governor Fishback's brave and honorable white southerners, who resent "outside interference." They lined themselves up in the most effective manner and poured volley after volley into the bodies of their helpless, pleading victims, who in their bolted prison cells could do nothing but suffer and die. Then these lynchers went quietly away and the bodies of the woman and three men were taken out and buried with as little ceremony as men would bury hogs.

No one will say that the massacre near Memphis in 1894 was any worse than this bloody crime of Alabama in 1892. The details of this shocking affair were given to the public by the press, but public sentiment was not moved to action in the least; it was only a matter of a day's notice and then went to swell the list of murders which stand charged against the noble, Christian people of Alabama.

AMERICA AWAKENED

But there is now an awakened conscience throughout the land, and Lynch Law can not flourish in the future as it has in the past. The close of the year 1894 witnessed an aroused interest, an assertative humane principle which must tend to the extirpation of that crime. The awful butchery last mentioned failed to excite more than a passing comment In 1894, but far different is it today. Gov. Jones, of Alabama, in 1893 dared to speak out against the rule of the mob in no uncertain terms. His address indicated a most helpful result of the present agitation. In face of the many denials of the outrages on the one hand and apologies for lynchers on the other, Gov. Jones admits the awful lawlessness charged and refuses to join in the infamous plea made to condone the crime. No stronger nor more effective words have been said than those following from Gov. Jones.

While the ability of the state to deal with open revolts against the supremacy of its laws has been ably demonstrated, I regret that deplorable acts of violence have been perpetrated, in at least four instances, within the past two years by mobs, whose sudden work and quick dispersions rendered it impossible to protect their victims. Within the past two years nine prisoners, who were either in jail or in the custody of the officers, have been taken from them without resistance, and put to death. There was doubt of the guilt of the defendants in most of these cases, and few of them were charged with capital offenses. None of them involved the crime of rape. The largest rewards allowed by law were offered for the apprehension of the offenders, and officers were charged to a vigilant performance of their duties, and aided in some instances by the services of skilled detectives; but not a single arrest has been made and the grand juries in these counties have returned no bills of indictment. This would indicate either that local public sentiment approved these acts of violence or was too weak to punish them, or that the officers charged with that duty were in some way lacking in their performance. The evil cannot be cured or remedied by silence as to its existence. Unchecked, it will continue until it becomes a reproach to our good name, and a menace to our prosperity and peace; and it behooves you to exhaust all remedies within your power to find better preventives for such crimes.

A FRIENDLY WARNING

From England comes a friendly voice which must give to every patriotic citizen food for earnese thought. Writing from London, to the _Chicago Inter Ocean_, Nov. 25, 1894, the distinguished compiler of our last census, Hon. Robert P. Porter, gives the American people a most interesting review of the antilynching crusade in England, submitting editorial opinions from all sections of England and Scotland, showing the consensus of British opinion on this subject. It hardly need be said, that without exception, the current of English thought deprecates the rule of mob law, and the conscience of England is shocked by the revelation made during the present crusade. In his letter Mr. Porter says:

While some English journals have joined certain American journals in ridiculing the well-meaning people who have formed the antilynching committee, there is a deep under current on this subject which is injuring the Southern States far more than those who have not been drawn into the question of English investment for the South as I have can surmise. This feeling is by no means all sentiment. An Englishman whose word and active cooperation could send a million sterling to any legitimate Southern enterprise said the other day: "I will not invest a farthing in States where these horrors occur. I have no particular sympathy with the antilynching committee, but such outrages indicate to my mind that where life is held to be of such little value there is even less assurance that the laws will protect property. As I understand it the States, not the national government, control in such matters, and where those laws are strongest there is the best field for British capital."

Probably the most bitter attack on the antilynching committee has come from the _London Times_. Those Southern Governors who had their bombastic letters published in the _Times_, with favorable editorial comment, may have had their laugh at the antilynchers here too soon. A few days ago, in commenting on an interesting communication from Richard H. Edmonds, editor of the _Manufacturer's Record_, setting forth the industrial advantages of the Southern States, which was published in its columns, the _Times_ says:

Without in any way countenancing the impertinence of "antilynching" committee, we may say that a state of things in which the killing of Negroes by bloodthirsty mobs is an incident of not unfrequent occurrence is not conducive to success in industry. Its existence, however, is a serious obstacle to the success of the South in industry; for even now Negro labor, which means at best inefficient labor, must be largely relied on there, and its efficiency must be still further diminished by spasmodic terrorism.

Those interested in the development of the resources of the Southern States, and no one in proportion to his means has shown more faith in the progress of the South than the writer of this article, must take hold of this matter earnestly and intelligently. Sneering at the antilynching committee will do no good. Back of them, in fact, if not in form, is the public opinion of Great Britain. Even the _Times_ cannot deny this. It may not be generally known in the United States, but while the Southern and some of the Northern newspapers are making a target of Miss Wells, the young colored woman who started this English movement, and cracking their jokes at the expense of Miss Florence Balgarnie, who, as honorable secretary, conducts the committee's correspondence, the strongest sort of sentiment is really at the back of the movement. Here we have crystallized every phase of political opinion. Extreme Unionists like the Duke of Argyll and advanced home rulers such as Justin McCarthy; Thomas Burt, the labor leader; Herbert Burrows, the Socialist, and Tom Mann, representing all phases of the Labor party, are cooperating with conservatives like Sir T. Eldon Gorst. But the real strength of this committee is not visible to the casual observer. As a matter of fact it represents many of the leading and most powerful British journals. A.E. Fletcher is editor of the _London Daily Chronicle_; P.W. Clayden is prominent in the counsels of the _London Daily News_; Professor James Stuart is Gladstone's great friend and editor of the _London Star_, William Byles is editor and proprietor of the _Bradford Observer_, Sir Hugh Gilzen Reid is a leading Birmingham editor; in short, this committee has secured if not the leading editors, certainly important and warm friends, representing the Manchester Guardian, the _Leeds Mercury_, the _Plymouth Western News, Newcastle Leader_, the _London Daily Graphic_, the _Westminster Gazette_, the _London Echo_, a host of minor papers all over the kingdom, and practically the entire religious press of the kingdom.

The greatest victory for the antilynchers comes this morning in the publication in the _London Times_ of William Lloyd Garrison's letter. This letter will have immense effect here. It may have been printed in full in the United States, but nevertheless I will quote a paragraph which will strengthen the antilynchers greatly in their crusade here:

A year ago the South derided and resented Northern protests; today it listens, explains and apologizes for its uncovered cruelties. Surely a great triumph for a little woman to accomplish! It is the power of truth simply and unreservedly spoken, for her language was inadequate to describe the horrors exposed.

If the Southern states are wise, and I say this with the earnestness of a friend and one who has built a home in the mountain regions of the South and thrown his lot in with them, they will not only listen, but stop lawlessness of all kinds. If they do, and thus secure the confidence of Englishmen, we may in the next decade realize some of the hopes for the new South we have so fondly cherished.

8

MISS WILLARD'S ATTITUDE

No class of American citizens stands in greater need of the humane and thoughtful consideration of all sections of our country than do the colored people, nor does any class exceed us in the measure of grateful regard for acts of kindly interest in our behalf. It is, therefore, to us, a matter of keen regret that a Christian organization, so large and influential as the Woman's Christian Temperance Union, should refuse to give its sympathy and support to our oppressed people who ask no further favor than the promotion of public sentiment which shall guarantee to every person accused of crime the safeguard of a fair and impartial trial, and protection from butchery by brutal mobs. Accustomed as we are to the indifference and apathy of Christian people, we would bear this instance of ill fortune in silence, had not Miss Willard gone out of her way to antagonize the cause so dear to our hearts by including in her Annual Address to the W.C.T.U. Convention at Cleveland, November 5, 1894, a studied, unjust and wholly unwarranted attack upon our work.

In her address Miss Willard said:

The zeal for her race of Miss Ida B. Wells, a bright young colored woman, has, it seems to me, clouded her perception as to who were her friends and well-wishers in all high-minded and legitimate efforts to banish the abomination of lynching and torture from the land of the free and the home of the brave. It is my firm belief that in the statements made by Miss Wells concerning white women having taken the initiative in nameless acts between the races she has put an imputation upon half the white race in this country that is unjust, and, save in the rarest exceptional instances, wholly without foundation. This is the unanimous opinion of the most disinterested and observant leaders of opinion whom I have consulted on the subject, and I do not fear to say that the laudable efforts she is making are greatly handicapped by statements of this kind, nor to urge her as a friend and well-wisher to banish from her vocabulary all such allusions as a source of weakness to the cause she has at heart.

This paragraph, brief as it is, contains two statements which have not the slightest foundation in fact. At no time, nor in any place, have I made statements "concerning white women having taken the initiative in nameless acts between the races." Further, at no time, or place nor under any circumstance, have I directly or inferentially "put an imputation upon half the white race in this country" and I challenge this "friend and well-wisher" to give proof of the truth of her charge. Miss Willard protests against lynching in one paragraph and then, in the next, deliberately misrepresents my position in order that she may criticise a movement, whose only purpose is to protect our oppressed race from vindictive slander and Lynch Law.

What I have said and what I now repeat--in answer to her first charge--is, that colored men have been lynched for assault upon women, when the facts were plain that the relationship between the victim lynched and the alleged victim of his assault was voluntary, clandestine and illicit. For that very reason we maintain, that, in every section of our land, the accused should have a fair, impartial trial, so that a man who is colored shall not be hanged for an offense, which, if he were white, would not be adjudged a crime. Facts cited in another chapter--"History of Some Cases of Rape"--amply maintain this position. The publication of these facts in defense of the good name of the race casts no "imputation upon half the white race in this country" and no such imputation can be inferred except by persons deliberately determined to be unjust.

But this is not the only injury which this cause has suffered at the hands of our "friend and well-wisher." It has been said that the Women's Christian Temperance Union, the most powerful organization of women in America, was misrepresented by me while I was in England. Miss Willard was in England at the time and knowing that no such misrepresentation came to her notice, she has permitted that impression to become fixed and widespread, when a word from her would have made the facts plain.

I never at any time or place or in any way misrepresented that organization. When asked what concerted action had been taken by churches and great moral agencies in America to put down Lynch Law, I was compelled in truth to say that no such action had occurred, that pulpit, press and moral agencies in the main were silent and for reasons known to themselves, ignored the awful conditions which to the English people appeared so abhorent. Then the question was asked what the great moral reformers like Miss Frances Willard and Mr. Moody had done to suppress Lynch Law and again I answered nothing. That Mr. Moody had never

said a word against lynching in any of his trips to the South, or in the North either, so far as was known, and that Miss Willard's only public utterance on the situation had condoned lynching and other unjust practices of the South against the Negro. When proof of these statements was demanded, I sent a letter containing a copy of the _New York Voice_, Oct. 23,1890, in which appeared Miss Willard's own words of wholesale slander against the colored race and condonation of Southern white people's outrages against us. My letter in part reads as follows:

But Miss Willard, the great temperance leader, went even further in putting the seal of her approval upon the southerners' method of dealing with the Negro. In October, 1890, the Women's Christian Temperance Union held its national meeting at Atlanta, Georgia. It was the first time in the history of the organization that it had gone south for a national meeting, and met the southerners in their own homes. They were welcomed with open arms. The governor of the state and the legislature gave special audiences in the halls of state legislation to the temperance workers. They set out to capture the northerners to their way of seeing things, and without troubling to hear the Negro side of the question, these temperance people accepted the white man's story of the problem with which he had to deal. State organizers were appointed that year, who had gone through the southern states since then, but in obedience to southern prejudices have confined their work to white persons only. It is only after Negroes are in prison for crimes that efforts of these temperance women are exerted without regard to "race, color, or previous condition." No "ounce of prevention" is used in their case; they are black, and if these women went among the Negroes for this work, the whites would not receive them. Except here and there, are found no temperance workers of the Negro race; "the great dark-faced mobs" are left the easy prey of the saloonkeepers.

There was pending in the National Congress at this time a Federal Election Bill, the object being to give the National Government control of the national elections in the several states. Had this bill become a law, the Negro, whose vote has been systematically suppressed since 1875 in the southern states, would have had the protection of the National Government, and his vote counted. The South would have been no longer "solid"; the Southerners saw that the balance of power which they unlawfully held in the House of Representatives and the Electoral College, based on the Negro population, would be wrested from them. So they nick-named the pending elections law the "Force Bill"--probably because it would force them to disgorge their ill-gotten political gains--and defeated it. While it was being discussed, the question was submitted to Miss Willard: "What do you think of the race problem and the Force Bill?"

Said Miss Willard: "Now, as to the 'race problem' in its minified, current meaning, I am a true lover of the southern people--have spoken and worked in, perhaps, 200 of their towns and cities; have been taken into their love and confidence at scores of hospitable firesides; have heard them pour out their hearts in the splendid frankness of their impetuous natures. And I have said to them at such times: 'When I go North there will be wafted to you no word from pen or voice that is not loyal to what we are saying here and now.' Going South, a woman, a temperance woman, and a Northern temperance woman--three great barriers to their good will yonder--I was received by them with a confidence that was one of the most delightful surprises of my life. I think we have wronged the South, though we did not mean to do so. The reason was, in part, that we had irreparably wronged ourselves by putting no safeguards on the ballot box at the North that would sift out alien illiterates. They rule our cities today; the saloon is their palace, and the toddy stick their sceptre. It is not fair that they should vote, nor is it fair that a plantation Negro, who can neither read nor write, whose ideas are bounded by the fence of his own field and the price of his own mule, should be entrusted with the ballot. We ought to have put an educational test upon that ballot from the first. The Anglo-Saxon race will never submit to be dominated by the Negro so long as his altitude reaches no higher than the personal liberty of the saloon, and the power of appreciating the amount of liquor that a dollar will buy. New England would no more submit to this than South Carolina. 'Better whisky and more of it' has been the rallying cry of great dark-faced mobs in the Southern localities where local option was snowed under by the colored vote. Temperance has no enemy like that, for it is unreasoning and unreasonable. Tonight it promises in a great congregation to vote for temperance at the polls tomorrow; but tomorrow twenty-five cents changes that vote in favor of the liquor-seller.

"I pity the southerners, and I believe the great mass of them are as conscientious and kindly intentioned toward the colored man as an equal number of white church-members of the North. Would-be demagogues lead the colored people to destruction. Half-drunken white roughs murder them at the polls, or intimidate them so that they do not vote. But the better class of people must not be blamed for this, and a more thoroughly American population than the Christian people of the South does not exist. They have the traditions, the kindness, the probity, the courage of our forefathers. The problem on their hands is immeasurable. The colored race multiplies like the locusts of Egypt. The grog-shop is its center of power. 'The safety of woman, of childhood, of the home, is menaced in a thousand localities at this moment, so that the men dare not go beyond the sight of their own roof-tree.' How

little we know of all this, seated in comfort and affluence here at the North, descanting upon the rights of every man to cast one vote and have it fairly counted; that well-worn shibboleth invoked once more to dodge a living issue.

"The fact is that illiterate colored men will not vote at the South until the white population chooses to have them do so; and under similar conditions they would not at the North." Here we have Miss Willard's words in full, condoning fraud, violence, murder, at the ballot box; rapine, shooting, hanging and burning; for all these things are done and being done now by the Southern white people. She does not stop there, but goes a step further to aid them in blackening the good name of an entire race, as shown by the sentences quoted in the paragraph above. These utterances, for which the colored people have never forgiven Miss Willard, and which Frederick Douglass has denounced as false, are to be found in full in the Voice of October 23,1890, a temperance organ published at New York City.

This letter appeared in the May number of _Fraternity_, the organ of the first Anti-Lynching society of Great Britain. When Lady Henry Somerset learned through Miss Florence Balgarnie that this letter had been published she informed me that if the interview was published she would take steps to let the public know that my statements must be received with caution. As I had no money to pay the printer to suppress the edition which was already published and these ladies did not care to do so, the May number of _Fraternity_ was sent to its subscribers as usual. Three days later there appeared in the daily _Westminster Gazette_ an "interview" with Miss Willard, written by Lady Henry Somerset, which was so subtly unjust in its wording that I was forced to reply in my own defense. In that reply I made only statements which, like those concerning Miss Willard's _Voice_ interview, have not been and cannot be denied. It was as follows:

LADY HENRY SOMERSET'S INTERVIEW WITH MISS WILLARD

To the Editor of the _Westminster Gazette_: Sir--The interview published in your columns today hardly merits a reply, because of the indifference to suffering manifested. Two ladies are represented sitting under a tree at Reigate, and, after some preliminary remarks on the terrible subject of lynching, Miss Willard laughingly replies by cracking a joke. And the concluding sentence of the interview shows the object is not to determine how best they may help the Negro who is being hanged, shot and burned, but "to guard Miss Willard's reputation."

With me it is not myself nor my reputation, but the life of my people, which is at stake, and I affirm that this is the first time to my knowledge that Miss Willard has said a single word in denunciation of lynching or demand for law. The year 1890, the one in which the interview appears, had a larger lynching record than any previous year, and the number and territory have increased, to say nothing of the human beings burnt alive.

If so earnest as she would have the English public believe her to be, why was she silent when five minutes were given me to speak last June at Princes' Hall, and in Holborn Town Hall this May? I should say it was as President of the Women's Christian Temperance Union of America she is timid, because all these unions in the South emphasize the hatred of the Negro by excluding him. There is not a single colored woman admitted to the Southern W.C.T.U., but still Miss Willard blames the Negro for the defeat of Prohibition in the South. Miss Willard quotes from _Fraternity_, but forgets to add my immediate recognition of her presence on the platform at Holborn Town Hall, when, amidst many other resolutions on temperance and other subjects in which she is interested, time was granted to carry an anti-lynching resolution. I was so thankful for this crumb of her speechless presence that I hurried off to the editor of _Fraternity_ and added a postscript to my article blazoning forth that fact.

Any statements I have made concerning Miss Willard are confirmed by the Hon. Frederick Douglass (late United States minister to Hayti) in a speech delivered by him in Washington in January of this year, which has since been published in a pamphlet. The fact is, Miss Willard is no better or worse than the great bulk of white Americans on the Negro questions. They are all afraid to speak out, and it is only British public opinion which will move them, as I am thankful to see it has already begun to move Miss Willard. I am, etc.,

May 21

IDA B. WELLS

Unable to deny the truth of these assertions, the charge has been made that I have attacked Miss Willard and misrepresented the W.C.T.U. If to state facts is misrepresentation, then I plead guilty to the charge.

I said then and repeat now, that in all the ten terrible years of shooting, hanging and burning of men, women and children in America, the Women's Christian Temperance Union never suggested one plan or made one move to prevent those awful crimes. If this statement is untrue the records of that organization would disprove it before the ink is dry. It is clearly an issue of fact and in all fairness this charge of misrepresentation should either be substantiated or withdrawn.

It is not necessary, however, to make any representation concerning the W.C.T.U. and the lynching question. The record of that organization speaks for itself. During all the years prior to the agitation begun against Lynch Law, in which years men, women and children were scourged, hanged, shot and burned, the W.C.T.U. had no word, either of pity or protest; its great heart, which concerns itself about humanity the world over, was, toward our cause, pulseless as a stone. Let those who deny this speak by the record. Not until after the first British campaign, in 1893, was even a resolution passed by the body which is the self-constituted guardian for "God, home and native land."

Nor need we go back to other years. The annual session of that organization held in Cleveland in November, 1894, made a record which confirms and emphasizes the silence charged against it. At that session, earnest efforts were made to secure the adoption of a resolution of protest against lynching. At that very time two men were being tried for the murder of six colored men who were arrested on charge of barn burning, chained together, and on pretense of being taken to jail, were driven into the woods where they were ambushed and all six shot to death. The six widows of the butchered men had just finished the most pathetic recital ever heard in any court room, and the mute appeal of twenty-seven orphans for justice touched the stoutest hearts. Only two weeks prior to the session, Gov. Jones of Alabama, in his last message to the retiring state legislature, cited the fact that in the two years just past, nine colored men had been taken from the legal authorities by lynching mobs and butchered in cold blood--and not one of these victims was even charged with an assault upon womanhood.

It was thought that this great organization, in face of these facts, would not hesitate to place itself on record in a resolution of protest against this awful brutality towards colored people. Miss Willard gave assurance that such a resolution would be adopted, and that assurance was relied on. The record of the session shows in what good faith that assurance was kept. After recommending an expression against Lynch Law, the President attacked the antilynching movement, deliberately misrepresenting my position, and in her annual address, charging me with a statement I never made.

Further than that, when the committee on resolutions reported their work, not a word was said against lynching. In the interest of the cause I smothered the resentment. I felt because of the unwarranted and unjust attack of the President, and labored with members to secure an expression of some kind, tending to abate the awful slaughter of my race. A resolution against lynching was introduced by Mrs. Fessenden and read, and then that great Christian body, which in its resolutions had expressed itself in opposition to the social amusement of card playing, athletic sports and promiscuous dancing; had protested against the licensing of saloons, inveighed against tobacco, pledged its allegiance to the Prohibition party, and thanked the Populist party in Kansas, the Republican party in California and the Democratic party in the South, wholly ignored the seven millions of colored people of this country whose plea was for a word of sympathy and support for the movement in their behalf. The resolution was not adopted, and the convention adjourned.

In the _Union Signal_ Dec. 6, 1894, among the resolutions is found this one:

Resolved, That the National W.C.T.U, which has for years counted among its departments that of peace and arbitration, is utterly opposed to all lawless acts in any and all parts of our common lands and it urges these principles upon the public, praying that the time may speedily come when no human being shall be condemned without due process of law; and when the unspeakable outrages which have so often provoked such lawlessness shall be banished from the world, and childhood, maidenhood and womanhood shall no more be the victims of atrocities worse than death.

This is not the resolution offered by Mrs. Fessenden. She offered the one passed last year by the W.C.T.U. which was a strong unequivocal denunciation of lynching. But she was told by the chairman of the committee on resolutions, Mrs. Rounds, that there was already a lynching resolution in the hands of the committee. Mrs. Fessenden yielded the floor on that assurance, and no resolution of any kind against lynching was submitted and none was voted upon, not even the one above, taken from the columns of the _Union Signal_, the organ of the national W.C.T.U!

Even the wording of this resolution which was printed by the W.C.T.U., reiterates the false and unjust charge which has been so often made as an excuse for lynchers. Statistics show that less than one-third of the lynching victims are hanged, shot and burned alive for "unspeakable outrages against womanhood, maidenhood and childhood;" and that nearly a thousand, including women

and children, have been lynched upon any pretext whatsoever; and that all have met death upon the unsupported word of white men and women. Despite these facts this resolution which was printed, cloaks an apology for lawlessness, in the same paragraph which affects to condemn it, where it speaks of "the unspeakable outrages which have so often provoked such lawlessness."

Miss Willard told me the day before the resolutions were offered that the Southern women present had held a caucus that day. This was after I, as fraternal delegate from the Woman's Mite Missionary Society of the A.M.E. Church at Cleveland, O., had been introduced to tender its greetings. In so doing I expressed the hope of the colored women that the W.C.T.U. would place itself on record as opposed to lynching which robbed them of husbands, fathers, brothers and sons and in many cases of women as well. No note was made either in the daily papers or the _Union Signal_ of that introduction and greeting, although every other incident of that morning was published. The failure to submit a lynching resolution and the wording of the one above appears to have been the result of that Southern caucus.

On the same day I had a private talk with Miss Willard and told her she had been unjust to me and the cause in her annual address, and asked that she correct the statement that I had misrepresented the W.C.T.U, or that I had "put an imputation on one-half the white race in this country." She said that somebody in England told her it was a pity that I attacked the white women of America. "Oh," said I, "then you went out of your way to prejudice me and my cause in your annual address, not upon what you had heard me say, but what somebody had told you I said?" Her reply was that I must not blame her for her rhetorical expressions--that I had my way of expressing things and she had hers. I told her I most assuredly did blame her when those expressions were calculated to do such harm. I waited for an honest an unequivocal retraction of her statements based on "hearsay." Not a word of retraction or explanation was said in the convention and I remained misrepresented before that body through her connivance and consent.

The editorial notes in the _Union Signal_, Dec. 6, 1894, however, contains the following:

In her repudiation of the charges brought by Miss Ida Wells against white women as having taken the initiative in nameless crimes between the races, Miss Willard said in her annual address that this statement "put an unjust imputation upon half the white race." But as this expression has been misunderstood she desires to declare that she did not intend a literal interpretation to be given to the language used, but employed it to express a tendency that might ensue in public thought as a result of utterances so sweeping as some that have been made by Miss Wells.

Because this explanation is as unjust as the original offense, I am forced in self-defense to submit this account of differences. I desire no quarrel with the W.C.T.U., but my love for the truth is greater than my regard for an alleged friend who, through ignorance or design misrepresents in the most harmful way the cause of a long suffering race, and then unable to maintain the truth of her attack excuses herself as it were by the wave of the hand, declaring that "she did not intend a literal interpretation to be given to the language used." When the lives of men, women and children are at stake, when the inhuman butchers of innocents attempt to justify their barbarism by fastening upon a whole race the obloque of the most infamous of crimes, it is little less than criminal to apologize for the butchers today and tomorrow to repudiate the apology by declaring it a figure of speech.

9

LYNCHING RECORD FOR 1894

The following tables are based on statistics taken from the columns of the _Chicago Tribune_, Jan. 1, 1895. They are a valuable appendix to the foregoing pages. They show, among other things, that in Louisiana, April 23-28, eight Negroes were lynched because one white man was killed by the Negro, the latter acting in self defense. Only seven of them are given in the list.

Near Memphis, Tenn., six Negroes were lynched--this time charged with burning barns. A trial of the indicted resulted in an acquittal, although it was shown on trial that the lynching was prearranged for them. Six widows and twenty-seven orphans are indebted to this mob for their condition, and this lynching swells the number to eleven Negroes lynched in and about Memphis since March 9, 1892.

In Brooks County, Ga., Dec. 23, while this Christian country was preparing for Christmas celebration, seven Negroes were lynched in twenty-four hours because they refused, or were unable to tell the whereabouts of a colored man named Pike, who killed a white man. The wives and daughters of these lynched men were horribly and brutally outraged by the murderers of their husbands and fathers. But the mob has not been punished and again women and children are robbed of their protectors whose blood cries unavenged to Heaven and humanity. Georgia heads the list of lynching states.

MURDER

Jan. 9, Samuel Smith, Greenville, Ala., Jan. 11, Sherman Wagoner, Mitchell, Ind.; Jan. 12, Roscoe Parker, West Union, Ohio; Feb. 7, Henry Bruce, Gulch Co., Ark.; March 5, Sylvester Rhodes, Collins, Ga.; March 15, Richard Puryea, Stroudsburg, Pa.; March 29, Oliver Jackson, Montgomery, Ala.; March 30, ---- Saybrick, Fisher's Ferry, Miss.; April 14, William Lewis, Lanison, Ala.; April 23, Jefferson Luggle, Cherokee, Kan.; April 23, Samuel Slaugate, Tallulah, La.; April 23, Thomas Claxton, Tallulah, La.; April 23, David Hawkins, Tallulah, La.; April 27, Thel Claxton, Tallulah, La.; April 27, Comp Claxton, Tallulah, La.; April 27, Scot Harvey, Tallulah, La.; April 27, Jerry McCly, Tallulah, La.; May 17, Henry Scott, Jefferson, Tex.; May 15, Coat Williams, Pine Grove, Fla.; June 2, Jefferson Crawford, Bethesda, S.C.; June 4, Thondo Underwood, Monroe, La.; June 8, Isaac Kemp, Cape Charles, Va.; June 13, Lon Hall, Sweethouse, Tex.; June 13, Bascom Cook, Sweethouse, Tex.; June 15, Luke Thomas, Biloxi, Miss.; June 29, John Williams, Sulphur, Tex.; June 29, Ulysses Hayden, Monett, Mo.; July 6, ---- Hood, Amite, Miss.; July 7, James Bell, Charlotte, Tenn.; Sept. 2, Henderson Hollander, Elkhorn, W. Va.; Sept. 14, Robert Williams, Concordia Parish, La.; Sept. 22, Luke Washington, Meghee, Ark.; Sept. 22, Richard Washington, Meghee, Ark.; Sept. 22, Henry Crobyson, Meghee, Ark.; Nov. 10, Lawrence Younger, Lloyd, Va.; Dec. 17, unknown Negro, Williamston, S.C.; Dec. 23, Samuel Taylor, Brooks County, Ga.; Dec. 23, Charles Frazier, Brooks County, Ga.; Dec. 23, Samuel Pike, Brooks County, Ga.; Dec. 22, Harry Sherard, Brooks County, Ga.; Dec. 23, unknown Negro, Brooks County, Ga.; Dec. 23, unknown Negro, Brooks County, Ga.; Dec. 23, unknown Negro, Brooks County, Ga.; Dec. 26, Daniel McDonald, Winston County, Miss.; Dec. 23, William Carter, Winston County, Miss.

RAPE

Jan. 17, John Buckner, Valley Park, Mo.; Jan. 21, M.G. Cambell, Jellico Mines, Ky.; Jan. 27, unknown, Verona, Mo.; Feb. 11, Henry McCreeg, near Pioneer, Tenn.; April 6, Daniel Ahren, Greensboro, Ga.; April 15, Seymour Newland, Rushsylvania, Ohio; April 26, Robert Evarts, Jamaica, Ga.; April 27, James Robinson, Manassas, Va.; April 27, Benjamin White, Manassas, Va.; May 15, Nim Young, Ocala, Fla.; May 22, unknown, Miller County, Ga.; June 13, unknown, Blackshear, Ga.; June 18, Owen Opliltree, Forsyth, Ga.; June 22, Henry Capus, Magnolia, Ark.; June 26, Caleb Godly, Bowling Green, Ky.; June 28, Fayette Franklin, Mitchell, Ga.; July 2, Joseph Johnson, Hiller's Creek, Mo.; July 6, Lewis Bankhead, Cooper, Ala.; July 16, Marion Howard, Scottsville, Ky.; July 20, William Griffith, Woodville, Tex.; Aug. 12, William Nershbread, Rossville, Tenn.; Aug. 14, Marshall Boston, Frankfort, Ky; Sept. 19, David Gooseby, Atlanta, Ga.; Oct. 15, Willis Griffey, Princeton, Ky; Nov. 8, Lee Lawrence, Jasper County, Ga.; Nov. 10, Needham Smith, Tipton County, Tenn.; Nov. 14, Robert Mosely, Dolinite, Ala.; Dec. 4, William Jackson, Ocala, Fla.; Dec. 18, unknown, Marion County, Fla.

UNKNOWN OFFENSES

March 6, Lamsen Gregory, Bell's Depot, Tenn.; March 6, unknown woman, near Marche, Ark.; April 14, Alfred Brenn, Calhoun, Ga.; June 8, Harry Gill, West Lancaster, S.C.; Nov. 23, unknown, Landrum, S.C.; Dec. 5, Mrs. Teddy Arthur, Lincoln County, W. Va.

DESPERADO

Jan. 14, Charles Willis, Ocala, Fla.

SUSPECTED INCENDIARISM

Jan. 18, unknown, Bayou Sarah, La.

SUSPECTED ARSON

June 14, J.H. Dave, Monroe, La.

ENTICING SERVANT AWAY

Feb. 10, ---- Collins, Athens, Ga.

TRAIN WRECKING

Feb. 10, Jesse Dillingham, Smokeyville, Tex.

HIGHWAY ROBBERY

June 3, unknown, Dublin, Ga.

INCENDIARISM

Nov. 8, Gabe Nalls, Blackford, Ky.; Nov. 8, Ulysses Nails, Blackford, Ky.

ARSON

Dec. 20, James Allen, Brownsville, Tex.

ASSAULT

Dec. 23, George King, New Orleans, La.

NO OFFENSE

Dec. 28, Scott Sherman, Morehouse Parish, La.

BURGLARY

May 29, Henry Smith, Clinton, Miss.; May 29, William James, Clinton, Miss.

ALLEGED RAPE

June 4, Ready Murdock, Yazoo, Miss.

ATTEMPTED RAPE

July 14, unknown Negro, Biloxi, Miss.; July 26, Vance McClure, New Iberia, La.; July 26, William Tyler, Carlisle, Ky.; Sept. 14, James Smith, Stark, Fla.; Oct. 8, Henry Gibson, Fairfield, Tex.; Oct. 20, ---- Williams, Upper Marlboro, Md.; June 9, Lewis Williams, Hewett Springs, Miss.; June 28, George Linton, Brookhaven, Miss.; June 28, Edward White, Hudson, Ala.; July 6, George Pond, Fulton, Miss.; July 7, Augustus Pond, Tupelo, Miss.

RACE PREJUDICE

June 10, Mark Jacobs, Bienville, La.; July 24, unknown woman, Sampson County, Miss.

INTRODUCING SMALLPOX

June 10, James Perry, Knoxville, Ark.

KIDNAPPING

March 2, Lentige, Harland County, Ky.

CONSPIRACY

May 29, J.T. Burgis, Palatka, Fla.

HORSE STEALING

June 20, Archie Haynes, Mason County, Ky.; June 20, Burt Haynes, Mason County, Ky.; June 20, William Haynes, Mason County, Ky.

WRITING LETTER TO WHITE WOMAN

May 9, unknown Negro, West Texas.

GIVING INFORMATION

July 12, James Nelson, Abbeyville, S.C.

STEALING

Jan. 5, Alfred Davis, Live Oak County, Ark.

LARCENY

April 18, Henry Montgomery, Lewisburg, Tenn.

POLITICAL CAUSES

July 19, John Brownlee, Oxford, Ala.

CONJURING

July 20, Allen Myers, Rankin County, Miss.

ATTEMPTED MURDER

June 1, Frank Ballard, Jackson, Tenn.

ALLEGED MURDER

April 5, Negro, near Selma, Ala.; April 5, Negro, near Selma, Ala.

WITHOUT CAUSE

May 17, Samuel Wood, Gates City, Va.

BARN BURNING

April 22, Thomas Black, Tuscumbia, Ala.; April 22, John Williams, Tuscumbia, Ala.; April 22, Toney Johnson, Tuscumbia, Ala.; July 14, William Bell, Dixon, Tenn.; Sept. 1, Daniel Hawkins, Millington, Tenn.; Sept. 1, Robert Haynes, Millington, Tenn.; Sept. 1, Warner Williams, Millington, Tenn.; Sept. 1, Edward Hall, Millington, Tenn.; Sept. 1, John Haynes, Millington, Tenn.; Sept. 1, Graham White, Millington, Tenn.

ASKING WHITE WOMAN TO MARRY HIM

May 23, William Brooks, Galesline, Ark.

OFFENSES CHARGED FOR LYNCHING

Suspected arson, 2; stealing, 1; political causes, 1; murder, 45; rape, 29; desperado, 1; suspected incendiarism, 1; train wrecking, 1; enticing servant away, 1; kidnapping, 1; unknown offense, 6; larceny, 1; barn burning, 10; writing letters to a white woman, 1; without cause, 1; burglary, 1; asking white woman to marry, 1; conspiracy, 1; attempted murder, 1; horse stealing, 3; highway robbery, 1; alleged rape, 1; attempted rape, 11; race prejudice, 2; introducing smallpox, 1; giving information, 1; conjuring, 1; incendiarism, 2; arson, 1; assault, 1; no offense, 1; alleged murder, 2; total (colored), 134.

LYNCHING STATES

Mississippi, 15; Arkansas, 8; Virginia, 5; Tennessee, 15; Alabama, 12; Kentucky, 12; Texas, 9; Georgia, 19; South Carolina, 5; Florida, 7; Louisiana, 15; Missouri, 4; Ohio, 2; Maryland, 1; West Virginia, 2; Indiana, 1; Kansas, 1; Pennsylvania, 1.

LYNCHING BY THE MONTH

January, 11; February, 17; March, 8; April, 36; May, 16; June, 31; July, 21; August, 4; September, 17; October, 7; November, 9; December, 20; total colored and white, 197.

WOMEN LYNCHED

July 24, unknown woman, race prejudice, Sampson County, Miss.; March 6, unknown, woman, unknown offense, Marche, Ark.; Dec. 5, Mrs. Teddy Arthur, unknown cause, Lincoln County, W. Va.

10

THE REMEDY

It is a well-established principle of law that every wrong has a remedy. Herein rests our respect for law. The Negro does not claim that all of the one thousand black men, women and children, who have been hanged, shot and burned alive during the past ten years, were innocent of the charges made against them. We have associated too long with the white man not to have copied his vices as well as his virtues. But we do insist that the punishment is not the same for both classes of criminals. In lynching, opportunity is not given the Negro to defend himself against the unsupported accusations of white men and women. The word of the accuser is held to be true and the excited bloodthirsty mob demands that the rule of law be reversed and instead of proving the accused to be guilty, the victim of their hate and revenge must prove himself innocent. No evidence he can offer will satisfy the mob; he is bound hand and foot and swung into eternity. Then to excuse its infamy, the mob almost invariably reports the monstrous falsehood that its victim made a full confession before he was hanged.

With all military, legal and political power in their hands, only two of the lynching States have attempted a check by exercising the power which is theirs. Mayor Trout, of Roanoke, Virginia, called out the militia in 1893, to protect a Negro prisoner, and in so doing nine men were killed and a number wounded. Then the mayor and militia withdrew, left the Negro to his fate and he was promptly lynched. The business men realized the blow to the town's were given light sentences, the highest being one of twelve financial interests, called the mayor home, the grand jury indicted and prosecuted the ringleaders of the mob. They months in State prison. The day he arrived at the penitentiary, he was pardoned by the governor of the State.

The only other real attempt made by the authorities to protect a prisoner of the law, and which was more successful, was that of Gov. McKinley, of Ohio, who sent the militia to Washington Courthouse, O., in October, 1894, and five men were killed and twenty wounded in maintaining the principle that the law must be upheld.

In South Carolina, in April, 1893, Gov. Tillman aided the mob by yielding up to be killed, a prisoner of the law, who had voluntarily placed himself under the Governor's protection. Public sentiment by its representatives has encouraged Lynch Law, and upon the revolution of this sentiment we must depend for its abolition.

Therefore, we demand a fair trial by law for those accused of crime, and punishment by law after honest conviction. No maudlin sympathy for criminals is solicited, but we do ask that the law shall punish all alike. We earnestly desire those that control the forces which make public sentiment to join with us in the demand. Surely the humanitarian spirit of this country which reaches out to denounce the treatment of the Russian Jews, the Armenian Christians, the laboring poor of Europe, the Siberian exiles and the native women of India--will not longer refuse to lift its voice on this subject. If it were known that the cannibals or the savage Indians had burned three human beings alive in the past two years, the whole of Christendom would be roused, to devise ways and means to put a stop to it. Can you remain silent and inactive when such things are done in our own community and country? Is your duty to humanity in the United States less binding?

What can you do, reader, to prevent lynching, to thwart anarchy and promote law and order throughout our land?

1st. You can help disseminate the facts contained in this book by bringing them to the knowledge of every one with whom you come in contact, to the end that public sentiment may be revolutionized. Let the facts speak for themselves, with you as a medium.

2d. You can be instrumental in having churches, missionary societies, Y.M.C.A.'s, W.C.T.U.'s and all Christian and moral forces in connection with your religious and social life, pass resolutions of condemnation and protest every time a lynching takes place; and see that they axe sent to the place where these outrages occur.

3d. Bring to the intelligent consideration of Southern people the refusal of capital to invest where lawlessness and mob violence hold sway. Many labor organizations have declared by resolution that they would avoid lynch infested localities as they would the pestilence when seeking new homes. If the South wishes to build up its waste places quickly, there is no better way than to uphold the majesty of the law by enforcing obedience to the same, and meting out the same punishment to all classes of criminals, white as well as black. "Equality before the law," must become a fact as well as a theory before America is truly the "land of the free and

the home of the brave."

4th. Think and act on independent lines in this behalf, remembering that after all, it is the white man's civilization and the white man's government which are on trial. This crusade will determine whether that civilization can maintain itself by itself, or whether anarchy shall prevail; Whether this Nation shall write itself down a success at self government, or in deepest humiliation admit its failure complete; whether the precepts and theories of Christianity are professed and practiced by American white people as Golden Rules of thought and action, or adopted as a system of morals to be preached to, heathen until they attain to the intelligence which needs the system of Lynch Law.

5th. Congressman Blair offered a resolution in the House of Representatives, August, 1894. The organized life of the country can speedily make this a law by sending resolutions to Congress indorsing Mr. Blair's bill and asking Congress to create the commission. In no better way can the question be settled, and the Negro does not fear the issue. The following is the resolution:

Resolved, By the House of Representatives and Senate in congress assembled, That the committee on labor be instructed to investigate and report the number, location and date of all alleged assaults by males upon females throughout the country during the ten years last preceding the passing of this joint resolution, for or on account of which organized but unlawful violence has been inflicted or attempted to be inflicted. Also to ascertain and report all facts of organized but unlawful violence to the person, with the attendant facts and circumstances, which have been inflicted upon accused persons alleged to have been guilty of crimes punishable by due process of law which have taken place in any part of the country within the ten years last preceding the passage of this resolution. Such investigation shall be made by the usual methods and agencies of the Department of Labor, and report made to Congress as soon as the work can be satisfactorily done, and the sum of $25,000, or so much thereof as may be necessary, is hereby appropriated to pay the expenses out of any money in the treasury not otherwise appropriated.

The belief has been constantly expressed in England that in the United States, which has produced Wm. Lloyd Garrison, Henry Ward Beecher, James Russell Lowell, John G. Whittier and Abraham Lincoln there must be those of their descendants who would take hold of the work of inaugurating an era of law and order. The colored people of this country who have been loyal to the flag believe the same, and strong in that belief have begun this crusade. To those who still feel they have no obligation in the matter, we commend the following lines of Lowell on "Freedom."

Men! whose boast it is that ye Come of fathers brave and free, If there breathe on earth a slave Are ye truly free and brave? If ye do not feel the chain, When it works a brother's pain, Are ye not base slaves indeed, Slaves unworthy to be freed?

Women! who shall one day bear Sons to breathe New England air, If ye hear without a blush, Deeds to make the roused blood rush Like red lava through your veins, For your sisters now in chains,-- Answer! are ye fit to be Mothers of the brave and free?

Is true freedom but to break Fetters for our own dear sake, And, with leathern hearts, forget That we owe mankind a debt? No! true freedom is to share All the chains our brothers wear, And, with heart and hand, to be Earnest to make others free!

There are slaves who fear to speak For the fallen and the weak; They are slaves who will not choose Hatred, scoffing, and abuse, Rather than in silence shrink From the truth they needs must think; They are slaves who dare not be In the right with two or three.

A FIELD FOR PRACTICAL WORK

The very frequent inquiry made after my lectures by interested friends is "What can I do to help the cause?" The answer always is: "Tell the world the facts." When the Christian world knows the alarming growth and extent of outlawry in our land, some means will be found to stop it.

The object of this publication is to tell the facts, and friends of the cause can lend a helping hand by aiding in the distribution of these books. When I present our cause to a minister, editor, lecturer, or representative of any moral agency, the first demand is for facts and figures. Plainly, I can not then hand out a book with a twenty-five-cent tariff on the information contained. This would be only a new method in the book agents' art. In all such cases it is a pleasure to submit this book for investigation, with the certain assurance of gaining a friend to the cause.

There are many agencies which may be enlisted in our cause by the general circulation of the facts herein contained. The preachers, teachers, editors and humanitarians of the white race, at home and abroad, must have facts laid before them, and it is our duty to supply these facts. The Central Anti-Lynching League, Room 9, 128 Clark St., Chicago, has established a Free Distribution Fund, the work of which can be promoted by all who are interested in this work.

Antilynching leagues, societies and individuals can order books from this fund at agents' rates. The books will be sent to their order, or, if desired, will be distributed by the League among those whose cooperative aid we so greatly need. The writer hereof assures prompt distribution of books according to order, and public acknowledgment of all orders through the public press.

PREFACE

This is an essay--not a treatise--on the most important of all matters of human concern. Although it has cost its author a great deal more thought and labor than will be apparent, it falls, in his estimation, far below the demands of its implacably urgent theme. Each page could readily be expanded into a volume. It suggests but the beginning of the beginning now being made to raise men's thinking onto a plain which may perhaps enable them to fend off or reduce some of the dangers which lurk on every hand.

J. H. R.

NEW SCHOOL FOR SOCIAL RESEARCH, NEW YORK CITY, _August, 1921._

THE MIND IN THE MAKING

1. ON THE PURPOSE OF THIS VOLUME

If some magical transformation could be produced in men's ways of looking at themselves and their fellows, no inconsiderable part of the evils which now afflict society would vanish away or remedy themselves automatically. If the majority of influential persons held the opinions and occupied the point of view that a few rather uninfluential people now do, there would, for instance, be no likelihood of another great war; the whole problem of "labor and capital" would be transformed and attenuated; national arrogance, race animosity, political corruption, and inefficiency would all be reduced below the danger point. As an old Stoic proverb has it, men are tormented by the opinions they have of things, rather than by the things themselves. This is eminently true of many of our worst problems to-day. We have available knowledge and ingenuity and material resources to make a far fairer world than that in which we find ourselves, but various obstacles prevent our intelligently availing ourselves of them. The object of this book is to substantiate this proposition, to exhibit with entire frankness the tremendous difficulties that stand in the way of such a beneficent change of mind, and to point out as clearly as may be some of the measures to be taken in order to overcome them.

When we contemplate the shocking derangement of human affairs which now prevails in most civilized countries, including our own, even the best minds are puzzled and uncertain in their attempts to grasp the situation. The world seems to demand a moral and economic regeneration which it is dangerous to postpone, but as yet impossible to imagine, let alone direct. The preliminary intellectual regeneration which would put our leaders in a position to determine and control the course of affairs has not taken place. We have unprecedented conditions to deal with and novel adjustments to make--there can be no doubt of that. We also have a great stock of scientific knowledge unknown to our grandfathers with which to operate. So novel are the conditions, so copious the knowledge, that we must undertake the arduous task of reconsidering a great part of the opinions about man and his relations to his fellow-men which have been handed down to us by previous generations who lived in far other conditions and possessed far less information about the world and themselves. We have, however, first to create an _unprecedented attitude of mind to cope with unprecedented conditions, and to utilize unprecedented knowledge_ This is the preliminary, and most difficult, step to be taken--far more difficult than one would suspect who fails to realize that in order to take it we must overcome inveterate natural tendencies and artificial habits of long standing. How are we to put ourselves in a position to come to think of things that we not only never thought of before, but are most reluctant to question? In short, how are we to rid ourselves of our fond prejudices and _open our minds_?

As a historical student who for a good many years has been especially engaged in inquiring how man happens to have the ideas and convictions about himself and human relations which now prevail, the writer has reached the conclusion that history can at least shed a great deal of light on our present predicaments and confusion. I do not mean by history that conventional chronicle of remote and irrelevant events which embittered the youthful years of many of us, but rather a study of how man has come to be as he is and to believe as he does.

No historian has so far been able to make the whole story very plain or popular, but a number of considerations are obvious enough, and it ought not to be impossible some day to popularize them. I venture to think that if certain seemingly indisputable historical facts were generally known and accepted and permitted to play a daily part in our thought, the world would forthwith become a very different place from what it now is. We could then neither delude ourselves in the simple-minded way we now do, nor could we take advantage of the primitive ignorance of others. All our discussions of social, industrial, and political reform would be raised to a higher plane of insight and fruitfulness.

In one of those brilliant divagations with which Mr. H. G. Wells is wont to enrich his novels he says:

When the intellectual history of this time comes to be written, nothing, I think, will stand out more strikingly than the empty gulf in quality between the superb and richly fruitful scientific investigations that are going on, and the general thought of other educated sections of the community. I do not mean that scientific men are, as a whole, a class of supermen, dealing with and thinking about everything in a way altogether better than the common run of humanity, but in their field they think and work with an intensity, an integrity, a breadth, boldness, patience, thoroughness, and faithfulness--excepting only a few artists--which puts their work out of all comparison with any other human activity.... In these particular directions the human mind has achieved a new and higher quality of attitude and gesture, a veracity, a self-detachment, and self-abnegating vigor of criticism that tend to spread out and must ultimately spread out to every other human affair.

No one who is even most superficially acquainted with the achievements of students of nature during the past few centuries can fail to see that their thought has been astoundingly effective in constantly adding to our knowledge of the universe, from the hugest nebula to the tiniest atom; moreover, this knowledge has been so applied as to well-nigh revolutionize human affairs, and both the knowledge and its applications appear to be no more than hopeful beginnings, with indefinite revelations ahead, if only the same kind of thought be continued in the same patient and scrupulous manner.

But the knowledge of man, of the springs of his conduct, of his relation to his fellow-men singly or in groups, and the felicitous regulation of human intercourse in the interest of harmony and fairness, have made no such advance. Aristotle's treatises on astronomy and physics, and his notions of "generation and decay" and of chemical processes, have long gone by the board, but his politics and ethics are still revered. Does this mean that his penetration in the sciences of man exceeded so greatly his grasp of natural science, or does it mean that the progress of mankind in the scientific knowledge and regulation of human affairs has remained almost stationary for over two thousand years? I think that we may safely conclude that the latter is the case.

It has required three centuries of scientific thought and of subtle inventions for its promotion to enable a modern chemist or physicist to center his attention on electrons and their relation to the mysterious nucleus of the atom, or to permit an embryologist to study the early stirrings of the fertilized egg. As yet relatively little of the same kind of thought has been brought to bear on human affairs.

When we compare the discussions in the United States Senate in regard to the League of Nations with the consideration of a broken-down car in a roadside garage the contrast is shocking. The rural mechanic thinks scientifically; his only aim is to avail himself of his knowledge of the nature and workings of the car, with a view to making it run once more. The Senator, on the other hand, appears too often to have little idea of the nature and workings of nations, and he relies on rhetoric and appeals to vague fears and hopes or mere partisan animosity. The scientists have been busy for a century in revolutionizing the _practical_ relation of nations. The ocean is no longer a barrier, as it was in Washington's day, but to all intents and purposes a smooth avenue closely connecting, rather than safely separating, the eastern and western continents. The Senator will nevertheless unblushingly appeal to policies of a century back, suitable, mayhap, in their day, but now become a warning rather than a guide. The garage man, on the contrary, takes his mechanism as he finds it, and does not allow any mystic respect for the earlier forms of the gas engine to interfere with the needed adjustments.

Those who have dealt with natural phenomena, as distinguished from purely human concerns, did not, however, quickly or easily gain popular approbation and respect. The process of emancipating natural science from current prejudices, both of the learned

and of the unlearned, has been long and painful, and is not wholly completed yet. If we go back to the opening of the seventeenth century we find three men whose business it was, above all, to present and defend common sense in the natural sciences. The most eloquent and variedly persuasive of these was Lord Bacon. Then there was the young Descartes trying to shake himself loose from his training in a Jesuit seminary by going into the Thirty Years' War, and starting his intellectual life all over by giving up for the moment all he had been taught. Galileo had committed an offense of a grave character by discussing in the mother tongue the problems of physics. In his old age he was imprisoned and sentenced to repeat the seven penitential psalms for differing from Aristotle and Moses and the teachings of the theologians. On hearing Galileo's fate. Descartes burned a book he had written, _On The World_, lest he, too, get into trouble.

From that time down to the days of Huxley and John Fiske the struggle has continued, and still continues--the Three Hundred Years' War for intellectual freedom in dealing with natural phenomena. It has been a conflict against ignorance, tradition, and vested interests in church and university, with all that preposterous invective and cruel misrepresentation which characterize the fight against new and critical ideas. Those who cried out against scientific discoveries did so in the name of God, of man's dignity, and of holy religion and morality. Finally, however, it has come about that our instruction in the natural sciences is tolerably free; although there are still large bodies of organized religious believers who are hotly opposed to some of the more fundamental findings of biology. Hundreds of thousands of readers can be found for Pastor Russell's exegesis of Ezekiel and the Apocalypse to hundreds who read Conklin's _Heredity and Environment_ or Slosson's _Creative Chemistry_. No publisher would accept a historical textbook based on an explicit statement of the knowledge we now have of man's animal ancestry. In general, however, our scientific men carry on their work and report their results with little or no effective hostility on the part of the clergy or the schools. The social body has become tolerant of their virus.

This is not the case, however, with the social sciences. One cannot but feel a little queasy when he uses the expression "social science", because it seems as if we had not as yet got anywhere near a real science of man. I mean by social science our feeble efforts to study man, his natural equipment and impulses, and his relations to his fellows in the light of his origin and the history of the race.

This enterprise has hitherto been opposed by a large number of obstacles essentially more hampering and far more numerous than those which for three hundred years hindered the advance of the natural sciences. Human affairs are in themselves far more intricate and perplexing than molecules and chromosomes. But this is only the more reason for bringing to bear on human affairs that critical type of thought and calculation for which the remunerative thought about molecules and chromosomes has prepared the way.

I do not for a moment suggest that we can use precisely the same kind of thinking in dealing with the quandaries of mankind that we use in problems of chemical reaction and mechanical adjustment. Exact scientific results, such as might be formulated in mechanics, are, of course, out of the question. It would be unscientific to expect to apply them. I am not advocating any particular method of treating human affairs, but rather such a _general frame of mind, such a critical open-minded attitude_, as has hitherto been but sparsely developed among those who aspire to be men's guides, whether religious, political, economic, or academic. Most human progress has been, as Wells expresses it, a mere "muddling through". It has been man's wont to explain and sanctify his ways, with little regard to their fundamental and permanent expediency. An arresting example of what this muddling may mean we have seen during these recent years in the slaying or maiming of fifteen million of our young men, resulting in incalculable loss, continued disorder, and bewilderment. Yet men seem blindly driven to defend and perpetuate the conditions which produced the last disaster.

Unless we wish to see a recurrence of this or some similar calamity, we must, as I have already suggested, create a new and unprecedented attitude of mind to meet the new and unprecedented conditions which confront us. _We should proceed to the thorough reconstruction of our mind, with a view to understanding actual human conduct and organization_. We must examine the facts freshly, critically, and dispassionately, and then allow our philosophy to formulate itself as a result of this examination, instead of permitting our observations to be distorted by archaic philosophy, political economy, and ethics. As it is, we are taught our philosophy first, and in its light we try to justify the facts. We must reverse this process, as did those who began the great work in experimental science; we must first face the facts, and patiently await the emergence of a new philosophy.

A willingness to examine the very foundations of society does not mean a desire to encourage or engage in any hasty readjustment, but certainly no wise or needed readjustment _can_ be made unless such an examination is undertaken.

I come back, then, to my original point that in this examination of existing facts history, by revealing the origin of many of our current fundamental beliefs, will tend to free our minds so as to permit honest thinking. Also, that the historical facts which I propose to recall would, if permitted to play a constant part in our thinking, automatically eliminate a very considerable portion of the gross stupidity and blindness which characterize our present thought and conduct in public affairs, and would contribute greatly to developing the needed scientific attitude toward human concerns--in other words, to _bringing the mind up to date_.

2. THREE DISAPPOINTED METHODS OF REFORM

Plans for social betterment and the cure of public ills have in the past taken three general forms: (I) changes in the rules of the game, (II) spiritual exhortation, and (III) education. Had all these not largely failed, the world would not be in the plight in which it now confessedly is.

I. Many reformers concede that they are suspicious of what they call "ideas". They are confident that our troubles result from defective organization, which should be remedied by more expedient legislation and wise ordinances. Abuses should be abolished or checked by forbidding them, or by some ingenious reordering of procedure. Responsibility should be concentrated or dispersed. The term of office of government officials should be lengthened or shortened; the number of members in governing bodies should be increased or decreased; there should be direct primaries, referendum, recall, government by commission; powers should be shifted here and there with a hope of meeting obvious mischances all too familiar in the past. In industry and education administrative reform is constantly going on, with the hope of reducing friction and increasing efficiency. The House of Commons not long ago came to new terms with the peers. The League of Nations has already had to adjust the functions and influence of the Council and the Assembly, respectively.

No one will question that organization is absolutely essential in human affairs, but reorganization, while it sometimes produces assignable benefit, often fails to meet existing evils, and not uncommonly engenders new and unexpected ones. Our confidence in restriction and regimentation is exaggerated. What we usually need is a _change of attitude_, and without this our new regulations often leave the old situation unaltered. So long as we allow our government to be run by politicians and business lobbies it makes little difference how many aldermen or assemblymen we have or how long the mayor or governor holds office. In a university the fundamental drift of affairs cannot be greatly modified by creating a new dean, or a university council, or by enhancing or decreasing the nominal authority of the president or faculty. We now turn to the second sanctified method of reform, moral uplift.

II. Those who are impatient with mere administrative reform, or who lack faith in it, declare that what we need is brotherly love. Thousands of pulpits admonish us to remember that we are all children of one Heavenly Father and that we should bear one another's burdens with fraternal patience. Capital is too selfish; Labor is bent on its own narrow interests regardless of the risks Capital takes. We are all dependent on one another, and a recognition of this should beget mutual forbearance and glad co-operation. Let us forget ourselves in others. "Little children, love one another."

The fatherhood of God has been preached by Christians for over eighteen centuries, and the brotherhood of man by the Stoics long before them. The doctrine has proved compatible with slavery and serfdom, with wars blessed, and not infrequently instigated, by religious leaders, and with industrial oppression which it requires a brave clergyman or teacher to denounce to-day. True, we sometimes have moments of sympathy when our fellow-creatures become objects of tender solicitude. Some rare souls may honestly flatter themselves that they love mankind in general, but it would surely be a very rare soul indeed who dared profess that he loved his personal enemies--much less the enemies of his country or institutions. We still worship a tribal god, and the "foe" is not to be reckoned among his children. Suspicion and hate are much more congenial to our natures than love, for very obvious reasons in this world of rivalry and common failure. There is, beyond doubt, a natural kindliness in mankind which will show itself under favorable auspices. But experience would seem to teach that it is little promoted by moral exhortation. This is the only point that need be urged here. Whether there is another way of forwarding the brotherhood of man will be considered in the sequel.

III. One disappointed in the effects of mere reorganization, and distrusting the power of moral exhortation, will urge that what we need above all is _education_. It is quite true that what we need is education, but something so different from what now passes as such that it needs a new name.

Education has more various aims than we usually recognize, and should of course be judged in relation to the importance of its several intentions, and of its success in gaining them. The arts of reading and writing and figuring all would concede are basal in a world of newspapers and business. Then there is technical information and the training that prepares one to earn a livelihood in

some more or less standardized guild or profession. Both these aims are reached fairly well by our present educational system, subject to various economies and improvements in detail. Then there are the studies which it is assumed contribute to general culture and to "training the mind", with the hope of cultivating our tastes, stimulating the imagination, and mayhap improving our reasoning powers.

This branch of education is regarded by the few as very precious and indispensable; by the many as at best an amenity which has little relation to the real purposes and success of life. It is highly traditional and retrospective in the main, concerned with ancient tongues, old and revered books, higher mathematics, somewhat archaic philosophy and history, and the fruitless form of logic which has until recently been prized as man's best guide in the fastnesses of error. To these has been added in recent decades a choice of the various branches of natural science.

The results, however, of our present scheme of liberal education are disappointing. One who, like myself, firmly agrees with its objects and is personally so addicted to old books, so pleased with such knowledge as he has of the ancient and modern languages, so envious of those who can think mathematically, and so interested in natural science--such a person must resent the fact that those who have had a liberal education rarely care for old books, rarely read for pleasure any foreign language, think mathematically, love philosophy or history, or care for the beasts, birds, plants, and rocks with any intelligent insight, or even real curiosity. This arouses the suspicion that our so-called "liberal education" miscarries and does not attain its ostensible aims.

The three educational aims enumerated above have one thing in common. They are all directed toward an enhancement of the chances of _personal_ worldly success, or to the increase of our _personal_ culture and intellectual and literary enjoyment. Their purpose is not primarily to fit us to play a part in social or political betterment. But of late a fourth element has been added to the older ambitions, namely the hope of preparing boys and girls to become intelligent voters. This need has been forced upon us by the coming of political democracy, which makes one person's vote exactly as good as another's.

Now education for citizenship would seem to consist in gaining a knowledge of the actual workings of our social organization, with some illuminating notions of its origin, together with a full realization of its defects and their apparent sources. But here we encounter an obstacle that is unimportant in the older types of education, but which may prove altogether fatal to any good results in our efforts to make better citizens. Subjects of instruction like reading and writing, mathematics, Latin and Greek, chemistry and physics, medicine and the law are fairly well standardized and retrospective. Doubtless there is a good deal of internal change in method and content going on, but this takes place unobtrusively and does not attract the attention of outside critics. Political and social questions, on the other hand, and matters relating to prevailing business methods, race animosities, public elections, and governmental policy are, if they are vital, necessarily "controversial". School boards and superintendents, trustees and presidents of colleges and universities, are sensitive to this fact. They eagerly deprecate in their public manifestos any suspicion that pupils and students are being awakened in any way to the truth that our institutions can possibly be fundamentally defective, or that the present generation of citizens has not conducted our affairs with exemplary success, guided by the immutable principles of justice.

How indeed can a teacher be expected to explain to the sons and daughters of businessmen, politicians, doctors, lawyers, and clergymen--all pledged to the maintenance of the sources of their livelihood--the actual nature of business enterprise as now practiced, the prevailing methods of legislative bodies and courts, and the conduct of foreign affairs? Think of a teacher in the public schools recounting the more illuminating facts about the municipal government under which he lives, with due attention to graft and jobs! So, courses in government, political economy, sociology, and ethics confine themselves to inoffensive generalizations, harmless details of organization, and the commonplaces of routine morality, for only in that way can they escape being controversial. Teachers are rarely able or inclined to explain our social life and its presuppositions with sufficient insight and honesty to produce any very important results. Even if they are tempted to tell the essential facts they dare not do so, for fear of losing their places, amid the applause of all the righteously minded.

However we may feel on this important matter, we must all agree that the aim of education for citizenship as now conceived is a preparation for the same old citizenship which has so far failed to eliminate the shocking hazards and crying injustices of our social and political life. For we sedulously inculcate in the coming generation exactly the same illusions and the same ill-placed confidence in existing institutions and prevailing notions that have brought the world to the pass in which we find it. Since we do all we can to corroborate the beneficence of what we have, we can hardly hope to raise up a more intelligent generation bent on achieving what we have not. We all know this to be true; it has been forcibly impressed on our minds of late. Most of us agree that it is right and best that it should be so; some of us do not like to think about it at all, but a few will be glad to spend a little time weighing certain suggestions in this volume which may indicate a way out of this _impasse_.[1]

We have now considered briefly the three main hopes that have been hitherto entertained of bettering things (I) by changing the rules of the game, (II) by urging men to be good, and to love their neighbor as themselves, and (III) by education for citizenship. It may be that these hopes are not wholly unfounded, but it must be admitted that so far they have been grievously disappointed. Doubtless they will continue to be cherished on account of their assured respectability.

Mere lack of success does not discredit a method, for there are many things that determine and perpetuate our sanctified ways of doing things besides their success in reaching their proposed ends. Had this not always been so, our life to-day would be far less stupidly conducted than it is. But let us agree to assume for the moment that the approved schemes of reform enumerated above have, to say the least, shown themselves inadequate to meet the crisis in which civilized society now finds itself. Have we any other hope?

Yes, there is Intelligence. That is as yet an untested hope in its application to the regulation of human relations. It is not discredited because it has not been tried on any large scale outside the realm of natural science. There, everyone will confess, it has produced marvelous results. Employed in regard to stars, rocks, plants, and animals, and in the investigation of mechanical and chemical processes, it has completely revolutionized men's notions of the world in which they live, and of its inhabitants, _with the notable exception of man himself_. These discoveries have been used to change our habits and to supply us with everyday necessities which a hundred years ago were not dreamed of as luxuries accessible even to kings and millionaires.

But most of us know too little of the past to realize the penalty that had to be paid for this application of intelligence. In order that these discoveries should be made and ingeniously applied to the conveniences of life, _it was necessary to discard practically all the consecrated notions of the world and its workings which had been held by the best and wisest and purest of mankind down to three hundred years ago_--indeed, until much more recently. Intelligence, in a creature of routine like man and in a universe so ill understood as ours, must often break valiantly with the past in order to get ahead. It would be pleasant to assume that all we had to do was to build on well-designed foundations, firmly laid by the wisdom of the ages. But those who have studied the history of natural science would agree that Bacon, Galileo, and Descartes found no such foundation, but had to begin their construction from the ground up.

The several hopes of reform mentioned above all assume that the now generally accepted notions of righteous human conduct are not to be questioned. Our churches and universities defend this assumption. Our editors and lawyers and the more vocal of our business men adhere to it. Even those who pretend to study society and its origin seem often to believe that our present ideals and standards of property, the state, industrial organization, the relations of the sexes, and education are practically final and must necessarily be the basis of any possible betterment in detail. But if this be so Intelligence has already done its perfect work, and we can only lament that the outcome in the way of peace, decency, and fairness, judged even by existing standards, has been so disappointing.

There are, of course, a few here and there who suspect and even repudiate current ideals and standards. But at present their resentment against existing evils takes the form of more or less dogmatic plans of reconstruction, like those of the socialists and communists, or exhausts itself in the vague protest and faultfinding of the average "Intellectual". Neither the socialist nor the common run of Intellectual appears to me to be on the right track. The former is more precise in his doctrines and confident in his prophecies than a scientific examination of mankind and its ways would at all justify; the other, more indefinite than he need be.

If Intelligence is to have the freedom of action necessary to accumulate new and valuable knowledge about man's nature and possibilities which may ultimately be applied to reforming our ways, it must loose itself from the bonds that now confine it. The primeval curse still holds: "Of every tree in the garden thou mayest freely eat; but of the tree of the knowledge of good and evil, thou shalt not eat of it; for in the day that thou eatest thereof thou shalt surely die." Few people confess that they are afraid of knowledge, but the university presidents, ministers, and editors who most often and publicly laud what they are wont to call "the fearless pursuit of truth", feel compelled, in the interest of public morals and order, to discourage any reckless indulgence in the fruit of the forbidden tree, for the inexperienced may select an unripe apple and suffer from the colic in consequence. "Just look at Russia!" Better always, instead of taking the risk on what the church calls "science falsely so called", fall back on ignorance rightly so called. No one denies that Intelligence is the light of the world and the chief glory of man, but, as Bertrand Russell says, we dread its indifference to respectable opinions and what we deem the well-tried wisdom of the ages. "It is," as he truly says, "fear that holds men back; fear that their cherished beliefs should prove harmful, fear lest they themselves should prove less worthy of respect than they have supposed themselves to be. 'Should the workingman think freely about property? What then will become of us, the rich? Should young men and women think freely about sex? What then will become of morality? Should soldiers think freely

about war? What then will become of military discipline?'"

This fear is natural and inevitable, but it is none the less dangerous and discreditable. Human arrangements are no longer so foolproof as they may once have been when the world moved far more slowly than it now does. It should therefore be a good deed to remove or lighten any of the various restraints on thought. I believe that there is an easy and relatively painless way in which our respect for the past can be lessened so that we shall no longer feel compelled to take the wisdom of the ages as the basis of our reforms. My own confidence in what President Butler calls "the findings of mankind" is gone, and the process by which it was lost will become obvious as we proceed. I have no reforms to recommend, except the liberation of Intelligence, which is the first and most essential one. I propose to review by way of introduction some of the new ideas which have been emerging during the past few years in regard to our minds and their operations. Then we shall proceed to the main theme of the book, a sketch of the manner in which our human intelligence appears to have come about. If anyone will follow the story with a fair degree of sympathy and patience he may, by merely putting together well-substantiated facts, many of which he doubtless knows in other connections, hope better to understand the perilous quandary in which mankind is now placed and the ways of escape that offer themselves.

NOTES.

[1] George Bernard Shaw reaches a similar conclusion when he contemplates education in the British Isles. "We must teach citizenship and political science at school. But must we? There is no must about it, the hard fact being that we must not teach political science or citizenship at school. The schoolmaster who attempted it would soon find himself penniless in the streets without pupils, if not in the dock pleading to a pompously worded indictment for sedition against the exploiters. Our schools teach the morality of feudalism corrupted by commercialism, and hold up the military conqueror, the robber baron, and the profiteer, as models of the illustrious and successful."--_Back to Methuselah_, xii.

II

Good sense is, of all things among men, the most equally distributed; for everyone thinks himself so abundantly provided with it that those even who are the most difficult to satisfy in everything else do not usually desire a larger measure of this quality than they already possess.--DESCARTES.

We see man to-day, instead of the frank and courageous recognition of his status, the docile attention to his biological history, the determination to let nothing stand in the way of the security and permanence of his future, which alone can establish the safety and happiness of the race, substituting blind confidence in his destiny, unclouded faith in the essentially respectful attitude of the universe toward his moral code, and a belief no less firm that his traditions and laws and institutions necessarily contain permanent qualities of reality.--WILLIAM TROTTER.

3. ON VARIOUS KINDS OF THINKING

The truest and most profound observations on Intelligence have in the past been made by the poets and, in recent times, by story-writers. They have been keen observers and recorders and reckoned freely with the emotions and sentiments. Most philosophers, on the other hand, have exhibited a grotesque ignorance of man's life and have built up systems that are elaborate and imposing, but quite unrelated to actual human affairs. They have almost consistently neglected the actual process of thought and have set the mind off as something apart to be studied by itself. _But no such mind, exempt from bodily processes, animal impulses, savage traditions, infantile impressions, conventional reactions, and traditional knowledge, ever existed_, even in the case of the most abstract of metaphysicians. Kant entitled his great work _A Critique of Pure Reason_. But to the modern student of mind pure reason seems as mythical as the pure gold, transparent as glass, with which the celestial city is paved.

Formerly philosophers thought of mind as having to do exclusively with conscious thought. It was that within man which perceived, remembered, judged, reasoned, understood, believed, willed. But of late it has been shown that we are unaware of a great part of what we perceive, remember, will, and infer; and that a great part of the thinking of which we are aware is determined by that of which we are not conscious. It has indeed been demonstrated that our unconscious psychic life far outruns our conscious. This seems perfectly natural to anyone who considers the following facts:

The sharp distinction between the mind and the body is, as we shall find, a very ancient and spontaneous uncritical savage prepossession. What we think of as "mind" is so intimately associated with what we call "body" that we are coming to realize that the one cannot be understood without the other. Every thought reverberates through the body, and, on the other hand, alterations in our physical condition affect our whole attitude of mind. The insufficient elimination of the foul and decaying products of digestion may plunge us into deep melancholy, whereas a few whiffs of nitrous monoxide may exalt us to the seventh heaven of supernal knowledge and godlike complacency. And vice versa, a sudden word or thought may cause our heart to jump, check our breathing, or make our knees as water. There is a whole new literature growing up which studies the effects of our bodily secretions and our muscular tensions and their relation to our emotions and our thinking.

Then there are hidden impulses and desires and secret longings of which we can only with the greatest difficulty take account. They influence our conscious thought in the most bewildering fashion. Many of these unconscious influences appear to originate in our very early years. The older philosophers seem to have forgotten that even they were infants and children at their most impressionable age and never could by any possibility get over it.

The term "unconscious", now so familiar to all readers of modern works on psychology, gives offense to some adherents of the past. There should, however, be no special mystery about it. It is not a new animistic abstraction, but simply a collective word to include all the physiological changes which escape our notice, all the forgotten experiences and impressions of the past which continue to influence our desires and reflections and conduct, even if we cannot remember them. What we can remember at any time is indeed an infinitesimal part of what has happened to us. We could not remember anything unless we forgot almost everything. As Bergson says, the brain is the organ of forgetfulness as well as of memory. Moreover, we tend, of course, to become oblivious to things to which we are thoroughly accustomed, for habit blinds us to their existence. So the forgotten and the habitual make up a great part of the so-called "unconscious".

If we are ever to understand man, his conduct and reasoning, and if we aspire to learn to guide his life and his relations with his fellows more happily than heretofore, we cannot neglect the great discoveries briefly noted above. We must reconcile ourselves to novel and revolutionary conceptions of the mind, for it is clear that the older philosophers, whose works still determine our current views, had a very superficial notion of the subject with which they dealt. But for our purposes, with due regard to what has just been said and to much that has necessarily been left unsaid (and with the indulgence of those who will at first be inclined to dissent), _we shall consider mind chiefly as conscious knowledge and intelligence, as what we know and our attitude toward it--our disposition to increase our information, classify it, criticize it and apply it_.

We do not think enough about thinking, and much of our confusion is the result of current illusions in regard to it. Let us forget for the moment any impressions we may have derived from the philosophers, and see what seems to happen in ourselves. The first thing that we notice is that our thought moves with such incredible rapidity that it is almost impossible to arrest any specimen of it long enough to have a look at it. When we are offered a penny for our thoughts we always find that we have recently had so many things in mind that we can easily make a selection which will not compromise us too nakedly. On inspection we shall find that even if we are not downright ashamed of a great part of our spontaneous thinking it is far too intimate, personal, ignoble or trivial to permit us to reveal more than a small part of it. I believe this must be true of everyone. We do not, of course, know what goes on in other people's heads. They tell us very little and we tell them very little. The spigot of speech, rarely fully opened, could never emit more than driblets of the ever renewed hogshead of thought--_noch grösser wie's Heidelberger Fass_. We find it hard to believe that other people's thoughts are as silly as our own, but they probably are.

We all appear to ourselves to be thinking all the time during our waking hours, and most of us are aware that we go on thinking while we are asleep, even more foolishly than when awake. When uninterrupted by some practical issue we are engaged in what is now known as a _reverie_. This is our spontaneous and favorite kind of thinking. We allow our ideas to take their own course and this course is determined by our hopes and fears, our spontaneous desires, their fulfillment or frustration; by our likes and dislikes, our loves and hates and resentments. There is nothing else anything like so interesting to ourselves as ourselves. All thought that is not more or less laboriously controlled and directed will inevitably circle about the beloved Ego. It is amusing and pathetic to observe this tendency in ourselves and in others. We learn politely and generously to overlook this truth, but if we dare to think of it, it blazes forth like the noontide sun.

The reverie or "free association of ideas" has of late become the subject of scientific research. While investigators are not yet agreed on the results, or at least on the proper interpretation to be given to them, there can be no doubt that our reveries form the chief index to our fundamental character. They are a reflection of our nature as modified by often hidden and forgotten experiences.

We need not go into the matter further here, for it is only necessary to observe that the reverie is at all times a potent and in many cases an omnipotent rival to every other kind of thinking. It doubtless influences all our speculations in its persistent tendency to self-magnification and self-justification, which are its chief preoccupations, but it is the last thing to make directly or indirectly for honest increase of knowledge.[2] Philosophers usually talk as if such thinking did not exist or were in some way negligible. This is what makes their speculations so unreal and often worthless. The reverie, as any of us can see for himself, is frequently broken and interrupted by the necessity of a second kind of thinking. We have to make practical decisions. Shall we write a letter or no? Shall we take the subway or a bus? Shall we have dinner at seven or half past? Shall we buy U. S. Rubber or a Liberty Bond? Decisions are easily distinguishable from the free flow of the reverie. Sometimes they demand a good deal of careful pondering and the recollection of pertinent facts; often, however, they are made impulsively. They are a more difficult and laborious thing than the reverie, and we resent having to "make up our mind" when we are tired, or absorbed in a congenial reverie. Weighing a decision, it should be noted, does not necessarily add anything to our knowledge, although we may, of course, seek further information before making it.

4. RATIONALIZING

A third kind of thinking is stimulated when anyone questions our belief and opinions. We sometimes find ourselves changing our minds without any resistance or heavy emotion, but if we are told that we are wrong we resent the imputation and harden our hearts. We are incredibly heedless in the formation of our beliefs, but find ourselves filled with an illicit passion for them when anyone proposes to rob us of their companionship. It is obviously not the ideas themselves that are dear to us, but our self-esteem, which is threatened. We are by nature stubbornly pledged to defend our own from attack, whether it be our person, our family, our property, or our opinion. A United States Senator once remarked to a friend of mine that God Almighty could not make him change his mind on our Latin-America policy. We may surrender, but rarely confess ourselves vanquished. In the intellectual world at least peace is without victory.

Few of us take the pains to study the origin of our cherished convictions; indeed, we have a natural repugnance to so doing. We like to continue to believe what we have been accustomed to accept as true, and the resentment aroused when doubt is cast upon any of our assumptions leads us to seek every manner of excuse for clinging to them. _The result is that most of our so-called reasoning consists in finding arguments for going on believing as we already do_.

I remember years ago attending a public dinner to which the Governor of the state was bidden. The chairman explained that His Excellency could not be present for certain "good" reasons; what the "real" reasons were the presiding officer said he would leave us to conjecture. This distinction between "good" and "real" reasons is one of the most clarifying and essential in the whole realm of thought. We can readily give what seem to us "good" reasons for being a Catholic or a Mason, a Republican or a Democrat, an adherent or opponent of the League of Nations. But the "real" reasons are usually on quite a different plane. Of course the importance of this distinction is popularly, if somewhat obscurely, recognized. The Baptist missionary is ready enough to see that the Buddhist is not such because his doctrines would bear careful inspection, but because he happened to be born in a Buddhist family in Tokio. But it would be treason to his faith to acknowledge that his own partiality for certain doctrines is due to the fact that his mother was a member of the First Baptist church of Oak Ridge. A savage can give all sorts of reasons for his belief that it is dangerous to step on a man's shadow, and a newspaper editor can advance plenty of arguments against the Bolsheviki. But neither of them may realize why he happens to be defending his particular opinion.

The "real" reasons for our beliefs are concealed from ourselves as well as from others. As we grow up we simply adopt the ideas presented to us in regard to such matters as religion, family relations, property, business, our country, and the state. We unconsciously absorb them from our environment. They are persistently whispered in our ear by the group in which we happen to live. Moreover, as Mr. Trotter has pointed out, these judgments, being the product of suggestion and not of reasoning, have the quality of perfect obviousness, so that to question them

... is to the believer to carry skepticism to an insane degree, and will be met by contempt, disapproval, or condemnation, according to the nature of the belief in question. When, therefore, we find ourselves entertaining an opinion about the basis of which there is a quality of feeling which tells us that to inquire into it would be absurd, obviously unnecessary, unprofitable, undesirable, bad form, or wicked, we may know that that opinion is a nonrational one, and probably, therefore, founded upon inadequate evidence.[3]

Opinions, on the other hand, which are the result of experience or of honest reasoning do not have this quality of "primary certitude". I remember when as a youth I heard a group of business men discussing the question of the immortality of the soul, I

was outraged by the sentiment of doubt expressed by one of the party. As I look back now I see that I had at the time no interest in the matter, and certainly no least argument to urge in favor of the belief in which I had been reared. But neither my personal indifference to the issue, nor the fact that I had previously given it no attention, served to prevent an angry resentment when I heard _my_ ideas questioned.

This spontaneous and loyal support of our preconceptions--this process of finding "good" reasons to justify our routine beliefs--is known to modern psychologists as "rationalizing"--clearly only a new name for a very ancient thing. Our "good" reasons ordinarily have no value in promoting honest enlightenment, because, no matter how solemnly they may be marshaled, they are at bottom the result of personal preference or prejudice, and not of an honest desire to seek or accept new knowledge.

In our reveries we are frequently engaged in self-justification, for we cannot bear to think ourselves wrong, and yet have constant illustrations of our weaknesses and mistakes. So we spend much time finding fault with circumstances and the conduct of others, and shifting on to them with great ingenuity the on us of our own failures and disappointments. _Rationalizing is the self-exculpation which occurs when we feel ourselves, or our group, accused of misapprehension or error._

The little word _my_ is the most important one in all human affairs, and properly to reckon with it is the beginning of wisdom. It has the same force whether it is _my_ dinner, _my_ dog, and _my_ house, or _my_ faith, _my_ country, and _my God_. We not only resent the imputation that our watch is wrong, or our car shabby, but that our conception of the canals of Mars, of the pronunciation of "Epictetus", of the medicinal value of salicine, or the date of Sargon I, are subject to revision.

Philosophers, scholars, and men of science exhibit a common sensitiveness in all decisions in which their _amour propre_ is involved. Thousands of argumentative works have been written to vent a grudge. However stately their reasoning, it may be nothing but rationalizing, stimulated by the most commonplace of all motives. A history of philosophy and theology could be written in terms of grouches, wounded pride, and aversions, and it would be far more instructive than the usual treatments of these themes. Sometimes, under Providence, the lowly impulse of resentment leads to great achievements. Milton wrote his treatise on divorce as a result of his troubles with his seventeen-year-old wife, and when he was accused of being the leading spirit in a new sect, the Divorcers, he wrote his noble _Areopagitica_ to prove his right to say what he thought fit, and incidentally to establish the advantage of a free press in the promotion of Truth.

All mankind, high and low, thinks in all the ways which have been described. The reverie goes on all the time not only in the mind of the mill hand and the Broadway flapper, but equally in weighty judges and godly bishops. It has gone on in all the philosophers, scientists, poets, and theologians that have ever lived. Aristotle's most abstruse speculations were doubtless tempered by highly irrelevant reflections. He is reported to have had very thin legs and small eyes, for which he doubtless had to find excuses, and he was wont to indulge in very conspicuous dress and rings and was accustomed to arrange his hair carefully.[4] Diogenes the Cynic exhibited the impudence of a touchy soul. His tub was his distinction. Tennyson in beginning his "Maud" could not forget his chagrin over losing his patrimony years before as the result of an unhappy investment in the Patent Decorative Carving Company. These facts are not recalled here as a gratuitous disparagement of the truly great, but to insure a full realization of the tremendous competition which all really exacting thought has to face, even in the minds of the most highly endowed mortals.

And now the astonishing and perturbing suspicion emerges that perhaps almost all that had passed for social science, political economy, politics, and ethics in the past may be brushed aside by future generations as mainly rationalizing. John Dewey has already reached this conclusion in regard to philosophy.[5] Veblen[6] and other writers have revealed the various unperceived presuppositions of the traditional political economy, and now comes an Italian sociologist, Vilfredo Pareto, who, in his huge treatise on general sociology, devotes hundreds of pages to substantiating a similar thesis affecting all the social sciences.[7] This conclusion may be ranked by students of a hundred years hence as one of the several great discoveries of our age. It is by no means fully worked out, and it is so opposed to nature that it will be very slowly accepted by the great mass of those who consider themselves thoughtful. As a historical student I am personally fully reconciled to this newer view. Indeed, it seems to me inevitable that just as the various sciences of nature were, before the opening of the seventeenth century, largely masses of rationalizations to suit the religious sentiments of the period, so the social sciences have continued even to our own day to be rationalizations of uncritically accepted beliefs and customs.

It will become apparent as we proceed that the fact that an idea is ancient and that it has been widely received is no argument in its favor, but should immediately suggest the necessity of carefully testing it as a probable instance of rationalization.

5. HOW CREATIVE THOUGHT TRANSFORMS THE WORLD

This brings us to another kind of thought which can fairly easily be distinguished from the three kinds described above. It has not the usual qualities of the reverie, for it does not hover about our personal complacencies and humiliations. It is not made up of the homely decisions forced upon us by everyday needs, when we review our little stock of existing information, consult our conventional preferences and obligations, and make a choice of action. It is not the defense of our own cherished beliefs and prejudices just because they are our own--mere plausible excuses for remaining of the same mind. On the contrary, it is that peculiar species of thought which leads us to _change_ our mind.

It is this kind of thought that has raised man from his pristine, subsavage ignorance and squalor to the degree of knowledge and comfort which he now possesses. On his capacity to continue and greatly extend this kind of thinking depends his chance of groping his way out of the plight in which the most highly civilized peoples of the world now find themselves. In the past this type of thinking has been called Reason. But so many misapprehensions have grown up around the word that some of us have become very suspicious of it. I suggest, therefore, that we substitute a recent name and speak of "creative thought" rather than of Reason. _For this kind of meditation begets knowledge, and knowledge is really creative inasmuch as it makes things look different from what they seemed before and may indeed work for their reconstruction_.

In certain moods some of us realize that we are observing things or making reflections with a seeming disregard of our personal preoccupations. We are not preening or defending ourselves; we are not faced by the necessity of any practical decision, nor are we apologizing for believing this or that. We are just wondering and looking and mayhap seeing what we never perceived before.

Curiosity is as clear and definite as any of our urges. We wonder what is in a sealed telegram or in a letter in which some one else is absorbed, or what is being said in the telephone booth or in low conversation. This inquisitiveness is vastly stimulated by jealousy, suspicion, or any hint that we ourselves are directly or indirectly involved. But there appears to be a fair amount of personal interest in other people's affairs even when they do not concern us except as a mystery to be unraveled or a tale to be told. The reports of a divorce suit will have "news value" for many weeks. They constitute a story, like a novel or play or moving picture. This is not an example of pure curiosity, however, since we readily identify ourselves with others, and their joys and despair then become our own.

We also take note of, or "observe", as Sherlock Holmes says, things which have nothing to do with our personal interests and make no personal appeal either direct or by way of sympathy. This is what Veblen so well calls "idle curiosity". And it is usually idle enough. Some of us when we face the line of people opposite us in a subway train impulsively consider them in detail and engage in rapid inferences and form theories in regard to them. On entering a room there are those who will perceive at a glance the degree of preciousness of the rugs, the character of the pictures, and the personality revealed by the books. But there are many, it would seem, who are so absorbed in their personal reverie or in some definite purpose that they have no bright-eyed energy for idle curiosity. The tendency to miscellaneous observation we come by honestly enough, for we note it in many of our animal relatives.

Veblen, however, uses the term "idle curiosity" somewhat ironically, as is his wont. It is idle only to those who fail to realize that it may be a very rare and indispensable thing from which almost all distinguished human achievement proceeds. Since it may lead to systematic examination and seeking for things hitherto undiscovered. For research is but diligent search which enjoys the high flavor of primitive hunting. Occasionally and fitfully idle curiosity thus leads to creative thought, which alters and broadens our own views and aspirations and may in turn, under highly favorable circumstances, affect the views and lives of others, even for generations to follow. An example or two will make this unique human process clear.

Galileo was a thoughtful youth and doubtless carried on a rich and varied reverie. He had artistic ability and might have turned out to be a musician or painter. When he had dwelt among the monks at Valambrosa he had been tempted to lead the life of a religious. As a boy he busied himself with toy machines and he inherited a fondness for mathematics. All these facts are of record. We may safely assume also that, along with many other subjects of contemplation, the Pisan maidens found a vivid place in his thoughts.

One day when seventeen years old he wandered into the cathedral of his native town. In the midst of his reverie he looked up at the lamps hanging by long chains from the high ceiling of the church. Then something very difficult to explain occurred. He found himself no longer thinking of the building, worshipers, or the services; of his artistic or religious interests; of his reluctance to become a physician as his father wished. He forgot the question of a career and even the _graziosissime donne_. As he watched the swinging lamps he was suddenly wondering if mayhap their oscillations, whether long or short, did not occupy the same time.

Then he tested this hypothesis by counting his pulse, for that was the only timepiece he had with him.

This observation, however remarkable in itself, was not enough to produce a really creative thought. Others may have noticed the same thing and yet nothing came of it. Most of our observations have no assignable results. Galileo may have seen that the warts on a peasant's face formed a perfect isosceles triangle, or he may have noticed with boyish glee that just as the officiating priest was uttering the solemn words, _ecce agnus Dei_, a fly lit on the end of his nose. To be really creative, ideas have to be worked up and then "put over", so that they become a part of man's social heritage. The highly accurate pendulum clock was one of the later results of Galileo's discovery. He himself was led to reconsider and successfully to refute the old notions of falling bodies. It remained for Newton to prove that the moon was falling, and presumably all the heavenly bodies. This quite upset all the consecrated views of the heavens as managed by angelic engineers. The universality of the laws of gravitation stimulated the attempt to seek other and equally important natural laws and cast grave doubts on the miracles in which mankind had hitherto believed. In short, those who dared to include in their thought the discoveries of Galileo and his successors found themselves in a new earth surrounded by new heavens.

On the 28th of October, 1831, three hundred and fifty years after Galileo had noticed the isochronous vibrations of the lamps, creative thought and its currency had so far increased that Faraday was wondering what would happen if he mounted a disk of copper between the poles of a horseshoe magnet. As the disk revolved an electric current was produced. This would doubtless have seemed the idlest kind of an experiment to the stanch business men of the time, who, it happened, were just then denouncing the child-labor bills in their anxiety to avail themselves to the full of the results of earlier idle curiosity. But should the dynamos and motors which have come into being as the outcome of Faraday's experiment be stopped this evening, the business man of to-day, agitated over labor troubles, might, as he trudged home past lines of "dead" cars, through dark streets to an unlighted house, engage in a little creative thought of his own and perceive that he and his laborers would have no modern factories and mines to quarrel about had it not been for the strange practical effects of the idle curiosity of scientists, inventors, and engineers.

The examples of creative intelligence given above belong to the realm of modern scientific achievement, which furnishes the most striking instances of the effects of scrupulous, objective thinking. But there are, of course, other great realms in which the recording and embodiment of acute observation and insight have wrought themselves into the higher life of man. The great poets and dramatists and our modern story-tellers have found themselves engaged in productive reveries, noting and artistically presenting their discoveries for the delight and instruction of those who have the ability to appreciate them.

The process by which a fresh and original poem or drama comes into being is doubtless analogous to that which originates and elaborates so-called scientific discoveries; but there is clearly a temperamental difference. The genesis and advance of painting, sculpture, and music offer still other problems. We really as yet know shockingly little about these matters, and indeed very few people have the least curiosity about them.[8] Nevertheless, creative intelligence in its various forms and activities is what makes man. Were it not for its slow, painful, and constantly discouraged operations through the ages man would be no more than a species of primate living on seeds, fruit, roots, and uncooked flesh, and wandering naked through the woods and over the plains like a chimpanzee.

The origin and progress and future promotion of civilization are ill understood and misconceived. These should be made the chief theme of education, but much hard work is necessary before we can reconstruct our ideas of man and his capacities and free ourselves from innumerable persistent misapprehensions. There have been obstructionists in all times, not merely the lethargic masses, but the moralists, the rationalizing theologians, and most of the philosophers, all busily if unconsciously engaged in ratifying existing ignorance and mistakes and discouraging creative thought. Naturally, those who reassure us seem worthy of honor and respect. Equally naturally those who puzzle us with disturbing criticisms and invite us to change our ways are objects of suspicion and readily discredited. Our personal discontent does not ordinarily extend to any critical questioning of the general situation in which we find ourselves. In every age the prevailing conditions of civilization have appeared quite natural and inevitable to those who grew up in them. The cow asks no questions as to how it happens to have a dry stall and a supply of hay. The kitten laps its warm milk from a china saucer, without knowing anything about porcelain; the dog nestles in the corner of a divan with no sense of obligation to the inventors of upholstery and the manufacturers of down pillows. So we humans accept our breakfasts, our trains and telephones and orchestras and movies, our national Constitution, or moral code and standards of manners, with the simplicity and innocence of a pet rabbit. We have absolutely inexhaustible capacities for appropriating what others do for us with no thought of a "thank you". We do not feel called upon to make any least contribution to the merry game ourselves. Indeed, we are usually quite unaware that a game is being played at all.

We have now examined the various classes of thinking which we can readily observe in ourselves and which we have plenty of reasons to believe go on, and always have been going on, in our fellow-men. We can sometimes get quite pure and sparkling examples of all four kinds, but commonly they are so confused and intermingled in our reverie as not to be readily distinguishable. The reverie is a reflection of our longings, exultations, and complacencies, our fears, suspicions, and disappointments. We are chiefly engaged in struggling to maintain our self-respect and in asserting that supremacy which we all crave and which seems to us our natural prerogative. It is not strange, but rather quite inevitable, that our beliefs about what is true and false, good and bad, right and wrong, should be mixed up with the reverie and be influenced by the same considerations which determine its character and course. We resent criticisms of our views exactly as we do of anything else connected with ourselves. Our notions of life and its ideals seem to us to be _our own_ and as such necessarily true and right, to be defended at all costs.

We very rarely consider, however, the process by which we gained our convictions. If we did so, we could hardly fail to see that there was usually little ground for our confidence in them. Here and there, in this department of knowledge or that, some one of us might make a fair claim to have taken some trouble to get correct ideas of, let us say, the situation in Russia, the sources of our food supply, the origin of the Constitution, the revision of the tariff, the policy of the Holy Roman Apostolic Church, modern business organization, trade unions, birth control, socialism, the League of Nations, the excess-profits tax, preparedness, advertising in its social bearings; but only a very exceptional person would be entitled to opinions on all of even these few matters. And yet most of us have opinions on all these, and on many other questions of equal importance, of which we may know even less. We feel compelled, as self-respecting persons, to take sides when they come up for discussion. We even surprise ourselves by our omniscience. Without taking thought we see in a flash that it is most righteous and expedient to discourage birth control by legislative enactment, or that one who decries intervention in Mexico is clearly wrong, or that big advertising is essential to big business and that big business is the pride of the land. As godlike beings why should we not rejoice in our omniscience?

It is clear, in any case, that our convictions on important matters are not the result of knowledge or critical thought, nor, it may be added, are they often dictated by supposed self-interest. Most of them are _pure prejudices_ in the proper sense of that word. We do not form them ourselves. They are the whisperings of "the voice of the herd". We have in the last analysis no responsibility for them and need assume none. They are not really our own ideas, but those of others no more well informed or inspired than ourselves, who have got them in the same careless and humiliating manner as we. It should be our pride to revise our ideas and not to adhere to what passes for respectable opinion, for such opinion can frequently be shown to be not respectable at all. We should, in view of the considerations that have been mentioned, resent our supine credulity. As an English writer has remarked:

"If we feared the entertaining of an unverifiable opinion with the warmth with which we fear using the wrong implement at the dinner table, if the thought of holding a prejudice disgusted us as does a foul disease, then the dangers of man's suggestibility would be turned into advantages."[9]

The purpose of this essay is to set forth briefly the way in which the notions of the herd have been accumulated. This seems to me the best, easiest, and least invidious educational device for cultivating a proper distrust for the older notions on which we still continue to rely.

The "real" reasons, which explain how it is we happen to hold a particular belief, are chiefly historical. Our most important opinions--those, for example, having to do with traditional, religious, and moral convictions, property rights, patriotism, national honor, the state, and indeed all the assumed foundations of society--are, as I have already suggested, rarely the result of reasoned consideration, but of unthinking absorption from the social environment in which we live. Consequently, they have about them a quality of "elemental certitude", and we especially resent doubt or criticism cast upon them. So long, however, as we revere the whisperings of the herd, we are obviously unable to examine them dispassionately and to consider to what extent they are suited to the novel conditions and social exigencies in which we find ourselves to-day.

The "real" reasons for our beliefs, by making clear their origins and history, can do much to dissipate this emotional blockade and rid us of our prejudices and preconceptions. Once this is done and we come critically to examine our traditional beliefs, we may well find some of them sustained by experience and honest reasoning, while others must be revised to meet new conditions and our more extended knowledge. But only after we have undertaken such a critical examination in the light of experience and modern knowledge, freed from any feeling of "primary certitude", can we claim that the "good" are also the "real" reasons for our opinions.

I do not flatter myself that this general show-up of man's thought through the ages will cure myself or others of carelessness in adopting ideas, or of unseemly heat in defending them just because we have adopted them. But if the considerations which I

propose to recall are really incorporated into our thinking and are permitted to establish our general outlook on human affairs, they will do much to relieve the imaginary obligation we feel in regard to traditional sentiments and ideals. Few of us are capable of engaging in creative thought, but some of us can at least come to distinguish it from other and inferior kinds of thought and accord to it the esteem that it merits as the greatest treasure of the past and the only hope of the future.

NOTES.

[2] The poet-clergyman, John Donne, who lived in the time of James I, has given a beautifully honest picture of the doings of a saint's mind: "I throw myself down in my chamber and call in and invite God and His angels thither, and when they are there I neglect God and His angels for the noise of a fly, for the rattling of a coach, for the whining of a door. I talk on in the same posture of praying, eyes lifted up, knees bowed down, as though I prayed to God, and if God or His angels should ask me when I thought last of God in that prayer I cannot tell. Sometimes I find that I had forgot what I was about, but when I began to forget it I cannot tell. A memory of yesterday's pleasures, a fear of to-morrow's dangers, a straw under my knee, a noise in mine ear, a light in mine eye, an anything, a nothing, a fancy, a chimera in my brain troubles me in my prayer."--Quoted by ROBERT LYND, _The Art of Letters_, pp. 46-47.

[5] _Reconstruction in Philosophy_.

[6] _The Place of Science in Modern Civilization._

[7] _Traité de Sociologie Générale, passim._ The author's term "_derivations_" seems to be his precise way of expressing what we have called the "good" reasons, and his "_residus_" correspond to the "real" reasons. He well says, _"L'homme éprouve le besoin de raisonner, et en outre d'étendre un voile sur ses instincts et sur ses sentiments"_--hence, rationalization. (P. 788.) His aim is to reduce sociology to the "real" reasons. (P. 791.)

[8] Recently a re-examination of creative thought has begun as a result of new knowledge which discredits many of the notions formerly held about "reason". See, for example, _Creative Intelligence_, by a group of American philosophic thinkers; John Dewey, _Essays in Experimental Logic_ (both pretty hard books); and Veblen, _The Place of Science in Modern Civilization_. Easier than these and very stimulating are Dewey, _Reconstruction in Philosophy_, and Woodworth, _Dynamic Psychology_.

Nous étions déjà si vieux quand nous sommes nés.--ANATOLE FRANCE.

Simia quam similis, turpissima bestia, nobis?--ENNIUS.

Tous les homines se ressemblent si fort qu'il n'y a point de peuple dont les sottises ne nous doivent faire trembler.--FONTENELLE.

The savage is very close to us indeed, both in his physical and mental make-up and in the forms of his social life. Tribal society is virtually delayed civilization, and the savages are a sort of contemporaneous ancestry.--WILLIAM I. THOMAS.

6. OUR ANIMAL HERITAGE. THE NATURE OF CIVILIZATION

There are four historical layers underlying the minds of civilized men--the animal mind, the child mind, the savage mind, and the traditional civilized mind. We are all animals and never can cease to be; we were all children at our most impressionable age and can never get over the effects of that; our human ancestors have lived in savagery during practically the whole existence of the race, say five hundred thousand or a million years, and the primitive human mind is ever with us; finally, we are all born into an elaborate civilization, the constant pressure of which we can by no means escape.

Each of these underlying minds has its special sciences and appropriate literatures. The new discipline of animal or comparative psychology deals with the first; genetic and analytical psychology with the second;[10] anthropology, ethnology, and comparative religion with the third; and the history of philosophy, science, theology, and literature with the fourth.

We may grow beyond these underlying minds and in the light of new knowledge we may criticize their findings and even persuade ourselves that we have successfully transcended them. But if we are fair with ourselves we shall find that their hold on us is really inexorable. We can only transcend them artificially and precariously and in certain highly favorable conditions. Depression, anger, fear, or ordinary irritation will speedily prove the insecurity of any structure that we manage to rear on our fourfold foundation. Such fundamental and vital preoccupations as religion, love, war, and the chase stir impulses that lie far back in human history and which effectually repudiate the cavilings of ratiocination.

In all our reveries and speculations, even the most exacting, sophisticated, and disillusioned, we have three unsympathetic companions sticking closer than a brother and looking on with jealous impatience--our wild apish progenitor, a playful or peevish baby, and a savage. We may at any moment find ourselves overtaken with a warm sense of camaraderie for any or all of these ancient pals of ours, and experience infinite relief in once more disporting ourselves with them as of yore. Some of us have in addition a Greek philosopher or man of letters in us; some a neoplatonic mystic, some a mediaeval monk, all of whom have learned to make terms with their older playfellows.

Before retracing the way in which the mind as we now find it in so-called intelligent people has been accumulated, we may take time to try to see what civilization is and why man alone can become civilized. For the mind has expanded _pari passu_ with civilization, and without civilization there would, I venture to conjecture, have been no human mind in the commonly accepted sense of that term.

It is now generally conceded by all who have studied the varied evidence and have freed themselves from ancient prejudice that, if we traced back our human lineage far enough we should come to a point where our human ancestors had no civilization and lived a speechless, naked, houseless, fireless, and toolless life, similar to that of the existing primates with which we are zoologically closely connected.

This is one of the most fully substantiated of historical facts and one which we can never neglect in our attempts to explain man as he now is. We are all descended from the lower animals. We are furthermore still animals with not only an animal body, but with an animal mind. And this animal body and animal mind are the original foundations on which even the most subtle and refined intellectual life must perforce rest.

We are ready to classify certain of our most essential desires as brutish--hunger and thirst, the urgence of sleep, and especially sexual longing. We know of blind animal rage, of striking, biting, scratching, howling, and snarling, of irrational fears and ignominious flight. We share our senses with the higher animals, have eyes and ears, noses and tongues much like theirs; heart, lungs, and other viscera, and four limbs. They have brains which stand them in good stead, although their heads are not so good as ours. But when one speaks of the animal mind he should think of still other resemblances between the brute and man.

All animals learn--even the most humble among them may gain something from experience. All the higher animals exhibit curiosity under certain circumstances, and it is this impulse which underlies all human science.

Moreover, some of the higher animals, especially the apes and monkeys, are much given to fumbling and groping. They are restless, easily bored, and spontaneously experimental. They therefore make discoveries quite unconsciously, and form new and sometimes profitable habits of action. If, by mere fumbling, a monkey, cat, or dog happens on a way to secure food, this remunerative line of conduct will "occur" to the creature when he feels hungry. This is what Thorndike has named learning by "trial and error". It might better be called "fumbling and success", for it is the success that establishes the association. The innate curiosity which man shares with his uncivilized zoological relatives is the native impulse that leads to scientific and philosophical speculation, and the original fumbling of a restless ape has become the ordered experimental investigation of modern times. A creature which lacked curiosity and had no tendency to fumble could never have developed civilization and human intelligence.[l0]

But why did man alone of all the animals become civilized? The reason is not far to seek, although it has often escaped writers[11] on the subject. All animals gain a certain wisdom with age and experience, but the experience of one ape does not profit another. Learning among animals below man is _individual_, not _co-operative_ and _cumulative_. One dog does not seem to learn from another, nor one ape from another, in spite of the widespread misapprehension in this regard. Many experiments have been

patiently tried in recent years and it seems to be pretty well established that the monkey learns by _monkeying_, but that he rarely or never appears to _ape_. He does not learn by imitation, because he does not imitate. There may be minor exceptions, but the fact that apes never, in spite of a bodily equipment nearly human, become in the least degree civilized, would seem to show that the accumulation of knowledge or dexterity through imitation is impossible for them.

Man has the various sense organs of the apes and their extraordinary power of manipulation. To these essentials he adds a brain sufficiently more elaborate than that of the chimpanzee to enable him to do something that the ape cannot do--namely, "see" things clearly enough to form associations through imitation.[12]

We can imagine the manner in which man unwittingly took one of his momentous and unprecedented first steps in civilization. Some restless primeval savage might find himself scraping the bark off a stick with the edge of a stone or shell and finally cutting into the wood and bringing the thing to a point. He might then spy an animal and, quite without reasoning, impulsively make a thrust with the stick and discover that it pierced the creature. If he could hold these various elements in the situation, sharpening the stick and using it, he would have made an invention--a rude spear. A particularly acute bystander might comprehend and imitate the process. If others did so and the habit was established in the tribe so that it became traditional and was transmitted to following generations, the process of civilization would have begun--also the process of human learning, which is noticing distinctions and analyzing situations. This simple process of sharpening a stick would involve the "concepts", as the philosophers say, of a tool and bark and a point and an artificial weapon. But ages and ages were to elapse before the botanist would distinguish the various layers which constitute the bark, or successive experimenters come upon the idea of a bayonet to take the place of the spear.

Of late, considerable attention has been given to the question of man's original, uneducated, animal nature; what resources has he as a mere creature independent of any training that results from being brought up in some sort of civilized community? The question is difficult to formulate satisfactorily and still more difficult to answer. But without attempting to list man's supposed natural "instincts" we must assume that civilization is built up on his original propensities and impulses, whatever they may be. These probably remain nearly the same from generation to generation. The idea formerly held that the civilization of our ancestors affects our original nature is almost completely surrendered. _We are all born wholly uncivilized._

If a group of infants from the "best" families of to-day could be reared by apes they would find themselves with no civilization. How long it would take them and their children to gain what now passes for even a low savage culture it is impossible to say. The whole arduous task would have to be performed anew and it might not take place at all, unless conditions were favorable, for man is not naturally a "progressive" animal. He shares the tendency of all other animal tribes just to pull through and reproduce his kind.

Most of us do not stop to think of the conditions of an animal existence. When we read the descriptions of our nature as given by William James, McDougall, or even Thorndike, with all his reservations, we get a rather impressive idea of our possibilities, not a picture of uncivilized life. When we go camping we think that we are deserting civilization, forgetting the sophisticated guides, and the pack horses laden with the most artificial luxuries, many of which would not have been available even a hundred years ago. We lead the simple life with Swedish matches, Brazilian coffee, Canadian bacon, California canned peaches, magazine rifles, jointed fishing rods, and electric flashlights. We are elaborately clothed and can discuss Bergson's views or D. H. Lawrence's last story. We naïvely imagine we are returning to "primitive" conditions because we are living out of doors or sheltered in a less solid abode than usual, and have to go to the brook for water.

But man's original estate was, as Hobbes reflected, "poor, nasty, brutish, and short". To live like an animal is to rely upon one's own quite naked equipment and efforts, and not to mind getting wet or cold or scratching one's bare legs in the underbrush. One would have to eat his roots and seeds quite raw, and gnaw a bird as a cat does. To get the feel of uncivilized life, let us recall how savages with the comparatively advanced degree of culture reached by our native Indian tribes may fall to when really hungry. In the journal of the Lewis and Clark expedition there is an account of the killing of a deer by the white men. Hearing of this, the Shoshones raced wildly to the spot where the warm and bloody entrails had been thrown out

... and ran tumbling over one another like famished dogs. Each tore away whatever part he could, and instantly began to eat it; some had the liver, some the kidneys, and, in short, no part on which we are accustomed to look with disgust escaped them. One of them who had seized about nine feet of the entrails was chewing at one end, while with his hand he was diligently clearing his way by discharging the contents at the other.

Another striking example of simple animal procedure is given in the same journal:

One of the women, who had been leading two of our pack horses, halted at a rivulet about a mile behind and sent on the two horses by a female friend. On inquiring of Cameahwait the cause of her detention, he answered, with great apparent unconcern, that she had just stopped to lie in, but would soon overtake us. In fact, we were astonished to see her in about an hour's time come on with her new-born infant, and pass us on her way to the camp, seemingly in perfect health.

This is the simple life and it was the life of our ancestors before civilization began. It had been the best kind of life possible in all the preceding aeons of the world's history. Without civilization it would be the existence to which all human beings now on the earth would forthwith revert. It is man's starting point.[13]

But what about the mind? What was going on in the heads of our untutored forbears? We are apt to fall into the error of supposing that because they had human brains they must have had somewhat the same kinds of ideas and made the same kind of judgments that we do. Even distinguished philosophers like Descartes and Rousseau made this mistake. This assumption will not stand inspection. To reach back in imagination to the really primitive mind we should of course have to deduct at the start all the knowledge and all the discriminations and classifications that have grown up as a result of our education and our immersion from infancy in a highly artificial environment. Then we must recollect that our primitive ancestor had no words with which to name and tell about things. He was speechless. His fellows knew no more than he did. Each one learned during his lifetime according to his capacity, but no instruction in our sense of the word was possible. What he saw and heard was not what we should have called seeing and hearing. He responded to situations in a blind and impulsive manner, with no clear idea of them. In short, he must have _thought_ much as a wolf or bear does, just as he _lived_ much like them.

We must be on our guard against accepting the prevalent notions of even the animal intellect. An owl may look quite as wise as a judge. A monkey, canary, or collie has bright eyes and seems far more alert than most of the people we see on the street car. A squirrel in the park appears to be looking at us much as we look at him. But he cannot be seeing the same things that we do. We can be scarcely more to him than a vague suggestion of peanuts. And even the peanut has little of the meaning for him that it has for us. A dog perceives a motor-car and may be induced to ride in it, but his idea of it would not differ from that of an ancient carryall, except, mayhap, in an appreciative distinction between the odor of gasoline and that of the stable. Only in times of sickness, drunkenness, or great excitement can we get some hint in ourselves of the impulsive responses in animals free from human sophistication and analysis.

Locke thought that we first got simple ideas and then combined them into more complex conceptions and finally into generalizations or abstract ideas. But this is not the way that man's knowledge arose. He started with mere impressions of general situations, and gradually by his ability to handle things he came upon distinctions, which in time he made clearer by attaching names to them.

We keep repeating this process when we learn about anything. The typewriter is at first a mere mass impression, and only gradually and imperfectly do most of us distinguish certain of its parts; only the men who made it are likely to realize its full complexity by noting and assigning names to all the levers, wheels, gears, bearings, controls, and adjustments. John Stuart Mill thought that the chief function of the mind was making inferences. But making distinctions is equally fundamental--seeing that there are really many things where only one was at first apparent. This process of analysis has been man's supreme accomplishment. This is what has made his mind grow.

The human mind has then been built up through hundreds of thousands of years by gradual accretions and laborious accumulations. Man started at a cultural zero and had to find out everything for himself; or rather a very small number of peculiarly restless and adventurous spirits did the work. The great mass of humanity has never had anything to do with the increase of intelligence except to act as its medium of transfusion and perpetuation. Creative intelligence is confined to the very few, but the many can thoughtlessly avail themselves of the more obvious achievements of those who are exceptionally highly endowed.

Even an ape will fit himself into a civilized environment. A chimpanzee can be taught to relish bicycles, roller skates, and cigarettes which he could never have devised, cannot understand, and could not reproduce. Even so with mankind. Most of us could not have devised, do not understand, and consequently could not reproduce any of the everyday conveniences and luxuries which surround us. Few of us could make an electric light, or write a good novel to read by it, or paint a picture for it to shine upon.

Professor Giddings has recently asked the question, Why has there been any history?[14] Why, indeed, considering that the "good" and "respectable" is usually synonymous with the ancient routine, and the old have always been there to repress the young? Such heavy words of approval as "venerable", "sanctified", and "revered" all suggest great age rather than fresh discoveries. As it was in

the beginning, is now and ever shall be, is our protest against being disturbed, forced to think or to change our habits. So history, _namely change_, has been mainly due to a small number of "seers",--really gropers and monkeyers--whose native curiosity outran that of their fellows and led them to escape here and there from the sanctified blindness of their time.

The seer is simply an example of a _variation_ biologically, such as occurs in all species of living things, both animal and vegetable. But the unusually large roses in our gardens, the swifter horses of the herd, and the cleverer wolf in the pack have no means of influencing their fellows as a result of their peculiar superiority. Their offspring has some chance of sharing to some degree this pre-eminence, but otherwise things will go on as before. Whereas the singular variation represented by a St. Francis, a Dante, a Voltaire, or a Darwin may permanently, and for ages to follow change somewhat the character and ambitions of innumerable inferior members of the species who could by no possibility have originated anything for themselves, but who can, nevertheless, suffer some modification as a result of the teachings of others. This illustrates the magical and unique workings of culture and creative intelligence in mankind.[15]

We have no means of knowing when or where the first contribution to civilization was made, and with it a start on the arduous building of the mind. There is some reason to think that the men who first transcended the animal mind were of inferior mental capacity to our own, but even if man, emerging from his animal estate, had had on the average quite as good a brain as those with which we are now familiar, I suspect that the extraordinarily slow and hazardous process of accumulating modern civilization would not have been greatly shortened. Mankind is lethargic, easily pledged to routine, timid, suspicious of innovation. That is his nature. He is only artificially, partially, and very recently "progressive". He has spent almost his whole existence as a savage hunter, and in that state of ignorance he illustrated on a magnificent scale all the inherent weaknesses of the human mind.

7. OUR SAVAGE MIND

Should we arrange our present beliefs and opinions on the basis of their age, we should find that some of them were very, very old, going back to primitive man; others were derived from the Greeks; many more of them would prove to come directly from the Middle Ages; while certain others in our stock were unknown until natural science began to develop in a new form about three hundred years ago. The idea that man has a soul or double which survives the death of the body is very ancient indeed and is accepted by most savages. Such confidence as we have in the liberal arts, metaphysics, and formal logic goes back to the Greek thinkers; our religious ideas and our standards of sexual conduct are predominantly mediaeval in their presuppositions; our notions of electricity and disease germs are, of course, recent in origin, the result of painful and prolonged research which involved the rejection of a vast number of older notions sanctioned by immemorial acceptance.

In general, those ideas which are still almost universally accepted in regard to man's nature, his proper conduct, and his relations to God and his fellows are far more ancient and far less critical than those which have to do with the movement of the stars, the stratification of the rocks and the life of plants and animals.

Nothing is more essential in our attempt to escape from the bondage of consecrated ideas than to get a vivid notion of human achievement in its proper historical perspective. In order to do this let us imagine the whole gradual and laborious attainments of mankind compressed into the compass of a single lifetime. Let us assume that a single generation of men have in fifty years managed to accumulate all that now passes for civilization. They would have to start, as all individuals do, absolutely uncivilized, and their task would be to recapitulate what has occupied the race for, let us guess, at least five hundred thousand years. Each year in the life of a generation would therefore correspond to ten thousand years in the progress of the race.

On this scale it would require forty-nine years to reach a point of intelligence which would enable our self-taught generation to give up their ancient and inveterate habits of wandering hunters and settle down here and there to till the ground, harvest their crops, domesticate animals, and weave their rough garments. Six months later, or half through the fiftieth year, some of them, in a particularly favorable situation, would have invented writing and thus established a new and wonderful means of spreading and perpetuating civilization. Three months later another group would have carried literature, art, and philosophy to a high degree of refinement and set standards for the succeeding weeks. For two months our generation would have been living under the blessings of Christianity; the printing press would be but a fortnight old and they would not have had the steam engine for quite a week. For two or three days they would have been hastening about the globe in steamships and railroad trains, and only yesterday would they have come upon the magical possibilities of electricity. Within the last few hours they would have learned to sail in the air and beneath the waters, and have forthwith applied their newest discoveries to the prosecution of a magnificent war on the scale befitting their high ideals and new resources. This is not so strange, for only a week ago they were burning and burying alive those

who differed from the ruling party in regard to salvation, eviscerating in public those who had new ideas of government, and hanging old women who were accused of traffic with the devil. All of them had been no better than vagrant savages a year before. Their fuller knowledge was altogether too recent to have gone very deep, and they had many institutions and many leaders dedicated to the perpetuation of outworn notions which would otherwise have disappeared. Until recently changes had taken place so slowly and so insensibly that only a very few persons could be expected to realize that not a few of the beliefs that were accepted as eternal verities were due to the inevitable misunderstandings of a savage.

In speaking of the "savage" or "primitive mind", we are, of course, using a very clumsy expression. We shall employ the term, nevertheless, to indicate the characteristics of the human mind when there was as yet no writing, no organized industry or mechanical arts, no money, no important specialization of function except between the sexes, no settled life in large communities. The period so described covers all but about five or six thousand of the half million to a million years that man has existed on the earth.

There are no chronicles to tell us the story of those long centuries. Some inferences can be made from the increasing artfulness and variety of the flint weapons and tools which we find. But the stone weapons which have come down to us, even in their crudest forms (eoliths), are very far from representing the earliest achievements of man in the accumulation of culture. Those dim, remote cycles must have been full of great, but inconspicuous, originators who laid the foundations of civilization in discoveries and achievements so long taken for granted that we do not realize that they ever had to be made at all.

Since man is descended from less highly endowed animals, there must have been a time when the man-animal was in a state of animal ignorance. He started with no more than an ape is able to know. He had to learn everything for himself, as he had no one to teach him the tricks that apes and children can be taught by sophisticated human beings. He was necessarily self-taught, and began, as we have seen, in a state of ignorance beyond anything we can readily conceive. He lived naked and speechless in the woods, or wandered over the plains without artificial shelter or any way of cooking his food. He subsisted on raw fruit, berries, roots, insects, and such animals as he could strike down or pick up dead. His mind must have corresponded with his brutish state. He must at the first have learned just as his animal relatives learn--by fumbling and by forming accidental associations. He had impulses and such sagacity as he individually derived from experience, but no heritage of knowledge accumulated by the group and transmitted by education. This heritage had to be constructed on man's potentialities.

Of mankind in this extremely primitive condition we have no traces. There could indeed be no traces. All savages of the present day or of whom we have any record represent a relatively highly developed traditional culture, with elaborate languages, myths, and well-established artificial customs, which it probably took hundreds of thousands of years to accumulate. Man in "a state of nature" is only a presupposition, but a presupposition which is forced upon us by compelling evidence, conjectural and inferential though it is.

On a geological time scale we are still close to savagery, and it is inevitable that the ideas and customs and sentiments of savagery should have become so ingrained that they may have actually affected man's nature by natural selection through the survival of those who most completely adjusted themselves to the uncritical culture which prevailed. But in any case it is certain, as many anthropologists have pointed out, that customs, savage ideas, and primitive sentiments have continued to form an important part of our own culture down even to the present day. We are met thus with the necessity of reckoning with this inveterate element in our present thought and customs. Much of the data that we have regarding primitive man has been accumulated in recent times, for the most part as a result of the study of simple peoples. These differ greatly in their habits and myths, but some salient common traits emerge which cast light on the spontaneous workings of the human mind when unaffected by the sophistications of a highly elaborate civilization.

At the start man had to distinguish himself from the group to which he belonged and say, "I am I." This is not an idea given by nature.[16] There are evidences that the earlier religious notions were not based on individuality, but rather on the "virtue" which objects had--that is, their potency to do things. Only later did the animistic belief in the personalities of men, animals, and the forces of nature appear. When man discovered his own individuality he spontaneously ascribed the same type of individuality and purpose to animals and plants, to the wind and the thunder.

This exhibits one of the most noxious tendencies of the mind--namely, personification. It is one of the most virulent enemies of clear thinking. We speak of the Spirit of the Reformation or the Spirit of Revolt or the Spirit of Disorder and Anarchy. The papers tell us that, "Berlin says", "London says", "Uncle Sam so decides", "John Bull is disgruntled". Now, whether or no there are such things as

spirits, Berlin and London have no souls, and Uncle Sam is as mythical as the great god Pan. Sometimes this regression to the savage is harmless, but when a newspaper states that "Germany is as militaristic as ever", on the ground that some insolent Prussian lieutenant says that German armies will occupy Paris within five years, we have an example of animism which in a society farther removed from savagery than ours might be deemed a high crime and misdemeanor. Chemists and physicians have given up talking of spirits, but in discussing social and economic questions we are still victimized by the primitive animistic tendencies of the mind.

The dream has had a great influence in the building up of the mind. Our ideas, especially our religious beliefs, would have had quite another history had men been dreamless. For it was not merely his shadow and his reflection in the water that led man to imagine souls and doubles, but pre-eminently the visions of the night. As his body lay quiet in sleep he found himself wandering in distant places.

Sometimes he was visited by the dead. So it was clear that the body had an inhabitant who was not necessarily bound to it, who could desert it from time to time during life, and who continued to exist and interest itself in human affairs after death.

Whole civilizations and religions and vast theological speculations have been dominated by this savage inference. It is true that in very recent times, since Plato, let us say, other reasons have been urged for believing in the soul and its immortality, but the idea appears to have got its firm footing in savage logic. It is a primitive inference, however it may later have been revised, rationalized, and ennobled.

The taboo--the forbidden thing--of savage life is another thing very elementary in man's make-up. He had tendencies to fall into habits and establish inhibitions for reasons that he either did not discover or easily forgot. These became fixed and sacred to him and any departure from them filled him with dread. Sometimes the prohibition might have some reasonable justification, sometimes it might seem wholly absurd and even a great nuisance, but that made no difference in its binding force. For example, pork was taboo among the ancient Hebrews--no one can say why, but none of the modern justifications for abstaining from that particular kind of meat would have counted in early Jewish times. It is not improbable that it was the original veneration for the boar and not an abhorrence of him that led to the prohibition.

The modern "principle" is too often only a new form of the ancient taboo, rather than an enlightened rule of conduct. The person who justifies himself by saying that he holds certain beliefs, or acts in a certain manner "on principle", and yet refuses to examine the basis and expediency of his principle, introduces into his thinking and conduct an irrational, mystical element similar to that which characterized savage prohibitions. Principles unintelligently urged make a great deal of trouble in the free consideration of social readjustment, for they are frequently as recalcitrant and obscurantist as the primitive taboo, and are really scarcely more than an excuse for refusing to reconsider one's convictions and conduct. The psychological conditions lying back of both taboo and this sort of principle are essentially the same.

We find in savage thought a sort of intensified and generalized taboo in the classification of things as clean and unclean and in the conceptions of the sacred. These are really expressions of profound and persistent traits in the uncritical mind and can only be overcome by carefully cultivated criticism. They are the result of our natural timidity and the constant dread lest we find ourselves treading on holy (_i. e._, dangerous) ground.[17] When they are intrenched in the mind we cannot expect to think freely and fairly, for they effectually stop argument. If a thing is held to be sacred it is the center of what may be called a defense complex, and a reasonable consideration of the merits of the case will not be tolerated. When an issue is declared to be a "moral" one--for example, the prohibition of strong drink--an emotional state is implied which makes reasonable compromise and adjustment impossible; for "moral" is a word on somewhat the same plane as "sacred", and has much the same qualities and similar effects on thinking. In dealing with the relations of the sexes the terms "pure" and "impure" introduce mystic and irrational moods alien to clear analysis and reasonable readjustments. Those who have studied the characteristics of savage life are always struck by its deadly conservatism, its needless restraints on the freedom of the individual, and its hopeless routine. Man, like plants and animals in general, tends to go on from generation to generation, living as nearly as may be the life of his forbears. Changes have to be forced upon him by hard experience, and he is ever prone to find excuses for slipping back into older habits, for these are likely to be simpler, less critical, more spontaneous--more closely akin, in short, to his animal and primitive promptings. One who prides himself to-day on his conservatism, on the ground that man is naturally an anarchic and disorderly creature who is held in check by the far-seeing Tory, is almost exactly reversing the truth. Mankind is conservative by nature and readily generates restraints on himself and obstacles to change which have served to keep him in a state of savagery during almost his whole existence on the earth, and which still perpetuate all sorts of primitive barbarism in modern society. The conservative "on principle" is therefore a most

unmistakably primitive person in his attitude. His only advance beyond the savage mood lies in the specious reasons he is able to advance for remaining of the same mind. What we vaguely call a "radical" is a very recent product due to altogether exceptional and unprecedented circumstances.

NOTES.

[10] It is impossible to discuss here the results which a really honest study of child psychology promises. The relations of the child to his parents and elders in general and to the highly artificial system of censorship and restraints which they impose in their own interests on his natural impulses must surely have a permanent influence on the notions he continues to have as an adult in regard to his "superiors" and the institutions and _mores_ under which he is called to live. Attempts in later life to gain intellectual freedom can only be successful if one comes to think of the childish origin of a great part of his "real" reasons.

[11] Clarence Day in _Our Simian World_ discusses with delightful humor the effects of our underlying simian temperament on the conduct of life.

[12] The word "imitation" is commonly used very loosely. The real question is does an animal, or even man himself, tend to make movements or sounds made by their fellow-creatures in their presence It seems to be made out now that even monkeys are not imitative in that sense and that man himself has no general inclination to do over what he sees being done. Pray, if you doubt this, note how many things you see others doing that you have no inclination to imitate! For an admirable summary see Thorndike, E. L., _The Original Nature of Man_, 1913, pp. 108 ff.

[13] "If the earth were struck by one of Mr. Wells's comets, and if, in consequence, every human being now alive were to lose all the knowledge and habits which he had acquired from preceding generations (though retaining unchanged all his own powers of invention and memory and habituation) nine tenths of the inhabitants of London or New York would be dead in a month, and 99 per cent of the remaining tenth would be dead in six months. They would have no language to express their thoughts, and no thoughts but vague reverie. They could not read notices, or drive motors or horses. They would wander about, led by the inarticulate cries of a few naturally dominant individuals, drowning themselves, as thirst came on, in hundreds at the riverside landing places, looting those shops where the smell of decaying food attracted them, and perhaps at the end stumbling on the expedient of cannibalism. Even in the country districts men could not invent, in time to preserve their lives, methods of growing food, or taming animals, or making fire, or so clothing themselves as to endure a Northern winter."--GRAHAM WALLAS, _Our Social Heritage_, p. 16. Only the very lowest of savages might possibly pull through if culture should disappear.

[14] "A Theory of History", Political Science Quarterly, December, 1920. He attributes history to the adventurers.

[15] Count Korzybski in his _Manhood of Humanity_ is so impressed by the uniqueness and undreamed possibilities of human civilization and man's "time-binding" capacity that he declares that it is a gross and misleading error to regard man as an animal at all. Yet he is forced sadly to confess that man continues all too often to operate on an animal or "space-binding" plan of life. His aim and outlook are, however, essentially the same as those of the present writer. His method of approach will appeal especially to those who are wont to deal with affairs in the spirit of the mathematician and engineer. He is quite right in thinking that man has hitherto had little conception of his peculiar prerogatives and unlimited opportunities for betterment.

[16] In the beginning, too, man did not know how children came about, for it was not easy to connect a common impulsive act with the event of birth so far removed in time. The tales told to children still are reminiscences of the mythical explanations which our savage ancestors advanced to explain the arrival of the infant. Consequently, all popular theories of the origin of marriage and the family based on the assumption of conscious paternity are outlawed.

[17] Lucretius warns the reader not to be deterred from considering the evils wrought by religion by the fear of treading on "the unholy grounds of reason and in the path of sin".--_De Rer. Nat_. i, 80 ff.

IV

Thereupon one of the Egyptian priests, who was of a very great age, said: O Solon, Solon, you Hellenes are but children, and there was never an old man who was a Hellene. Solon in return asked him what he meant. I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition; nor any science which is hoary with age. --PLATO'S

Timaeus, 22 (Jowett's translation).

The truth is that we are far more likely to underrate the originality of the Greeks than to exaggerate it, and we do not always remember the very short time they took to lay down the lines scientific inquiry has followed ever since.--JOHN BURNET.

8. BEGINNING OF CRITICAL THINKING

The Egyptians were the first people, so far as we know, who invented a highly artificial method of writing, about five thousand years ago, and began to devise new arts beyond those of their barbarous predecessors. They developed painting and architecture, navigation, and various ingenious industries; they worked in glass and enamels and began the use of copper, and so introduced metal into human affairs. But in spite of their extraordinary advance in practical, matter-of-fact knowledge they remained very primitive in their beliefs. The same may be said of the peoples of Mesopotamia and of the western Asiatic nations in general--just as in our own day the practical arts have got a long start compared with the revision of beliefs in regard to man and the gods. The peculiar opinions of the Egyptians do not enter directly into our intellectual heritage, but some of the fundamental religious ideas which developed in western Asia have, through the veneration for the Hebrew Scriptures, become part and parcel of our ways of thinking. To the Greeks, however, we are intellectually under heavy obligation. The literature of the Greeks, in such fragments as escaped destruction, was destined, along with the Hebrew Scriptures, to exercise an incalculable influence in the formation of our modern civilized minds. These two dominating literary heritages originated about the same time--day before yesterday--viewed in the perspective of our race's history. Previous to the Greek civilization books had played no great part in the development, dissemination, and transmission of culture from generation to generation. Now they were to become a cardinal force in advancing and retarding the mind's expansion.

It required about a thousand years for the Greek shepherds from the pastures of the Danube to assimilate the culture of the highly civilized regions in which they first appeared as barbarian destroyers. They accepted the industrial arts of the eastern Mediterranean, adopted the Phoenician alphabet, and emulated the Phoenician merchant. By the seventh century before our era they had towns, colonies, and commerce, with much stimulating running hither and thither. We get our first traces of new intellectual enterprise in the Ionian cities, especially Miletus, and in the Italian colonies of the Greeks. Only later did Athens become the unrivaled center in a marvelous outflowering of the human intelligence.

It is a delicate task to summarize what we owe to the Greeks. Leaving aside their supreme achievements in literature and art, we can consider only very briefly the general scope and nature of their thinking as it relates most closely to our theme.

The chief strength of the Greeks lay in their freedom from hampering intellectual tradition. They had no venerated classics, no holy books, no dead languages to master, no authorities to check their free speculation. As Lord Bacon reminds us, they had no antiquity of knowledge and no knowledge of antiquity. A modern classicist would have been a forlorn outlander in ancient Athens, with no books in a forgotten tongue, no obsolete inflections to impose upon reluctant youth. He would have had to use the everyday speech of the sandal-maker and fuller.

For a long time no technical words were invented to give aloofness and seeming precision to philosophic and scientific discussion. Aristotle was the first to use words incomprehensible to the average citizen. It was in these conditions that the possibilities of human criticism first showed themselves. The primitive notions of man, of the gods, and of the workings of natural forces began to be overhauled on an entirely new scale. Intelligence developed rapidly as exceptionally bold individuals came to have their suspicions of simple, spontaneous, and ancient ways of looking at things. Ultimately there came men who professed to doubt everything.

As Abelard long after put it, "By doubting we come to question, and by seeking we may come upon the truth." But man is by nature credulous. He is victimized by first impressions, from which he can only escape with great difficulty. He resents criticism of accepted and familiar ideas as he resents any unwelcome disturbance of routine. So criticism is against nature, for it conflicts with the smooth workings of our more primitive minds, those of the child and the savage.

It should not be forgotten that the Greek people were no exception in this matter. Anaxagoras and Aristotle were banished for thinking as they did; Euripides was an object of abhorrence to the conservative of his day, and Socrates was actually executed for his godless teachings. The Greek thinkers furnish the first instance of intellectual freedom, of the "self-detachment and self-abnegating vigor of criticism" which is most touchingly illustrated in the honest "know-nothingism" of Socrates. _They discovered skepticism in the higher and proper significance of the word, and this was their supreme contribution to human

thought_.

One of the finest examples of early Greek skepticism was the discovery of Xenophanes that man created the gods in his own image. He looked about him, observed the current conceptions of the gods, compared those of different peoples, and reached the conclusion that the way in which a tribe pictured its gods was not the outcome of any knowledge of how they really looked and whether they had black eyes or blue, but was a reflection of the familiarly human. If the lions had gods they would have the shape of their worshipers.

No more fundamentally shocking revelation was ever made than this, for it shook the very foundations of religious belief. The home life on Olympus as described in Homer was too scandalous to escape the attention of the thoughtful, and no later Christian could have denounced the demoralizing influence of the current religious beliefs in hotter indignation than did Plato. To judge from the reflection of Greek thought which we find in Lucretius and Cicero, none of the primitive religious beliefs escaped mordant criticism.

The second great discovery of the Greek thinkers was _metaphysics_. They did not have the name, which originated long after in quite an absurd fashion,[18] but they reveled in the thing. Nowadays metaphysics is revered by some as our noblest effort to reach the highest truth, and scorned by others as the silliest of wild-goose chases. I am inclined to rate it, like smoking, as a highly gratifying indulgence to those who like it, and, as indulgences go, relatively innocent. The Greeks found that the mind could carry on an absorbing game with itself. We all engage in reveries and fantasies of a homely, everyday type, concerned with our desires or resentments, but the fantasy of the metaphysician busies itself with conceptions, abstractions, distinctions, hypotheses, postulates, and logical inferences. Having made certain postulates or hypotheses, he finds new conclusions, which he follows in a seemingly convincing manner. This gives him the delightful emotion of pursuing Truth, something as the simple man pursues a maiden. Only Truth is more elusive than the maiden and may continue to beckon her follower for long years, no matter how gray and doddering he may become.

Let me give two examples of metaphysical reasoning.[19] We have an idea of an omnipotent, all-good, and perfect being. We are incapable, knowing as we do only imperfect things, of framing such an idea for ourselves, so it must have been given us by the being himself. And perfection must include existence, so God must exist. This was good enough for Anselm and for Descartes, who went on to build a whole closely concatenated philosophical system on this foundation. To them the logic seemed irrefragable; to the modern student of comparative religion, even to Kant, himself a metaphysician, there was nothing whatsoever in it but an illustration of the native operations of a mind that has made a wholly gratuitous hypothesis and is victimized by an orderly series of spontaneous associations.

A second example of metaphysics may be found in the doctrines of the Eleatic philosophers, who early appeared in the Greek colonies on the coast of Italy, and thought hard about space and motion. Empty space seemed as good as nothing, and, as nothing could not be said to exist, space must be an illusion; and as motion implied space in which to take place, there could be no motion. So all things were really perfectly compact and at rest, and all our impressions of change were the illusions of the thoughtless and the simple-minded. Since one of the chief satisfactions of the metaphysicians is to get away from the welter of our mutable world into a realm of assurance, this doctrine exercised a great fascination over many minds. The Eleatic conviction of unchanging stability received a new form in Plato's doctrine of eternal "ideas", and later developed into the comforting conception of the "Absolute", in which logical and world-weary souls have sought refuge from the times of Plotinus to those of Josiah Royce.

But there was one group of Greek thinkers whose general notions of natural operations correspond in a striking manner to the conclusions of the most recent science. These were the Epicureans. Democritus was in no way a modern experimental scientist, but he met the Eleatic metaphysics with another set of speculative considerations which happened to be nearer what is now regarded as the truth than theirs. He rejected the Eleatic decisions against the reality of space and motion on the ground that, since motion obviously took place, the void must be a reality, even if the metaphysician could not conceive it. He hit upon the notion that all things were composed of minute, indestructible particles (or atoms) of fixed kinds. Given motion and sufficient time, these might by fortuitous concourse make all possible combinations. And it was one of these combinations which we call the world as we find it. For the atoms of various shapes were inherently capable of making up all material things, even the soul of man and the gods themselves. There was no permanence anywhere; all was no more than the shifting accidental and fleeting combinations of the permanent atoms of which the cosmos was composed. This doctrine was accepted by the noble Epicurus and his school and is delivered to us in the immortal poem of Lucretius "On the Nature of Things".

The Epicureans believed the gods to exist because, like Anselm and Descartes, they thought we had an innate idea of them. But the divine beings led a life of elegant ease and took no account of man; neither his supplications, nor his sweet-smelling sacrifices, nor his blasphemies, ever disturbed their calm. Moreover, the human soul was dissipated at death. So the Epicureans flattered themselves that they had delivered man from his two chief apprehensions, the fear of the gods and the fear of death. For, as Lucretius says, he who understands the real nature of things will see that both are the illusions of ignorance. Thus one school of Greek thinkers attained to a complete rejection of religious beliefs in the name of natural science.

9. INFLUENCE OF PLATO AND ARISTOTLE

In Plato we have at once the skepticism and the metaphysics of his contemporaries. He has had his followers down through the ages, some of whom carried his skepticism to its utmost bounds, while others availed themselves of his metaphysics to rear a system of arrogant mystical dogmatism. He put his speculations in the form of dialogues --ostensible discussions in the market place or the houses of philosophic Athenians. The Greek word for logic is dialectic, which really means "discussion". argumentation in the interest of fuller analysis, with the hope of more critical conclusions. The dialogues are the drama of his day, employed in Plato's magical hand as a vehicle of discursive reason. Of late we have in Ibsen, Shaw, Brieux, and Galsworthy the old expedient applied to the consideration of social perplexities and contradictions. The dialogue is indecisive in its outcome. It does not lend itself to dogmatic conclusions and systematic presentation, but exposes the intricacy of all important questions and the inevitable conflict of views, which may seem altogether irreconcilable. We much need to encourage and elaborate opportunities for profitable discussion to-day. We should revert to the dialectic of the Athenian agora and make it a chosen instrument for clarifying, co-ordinating and directing our co-operative thinking.

Plato's indecision and urbane fair-mindedness is called irony. Now irony is seriousness without solemnity. It assumes that man is a serio-comic animal, and that no treatment of his affairs can be appropriate which gives him a consistency and dignity which he does not possess. He is always a child and a savage. He is the victim of conflicting desires and hidden yearnings. He may talk like a sentimental idealist and act like a brute. The same person will devote anxious years to the invention of high explosives and then give his fortune to the promotion of peace. We devise the most exquisite machinery for blowing our neighbors to pieces and then display our highest skill and organization in trying to patch together such as offer hope of being mended. Our nature forbids us to make a definite choice between the machine gun and the Red Cross nurse. So we use the one to keep the other busy. Human thought and conduct can only be treated broadly and truly in a mood of tolerant irony. It belies the logical precision of the long-faced, humorless writer on politics and ethics, whose works rarely deal with man at all, but are a stupid form of metaphysics.

Plato made terms with the welter of things, but sought relief in the conception of supernal models, eternal in the heavens, after which all things were imperfectly fashioned. He confessed that he could not bear to accept a world which was like a leaky pot or a man running at the nose. In short, he ascribed the highest form of existence to ideals and abstractions. This was a new and sophisticated republication of savage animism. It invited lesser minds than his to indulge in all sorts of noble vagueness and impertinent jargon which continue to curse our popular discussions of human affairs. He consecrated one of the chief foibles of the human mind and elevated it to a religion.

Ever since his time men have discussed the import of names. Are there such things as love, friendship, and honor, or are there only lovely things, friendly emotions in this individual and that, deeds which we may, according to our standards, pronounce honorable or dishonorable? If you believe in beauty, truth, and love _as such_ you are a Platonist. If you believe that there are only individual instances and illustrations of various classified emotions and desires and acts, and that abstractions are only the inevitable categories of thought, you would in the Middle Ages have been called a "nominalist".

This matter merits a long discussion, but one can test any book or newspaper editorial at his leisure and see whether the writer puts you off with abstractions--Americanism, Bolshevism, public welfare, liberty, national honor, religion, morality, good taste, rights of man, science, reason, error--or, on the other hand, casts some light on actual human complications. I do not mean, of course, that we can get along without the use of abstract and general terms in our thinking and speaking, but we should be on our constant guard against viewing them as forces and attributing to them the vigor of personality. Animism is, as already explained, a pitfall which is always yawning before us and into which we are sure to plunge unless we are ever watchful. Platonism is its most amiable and complete disguise.

Previous to Aristotle, Greek thought had been wonderfully free and elastic. It had not settled into compartments or assumed an educational form which would secure its unrevised transmission from teacher to student. It was not gathered together in systematic

treatises. Aristotle combined the supreme powers of an original and creative thinker with the impulses of a textbook writer. He loved order and classification. He supplied manuals of Ethics, Politics, Logic, Psychology, Physics, Metaphysics, Economics, Poetics, Zoölogy, Meteorology, Constitutional Law, and God only knows what not, for we do not have by any means all the things he wrote. And he was equally interested, and perhaps equally capable, in all the widely scattered fields in which he labored. And some of his manuals were so overwhelming in the conclusiveness of their reasoning, so all-embracing in their scope, that the mediaeval universities may be forgiven for having made them the sole basis of a liberal education and for imposing fines on those who ventured to differ from "The Philosopher". He seemed to know everything that could be known and to have ordered all earthly knowledge in an inspired codification which would stand the professors in good stead down to the day of judgment.

Aristotle combined an essentially metaphysical taste with a preternatural power of observation in dealing with the workings of nature. In spite of his inevitable mistakes, which became the curse of later docile generations, no other thinker of whom we have record can really compare with him in the distinction and variety of his achievements. It is not his fault that posterity used his works to hamper further progress and clarification. He is the father of book knowledge and the grandfather of the commentator.

After two or three hundred years of talking in the market place and of philosophic discussions prolonged until morning, such of the Greeks as were predisposed to speculation had thought all the thoughts and uttered all the criticisms of commonly accepted beliefs and of one another that could by any possibility occur to those who had little inclination to fare forth and extend their knowledge of the so-called realities of nature by painful and specialized research and examination. This is to me the chief reason why, except for some advances in mathematics, astronomy, geography, and the refinements of scholarship, the glorious period of the Greek mind is commonly and rightfully assumed to have come to an end about the time of Aristotle's death. Why did the Greeks not go on, as modern scientists have gone on, with vistas of the unachieved still ahead of them?

In the first place, Greek civilization was founded on slavery and a fixed condition of the industrial arts. The philosopher and scholar was estopped from fumbling with those everyday processes that were associated with the mean life of the slave and servant. Consequently there was no one to devise the practical apparatus by which alone profound and ever-increasing knowledge of natural operations is possible. The mechanical inventiveness of the Greeks was slight, and hence they never came upon the lens; they had no microscope to reveal the minute, no telescope to attract the remote; they never devised a mechanical timepiece, a thermometer, nor a barometer, to say nothing of cameras and spectroscopes. Archimedes, it is reported, disdained to make any record of his ingenious devices, for they were unworthy the noble profession of a philosopher. Such inventions as were made were usually either toys or of a heavy practical character. So the next great step forward in the extension of the human mind awaited the disappearance of slavery and the slowly dawning suspicion, and final repudiation, of the older metaphysics, which first became marked some three hundred years ago.

NOTES.

[18] When in the time of Cicero the long-hidden works of Aristotle were recovered and put into the hands of Andronicus of Rhodes to edit, he found certain fragments of highly abstruse speculation which he did not know what to do with. So he called them "addenda to the Physics"--_Ta meta ta physica_. These fragments, under the caption "Metaphysica", became the most revered of Aristotle's productions, his "First Philosophy", as the Scholastics were wont to call it.

[19] John Dewey deduces metaphysics from man's original reverie and then shows how in time it became a solemn form of rationalizing current habits and standards. _Reconstruction in Philosophy_, lectures i-ii. It is certainly surprising how few philosophical writers have ever reached other than perfectly commonplace conclusions in regard to practical "morality".

* * * * *

V

And God made the two great lights; the greater light to rule the day, and the lesser light to rule the night; he made the stars also. And God set them in the firmament of heaven to give light upon the earth.

And God said, Let the earth bring forth the living creature after its kind, cattle and creeping thing, and beast of the earth after its kind: and it was so.

And God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth.--Gen. i.

Ibi vacabimus et videbimus, videbimus et amabimus, amabimus et laudabimus. Ecce quod erit in fine sine fine. Nam quis alius noster est finis nisi pervenire ad regnum, cuius nullus est finis?--AUGUSTINE.

10. ORIGIN OF THE MEDIAEVAL CIVILIZATION

In the formation of what we may call our historical mind--namely, that modification of our animal and primitive outlook which has been produced by men of exceptional intellectual venturesomeness--the Greeks played a great part. We have seen how the Greek thinkers introduced for the first time highly subtle and critical ways of scrutinizing old beliefs, and, how they disabused their minds of many an ancient and naïve mistake. But our current ways of thinking are not derived directly from the Greeks; we are separated from them by the Roman Empire and the Middle Ages. When we think of Athens we think of the Parthenon and its frieze, of Sophocles and Euripides, of Socrates and Plato and Aristotle, of urbanity and clarity and moderation in all things. When we think of the Middle Ages we find ourselves in a world of monks, martyrs, and miracles, of popes and emperors, of knights and ladies; we remember Gregory the Great, Abélard, and Thomas Aquinas --and very little do these reminiscences have in common with those of Hellas.

It was indeed a different world, with quite different fundamental presuppositions. Marvelous as were the achievements of the Greeks in art and literature, and ingenious as they were in new and varied combinations of ideas, they paid too little attention to the common things of the world to devise the necessary means of penetrating its mysteries. They failed to come upon the lynx-eyed lens, or other instruments of modern investigation, and thus never gained a godlike vision of the remote and the minute. Their critical thought was consequently not grounded in experimental or applied science, and without that the western world was unable to advance or even long maintain their high standards of criticism.

After the Hellenes were absorbed into the vast Roman Empire critical thought and creative intelligence--rare and precarious things at best--began to decline, at first slowly and then with fatal rapidity and completeness. Moreover, new and highly uncritical beliefs and modes of thought became popular. They came from the Near East --Mesopotamia, Syria, Egypt, and Asia Minor--and largely supplanted the critical traditions of the great schools of Greek philosophy. The Stoic and Epicurean dogmas had lost their freshness. The Greek thinkers had all agreed in looking for salvation through intelligence and knowledge. But eloquent leaders arose to reveal a new salvation, and over the portal of truth they erased the word "Reason" and wrote "Faith" in its stead; and the people listened gladly to the new prophets, for it was necessary only _to believe_ to be saved, and believing is far easier than thinking.

It was religious and mystical thought which, in contrast to the secular philosophy of the Greeks and the scientific thought of our own day, dominated the intellectual life of the Middle Ages.

Before considering this new phase through which the human mind was to pass it is necessary to guard against a common misapprehension in the use of the term "Middle Ages". Our historical textbooks usually include in that period the happenings between the dissolution of the Roman Empire and the voyages of Columbus or the opening of the Protestant revolt. To the student of intellectual history this is unfortunate, for the simple reason that almost all the ideas and even institutions of the Middle Ages, such as the church and monasticism and organized religious intolerance, really originated in the late Roman Empire. Moreover, the intellectual revolution which has ushered in the thought of our day did not get well under way until the seventeenth century. So one may say that medieval thought began long before the accepted beginning of the Middle Ages and persisted a century or so after they are ordinarily esteemed to have come to an end. We have to continue to employ the old expression for convenience' sake, but from the standpoint of the history of the European mind three periods should be distinguished, lying between ancient Greek thought as it was flourishing in Athens, Alexandria, Rhodes, Rome, and elsewhere at the opening of the Christian era, and the birth of modern science some sixteen hundred years later.

The first of these is the period of the Christian Fathers, culminating in the authoritative writings of Augustine, who died in 430. By this time a great part of the critical Greek books had disappeared in western Europe. As for pagan writers, one has difficulty in thinking of a single name (except that of Lucian) later than Juvenal, who had died nearly three hundred years before Augustine. Worldly knowledge was reduced to pitiful compendiums on which the mediaeval students were later to place great reliance. Scientific, literary, and historical information was scarcely to be had. The western world, so far as it thought at all, devoted its attention to religion and all manner of mystical ideas, old and new. As Harnack has so well said, the world was already intellectually bankrupt before the German invasions and their accompanying disorders plunged it into still deeper ignorance and mental

obscurity.

The second, or "Dark Age", lasted with only slight improvement from Augustine to Abélard, about seven hundred years. The prosperous _villas_ disappeared; towns vanished or shriveled up; libraries were burned or rotted away from neglect; schools were closed, to be reopened later here and there, after Charlemagne's educational edict, in an especially enterprising monastery or by some exceptional bishop who did not spend his whole time in fighting.

From about the year 1100 conditions began to be more and more favorable to the revival of intellectual ambition, a recovery of forgotten knowledge, and a gradual accumulation of new information and inventions unknown to the Greeks, or indeed to any previous civilization. The main presuppositions of this third period of the later Middle Ages go back, however, to the Roman Empire. They had been formulated by the Church Fathers, transmitted through the Dark Age, and were now elaborated by the professors in the newly established universities under the influence of Aristotle's recovered works and built up into a majestic intellectual structure known as Scholasticism. On these mediaeval university professors--the schoolmen--Lord Bacon long ago pronounced a judgment that may well stand to-day. "Having sharp and strong wits, and abundance of leisure, and small variety of reading, but their wits being shut up in the cells of a few authors (chiefly Aristotle, their dictator), as their persons were shut up in the cells of monasteries and colleges, and knowing little history, either of nature or time [they], did out of no great quantity of matter and infinite agitation of wit spin out unto us those laborious webs of learning which are extant in their books."

Our civilization and the human mind, critical and uncritical, as we now find it in our western world, is a direct and uninterrupted outgrowth of the civilization and thought of the later Middle Ages. Very gradually only did peculiarly free and audacious individual thinkers escape from this or that mediaeval belief, until in our own day some few have come to reject practically all the presuppositions on which the Scholastic system was reared. But the great mass of Christian believers, whether Catholic or Protestant, still professedly or implicitly adhere to the assumptions of the Middle Ages, at least in all matters in which religious or moral sanctions are concerned. It is true that outside the Catholic clergy the term "mediaeval" is often used in a sense of disparagement, but that should not blind us to the fact that mediaeval presumptions, whether for better or worse, are still common. A few of the most fundamental of these presuppositions especially germane to our theme may be pointed out here.

11. OUR MEDIAEVAL INTELLECTUAL INHERITANCE

The Greeks and Romans had various theories of the origin of things, all vague and admittedly conjectural. But the Christians, relying upon the inspired account in the Bible, built their theories on information which they believed vouchsafed to them by God himself. Their whole conception of human history was based upon a far more fundamental and thorough supernaturalism than we find among the Greeks and Romans. The pagan philosophers reckoned with the gods, to be sure, but they never assumed that man's earthly life should turn entirely on what was to happen after death. This was in theory the sole preoccupation of the mediaeval Christian. Life here below was but a brief, if decisive, preliminary to the real life to come.

The mediaeval Christian was essentially more polytheistic than his pagan predecessors, for he pictured hierarchies of good and evil spirits who were ever aiding him to reach heaven or seducing him into the paths of sin and error. Miracles were of common occurrence and might be attributed either to God or the devil; the direct intervention of both good and evil spirits played a conspicuous part in the explanation of daily acts and motives.[20]

As a distinguished church historian has said, the God of the Middle Ages was a God of arbitrariness--the more arbitrary the more Godlike. By frequent interferences with the regular course of events he made his existence clear, reassured his children of his continued solicitude, and frustrated the plots of the Evil One. Not until the eighteenth century did any considerable number of thinkers revolt against this conception of the Deity and come to worship a God of orderliness who abode by his own laws.

The mediaeval thinkers all accepted without question what Santayana has strikingly described as the "Christian Epic". This included the general historical conceptions of how man came about, and how, in view of his origin and his past, he should conduct his life. The universe had come into being in less than a week, and man had originally been created in a state of perfection along with all other things--sun, moon, and stars, plants and animals. After a time the first human pair had yielded to temptation, transgressed God's commands, and been driven from the lovely garden in which he had placed them. So sin came into the world, and the offspring of the guilty pair were thereby contaminated and defiled from the womb.

In time the wickedness became such on the newly created earth that God resolved to blot out mankind, excepting only Noah's family, which was spared to repeople the earth after the Flood, but the unity of language that man had formerly possessed was lost.

At the appointed time, preceded by many prophetic visions among the chosen people, God sent his Son to live the life of men on earth and become their Saviour by submitting to death. Thereafter, with the spread of the gospel, the struggle between the kingdom of God and that of the devil became the supreme conflict of history. It was to culminate in the Last Judgment, when the final separation of good and evil should take place and the blessed should ascend into the heavens to dwell with God forever, while the wicked sank to hell to writhe in endless torment.

This general account of man, his origin and fate, embraced in the Christian Epic, was notable for its precision, its divine authenticity, and the obstacles which its authority consequently presented to any revision in the light of increasing knowledge. The fundamental truths in regard to man were assumed to be established once and for all. The Greek thinkers had had little in the way of authority on which to build, and no inconsiderable number of them frankly confessed that they did not believe that such a thing could exist for the thoroughly sophisticated intelligence. But mediaeval philosophy and science _were grounded wholly in authority_. The mediaeval schoolmen turned aside from the hard path of skepticism, long searchings and investigation of actual phenomena, and confidently believed that they could find truth by the easy way of revelation and the elaboration of unquestioned dogmas.

This reliance on authority is a fundamental primitive trait. We have inherited it not only from our mediaeval forefathers, but, like them and through them, from long generations of prehistoric men. We all have a natural tendency to rely upon established beliefs and fixed institutions. This is an expression of our spontaneous confidence in everything that comes to us in an unquestioned form. As children we are subject to authority and cannot escape the control of existing opinion. We unconsciously absorb our ideas and views from the group in which we happen to live. What we see about us, what we are told, and what we read has to be received at its face value so long as there are no conflicts to arouse skepticism.

We are tremendously suggestible. Our mechanism is much better adapted to credulity than to questioning. All of us believe nearly all the time. Few doubt, and only now and then. The past exercises an almost irresistible fascination over us. As children we learn to look up to the old, and when we grow up we do not permit our poignant realization of elderly incapacity among our contemporaries to rouse suspicions of Moses, Isaiah, Confucius, or Aristotle. Their sayings come to us unquestioned; their remoteness makes inquiry into their competence impossible. We readily assume that they had sources of information and wisdom superior to the prophets of our own day.

During the Middle Ages reverence for authority, and for that particular form of authority which we may call the tyranny of the past, was dominant, but probably not more so than it had been in other societies and ages--in ancient Egypt, in China and India. Of the great sources of mediaeval authority, the Bible and the Church Fathers, the Roman and Church law, and the encyclopaedic writings of Aristotle, none continues nowadays to hold us in its old grip. Even the Bible, although nominally unquestioned among Roman Catholics and all the more orthodox Protestant sects, is rarely appealed to, as of old, in parliamentary debate or in discussions of social and economic questions. It is still a religious authority, but it no longer forms the basis of secular decisions.

The findings of modern science have shaken the hold of the sources of mediaeval authority, but they have done little as yet to loosen our inveterate habit of relying on the more insidious authority of current practice and belief. We still assume that received dogmas represent the secure conclusions of mankind, and that current institutions represent the approved results of much experiment in the past, which it would be worse than futile to repeat. One solemn remembrancer will cite as a warning the discreditable experience of the Greek cities in democracy; another, how the decline of "morality" and the disintegration of the family heralded the fall of Rome; another, the constant menace of mob rule as exemplified in the Reign of Terror. But to the student of history these alleged illustrations have little bearing on present conditions. He is struck, moreover, with the ease with which ancient misapprehensions are transmitted from generation to generation and with the difficulty of launching a newer and clearer and truer idea of anything. Bacon warns us that the multitude, "or the wisest for the multitude's sake", is in reality "ready to give passage rather to that which is popular and superficial than to that which is substantial and profound; for the truth is that time seemeth to be of the nature of a river or stream, which carrieth down to us that which is light and blown up, and sinketh and drowneth that which is weighty and solid".

It is very painful to most minds to admit that the past does not furnish us with reliable, permanent standards of conduct and of public policy. We resent the imputation that things are not going, on the whole, pretty well, and find excuses for turning our backs on disconcerting and puzzling facts. We are full of respectable fears and a general timidity in the face of conditions which we vaguely feel are escaping control in spite of our best efforts to prevent any thoroughgoing readjustment. We instinctively try to show that Mr. Keynes must surely be wrong about the Treaty of Versailles; that Mr. Gibbs must be perversely exaggerating the horrors of modern

war; that Mr. Hobson certainly views the industrial crisis with unjustifiable pessimism; that "business as usual" cannot be that socially perverse and incredibly inexpedient thing Mr. Veblen shows it to be; that Mr. Robin's picture of Lenin can only be explained by a disguised sympathy for Bolshevism.

Yet, even if we could assume that traditional opinion is a fairly clear and reliable reflection of hard-earned experience, surely it should have less weight in our day and generation than in the past. For changes have overtaken mankind which have fundamentally altered the conditions in which we live, and which are revolutionizing the relations between individuals and classes and nations. Moreover, we must remember that knowledge has widened and deepened, so that, could any of us really catch up with the information of our own time, he would have little temptation to indulge the mediaeval habit of appealing to the authority of the past.

The Christian Epic did not have to rely for its perpetuation either on its intellectual plausibility or its traditional authority. During the Middle Ages there developed a vast and powerful religious State, the mediaeval Church, the real successor, as Hobbes pointed out, to the Roman Empire; and the Church with all its resources, including its control over "the secular arm" of kings and princes, was ready to defend the Christian beliefs against question and revision. To doubt the teachings of the Church was the supreme crime; it was treason against God himself, in comparison with which--to judge from mediaeval experts on heresy--murder was a minor offense.

We do not, however, inherit our present disposition to intolerance solely from the Middle Ages. As animals and children and savages, we are naively and unquestioningly intolerant. All divergence from the customary is suspicious and repugnant. It seems perverse, and readily suggests evil intentions. Indeed, so natural and spontaneous is intolerance that the question of freedom of speech and writing scarcely became a real issue before the seventeenth century. We have seen that some of the Greek thinkers were banished, or even executed, for their new ideas. The Roman officials, as well as the populace, pestered the early Christians, not so much for the substance of their views as because they were puritanical, refused the routine reverence to the gods, and prophesied the downfall of the State.

But with the firm establishment of Christianity edicts began to be issued by the Roman emperors making orthodox Christian belief the test of good citizenship. One who disagreed with the emperor and his religious advisers in regard to the relation of the three members of the Trinity was subject to prosecution. Heretical books were burned, the houses of heretics destroyed. So, organized mediaeval religious intolerance was, like so many other things, a heritage of the later Roman Empire, and was duly sanctioned in both the Theodosian and Justinian Codes. It was, however, with the Inquisition, beginning in the thirteenth century, that the intolerance of the Middle Ages reached its most perfect organization.

Heresy was looked upon as a contagious disease that must be checked at all costs. It did not matter that the heretic usually led a conspicuously blameless life, that he was arduous, did not swear, was emaciated with fasting and refused to participate in the vain recreations of his fellows. He was, indeed, overserious and took his religion too hard. This offensive parading as an angel of light was explained as the devil's camouflage. No one tried to find out what the heretic really thought or what were the merits of his divergent beliefs. Because he insisted on expressing his conception of God in slightly unfamiliar terms, the heretic was often branded as an atheist, just as to-day the Socialist is so often accused of being opposed to all government, when the real objection to him is that he believes in too much government. It was sufficient to classify a suspected heretic as an Albigensian, or Waldensian, or a member of some other heretical sect. There was no use in his trying to explain or justify; it was enough that he diverged.

There have been various explanations of mediaeval religious intolerance. Lecky, for example, thought that it was due to the theory of exclusive salvation; that, since there was only one way of getting to heaven, all should obviously be compelled to adopt it, for the saving of their souls from eternal torment. But one finds little solicitude for the damned in mediaeval writings. The public at large thought hell none too bad for one who revolted against God and Holy Church. No, the heretics were persecuted because heresy was, according to the notions of the time, a monstrous and unutterably wicked thing, and because their beliefs threatened the vested interests of that day.

We now realize more clearly than did Lecky that the Church was really a State in the Middle Ages, with its own laws and courts and prisons and regular taxation to which all were subject. It had all the interests and all the touchiness of a State, and more. The heretic was a traitor and a rebel. He thought that he could get along without the pope and bishops, and that he could well spare the ministrations of the orthodox priests and escape their exactions. He was the "anarchist", the "Red" of his time, who was

undermining established authority, and, with the approval of all right-minded citizens, he was treated accordingly. For the mediaeval citizen no more conceived of a State in which the Church was not the dominating authority than we can conceive of a society in which the present political State may have been superseded by some other form of organization.

Yet the inconceivable has come to pass. Secular authority has superseded in nearly all matters the old ecclesiastical regime. What was the supreme issue of the Middle Ages--the distinction between the religious heretic and the orthodox--is the least of public questions now.

What, then, we may ask, has been the outcome of the old religious persecutions, of the trials, tortures, imprisonings, burnings, and massacres, culminating with the Revocation of the Edict of Nantes? What did the Inquisition and the censorship, both so long unquestioned, accomplish? Did they succeed in defending the truth or "safeguarding" society? At any rate, conformity was not established. Nor did the Holy Roman Church maintain its monopoly, although it has survived, purified and freed from many an ancient abuse. In most countries of western Europe and in our own land one may now believe as he wishes, teach such religious views as appeal to him, and join with others who share his sympathies. "Atheism" is still a shocking charge in many ears, but the atheist is no longer an outlaw. _It has been demonstrated, in short, that religious dogma can be neglected in matters of public concern and reduced to a question of private taste and preference_.

This is an incredible revolution. But we have many reasons for suspecting that in a much shorter time than that which has elapsed since the Inquisition was founded, the present attempt to eliminate by force those who contemplate a fundamental reordering of social and economic relations will seem quite as inexpedient and hopeless as the Inquisition's effort to defend the monopoly of the mediaeval Church.

We can learn much from the past in regard to wrong ways of dealing with new ideas. As yet we have only old-fashioned and highly expensive modes of meeting the inevitable changes which are bound to take place. Repression has now and then enjoyed some temporary success, it is true, but in the main it has failed lamentably and produced only suffering and confusion. Much will depend on whether our purpose is to keep things as they are or to bring about readjustments designed to correct abuses and injustice in the present order. Do we believe, in other words, that truth is finally established and that we have only to defend it, or that it is still in the making? Do we believe in what is commonly called progress, or do we think of that as belonging only to the past? Have we, on the whole, arrived, or are we only on the way, or mayhap just starting?

In the Middle Ages, even in the times of the Greeks and Romans, there was little or no conception of progress as the word is now used. There could doubtless be improvement in detail. Men could be wiser and better or more ignorant and perverse. But the assumption was that in general the social, economic, and religious order was fairly standardized.

This was especially true in the Middle Ages. During these centuries men's single objective was the assurance of heaven and escape from hell. Life was an angry river into which men were cast. Demons were on every hand to drag them down. The only aim could be, with God's help, to reach the celestial shore. There was no time to consider whether the river might be made less dangerous by concerted effort, through the deflection of its torrents and the removal of its sharpest rocks. No one thought that human efforts should be directed to making the lot of humanity progressively better by intelligent reforms in the light of advancing knowledge.

The world was a place to escape from on the best terms possible. In our own day this mediaeval idea of a static society yields only grudgingly, and the notion of inevitable vital change is as yet far from assimilated. We confess it with our lips, but resist it in our hearts. We have learned as yet to respect only one class of fundamental innovators, those dedicated to natural science and its applications. The social innovator is still generally suspect.

To the mediaeval theologian, man was by nature vile. We have seen that, according to the Christian Epic, he was assoiled from birth with the primeval sin of his first parents, and began to darken his score with fresh offenses of his own as soon as he became intelligent enough to do so. An elaborate mechanism was supplied by the Church for washing away the original pollution and securing forgiveness for later sins. Indeed, this was ostensibly its main business.

We may still well ask, Is man by nature bad? And accordingly as we answer the question we either frame appropriate means for frustrating his evil tendencies or, if we see some promise in him, work for his freedom and bid him take advantage of it to make himself and others happy. So far as I know, Charron, a friend of Montaigne, was one of the first to say a good word for man's animal nature, and a hundred years later the amiable Shaftesbury pointed out some honestly gentlemanly traits in the species. To

the modern student of biology and anthropology man is neither good nor bad. There is no longer any "mystery of evil". But the mediaeval notion of _sin_--a term heavy with mysticism and deserving of careful scrutiny by every thoughtful person--still confuses us.

Of man's impulses, the one which played the greatest part in mediaeval thoughts of sin and in the monastic ordering of life was the sexual. The presuppositions of the Middle Ages in the matter of the relations of men and women have been carried over to our own day. As compared with many of the ideas which we have inherited from the past, they are of comparatively recent origin. The Greeks and Romans were, on the whole, primitive and uncritical in their view of sex. The philosophers do not seem to have speculated on sex, although there was evidently some talk in Athens of women's rights. The movement is satirized by Aristophanes, and later Plato showed a willingness in _The Republic_ to impeach the current notions of the family and women's position in general.

But there are few traces of our ideas of sexual "purity" in the classical writers. To the Stoic philosopher, and to other thoughtful elderly people, sexual indulgence was deemed a low order of pleasure and one best carefully controlled in the interests of peace of mind. But with the incoming of Christianity an essentially new attitude developed, which is still, consciously or unconsciously, that of most people to-day.

St. Augustine, who had led a free life as a teacher of rhetoric in Carthage and Rome, came in his later years to believe, as he struggled to overcome his youthful temptations, that sexual desire was the most devilish of man's enemies and the chief sign of his degradation. He could imagine no such unruly urgence in man's perfect estate, when Adam and Eve still dwelt in Paradise. But with man's fall sexual desire appeared as the sign and seal of human debasement. This theory is poignantly set forth in Augustine's _City of God_. He furnished therein a philosophy for the monks, and doubtless his fourteenth book was well thumbed by those who were wont to ponder somewhat wistfully on one of the sins they had fled the world to escape.

Christian monasticism was spreading in western Europe in Augustine's time, and the monkist vows included "chastity". There followed a long struggle to force the whole priesthood to adopt a celibate life, and this finally succeeded so far as repeated decrees of the Church could effect it. Marriage was proper for the laity, but both the monastic and secular clergy aspired to a superior holiness which should banish all thoughts of fervent earthly love. Thus a highly unnatural life was accepted by men and women of the most varied temperament and often with slight success.

The result of Augustine's theories and of the efforts to frustrate one of man's most vehement impulses was to give sex a conscious importance it had never possessed before. The devil was thrust out of the door only to come in at all the windows. In due time the Protestant sects abolished monasteries, and the Catholic countries later followed their example. The Protestant clergy were permitted to marry, and the old asceticism has visibly declined. But it has done much to determine our whole attitude toward sex, and there is no class of questions still so difficult to discuss with full honesty or to deal with critically and with an open mind as those relating to the intimate relations of men and women.

No one familiar with mediaeval literature will, however, be inclined to accuse its authors of prudishness. Nevertheless, modern prudishness, as it prevails especially in England and the United States--our squeamish and shamefaced reluctance to recognize and deal frankly with the facts and problems of sex--is clearly an outgrowth of the mediaeval attitude which looked on sexual impulse as of evil origin and a sign of man's degradation. Modern psychologists have shown that prudishness is not always an indication of exceptional purity, but rather the reverse. It is often a disguise thrown over repressed sexual interest and sexual preoccupations. It appears to be decreasing among the better educated of the younger generation. The study of biology, and especially of embryology, is an easy and simple way of disintegrating the "impurity complex". "Purity" in the sense of ignorance and suppressed curiosity is a highly dangerous state of mind. And such purity in alliance with prudery and defensive hypocrisy makes any honest discussion or essential readjustment of our institutions and habits extremely difficult.

One of the greatest contrasts between mediaeval thinking and the more critical thought of to-day lies in the general conception of man's relation to the cosmos. To the medieval philosopher, as to the stupidest serf of the time, the world was made for man. All the heavenly bodies revolved about man's abode as their center. All creatures were made to assist or to try man. God and the devil were preoccupied with his fate, for had not God made him in his own image for his glory, and was not the devil intent on populating his own infernal kingdom? It was easy for those who had a poetic turn of mind to think of nature's workings as symbols for man's edification. The habits of the lion or the eagle yielded moral lessons or illustrated the divine scheme of salvation. Even the written word was to be valued, not for what it seemed to say, but for hidden allegories depicting man's struggles against evil and cheering

him on his way.

This is a perennially appealing conception of things. It corresponds to primitive and inveterate tendencies in humanity and gratifies, under the guise of humility, our hungering for self-importance. The mediaeval thinker, however freely he might exercise his powers of logical analysis in rationalizing the Christian Epic, never permitted himself to question its general anthropocentric and mystical view of the world. The philosophic mystic assumes the role of a docile child. He feels that all vital truth transcends his powers of discovery. He looks to the Infinite and Eternal Mind to reveal it to him through the prophets of old, or in moments of ecstatic communion with the Divine Intelligence. To the mystic all that concerns our deeper needs transcends logic and defies analysis. In his estimate the human reason is a feeble rushlight which can at best cast a flickering and uncertain ray on the grosser concerns of life, but which only serves to intensify the darkness which surrounds the hidden truth of God.

In order that modern science might develop it is clear that a wholly new and opposed set of fundamental convictions had to be substituted for those of the Middle Ages. Man had to cultivate another kind of self-importance and a new and more profound humility. He had come to believe in his capacity to discover important truth through thoughtful examination of things about him, and he had to recognize, on the other hand, that the world did not seem to be made for him, but that humanity was apparently a curious incident in the universe, and its career a recent episode in cosmic history. He had to acquire a taste for the simplest possible and most thoroughgoing explanation of things. His whole mood had to change and impel him to reduce everything so far as possible to the commonplace.

This new view was inevitably fiercely attacked by the mystically disposed. They misunderstood it and berated its adherents and accused them of robbing man of all that was most precious in life. These, in turn, were goaded into bitterness and denounced their opponents as pig-headed obscurantists.

But we must, after all, come to terms in some way with the emotions underlying mysticism. They are very dear to us, and scientific knowledge will never form an adequate substitute for them. No one need fear that the supply of mystery will ever give out; but a great deal depends on our taste in mystery; that certainly needs refining. What disturbs the so-called rationalist in the mystic's attitude is his propensity to see mysteries where there are none and to fail to see those that we cannot possibly escape. In declaring that one is not a mystic, one makes no claim to be able to explain everything, nor does he maintain that all things are explicable in scientific terms.

Indeed, no thoughtful person will be likely to boast that he can fully explain anything. We have only to scrape the surface of our experiences to find fundamental mystery. And how, indeed, as descendants of an extinct race of primates, with a mind still in the early stages of accumulation, should we be in the way of reaching ultimate truth at any point? One may properly urge, however, that as sharp a distinction as possible be made between fictitious mysteries and the unavoidable ones which surround us on every side. How milk turned sour used to be a real mystery, now partially solved since the discovery of bacteria; how the witch flew up the chimney was a gratuitous mystery with which we need no longer trouble ourselves. A "live" wire would once have suggested magic; now it is at least partially explained by the doctrine of electrons.

It is the avowed purpose of scientific thought to reduce the number of mysteries, and its success has been marvelous, but it has by no means done its perfect work as yet. We have carried over far too much of mediaeval mysticism in our views of man and his duty toward himself and others.

We must now recall the method adopted by students of the natural sciences in breaking away from the standards and limitations of the mediaeval philosophers and establishing new standards of their own. They thus prepared the way for a revolution in human affairs in the midst of which we now find ourselves. As yet their type of thinking has not been applied on any considerable scale to the solution of social problems. By learning to understand and appreciate the scientific frame of mind as a historical victory won against extraordinary odds, we may be encouraged to cultivate and popularize a similar attitude toward the study of man himself.

NOTES.

[20] St. Ethelred, returning from a pious visit to Citeaux in the days of Henry II, encountered a great storm when he reached the Channel. He asked himself what _he_ had done to be thus delayed, and suddenly thought that he had failed to _fulfill_ a promise to write a poem on St. Cuthbert. When he had completed this, "wonderful to say, the sea ceased to rage and became tranquil".--_Surtees Society Publications_, i, p. 177.

VI

Narrabo igitur primo opera artis et naturae miranda.... ut videatur quod omnis magica potestas sit inferior his operibus et indigna. --ROGER BACON.

I do not endeavor either by triumphs of confutation, or pleadings of antiquity, or assumption of authority, or even, by the veil of obscurity, to invest these inventions of mine with any majesty.... I have not sought nor do I seek either to force or ensnare men's judgments, but I lead them to things themselves and the concordances of things, that they may see for themselves what they have, what they can dispute, what they can add and contribute to the common stock.--FRANCIS BACON (_Preface to the Great Instauration_).

12. THE SCIENTIFIC REVOLUTION

At the opening of the seventeenth century a man of letters, of sufficient genius to be suspected by some of having written the plays of Shakespeare, directed his distinguished literary ability to the promotion and exaltation of natural science. Lord Bacon was the chief herald of that habit of scientific and critical thought which has played so novel and all-important a part in the making of the modern mind. When but twenty-two years old he was already sketching out a work which he planned to call _Temporis Partus Maximus (The Greatest Thing Ever)_. He felt that he had discovered why the human mind, enmeshed in mediaeval metaphysics and indifferent to natural phenomena, had hitherto been a stunted and ineffective thing, and how it might be so nurtured and guided as to gain undreamed of strength and vigor.

And never has there been a man better equipped with literary gifts to preach a new gospel than Francis Bacon. He spent years in devising eloquent and ingenious ways of delivering learning from the "discredits and disgraces" of the past, and in exhorting man to explore the realms of nature for his delight and profit. He never wearied of trumpeting forth the glories of the new knowledge which would come with the study of common things and the profitable uses to which it might be put in relieving man's estate. He impeached the mediaeval schoolmen for spinning out endless cobwebs of learning, remarkable for their fineness, but of no substance or spirit. He urged the learned to come out of their cells, study the creations of God, and build upon what they discovered a new and true philosophy.

Even in his own day students of natural phenomena had begun to carry out Bacon's general program with striking effects. While he was urging men to cease "tumbling up and down in their own reason and conceits" and to spell out, and so by degrees to learn to read, the volume of God's works, Galileo had already begun the reading and had found out that the Aristotelian physics ran counter to the facts; that a body once in motion will continue to move forever in a straight line unless it be stopped or deflected. Studying the sky through his newly invented telescope, he beheld the sun spots and noted the sun's revolution on its axis, the phases of Venus, and the satellites of Jupiter. These discoveries seemed to confirm the ideas advanced long before by Copernicus--the earth was not the center of the universe and the heavens were not perfect and unchanging. He dared to discuss these matters in the language of the people and was, as everyone knows, condemned by the Inquisition.

This preoccupation with natural phenomena and this refusal to accept the old, established theories until they had been verified by an investigation of common fact was a very novel thing. It introduced a fresh and momentous element into our intellectual heritage. We have recalled the mysticism, supernaturalism, and intolerance of the Middle Ages, their reliance on old books, and their indifference to everyday fact except as a sort of allegory for the edification of the Christian pilgrim. In the mediaeval universities the professors, or "schoolmen", devoted themselves to the elaborate formulation of Christian doctrine and the interpretation of Aristotle's works. It was a period of revived Greek metaphysics, adapted to prevailing religious presuppositions. Into this fettered world Bacon, Galileo, Descartes, and others brought a new aspiration to promote investigation and honest, critical thinking about everyday things.

These founders of modern natural science realized that they would have to begin afresh. This was a bold resolve, but not so bold as must be that of the student of mankind to-day if he expects to free himself from the trammels of the past. Bacon pointed out that the old days were not those of mature knowledge, but of youthful human ignorance. "_These_ times are the ancient times, when the world is ancient, and not those we count ancient, _ordine retrogrado_, by a computation backward from ourselves." In his _New Atlantis_ he pictures an ideal State which concentrated its resources on systematic scientific research, with a view to

applying new discoveries to the betterment of man's lot.

Descartes, who was a young man when Bacon was an old one, insisted on the necessity, if we proposed to seek the truth, of questioning _everything_ at least once in our lives. To all these leaders in the development of modern science doubt, not faith, was the beginning of wisdom. They doubted--and with good reason--what the Greeks were supposed to have discovered; they doubted all the old books and all the university professors' lecture notes. They did not venture to doubt the Bible, but they eluded it in various ways. They set to work to find out exactly what happened under certain circumstances. They experimented individually and reported their discoveries to the scientific academies which began to come into existence.

As one follows the deliberations of these bodies it is pathetic to observe how little the learning of previous centuries, in spite of its imposing claims, had to contribute to a fruitful knowledge of common things. It required a century of hard work to establish the most elementary facts which would now be found in a child's book. How water and air act, how to measure time and temperature and atmospheric pressure, had to be discovered. The microscope revealed the complexity of organic tissues, the existence of minute creatures, vaguely called infusoria, and the strange inhabitants of the blood, the red and white corpuscles. The telescope put an end to the flattering assumption that the cosmos circled around man and the little ball he lives on.

Without a certain un-Greek, practical inventive tendency which, for reasons not easily to be discovered, first began to manifest itself in the thirteenth century, this progress would not have been possible. The new thinkers descended from the magisterial chair and patiently fussed with lenses, tubes, pulleys, and wheels, thus weaning themselves from the adoration of man's mind and understanding. They had to devise the machinery of investigation as investigation itself progressed.

Moreover, they did not confine themselves to the conventionally noble and elevated subjects of speculation. They addressed themselves to worms and ditch water in preference to metaphysical subtleties. They agreed with Bacon that the mean and even filthy things deserve study. All this was naturally scorned by the university professors, and the universities consequently played little or no part in the advance of natural science until the nineteenth century.

Nor were the moral leaders of mankind behind the intellectual in opposing the novel tendencies. The clergy did all they could to perpetuate the squalid belief in witchcraft, but found no place for experimental science in their scheme of learning, and judged it offensive to the Maker of all things. But their opposition could do no more than hamper the new scientific impulse, which was far too potent to be seriously checked.

So in one department of human thought--the investigation of natural processes--majestic progress has been made since the opening of the seventeenth century, with every promise of continued and startling advance. The new methods employed by students of natural science have resulted in the accumulation of a stupendous mass of information in regard to the material structure and operation of things, and the gradual way in which the earth and all its inhabitants have come into being. The nature and workings of atoms and molecules are being cleared up, and their relation to heat, light, and electricity established. The slow processes which have brought about the mountains and valleys, the seas and plains, have been exposed. The structure of the elementary cell can be studied under powerful lenses; its divisions, conjunctions, differentiation, and multiplication into the incredibly intricate substance of plants and animals can be traced.

In short, man is now in a position, for the first time in his history, to have some really clear and accurate notion of the world in which he dwells and of the living creatures which surround him and with which he must come to terms. It would seem obvious that this fresh knowledge should enable him to direct his affairs more intelligently than his ancestors were able to do in their ignorance. He should be in a position to accommodate himself more and more successfully to the exigencies of an existence which he can understand more fully than any preceding generation, and he should aspire to deal more and more sagaciously with himself and his fellow-men.

13. HOW SCIENTIFIC KNOWLEDGE HAS REVOLUTIONIZED THE CONDITIONS OF LIFE

But while our information in regard to man and the world is incalculably greater than that available a hundred, even fifty years ago, we must frankly admit that the knowledge is still so novel, so imperfectly assimilated, so inadequately co-ordinated, and so feebly and ineffectively presented to the great mass of men, that its _direct_ effects upon human impulses and reasoning and outlook are as yet inconsiderable and disappointing. We _might_ think in terms of molecules and atoms, but we rarely do. Few have any more knowledge of their own bodily operations than had their grandparents. The farmer's confidence in the phases of the moon gives way but slowly before recent discoveries in regard to the bacteria of the soil. Few who use the telephone, ride on electric cars, and

carry a camera have even the mildest curiosity in regard to how these things work. It is only _indirectly_, through _invention_, that scientific knowledge touches our lives on every hand, modifying our environment, altering our daily habits, dislocating the anciently established order, and imposing the burden of constant adaptation on even the most ignorant and lethargic.

Unlike a great part of man's earlier thought, modern scientific knowledge and theory have not remained matter merely for academic discourse and learned books, but have provoked the invention of innumerable practical devices which surround us on every hand, and from which we can now scarce escape by land or sea. Thus while scientific knowledge has not greatly affected the thoughts of most of us, its influence in the promotion of modern invention has served to place us in a new setting or environment, the novel features of which it would be no small task to explain to one's great-great-grandfather, should he unexpectedly apply for up-to-date information. So even if modern scientific _knowledge_ is as yet so imperfect and ill understood as to make it impossible for us to apply much of it directly and personally in our daily conduct, we nevertheless cannot neglect the urgent effects of scientific _inventions_, for they are constantly posing new problems of adjustment to us, and sometimes disposing of old ones.

Let us recall a few striking examples of the astonishing way in which what seemed in the beginning to be rather trivial inventions and devices have, with the improvements of modern science, profoundly altered the conditions of life.

Some centuries before the time of Bacon and Galileo four discoveries were made which, supplemented and elaborated by later insight and ingenuity, may be said to underlie our modern civilization. A writer of the time of Henry II of England reports that sailors when caught in fog or darkness were wont to touch a needle to a bit of magnetic iron. The needle would then, it had been found, whirl around in a circle and come to rest pointing north. On this tiny index the vast extension of modern commerce and imperialism rests.

That lentil-shaped bits of glass would magnify objects was known before the end of the thirteenth century, and from that little fact have come microscopes, telescopes, spectroscopes, and cameras; and from these in turn has come a great part of our present knowledge of natural processes in men, animals, and plants and our comprehension of the cosmos at large.

Gunpowder began to be used a few decades after the lens was discovered; it and its terrible descendants have changed the whole problem of human warfare and of the public defense.

The printing press, originally a homely scheme for saving the labor of the copyist, has not only made modern democracy and nationality possible, but has helped by the extension of education to undermine the ancient foundations upon which human industry has rested from the beginnings of civilization.

In the middle of the eighteenth century the steam engine began to supplant the muscular power of men and animals, which had theretofore been only feebly supplemented by windmills and water wheels. And now we use steam and gas engines and water power to generate potent electric currents which do their work far from the source of supply. Mechanical ingenuity has utilized all this undreamed-of energy in innumerable novel ways for producing old and new commodities in tremendous quantities and distributing them with incredible rapidity throughout the earth.

Vast factories have sprung up, with their laborious multitudes engaged on minute contributions to the finished article; overgrown cities sprawl over the neighboring green fields and pastures; long freight trains of steel cars thunder across continents; monstrous masses of wealth pile up, are reinvested, and applied to making the whole system more and more inconceivably intricate and interdependent; and incidentally there is hurry and worry and discontent and hazard beyond belief for a creature who has to grasp it all and control it all with a mind reared on that of an animal, a child, and a savage.

As if these changes were not astounding enough, now has come the chemist who devotes himself to making not new _commodities_ (or old ones in new ways), but new _substances_. He juggles with the atoms of carbon, hydrogen, oxygen, nitrogen, chlorine, and the rest, and far outruns the workings of nature. Up to date he has been able to produce artfully over two hundred thousand compounds, for some of which mankind formerly depended on the alchemy of animals and plants. He can make foodstuffs out of sewage; he can entrap the nitrogen in the air and use it to raise wheat to feed, or high explosives to slaughter, his fellows. He no longer relies on plants and animals for dyes and perfumes. In short, a chemical discovery may at any moment devastate an immemorial industry and leave both capital and labor in the lurch. The day may not be far distant when, should the chemist learn to control the incredible interatomic energy, the steam engine will seem as complete an anachronism as the treadmill.

The uttermost parts of the earth have been visited by Europeans, and commerce has brought all races of the globe into close touch. We have now to reckon with every nation under heaven, as was shown in the World War. At the same time steam and

electrical communication have been so perfected that space has been practically annihilated as regards speech, and in matters of transportation reduced to perhaps a fifth. So all the peoples of the earth form economically a loose and, as yet, scarcely acknowledged federation of man, in which the fate of any member may affect the affairs of all the others, no matter how remote they may be geographically.

All these unprecedented conditions have conspired to give business for business' sake a fascination and overwhelming importance it has never had before. We no longer make things for the sake of making them, but for money. The chair is not made to sit on, but for profit; the soap is no longer prepared for purposes of cleanliness, but to be sold for profit. Practically nothing catches our eye in the way of writing that was written for its own sake and not for money. Our magazines and newspapers are our modern commercial travelers proclaiming the gospel of business competition. Formerly the laboring classes worked because they were slaves, or because they were defenseless and could not escape from thraldom--or, mayhap, because they were natural artisans; but now they are coming into a position where they can combine and bargain and enter into business competition with their employers. Like their employers, they are learning to give as little as possible for as much as possible. This is good business; and the employer should realize that at last he has succeeded in teaching his employees to be strictly businesslike. When houses were built to live in, and wheat and cattle grown to eat, these essential industries took care of themselves. But now that profit is the motive for building houses and raising grain, if the promised returns are greater from manufacturing automobiles or embroidered lingerie, one is tempted to ask if there are any longer compelling reasons for building houses or raising food?

Along with the new inventions and discoveries and our inordinately pervasive commerce have come two other novel elements in our environment--what we vaguely call "democracy" and "nationality". These also are to be traced to applied science and mechanical contrivances.

The printing press has made popular education possible, and it is our aspiration to have every boy and girl learn to read and write--an ideal that the Western World has gone far to realize in the last hundred years. General education, introduced first among men and then extended to women, has made plausible the contention that all adults should have a vote, and thereby exercise some ostensible influence in the choice of public officials and in the direction of the policy of the government.

Until recently the mass of the people have not been invited to turn their attention to public affairs, which have been left in the control of the richer classes and their representatives and agents, the statesmen or politicians. Doubtless our crowded cities have contributed to a growing sense of the importance of the common man, for all must now share the street car, the public park, the water supply, and contagious diseases.

But there is a still more fundamental discovery underlying our democratic tendencies. This is the easily demonstrated scientific truth that nearly all men and women, whatever their social and economic status, may have much greater possibilities of activity and thought and emotion than they exhibit in the particular conditions in which they happen to be placed; that in all ranks may be found evidence of unrealized capacity; that we are living on a far lower scale of intelligent conduct and rational enjoyment than is necessary.

Our present notions of nationality are of very recent origin, going back scarcely a hundred years. Formerly nations were made up of the subjects of this or that gracious majesty and were regarded by their God-given rulers as beasts of burden or slaves or, in more amiable moods, as children. The same forces that have given rise to modern democracy have made it possible for vast groups of people, such as make up France or the United States, to be held together more intimately than ever before by the news which reaches them daily of the enterprises of their government and the deeds of their conspicuous fellow-countrymen.

In this way the inhabitants of an extensive territory embracing hundreds of thousands of square miles are brought as close together as the people of Athens in former days. Man Is surely a gregarious animal who dislikes solitude. He is, moreover, given to the most exaggerated estimate of his tribe; and on these ancient foundations modern nationality has been built up by means of the printing press, the telegraph, and cheap postage. _So it has fallen out that just when the world was becoming effectively cosmopolitan in its economic interdependence, its scientific research, and its exchange of books and art, the ancient tribal insolence has been developed on a stupendous scale._

The manner in which man has revolutionized his environment, habits of conduct, and purposes of life by inventions is perhaps the most astonishing thing in human history. It is an obscure and hitherto rather neglected subject. But it is clear enough, from the little that has been said here, that since the Middle Ages, and especially in the past hundred years, science has so hastened the process of change that it becomes increasingly difficult for man's common run of thinking to keep pace with the radical alterations in

his actual practices and conditions of living.

VII

Peace sitting under her olive, and slurring the days gone by, When the poor are hovell'd and hustled together, each sex, like swine, When only the ledger lives, and when only not all men lie; Peace in her vineyard--yes!--but a company forges the wine. --TENNYSON.

Could great men thunder As Jove himself does, Jove would ne'er be quiet. For every pelting, petty officer Would use his heaven for thunder; Nothing but thunder! ... Man, proud man, Drest in a little brief authority, Most ignorant of what he's most assured, His glassy essence, like an angry ape, Plays such fantastic tricks before high heaven As make the angels weep; who, with our spleens, Would all themselves laugh mortal. --SHAKESPEARE.

14. "THE SICKNESS OF AN ACQUISITIVE SOCIETY"

It is so difficult a task to form any correct estimate of one's own surroundings, largely on account of our very familiarity with them, that historical students have generally evaded this responsibility. They have often declared that it was impossible to do so satisfactorily. And yet no one will ever know more than we about what is going on now. Some secrets may be revealed to coming generations, but plenty of our circumstances will be obscure to them. And it certainly seems pusillanimous, if not hazardous, to depute to those yet unborn the task of comprehending the conditions under which we must live and strive. I have long believed that the only unmistakable contribution that the historical student can make to the progress of intelligence is to study the past with an eye constantly on the present. For history not only furnishes us with the key to the present by showing how our situation came about, but at the same time supplies a basis of comparison and a point of vantage by virtue of which the salient contrasts between our days and those of old can be detected. Without history the essential differences are sure to escape us. Our generation, like all preceding generations of mankind, inevitably takes what it finds largely for granted, and the great mass of men who argue about existing conditions assume a fundamental likeness to past conditions as the basis of their conclusions in regard to the present and the still unrolled future.

Such a procedure becomes more and more dangerous, for although a continuity persists, there are more numerous, deeper and wider reaching contrasts between the world of to-day and that of a hundred, or even fifty, years ago, than have developed in any corresponding lapse of time since the beginning of civilization. This is not the place even to sketch the novelties in our knowledge and circumstances, our problems and possibilities. No more can be done here than to illustrate in a single field of human interest the need of an unprecedentedly open mind in order to avail ourselves of existing resources in grasping and manipulating the problems forced upon us.

Few people realize how novel is the almost universal preoccupation with business which we can observe on every hand, but to which we are already so accustomed that it easily escapes the casual observer. But in spite of its vastness and magnificent achievements, business, based upon mass production and speculative profits, has produced new evils and reinforced old ones which no thoughtful person can possibly overlook. Consequently it has become the great issue of our time, the chief subject of discussion, to be defended or attacked according to one's tastes, even as religion and politics formerly had their day.

Business men, whether conspicuous in manufacture, trade, or finance, are the leading figures of our age. They exercise a dominant influence in domestic and foreign policy; they subsidize our education and exert an unmistakable control over it. In other ages a military or religious caste enjoyed a similar pre-eminence. But now business directs and equips the soldier, who is far more dependent on its support than formerly. Most religious institutions make easy terms with business, and, far from interfering with it or its teachings, on the whole cordially support it. Business has its philosophy, which it holds to be based upon the immutable traits of human nature and as identical with morality and patriotism. It is a sensitive, intolerant philosophy, of which something will be said in the following section.

Modern business produced a sort of paradise for the luckier of mankind, which endured down to the war, and which many hope to see restored in its former charm, and perhaps further beautified as the years go on. It represents one of the most startling of human achievements. No doubt a great part of the population worked hard and lived in relative squalor, but even then they had many comforts unknown to the toiling masses of previous centuries, and were apparently fairly contented.

But escape was possible, for any man of capacity or character at all exceeding the average, into the middle or upper classes, for whom life offered, at a low cost and with the least trouble, conveniencies, comforts, and amenities beyond the compass of the richest and most powerful monarchs of other ages. The inhabitant of London could order by telephone, sipping his morning tea in bed, the various products of the whole earth, in such quantity as he might see fit, and reasonably expect their early delivery upon his doorstep; he could at the same moment and by the same means adventure his wealth in the natural resources and new enterprises of any quarter of the world, and share, without exertion or even trouble, in their prospective fruits and advantages.... He could secure forthwith, if he wished it, cheap and comfortable means of transit to any country or climate without passport or other formality, could dispatch his servant to the neighboring office of a bank for such supply of the precious metals as might seem convenient, and could then proceed abroad to foreign quarters, without knowledge of their religion, language, or customs, bearing coined wealth upon his person, and would consider himself greatly aggrieved and much surprised at the least interference.

And most important of all, he could, before the war, regard this state of affairs as

... normal, certain, and permanent, except in the direction of further improvement, and any deviation from it as aberrant, scandalous, and avoidable. The projects and politics of militarism, and imperialism, of racial and cultural rivalries, of monopolies, restrictions, and exclusion, which were to play the serpent in this paradise, were little more than the amusements of his daily newspaper, and appeared to exercise almost no influence at all on the ordinary course of social and economic life, the internationalization of which was nearly complete in practice.[21]

This assumption of the permanence and normality of the prevailing business system was much disturbed by the outcome of the war, but less so, especially in this country, than might have been expected. It was easy to argue that the terrible conflict merely interrupted the generally beneficent course of affairs which would speedily re-establish itself when given an opportunity. To those who see the situation in this light, modern business has largely solved the age-long problem of producing and distributing the material necessities and amenities of life; and nothing remains except to perfect the system in detail, develop its further potentialities, and fight tooth and nail those who are led by lack of personal success or a maudlin sympathy for the incompetent to attack and undermine it.

On the other hand, there were many before the war, not themselves suffering conspicuously from the system, who challenged its beneficence and permanence, in the name of justice, economy, and the best and highest interests of mankind as a whole. Since the war many more have come to the conclusion that business as now conducted is not merely unfair, exceedingly wasteful, and often highly inexpedient from a social standpoint, but that from an historical standpoint it is "intensely unusual, unstable, complicated, unreliable, and temporary" (Keynes). It may prove to be the chief eccentricity of our age; quite as impermanent as was the feudal and manorial system or the role of the mediaeval Church or of monarchs by the grace of God; and destined to undergo changes which it is now quite impossible to forecast.

In any case, economic issues are the chief and bitterest of our time. It is in connection with them that free thinking is most difficult and most apt to be misunderstood, for they easily become confused with the traditional reverences and sanctities of political fidelity, patriotism, morality, and even religion. There is something humiliating about this situation, which subordinates all the varied possibilities of life to its material prerequisites, much as if we were again back in a stage of impotent savagery, scratching for roots and looking for berries and dead animals. One of the most brilliant of recent English economists says with truth:

The burden of our civilization is not merely, as many suppose, that the product of industry is ill-distributed, or its conduct tyrannical, or its operation interrupted by bitter disagreements. It is that industry itself has come to hold a position of exclusive predominance among human interests, which no single interest, and least of all the provision of the material means of existence, is fit to occupy. Like a hypochondriac who is so absorbed in the processes of his own digestion that he goes to the grave before he has begun to live, industrialized communities neglect the very objects for which it is worth while to acquire riches in their feverish preoccupation with the means by which riches can be acquired.

That obsession by economic issues is as local and transitory as it is repulsive and disturbing. To future generations it will appear as pitiable as the obsession of the seventeenth century by religious quarrels appears to-day; indeed, it is less rational, since the object with which it is concerned is less important. And it is a poison which inflames every wound and turns each trivial scratch into a malignant ulcer.[22]

Whatever may be the merits of the conflicting views of our business system, there can be no doubt that it is agitating all types of thoughtful men and women. Poets, dramatists, and story writers turn aside from their old _motifs_ to play the role of economists.

Psychologists, biologists, chemists, engineers, are as never before striving to discover the relation between their realms of information and the general problems of social and industrial organization. And here is a historical student allowing the dust to collect on mediaeval chronicles, church histories, and even seventeenth-century rationalists, once fondly perused, in order to see if he can come to some terms with the profit system. And why not? Are we not all implicated? We all buy and many sell, and no one is left untouched by a situation which can in two or three years halve our incomes, without fault of ours. But before seeking to establish the bearing of the previous sections of this volume on our attitude toward the puzzles of our day, we must consider more carefully the "good reasons" commonly urged in defense of the existing system.

15. THE PHILOSOPHY OF SAFETY AND SANITY

So far we have been mainly engaged in recalling the process by which man has accumulated such a mind as he now has, and the effects of this accumulation on his mode of life. Under former conditions (which are now passing away) and in a state of ignorance about highly essential matters (which are now being put in quite a new light) he established certain standards and practices in his political, social, and industrial life. His views of property, government, education, the relations of the sexes, and various other matters he reaffirms and perpetuates by means of schools, colleges, churches, newspapers, and magazines, which in order to be approved and succeed must concur in and ratify these established standards and practices and the current notions of good and evil, right and wrong. This is what happened in the past, and to the great majority of people this still seems to be the only means of "safeguarding society". Before subjecting this attitude of mind to further criticism it will be helpful to see how those argue who fail to perceive the vicious circle involved.

The war brought with it a burst of unwonted and varied animation. Those who had never extended their activities beyond the usual routine of domestic and professional life suddenly found themselves participating in a vast enterprise in which they seemed to be broadening their knowledge and displaying undreamed of capacity for co-operation with their fellows. Expressions of high idealism exalted us above the petty cares of our previous existence, roused new ambitions, and opened up an exhilarating perspective of possibility and endeavor. It was common talk that when the foe, whose criminal lust for power had precipitated the mighty tragedy, should be vanquished, things would "no longer be the same". All would then agree that war was the abomination of abominations, the world would be made safe for right-minded democracy, and the nations would unite in smiling emulation.

Never did bitterer disappointment follow high hopes. All the old habits of nationalistic policy reasserted themselves at Versailles. A frightened and bankrupt world could indeed hardly be expected to exhibit greater intelligence than the relatively happy and orderly one which had five years earlier allowed its sanctified traditions to drag it over the edge of the abyss. Then there emerged from the autocracy of the Tsars the dictatorship of the proletariat, and in Hungary and Germany various startling attempts to revolutionize hastily and excessively that ancient order which the Hapsburg and Hohenzollern rulers had managed to perpetuate in spite of all modern novelties. The real character of these movements was ill understood in our country, but it was inevitable that with man's deep-seated animistic tendencies they should appear as a sort of wicked demon or a deadly contagion which might attack even our own land unless prevented by timely measures. War had naturally produced its machinery for dealing with dissenters, sympathizers with the enemy, and those who deprecated or opposed war altogether; and it was the easiest thing in the world to extend the repression to those who held exceptional or unpopular views, like the Socialists and members of the I.W.W. It was plausible to charge these associations with being under the guidance of foreigners, with "pacificism" and a general tendency to disloyalty. But suspicion went further so as to embrace members of a rather small, thoughtful class who, while rarely socialistic, were confessedly skeptical in regard to the general beneficence of existing institutions, and who failed to applaud at just the right points to suit the taste of the majority of their fellow-citizens. So the general impression grew up that there was a sort of widespread conspiracy to overthrow the government by violence or, at least, a dangerous tendency to prepare the way for such a disaster, or at any rate a culpable indifference to its possibility.

Business depression reinforced a natural reaction which had set in with the sudden and somewhat unexpected close of the war. The unwonted excitement brought on a national headache, and a sedative in the form of normalcy was proffered by the Republican party and thankfully accepted by the country at large. Under these circumstances the philosophy of safety and sanity was formulated. It is familiar and reassuring and puts no disagreeable task of mental and emotional readjustment on those who accept it. Hence its inevitable popularity and obvious soundness.

And these are its presuppositions: No nation is comparable to our own in its wealth and promise, in its freedom and opportunity for all. It has opened its gates to the peoples of the earth, who have flocked across the ocean to escape the poverty and oppression of

Europe. From the scattered colonies of the pre-revolutionary period the United States has rapidly advanced to its world ascendancy. When the European powers had reached a hopeless stalemate after four years of war the United States girded on the sword as the champion of liberty and democracy and in an incredibly short time brought the conflict to a victorious close before she had dispatched half the troops she could easily have spared. She had not entered the conflict with any motives of aggrandizement or of territorial extension. She felt her self-sufficiency and could well afford proudly to refuse to join the League of Nations on the ground that she did not wish to be involved in European wrangles or sacrifice a tittle of her rights of self-determination.

The prosperity of the United States is to be attributed largely to the excellence of the Federal Constitution and the soundness of her democratic institutions. Class privileges do not exist, or at least are not recognized. Everyone has equal opportunity to rise in the world unhampered by the shackles of European caste. There is perfect freedom in matters of religious belief. Liberty of speech and of the press is confirmed by both the Federal Constitution and the constitutions of the various states. If people are not satisfied with their form of government they may at any time alter it by a peaceful exercise of the suffrage.

In no other country is morality more highly prized or stoutly defended. Woman is held in her proper esteem and the institution of the family everywhere recognized as fundamental. We are singularly free from the vices which disgrace the capitals of Europe, not excepting London.

In no other country is the schoolhouse so assuredly acknowledged to be the corner stone of democracy and liberty. Our higher institutions of learning are unrivaled; our public libraries numerous and accessible. Our newspapers and magazines disseminate knowledge and rational pleasure throughout the land.

We are an ingenious people in the realm of invention and in the boldness of our business enterprise. We have the sturdy virtues of the pioneer. We are an honest people, keeping our contracts and giving fair measure. We are a tireless people in the patient attention to business and the laudable resolve to rise in the world. Many of our richest men began on the farm or as office boys. Success depends in our country almost exclusively on native capacity, which is rewarded here with a prompt and cheerful recognition which is rare in other lands.

We are a progressive people, always ready for improvements, which indeed we take for granted, so regularly do they make their appearance. No alert American can visit any foreign country without noting innumerable examples of stupid adherence to outworn and cumbrous methods in industry, commerce, and transportation.

Of course no one is so blind as not to see that here and there evils develop which should be remedied, either by legislation or by the gradual advance in enlightenment. Many of them will doubtless cure themselves. Our democracy is right at heart and you cannot fool all the people all the time. We have not escaped our fair quota of troubles. It would be too much to expect that we should. The difference of opinion between the Northern and Southern states actually led to civil war, but this only served to confirm the natural unity of the country and prepare the way for further advance. Protestants have sometimes dreaded a Catholic domination; the Mormons have been a source of anxiety to timid souls. Populists and advocates of free silver have seemed to threaten sound finance. On the other hand, Wall Street and the trusts have led some to think that corporate business enterprise may at times, if left unhampered, lead to over-powerful monopolies. But the evil workings of all these things had before the war been peaceful, if insidious. They might rouse apprehension in the minds of far-sighted and public-spirited observers, but there had been no general fear that any of them would overthrow the Republic and lead to a violent destruction of society as now constituted and mayhap to a reversion to barbarism.

The circumstances of our participation in the World War and the rise of Bolshevism convinced many for the first time that at last society and the Republic were actually threatened. Heretofore the socialists of various kinds, the communists and anarchists, had attracted relatively little attention in our country. Except for the Chicago anarchist episode and the troubles with the I.W.W., radical reformers had been left to go their way, hold their meetings, and publish their newspapers and pamphlets with no great interference on the part of the police or attention on the part of lawgivers. With the progress of the war this situation changed; police and lawgivers began to interfere, and government officials and self-appointed guardians of the public weal began to denounce the "reds" and those suspected of "radical tendencies". The report of the Lusk Committee in the state of New York is perhaps the most imposing monument to this form of patriotic zeal.

It is not our business here to discuss the merits of Socialism or Bolshevism either from the standpoint of their underlying theories or their promise in practice. It is only in their effects in developing and substantiating the philosophy of safety and sanity that they concern us in this discussion.

Whether the report of the so-called Lusk Committee[23] has any considerable influence or no, it well illustrates a common and significant frame of mind and an habitual method of reasoning. The ostensible aim of the report is:

... to give a clear, unbiased statement and history of the purposes and objects, tactics and methods, of the various forces now at work in the United States, and particularly within the state of New York, which are seeking to undermine and destroy, not only the government under which we live, but also the very structure of American society. It also seeks to analyze the various constructive forces which are at work throughout the country counteracting these evil influences, and to present the many industrial and social problems that these constructive forces must meet and are meeting.

The plan is executed with laborious comprehensiveness, and one unacquainted with the vast and varied range of so-called "radical" utterances will be overwhelmed by the mass brought together. But our aim here is to consider the attitude of mind and assumptions of the editors and their sympathizers.

They admit the existence of "real grievances and natural demands of the working classes for a larger share in the management and use of the common wealth". It is these grievances and demands which the agitators use as a basis of their machinations. Those bent on a social revolution fall into two classes--socialists and anarchists. But while the groups differ in detail, these details are not worth considering. "Anyone who studies the propaganda of the various groups which we have named will learn that the arguments employed are the same; that the tactics advocated cannot be distinguished from one another, and that articles, or speeches made on the question of tactics or methods by anarchists, could, with propriety, be published in socialist, or communist newspapers without offending the membership of these organizations." So, fortunately for the reader, it is unnecessary to make any distinctions between socialists, anarchists, communists, and Bolsheviki. They all have the common purpose of overthrowing existing society and "general strikes and sabotage are the direct means advocated". The object is to drive business into bankruptcy by reducing production and raising costs.[24]

But it would be a serious mistake to assume that the dangers are confined to our industrial system. "The very first general fact that must be driven home to Americans is that the pacifist movement in this country, the growth and connections of which are an important part of this report, is an absolutely integral and fundamental part of international socialism." European socialism, from which ours is derived, has had for one of its main purposes "the creation of an international sentiment to supersede national patriotism and effort, and this internationalism was based upon pacificism, in the sense that it opposed all wars between nations and developed at the same time class consciousness that was to culminate in relentless class warfare. In other words, it was not really peace that was the goal, but the abolition of the patriotic, warlike spirit of nationalities".

In view of the necessity of making head against this menace the Criminal Anarchy statute of the State of New York was invoked, search warrants issued, "large quantities of revolutionary, incendiary and seditious written and printed matter were seized". After the refusal of Governor Smith to sign them, the so-called Lusk educational bills were repassed and signed by the Republican Governor Miller. No teacher in the schools shall be licensed to teach who "has advocated, either by word of mouth or in writing, a form of government other than the government of the United States or of this state". Moreover, "No person, firm, corporation, association, or society shall conduct, maintain, or operate any school, institute, class, or course of instruction in any subject without making application for and being granted a license from the University of the State of New York [_i. e_. the Regents]." The Regents shall have the right to send inspectors to visit classes and schools so licensed and to revoke licenses if they deem that an overthrow of the existing government by violence is being taught.[25]

But the safe and sane philosophy by no means stops with the convenient and compendious identification of socialists of all kinds, anarchists, pacificists and internationalists, as belonging to one threatening group united in a like-minded attempt to overthrow society as we now know it. This class includes, it may be observed, such seemingly distinguishable personalities as Trotzky and Miss Jane Addams, who are assumed to be in essential harmony upon the great issue. But there are many others who are perhaps the innocent tools of the socialists. These include teachers, lecturers, writers, clergymen, and editors to whom the Lusk report devotes a long section on "the spread of socialism in educated circles". It is the purpose of this section

... to show the use made by members of the Socialist Party of America and other extreme radicals and revolutionaries of pacifist sentiment among people of education and culture in the United States as a vehicle for the promotion of revolutionary socialistic propaganda. The facts here related are important because they show that these socialists, playing upon the pacifist sentiment in a large body of sincere persons, were able to organize their energies and capitalize their prestige for the spread of their doctrines. [P. 969.]

An instance of this is an article in the _New Republic_ which:

... includes more or less open attacks on Attorney-General Palmer, Mr. Lansing, the House Immigration Committee, the New York _Times_, Senator Fall, this Committee, etc. It also quotes the dissenting opinions in the Abrams case of Justices Holmes and Brandeis, and ends by making light of the danger of revolution in America: ... This belittling of the very real danger to the institutions of this country, as well as the attempted discrediting of any investigating group (or individual), has become thoroughly characteristic of our "Parlor Bolshevik" or "Intelligentsia". [P. 1103.]

So it comes about, as might indeed have been foreseen from the first, that one finds himself, if not actually violating the criminal anarchy statute, at least branded as a Bolshevik if he speaks slightingly of the New York _Times_ or recalls the dissenting opinion of two judges of the Supreme Court.

Moreover, as might have been anticipated, the issues prove to be at bottom not so much economic as moral and religious, for "Materialism and its formidable sons, Anarchy, Bolshevism, and Unrest, have thrown down the gauge of battle" to all decency.

... What is of the greatest importance for churchmen to understand, in order that they may not be led astray by specious arguments of so-called Christian Socialists and so-called liberals and self-styled partisans of free speech, is that socialism as a system, as well as anarchism and all its ramifications, from high-brow Bolshevism to the Russian Anarchist Association, are all the declared enemies of religion and all recognized moral standards and restraints. [P. 1124.]

We must not be misled by "false, specious idealism masquerading as progress". The fight is one for God as well as country, in which all forms of radicalism, materialism, and anarchy should be fiercely and promptly stamped out.[26]

NOTES.

[21] Keynes, _The Economic Consequences of the Peace_, pp. 11-12.

[22] Tawney, R. H., _The Acquisitive Society_, pp. 183-184. The original title of this admirable little work, a Fabian tract, was, _The Sickness of an Acquisitive Society_, but the American publishers evidently thought it inexpedient to stress the contention of the author that modern society has anything fundamentally the matter with it.

[23] _Revolutionary Radicalism, Its History, Purpose, and Tactics: with an exposition and discussion of the steps being taken and required to curb it, being the report of the Joint Legislative Committee investigating seditious activities, filed April 24, 1920, in the Senate of the state of New York._ This comprises four stout volumes (over 4,200 pages in all) divided into two parts, dealing, respectively, with "Revolutionary and Subversive Movements at Home and Abroad" and "Constructive Movements and Measures in America". Albany, 1920.

[24] "While the nature of this investigation has led the committee to lay its emphasis upon the activities of subversive organizations, it feels that this report would not be complete if it did not state emphatically that it believes that those persons in business and commercial enterprise and certain owners of property who seek to take advantage of the situation to reap inordinate gain from the public contribute in no small part to the social unrest which affords the radical a field of operation which otherwise would be closed to him." (P. 10.)

[25] The general history throughout the United States of these and similar measures, the interference with public meetings, the trials, imprisonments, and censorship, are all set forth in Professor Chaffee's _Freedom of Speech_, 1920.

[26] During the summer of 1921 the Vice-President of the United States published in _The Delineator_ a series of three articles on "Enemies of the Republic", in which he considers the question, "Are the 'reds' stalking our college women?" He finds some indications that they are, and warns his readers that, "Adherence to radical doctrines means the ultimate breaking down of the old, sturdy virtues of manhood and womanhood, the insidious destruction of character, the weakening of the moral fiber of the individual, and the destruction of the foundations of society." It may seem anomalous to some that the defenders of the old, sturdy virtues should so carelessly brand honest and thoughtful men and women, of whose opinions they can have no real knowledge, as "enemies of the Republic"--but there is nothing whatever anomalous in this. It has been the habit of defenders of the sturdy, old virtues from time immemorial to be careless of others' reputations.

VIII

Dans les sciences politiques, il est un ordre de vérités qui, surtout chez les peuples libres ... ne peuvent être utiles, que lorsqu'elles sont généralement connues et avouées. Ainsi, l'influence du progrês de ces sciences sur la liberté, sur la prospérité des nations, doivent en quelque sorts se mesurer sur le nombre de ces vérités qui, par l'effet d'une instruction élémentaire, deviennent commune à tous les esprits; ainsi les progrès toujours croissants de cette instruction élémentaire, liés eux mêmes aux progrès nécessaires de ces sciences, nous répondent d'une amélioration dans les destinées de l'espèce humaine qui peut être regardée comme indéfinie, puisqu'elle n'a d'autres limites que celles de ces progrès mêmes.--CONDORCET.

16. SOME HISTORICAL REFLECTIONS ON THE PHILOSOPHY OF REPRESSION

Of course the kind of reasoning and the presuppositions described in the previous section will appeal to many readers as an illustration of excessive and unjustifiable fear lest the present order be disturbed --a frenzied impulse to rush to the defense of our threatened institutions. Doubtless the Lusk report may quite properly be classed as a mere episode in war psychology. Having armed to put down the Germans and succeeded in so doing, the ardor of conflict does not immediately abate, but new enemies are sought and easily discovered. The hysteria of repression will probably subside, but it is now a well-recognized fact that in disease, whether organic or mental, the abnormal and excessive are but instructive exaggerations and perversions of the usual course of things. They do not exist by themselves, but represent the temporary and exaggerated functioning of bodily and mental processes. The real question for us here is not whether Senator Lusk is too fearful and too indiscriminate in his denunciations, but whether he and his colleagues do not merely furnish an overcharged and perhaps somewhat grotesque instance of man's natural and impulsive way of dealing with social problems. It seems to me that enough has already been said to lead us to suspect this.

At the outset of this volume the statement was hazarded that if only men could come to look at things differently from the way they now generally do, a number of our most shocking evils would either remedy themselves or show themselves subject to gradual elimination or hopeful reduction. Among these evils a very fundamental one is the defensive attitude toward the criticism of our existing order and the naïve tendency to class critics as enemies of society. It was argued that a fuller understanding of the history of the race would contribute to that essential freedom of mind which would welcome criticism and permit fair judgments of its merits. Having reviewed the arguments of those who would suppress criticism lest it lead to violence and destruction, we may now properly recall in this connection certain often neglected historical facts which serve to weaken if not to discredit most of these arguments.

Man has never been able to adapt himself very perfectly to his civilization, and there has always been a deal of injustice and maladjustment which might conceivably have been greatly decreased by intelligence. But now it would seem that this chronic distress has become acute, and some careful observers express the quite honest conviction that unless thought be raised to a far higher plane than hitherto, some great setback to civilization is inevitable.

Yet instead of subjecting traditional ideas and rules to a thoroughgoing reconsideration, our impulse is, as we have seen, to hasten to justify existing and habitual notions of human conduct. There are many who flatter themselves that by suppressing so-called "radical" thought and its diffusion, the present system can be made to work satisfactorily on the basis of ideas of a hundred or a hundred thousand years ago.

While we have permitted our free thought in the natural sciences to transform man's old world, we allow our schools and even our universities to continue to inculcate beliefs and ideals which may or may not have been appropriate to the past, but which are clearly anachronisms now. For, the "social science" taught in our schools is, it would appear, an orderly presentation of the conventional proprieties, rather than a summons to grapple with the novel and disconcerting facts that surround us on every side.

At the opening of the twentieth century the so-called sciences of man, despite some progress, are, as has been pointed out, in much the same position that the natural sciences were some centuries earlier. Hobbes says of the scholastic philosophy that it went on one brazen leg and one of an ass. This seems to be our plight to-day. Our scientific leg is lusty and grows in strength daily; its fellow member--our thought of man and his sorry estate--is capricious and halting. We have not realized the hopes of the eighteenth-century "illumination", when confident philosophers believed that humanity was shaking off its ancient chains; that the clouds of superstition were lifting, and that with the new achievements of science man would boldly and rapidly advance toward hitherto undreamed-of concord and happiness. We can no longer countenance the specious precision of the English classical school of economics, whose premises have been given the lie by further thought and experience. We have really to start anew.

The students of natural phenomena early realized the arduous path they had to travel. They had to escape, above all things, from the past. They perceived that they could look for no help from those whose special business it was to philosophize and moralize in terms of the past. They had to look for light in their own way and in the directions from which they conjectured it might come. Their first object was, as Bacon put it, _light_, not _fruit_. They had to learn before they could undertake changes, and Descartes is very careful to say that philosophic doubt was not to be carried over to daily conduct. This should for the time being conform to accepted standards, unenlightened as they might be.

Such should be the frame of mind of one who seeks insight into human affairs. His subject matter is, however, far more intricate and unmanageable than that of the natural scientist. Experiment on which natural science has reared itself is by no means so readily applicable in studying mankind and its problems. The student of humanity has even more inveterate prejudices to overcome, more inherent and cultivated weaknesses of the mind to guard against, than the student of nature. Like the early scientists, he has a scholastic tradition to combat. He can look for little help from the universities as now constituted. The clergy, although less sensitive in regard to what they find in the Bible, are still stoutly opposed, on the whole, to any thoroughgoing criticism of the standards of morality to which they are accustomed. Few lawyers can view their profession with any considerable degree of detachment. Then there are the now all-potent business interests, backed by the politicians and in general supported by the ecclesiastical, legal, and educational classes. Many of the newspapers and magazines are under their influence, since they are become the business man's heralds and live off his bounty.

Business indeed has almost become our religion; it is defended by the civil government even as the later Roman emperors and the mediaeval princes protected the Church against attack. Socialists and communists are the Waldensians and Albigensians of our day, heretics to be cast out, suppressed, and deported to Russia, if not directly to hell as of old.

The Secret Service seems inclined to play the part of a modern Inquisition, which protects our new religion. Collected in its innumerable files is the evidence in regard to suspected heretics who have dared impugn "business as usual", or who have dwelt too lovingly on peace and good will among nations. Books and pamphlets, although no longer burned by the common hangman, are forbidden the mails by somewhat undiscerning officials. We have a pious vocabulary of high resentment and noble condemnation, even as they had in the Middle Ages, and part of it is genuine, if unintelligent, as it was then.

Such are some of the obstacles which the student of human affairs must surmount. Yet we may hope that it will become increasingly clear that the repression of criticism (even if such criticism becomes fault-finding and takes the form of a denunciation of existing habits and institutions) is inexpedient and inappropriate to the situation in which the world finds itself. Let us assume that such people as really advocate lawlessness and disorder should be carefully watched and checked if they promise to be a cause of violence and destruction. But is it not possible to distinguish between them and those who question and even arraign with some degree of heat the standardized unfairness and maladjustments of our times?

And there is another class who cannot by any exaggeration be considered agitators, who have by taking thought come to see that our conditions have so altered in the past hundred years and our knowledge so increased that the older ways of doing and viewing things are not only unreasonable, but actually dangerous. But so greatly has the hysteria of war unsettled the public mind that even this latter class is subject to discreditable accusations and some degree of interference.

We constantly hear it charged that this or that individual or group advocates the violent overthrow of government, is not loyal to the Constitution, or is openly or secretly working for the abolition of private property or the family, or, in general, is supposed to be eager to "overturn everything without having anything to put in its place".

The historical student may well recommend that we be on our guard against such accusations brought against groups and individuals. For the student of history finds that it has always been the custom to charge those who happened to be unpopular, with holding beliefs and doing things which they neither believed nor did. Socrates was executed for corrupting youth and infidelity to the gods; Jesus for proposing to overthrow the government; Luther was to the officials of his time one who taught "a loose, self-willed life, severed from all laws and wholly brutish".

Those who questioned the popular delusions in regard to witchcraft were declared by clergymen, professors, and judges of the seventeenth century to be as good as atheists, who shed doubt on the devil's existence in order to lead their godless lives without fear of future retribution. How is it possible, in view of this inveterate habit of mankind, to accept at its face value what the police or Department of Justice, or self-appointed investigators, choose to report of the teachings of people who are already condemned in their eyes?

Of course the criticism of accepted ideas is offensive and will long remain so. After all, talk and writing are forms of conduct, and, like all conduct, are inevitably disagreeable when they depart from the current standards of respectable behavior. To talk as if our established notions of religion, morality, and property, our ideas of stealing and killing, were defective and in need of revision, is indeed more shocking than to violate the current rules of action. For we are accustomed to actual crimes, misdemeanors, and sins, which are happening all the time, but we will not tolerate any suspected attempt to palliate them in theory.

It is inevitable that new views should appear to the thoughtless to be justifications or extenuations of evil actions and an encouragement of violence and rebellion, and that they will accordingly be bitterly denounced. But there is no reason why an increase of intelligence should not put a growing number of us on our guard against this ancient pitfall.

If we are courageously to meet and successfully to overcome the dangers with which our civilization is threatened, it is clear that we need _more mind_ than ever before. It is also clear that we can have indefinitely more mind than we already have if we but honestly desire it and avail ourselves of resources already at hand. Mind, as previously defined, is our "conscious knowledge and intelligence, what we know and our attitude toward it--our disposition to increase our information, classify it, criticize it, and apply it". _It is obvious that in this sense the mind is a matter of accumulation and that it has been in the making ever since man took his first step in civilization._ I have tried to suggest the manner in which man's long history illuminates our plight and casts light on the path to be followed. And history is beginning to take account of the knowledge of man's nature and origin contributed by the biologist and the anthropologist and the newer psychologists.

Few people realize the hopeful revolution that is already beginning to influence the aims and methods of all these sciences of man. No previous generation of thinkers has been so humble on the whole as is that of to-day, so ready to avow their ignorance and to recognize the tendency of each new discovery to reveal further complexities in the problem. On the other hand, we are justified in feeling that at last we have the chance to start afresh. We are freer than any previous age from the various prepossessions and prejudices which we now see hampered the so-called "free" thinking of the eighteenth century.

The standards and mood of natural science are having an increasing influence in stimulating eager research into human nature, beliefs, and institutions. With Bacon's recommendations of the study of common _things_ the human mind entered a new stage of development. Now that historic forces have brought the common _man_ to the fore, we are submitting him to scientific study and gaining thereby that elementary knowledge of his nature which needs to be vastly increased and spread abroad, since it can form the only possible basis for a successful and real democracy.

I would not have the reader infer that I overrate the place of science or exact knowledge in the life of man. Science, which is but the most accurate information available about the world in which we live and the nature of ourselves and of our fellow men, is not the whole of life; and except to a few peculiar persons it can never be the most absorbing and vivid of our emotional satisfactions. We are poetic and artistic and romantic and mystical. We resent the cold analysis and reduction of life to the commonplace and well substantiated--and this is after all is said, the aim of scientific endeavor. But we have to adjust ourselves to a changing world in the light of constantly accumulating knowledge. It is knowledge that has altered the world and we must rely on knowledge and understanding to accommodate ourselves to our new surroundings and establish peace and order and security for the pursuit of those things that to most of us are more enticing than science itself.[27]

No previous generation has been so perplexed as ours, but none has ever been justified in holding higher hopes if it could but reconcile itself to making bold and judicious use of its growing resources, material and intellectual. _It is fear that holds us back._ And fear is begotten of ignorance and uncertainty. And these mutually reinforce one another, for we feebly try to condone our ignorance by our uncertainty and to excuse our uncertainty by our ignorance.

Our hot defense of our ideas and beliefs does not indicate an established confidence in them but often half-distrust, which we try to hide from ourselves, just as one who suffers from bashfulness offsets his sense of inferiority and awkwardness by rude aggression. If, for example, religious beliefs had been really firmly established there would have been no need of "aids to faith"; and so with our business system to-day, our politics and international relations. We dread to see things as they would appear if we thought of them honestly, for it is the nature of critical thought to metamorphose our familiar and approved world into something strange and unfamiliar. It is undoubtedly a nervous sense of the precariousness of the existing social system which accounts for the present strenuous opposition to a fair and square consideration of its merits and defects.

Partisanship is our great curse. We too readily assume that everything has two sides and that it is our duty to be on one or the other. We must be defending or attacking something; only the lily-livered hide their natural cowardice by asking the impudent

question, What is it all about? The heroic gird on the armor of the Lord, square their shoulders, and establish a muscular tension which serves to dispel doubt and begets the voluptuousness of bigotry and fanaticism.[28] In this mood questions become issues of right and wrong, not of expediency and inexpediency. It has been said that the worthy people of Cambridge are able promptly to reduce the most complex social or economic problem to a simple moral issue, and this is a wile of the Father of Lies, to which many of us yield readily enough.

It is, however, possible for the individual to overcome the fear of thought. Once I was afraid that men might think too much; now, I only dread lest they will think too little and far too timidly, for I now see that real thinking is rare and difficult and that it needs every incentive in the face of innumerable ancient and inherent discouragements and impediments. We must first endeavor manfully to free our own minds and then do what we can to hearten others to free theirs. _Toujours de l'audace!_ As members of a race that has required from five hundred thousand to a million years to reach its present state of enlightenment, there is little reason to think that anyone of us is likely to cultivate intelligence too assiduously or in harmful excess.

17. WHAT OF IT?

Our age is one of unprecedented responsibility. As Mr. Lippmann has so well said:

Never before have we had to rely so completely on ourselves. No guardian to think for us, no precedent to follow without question, no lawmaker above, only ordinary men set to deal with heartbreaking perplexity. All weakness comes to the surface. We are homeless in a jungle of machines and untamed powers that haunt and lure the imagination. Of course our culture is confused, our thinking spasmodic, and our emotion out of kilter. No mariner ever enters upon a more uncharted sea than does the average human being born in the twentieth century. Our ancestors thought they knew their way from birth through all eternity; we are puzzled about day after to-morrow.... It is with emancipation that real tasks begin, and liberty is a searching challenge, for it takes away the guardianship of the master and the comfort of the priest. The iconoclasts did not free us. They threw us into the water, and now we have to swim.[29]

We must look forward to ever new predicaments and adventures. _Nothing is going to be settled in the sense in which things were once supposed to be settled, for the simple reason that knowledge will probably continue to increase and will inevitably alter the world with which we have to make terms_. The only thing that might conceivably remain somewhat stabilized is an attitude of mind and unflagging expectancy appropriate to the terms and the rules according to which life's game must hereafter be played. We must promote a new cohesion and co-operation on the basis of this truth. And this means that we have now to substitute purpose for tradition, and this is a concise statement of the great revolution which we face.

Now, when all human institutions so slowly and laboriously evolved are impugned, every consensus challenged, every creed flouted, as much as and perhaps even more than by the ancient Sophists, the call comes to us ... to explore, test, and, if necessary, reconstruct the very bases of conviction, for all open questions are new opportunities. Old beacon lights have shifted or gone out. Some of the issues we lately thought to be minor have taken on cosmic dimensions. We are all "up against" questions too big for us, so that there is everywhere a sense of insufficiency which is too deep to be fully deployed in the narrow field of consciousness. Hence, there is a new discontent with old leaders, standards, criteria, methods, and values, and a demand everywhere for new ones, a realization that mankind must now reorient itself and take its bearings from the eternal stars and sail no longer into the unknown future by the dead reckonings of the past.[30]

Life, in short, has become a solemn sporting proposition--solemn enough in its heavy responsibilities and the magnitude of the stakes to satisfy our deepest religious longings; sporty enough to tickle the fancy of a baseball fan or an explorer in darkest Borneo. We can play the game or refuse to play it. At present most of human organization, governmental, educational, social, and religious, is directed, as it always has been, to holding things down, and to perpetuating beliefs and policies which belong to the past and have been but too gingerly readjusted to our new knowledge and new conditions. On the other hand, there are various scientific associations which are bent on revising and amplifying our knowledge and are not pledged to keeping alive any belief or method which cannot stand the criticism which comes with further information. The terrible fear of falling into mere rationalizing is gradually extending from the so-called natural sciences to psychology, anthropology, politics, and political economy. All this is a cheering response to the new situation.

But, as has been pointed out, really honest discussion of our social, economic, and political standards and habits readily takes on the suspicion of heresy and infidelity. Just as the "freethinker" who, in the eighteenth century, strove to discredit miracles in the

name of an all-wise and foreseeing God (who could not be suspected of tampering with his own laws), was accused of being an atheist and of really believing in no God at all; so those who would ennoble our ideals of social organization are described as "Intellectuals" or "parlor Bolshevists" who would overthrow society and all the achievements of the past in order to free themselves from moral and religious restraints and mayhap "get something for nothing". The parallel is very exact indeed.

The Church always argued that there were no new heresies. All would, on examination, prove to be old and discredited. So the Vice-President of the United States has recently declared that:

Men have experimented with radical theories in great and small ways times without number and always, always with complete failure. They are not new; they are old. Each failure has demonstrated anew that without effort there is no success. The race never gets something for nothing.[31]

But is this not a complete reversal of the obvious truth? Unless we define "radical" as that which never does succeed, how can anyone with the most elementary notions of history fail to see that almost all the things that we prize to-day represent revolts against tradition, and were in their beginnings what seemed to be shocking divergences from current beliefs and practices? What about Christianity, and Protestantism, and constitutional government, and the rejection of old superstitions and the acceptance of modern scientific ideas? The race has always been getting something for nothing, for creative thought is, as we have seen, confined to a very few. And it has been the custom to discourage or kill those who prosecuted it too openly, not to reward them according to their merits.

One cannot but wonder at this constantly recurring phrase "getting something for nothing", as if it were the peculiar and perverse ambition of disturbers of society. Except for our animal outfit, practically all we have is handed to us gratis. Can the most complacent reactionary flatter himself that he invented the art of writing or the printing press, or discovered his religious, economic, and moral convictions, or any of the devices which supply him with meat and raiment or any of the sources of such pleasure as he may derive from literature or the fine arts? In short, civilization is little else than getting something for nothing. Like other vested interests, it is "the legitimate right to something for nothing".[32] How much execrable reasoning and how many stupid accusations would fall away if this truth were accepted as a basis of discussion! Of course there is no more flagrant example of a systematic endeavor to get something for nothing than the present business system based on profits, and absentee ownership of stocks.

Since the invention of printing, and indeed long before, those fearful of change have attempted to check criticism by attacking books. These were classified as orthodox or heterodox, moral or immoral, treasonable or loyal, according to their tone. Unhappily this habit continues and shows itself in the distinction between sound and unsound, radical and conservative, safe and dangerous. The sensible question to ask about a book is obviously whether it makes some contribution to a clearer understanding of our situation by adding or reaffirming important considerations and the inferences to be made from these. Such books could be set off against those that were but expressions of vague discontent or emulation, or denunciations of things because they are as they are or are not as they are not. I have personally little confidence in those who cry lo here or lo there. It is premature to advocate any wide sweeping reconstruction of the social order, although experiments and suggestions should not be discouraged. What we need first is a change of heart and a chastened mood which will permit an ever increasing number of people to see things as they are, in the light of what they have been and what they might be. The dogmatic socialist with his unhistorical assumptions of class struggle, his exaggerated economic interpretation of history, and his notion that labor is the sole producer of capital, is shedding scarcely more light on the actual situation than is the Lusk Committee and Mr. Coolidge, with their confidence in the sacredness of private property, as they conceive it, in the perennial rightness and inspiration of existing authority and the blessedness of the profit system. But there are plenty of writers, to mention only a few of the more recent ones, like Veblen, Dewey, J. A. Hobson, Tawney, Cole, Havelock Ellis, Bertrand Russell, Graham Wallas, who may or may not have (or ever have had) any confidence in the presuppositions and forecasts of socialism, whose books do make clearer to any fair-minded reader the painful exigencies of our own times.

I often think of the economic historians of, say, two centuries hence who may find time to dig up the vestiges of the economic literature of to-day. We may in imagination appeal to their verdicts and in some cases venture to forecast them. Many of our writers they will throw aside as dominated by a desire merely to save the ill-understood present at all costs; others as attempting to realize plans which were already discredited in their own day. Future historians will, nevertheless, clearly distinguish a few who, by a sort of persistent and ardent detachment, were able to see things close at hand more fully and truly than their fellows and endeavored to do what they could to lead their fellows to perceive and reckon with the facts which so deeply concerned them. Blessed be those who aspire to win this glory. On the monument erected to Bruno on the site where he was burned for seeing more clearly than

those in authority in his days, is the simple inscription, "Raised to Giordano Bruno by the generation which he foresaw."

We are all purblind, but some are blinder than others who use the various means available for sharpening their eyesight. As an onlooker it seems to me safe to say that the lenses recommended by both the "radicals" and their vivid opponents rather tend to increase than diminish our natural astigmatism.

Those who agree, on the whole, at least, with the _facts_ brought together in this essay and, on the whole, with the main _inferences_ suggested either explicitly or implicitly, will properly begin to wonder how our educational system and aims are to be so rearranged that coming generations may be better prepared to understand the condition of human life and to avail themselves of its possibilities more fully and guard against its dangers more skillfully than previous generations. There is now widespread discontent with our present educational methods and their elaborate futility; but it seems to me that we are rather rarely willing to face the fundamental difficulty, for it is obviously so very hard to overcome. _We do not dare to be honest enough to tell boys and girls and young men and women what would be most useful to them in an age of imperative social reconstruction._

We have seen that the ostensible aims of education are various,[33] and that among them is now included the avowed attempt to prepare the young to play their part later as voting citizens. If they are to do better than preceding generations they must be brought up differently. They would have to be given a different general attitude toward institutions and ideals; instead of having these represented to them as standardized and sacred they should be taught to view them as representing half-solved problems. But how can we ever expect to cultivate the judgment of the young in matters of fundamental social, economic, and political readjustment when we consider the really dominating forces in education? But even if these restraints were weakened or removed, the task would remain a very delicate one. Even with teachers free and far better informed than they are, it would be no easy thing to cultivate in the young a justifiable admiration for the achievements and traditional ideals of mankind and at the same time develop the requisite knowledge of the prevailing abuses, culpable stupidity, common dishonesty, and empty political buncombe, which too often passes for statesmanship.

But the problem has to be tackled, and it may be tackled directly or indirectly. The direct way would be to describe as realistically as might be the actual conditions and methods, and their workings, good and bad. If there were better books than are now available it would be possible for teachers tactfully to show not only how government is supposed to run, but how it actually is run. There are plenty of reports of investigating committees, Federal and state, which furnish authentic information in regard to political corruption, graft, waste, and incompetency. These have not hitherto been supposed to have anything to do with the _science_ of government, although they are obviously absolutely essential to an _understanding_ of it. Similar reflections suggest themselves in the matter of business, international relations, and race animosities. But so long as our schools depend on appropriations made by politicians, and colleges and universities are largely supported by business men or by the state, and are under the control of those who are bent on preserving the existing system from criticism, it is hard to see any hope of a kind of education which would effectively question the conventional notions of government and business. They cannot be discussed with sufficient honesty to make their consideration really medicinal. We laud the brave and outspoken and those supposed to have the courage of their convictions--but only when these convictions are acceptable or indifferent to us. Otherwise, honesty and frankness become mere impudence.[34]

No doubt politics and economics could be taught, and are being taught, better as time goes on. Neither of them are so utterly unreal and irrelevant to human proceedings as they formerly were. There is no reason why a teacher of political economy should not describe the actual workings of the profit system of industry with its restraints on production and its dependence on the engineer, and suggest the possibility of gathering together capital from functionless absentee stockholders on the basis of the current rate of interest rather than speculative dividends. The actual conditions of the workers could be described, their present precarious state, the inordinate and wasteful prevalence of hiring and firing; the policy of the unions, and their defensive and offensive tactics. Every youngster might be given some glimmering notion that neither "private property" nor "capital" is the real issue (since few question their essentiality) but rather the new problem of supplying other than the traditional motives for industrial enterprise--namely, the slave-like docility and hard compulsion of the great masses of workers, on the one hand, and speculative profits, on the other, which now dominate in our present business system. For the existing organization is not only becoming more and more patently wasteful, heartless, and unjust, but is beginning, for various reasons, to break down. In short, whatever the merits of our present ways of producing the material necessities and amenities of life, it looks to many as if they could not succeed indefinitely, even as well as they have in the past, without some fundamental revision.

As for political life, a good deal would be accomplished if students could be habituated to distinguish successfully between the empty declamations of politicians and statements of facts, between vague party programs and concrete recommendations and

proposals. They should early learn that language is not primarily a vehicle of ideas and information, but an emotional outlet, corresponding to various cooings, growlings, snarls, crowings, and brayings. Their attention could be invited to the rhetoric of the bitter-enders in the Senate or the soothing utterances of Mr. Harding on accepting the nomination for President:

"With a Senate advising as the Constitution contemplates, I would hopefully approach the nations of Europe and of the earth, proposing that understanding which makes us a willing participant in the consecration of nations to a new relationship, to commit the moral forces of the world, America included, to peace and international justice, still leaving America free, independent, self-reliant, but offering friendship to all the world. If men call for more specific details, I remind them that moral committals are broad and all-inclusive, and we are contemplating peoples in the concord of humanity's advancement."

After mastering the difference between language used to express facts and purposes and that which amounts to no more than a pious ejaculation, a suave and deprecating gesture, or an inferential accusation directed against the opposing party, the youth should be instructed in the theory and practice of party fidelity and the effects of partisanship on the conduct of our governmental affairs. In fine, he should get some notion of the motives and methods of those who really run our government, whether he learned anything else or not.

These _direct_ attempts to produce a more intelligently critical and open-minded generation are, however, likely to be far less feasible than the _indirect_ methods. Partly because they will arouse strenuous opposition from the self-appointed defenders of society as now regulated, and partly because no immediate inspection of habits and institutions is so instructive as a study of their origin and progress and a comparison of them with other forms of social adjustment. I hope that it has already become clear that we have great, and hitherto only very superficially worked, resources in History, as it is now coming to be conceived.

We are in the midst of the greatest intellectual revolution that has ever overtaken mankind. Our whole conception of mind is undergoing a great change. We are beginning to understand its nature, and as we find out more, intelligence may be raised to a recognized dignity and effectiveness which it has never enjoyed before. An encouraging beginning has been made in the case of the natural sciences, and a similar success may await the studies which have to do with the critical estimate of man's complicated nature, his fundamental impulses and resources, the needless and fatal repressions which these have suffered through the ignorance of the past, and the discovery of untried ways of enriching our existence and improving our relations with our fellow men.

There[35] is a well-known passage in Goethe's "Faust" where he likens History to the Book with Seven Seals described in Revelation, which no one in heaven, or on the earth or under the earth, was able to open and read therein. All sorts of guesses have been hazarded as to its contents by Augustine, Orosius, Otto of Freising, Bossuet, Bolingbroke, Voltaire, Herder, Hegel, and many others, but none of them were able to break the seals, and all of them were gravely misled by their fragmentary knowledge of the book's contents. For we now see that the seven seals were seven great ignorances. No one knew much (1) of man's physical nature, or (2) the workings of his thoughts and desires, or (3) of the world in which he lives, or (4) of how he has come about as a race, or (5) of how he develops as an individual from a tiny egg, or (6) how deeply and permanently he is affected by the often forgotten impressions of infancy and childhood, or (7) how his ancestors lived for hundreds of thousands of years in the dark ignorance of savagery.

The seals are all off now. The book at last lies open before those who are capable of reading it, and few they be as yet; for most of us still cling to the guesses made in regard to its contents before anyone knew what was in it. We have become attached to the familiar old stories which now prove to be fictions, and we find it hard to reconcile ourselves to the many hard sayings which the book proves to contain--its constant stress on the stupidity of "good" people; its scorn for the respectable and normal, which it often reduces to little more than sanctimonious routine and indolence and pious resentment at being disturbed in one's complacent assurances. Indeed, much of its teaching appears downright immoral according to existing standards.

One awful thing that the Book of the Past makes plain is that with our animal heritage we are singularly oblivious to the large concerns of life. We are keenly sensitive to little discomforts, minor irritations, wounded vanity, and various danger signals; but our comprehension is inherently vague and listless when it comes to grasping intricate situations and establishing anything like a fair perspective in life's problems and possibilities. Our imagination is restrained by our own timidity, constantly reinforced by the warnings of our fellows, who are always urging us to be safe and sane, by which they mean convenient for them, predictable in our conduct and graciously amenable to the prevailing standards.

But it is obvious that it is increasingly dangerous to yield to this inveterate tendency, however comfortable and respectable it may seem for the moment.

History, as H. G. Wells has so finely expressed it, is coming more and more to be "a race between education and catastrophe. Our internal policies and our economic and social ideas are profoundly vitiated at present by wrong and fantastic ideas of the origin and historical relationship of social classes. A sense of history as the common adventure of all mankind is as necessary for peace within as it is for peace between the nations". There can be no secure peace now but a common peace of the whole world; no prosperity but a general prosperity, and this for the simple reason that we are all now brought so near together and are so pathetically and intricately interdependent, that the old notions of noble Isolation and national sovereignty are magnificently criminal.

In the bottom of their hearts, or the depths of their unconscious, do not the conservatively minded realize that their whole attitude toward the world and its betterment is based on an assumption that finds no least support in the Great Book of the Past? Does it not make plain that the "conservative", so far as he is consistent and lives up to his professions, is fatally in the wrong? The so-called "radical" is also almost always wrong, for no one can foresee the future. But he works on a right assumption--namely, that the future has so far always proved different from the past and that it will continue to do so. Some of us, indeed, see that the future is tending to become more and more rapidly and widely different from the past. The conservative himself furnishes the only illustration of his theory, and even that is highly inconclusive. His general frame of mind appears to remain constant, but he finds himself defending and rejecting very different things. The great issue may, according to the period, be a primeval taboo, the utterances of the Delphic oracle, the Athanasian creed, the Inquisition, the geocentric theory, monarchy by the grace of God, witchcraft, slavery, war, capitalism, private property, or noble isolation. All of these tend to appear to the conservative under the aspect of eternity, but all of these things have come, many of them have gone, and the remainder would seem to be subject to undreamed-of modifications as time goes on. This is the teaching of the now unsealed book.

NOTES.

[27] Mr. James Branch Cabell has in his _Beyond Life_ defended man's romantic longings and inexorable craving to live part of the time at least in a world far more sweetly molded to his fancy than that of natural science and political economy. There is no reason why man should live by bread alone. There is a time, however, for natural science and political economy, for they should establish the conditions in which we may rejoice in our vital lies, which will then do no harm and bring much joy.

[28] The relation of our kinesthesia or muscular sense to fanaticism on the one hand and freedom of mind on the other is a matter now beginning to be studied with the promise of highly important results.

[29] _Drift and Mastery_, pp. 196-197.

[30] G. Stanley Hall, "The Message of the Zeitgeist", in _Scientific Monthly_, August, 1921--a very wonderful and eloquent appeal by one of our oldest and boldest truth seekers.

[31] _Delineator_, August, 1921, p. II.

[32] Adopting Mr. Veblen's definition of a vested interest which caused some scandal in conservative circles when it was first reported. Doubtless the seeming offensiveness of the latter part of the definition obscured its reassuring beginning.

[33] See Section 2 above.

[34] The wise Goethe has said, _"Zieret Stärke den Mann und freies, muthiges Wesen, O, so ziemet ihm fast tiefes Geheimniss noch mehr"_, --Römische Elegien, xx.

[35] The closing reflections are borrowed from _The Leaflet_, issued by the students of the New School for Social Research, established in New York in 1919, with a view of encouraging adults to continue their studies in the general spirit and mood which permeate this essay.

APPENDIX

SOME SUGGESTIONS IN REGARD TO READING

It may happen that among the readers of this essay there will be some who will ask how they can most readily get a clearer idea of the various newer ways of looking at mankind and the problems of the day. The following list of titles is furnished with a view of doing something to meet this demand. It is not a bibliography in the usual sense of the term. It is confined to rather short and readily understandable presentations appropriate to the overcrowded schedule upon which most of us have to operate. All the writers

mentioned belong, however, to that rather small class whose opinions are worth considering, even if one reserves the imprescriptible right not to agree with all they say. There may well be better references than those with which I happen to be acquainted, and others quite as useful; but I can hardly imagine anyone, whatever his degree of information, unless he happens to be a specialist in the particular field, failing to gain something of value from any one of the volumes mentioned.

For the astounding revelations in regard to the fundamental nature of matter and the ways in which the modern chemist plays with it, see John Mills, _Within the Atom_ (D. Van Nostrand Company), and Slosson, _Creative Chemistry_ (The Century Company).

A general account of the evolutionary process will be found in Crampton, _The Doctrine of Evolution_ (Columbia University Press), chaps, i-v. For our development as an individual from the egg see Conklin, _Heredity and Environment_ (Princeton University Press).

The general scope of modern anthropology and the influence of this study on our notions of mankind as we now find it can be gathered from Goldenweiser, _Early Civilization, Introduction to Anthropology_ (Knopf). This should be supplemented by the remarkable volume of essays by Franz Boas, _The Mind of Primitive Man_ (Macmillan).

Of the more recent and easily available books relating to the reconstruction of philosophy and the newer conceptions in regard to mind and intelligence the following may be mentioned: Dewey, _Reconstruction in Philosophy_ and _Human Nature and Conduct_ (Holt); Woodworth, _Dynamic Psychology_ (Columbia University Press); _Trotter, Instincts of the Herd in Peace and War_ (Macmillan)--especially the first two sections, pp. 1-65; Bernard Hart, _The Psychology of Insanity_ (Putnam), an admirable little introduction to the importance of abnormal mental conditions in understanding our usual thoughts and emotions; McDougall, _Social Psychology_ (J. W. Luce); Everett D. Martin, _The Behavior of Crowds_ (Harpers); Edman, _Human Traits_ (Houghton-Mifflin). For the so-called behavioristic interpretation of mankind, see Watson, _Psychology from the Standpoint of a Behaviorist_ (Lippincott). Haldane, _Mechanism, Life, and Personality_ (Dutton), is a short discussion of some of the most fundamental elements in our modern conception of life itself.

When it comes to gaining an idea of "Freudianism" and all the overwhelming discoveries, theories, and suggestions due to those who have busied themselves with the lasting effects of infantile and childish experiences, of hidden desires--sexual and otherwise, of "the Unconscious" and psychoanalysis, while there are many books, great and small, there would be no unanimity of opinion among those somewhat familiar with the subjects as to what should be recommended. It would be well if everyone could read in Havelock Ellis, _The Philosophy of Conflict_ (Houghton-Mifflin), the essay (XVIII) on Freud and his influence. Wilfred Lay, _Man's Unconscious Conflict_ (Dodd, Mead), is a popular exposition of psychoanalysis, and Tansley, _The New Psychology_ (Dodd, Mead), likewise. Harvey O'Higgins, _The Secret Springs_ (Harpers), reports, in a pleasing manner, some of the actual medical experiences of Dr. Edward Reede of Washington. But much of importance remains unsaid in all these little books for which one would have to turn to Freud himself, his present and former disciples, his enemies, and the special contributions of investigators and practitioners in this new and essential field of psychological research and therapy.

Turning to the existing industrial system, its nature, defects, and recommendations for its reform, I may say that I think that relatively little is to be derived from the common run of economic textbooks. The following compendious volumes give an analysis of the situation and a consideration of the proposed remedies for existing evils and maladjustments: Veblen, _The Vested Interests and the Common Man_, also his _The Engineers and the Price System_ (Huebsch); J. A. Hobson, _Democracy after the War_ (Macmillan) and his more recent _Problems of a New World_ (Macmillan); Tawney, _The Acquisitive Society_ (Harcourt, Brace); Bertrand Russell, _Why Men Fight_ (Century) and his _Proposed Roads to Freedom_ (Holt), in which he describes clearly the history and aims of the various radical leaders and parties of recent times.

As for newer views and criticism of the modern state and political life in general, in addition to Mr. Hobson's books mentioned above, the following are of importance: Graham Wallas, _The Great Society_ (Macmillan); Harold Laski, _Authority in the Modern State_ and _Problems of Sovereignty_ (Yale University Press); Walter Lippmann, _Preface to Politics_ and _Drift and Mastery_ (Holt).

J. Russell Smith, _The World's Food Resources_ (Holt), is a larger and more detailed discussion than most of those recommended above, but contains a number of general facts and comment of first-rate importance.

One who desires a highly thoughtful and scholarly review of the trend of religious thought in recent times should read McGiffert, _The Rise of Modern Religious Ideas_ (Macmillan).

ARISTOTLE'S ETHICS BOOK I BOOK II BOOK III BOOK IV BOOK V BOOK VI BOOK VII BOOK VIII BOOK IX BOOK X NOTES

INTRODUCTION

The _Ethics_ of Aristotle is one half of a single treatise of which his _Politics_ is the other half. Both deal with one and the same subject. This subject is what Aristotle calls in one place the "philosophy of human affairs;" but more frequently Political or Social Science. In the two works taken together we have their author's whole theory of human conduct or practical activity, that is, of all human activity which is not directed merely to knowledge or truth. The two parts of this treatise are mutually complementary, but in a literary sense each is independent and self-contained. The proem to the _Ethics_ is an introduction to the whole subject, not merely to the first part; the last chapter of the _Ethics_ points forward to the _Politics_, and sketches for that part of the treatise the order of enquiry to be pursued (an order which in the actual treatise is not adhered to).

The principle of distribution of the subject-matter between the two works is far from obvious, and has been much debated. Not much can be gathered from their titles, which in any case were not given to them by their author. Nor do these titles suggest any very compact unity in the works to which they are applied: the plural forms, which survive so oddly in English (Ethic_s_, Politic_s_), were intended to indicate the treatment within a single work of a _group_ of connected questions. The unity of the first group arises from their centring round the topic of character, that of the second from their connection with the existence and life of the city or state. We have thus to regard the _Ethics_ as dealing with one group of problems and the _Politics_ with a second, both falling within the wide compass of Political Science. Each of these groups falls into sub-groups which roughly correspond to the several books in each work. The tendency to take up one by one the various problems which had suggested themselves in the wide field obscures both the unity of the subject-matter and its proper articulation. But it is to be remembered that what is offered us is avowedly rather an enquiry than an exposition of hard and fast doctrine.

Nevertheless each work aims at a relative completeness, and it is important to observe the relation of each to the other. The distinction is not that the one treats of Moral and the other of Political Philosophy, nor again that the one deals with the moral activity of the individual and the other with that of the State, nor once more that the one gives us the theory of human conduct, while the other discusses its application in practice, though not all of these misinterpretations are equally erroneous. The clue to the right interpretation is given by Aristotle himself, where in the last chapter of the _Ethics_ he is paving the way for the _Politics_. In the _Ethics_ he has not confined himself to the abstract or isolated individual, but has always thought of him, or we might say, in his social and political context, with a given nature due to race and heredity and in certain surroundings. So viewing him he has studied the nature and formation of his character—all that he can make himself or be made by others to be. Especially he has investigated the various admirable forms of human character and the mode of their production. But all this, though it brings more clearly before us what goodness or virtue is, and how it is to be reached, remains mere theory or talk. By itself it does not enable us to become, or to help others to become, good. For this it is necessary to bring into play the great force of the Political Community or State, of which the main instrument is Law. Hence arises the demand for the necessary complement to the _Ethics, i.e._, a treatise devoted to the questions which centre round the enquiry; by what organisation of social or political forces, by what laws or institutions can we best secure the greatest amount of good character?

We must, however, remember that the production of good character is not the end of either individual or state action: that is the aim of the one and the other because good character is the indispensable condition and chief determinant of happiness, itself the goal of all human doing. The end of all action, individual or collective, is the greatest happiness of the greatest number. There is, Aristotle insists, no difference of kind between the good of one and the good of many or all. The sole difference is one of amount or scale. This does not mean simply that the State exists to secure in larger measure the objects of degree which the isolated individual attempts, but is too feeble, to secure without it. On the contrary, it rather insists that whatever goods society alone enables a man to secure have always had to the individual—whether he realised it or not—the value which, when so secured, he recognises them to possess. The best and happiest life for the individual is that which the State renders possible, and this it does mainly by revealing to him the value of new objects of desire and educating him to appreciate them. To Aristotle or to Plato the State is, above all, a large and powerful educative agency which gives the individual increased opportunities of self-development and greater capacities for the enjoyment of life.

Looking forward, then, to the life of the State as that which aids support, and combines the efforts of the individual to obtain happiness, Aristotle draws no hard and fast distinction between the spheres of action of Man as individual and Man as citizen. Nor does the division of his discussion into the _Ethics_ and the _Politics_ rest upon any such distinction. The distinction implied is rather between two stages in the life of the civilised man—the stage of preparation for the full life of the adult citizen, and the stage of the actual exercise or enjoyment of citizenship. Hence the _Ethics_, where his attention is directed upon the formation of character, is largely and centrally a treatise on Moral Education. It discusses especially those admirable human qualities which fit a man for life in an organised civic community, which makes him “a good citizen,” and considers how they can be fostered or created and their opposites prevented.

This is the kernel of the _Ethics_, and all the rest is subordinate to this main interest and purpose. Yet “the rest” is not irrelevant; the whole situation in which character grows and operates is concretely conceived. There is a basis of what we should call Psychology, sketched in firm outlines, the deeper presuppositions and the wider issues of human character and conduct are not ignored, and there is no little of what we should call Metaphysics. But neither the Psychology nor the Metaphysics is elaborated, and only so much is brought forward as appears necessary to put the main facts in their proper perspective and setting. It is this combination of width of outlook with close observation of the concrete facts of conduct which gives its abiding value to the work, and justifies the view of it as containing Aristotle’s Moral Philosophy. Nor is it important merely as summing up the moral judgments and speculations of an age now long past. It seizes and dwells upon those elements and features in human practice which are most essential and permanent, and it is small wonder that so much in it survives in our own ways of regarding conduct and speaking of it. Thus it still remains one of the classics of Moral Philosophy, nor is its value likely soon to be exhausted.

As was pointed out above, the proem (Book I., cc. i-iii.) is a prelude to the treatment of the whole subject covered by the _Ethics_ and the _Politics_ together. It sets forth the purpose of the enquiry, describes the spirit in which it is to be undertaken and what ought to be the expectation of the reader, and lastly states the necessary conditions of studying it with profit. The aim of it is the acquisition and propagation of a certain kind of knowledge (science), but this knowledge and the thinking which brings it about are subsidiary to a practical end. The knowledge aimed at is of what is best for man and of the conditions of its realisation. Such knowledge is that which in its consumate form we find in great statesmen, enabling them to organise and administer their states and regulate by law the life of the citizens to their advantage and happiness, but it is the same kind of knowledge which on a smaller scale secures success in the management of the family or of private life.

It is characteristic of such knowledge that it should be deficient in “exactness,” in precision of statement, and closeness of logical concatenation. We must not look for a mathematics of conduct. The subject-matter of Human Conduct is not governed by necessary and uniform laws. But this does not mean that it is subject to no laws. There are general principles at work in it, and these can be formulated in “rules,” which rules can be systematised or unified. It is all-important to remember that practical or moral rules are only general and always admit of exceptions, and that they arise not from the mere complexity of the facts, but from the liability of the facts to a certain unpredictable variation. At their very best, practical rules state probabilities, not certainties; a relative constancy of connection is all that exists, but it is enough to serve as a guide in life. Aristotle here holds the balance between a misleading hope of reducing the subject-matter of conduct to a few simple rigorous abstract principles, with conclusions necessarily issuing from them, and the view that it is the field of operation of inscrutable forces acting without predictable regularity. He does not pretend to find in it absolute uniformities, or to deduce the details from his principles. Hence, too, he insists on the necessity of experience as the source or test of all that he has to say. Moral experience—the actual possession and exercise of good character—is necessary truly to understand moral principles and profitably to apply them. The mere intellectual apprehension of

them is not possible, or if possible, profitless.

The _Ethics_ is addressed to students who are presumed both to have enough general education to appreciate these points, and also to have a solid foundation of good habits. More than that is not required for the profitable study of it.

If the discussion of the nature and formation of character be regarded as the central topic of the _Ethics_, the contents of Book I., cc. iv.-xii. may be considered as still belonging to the introduction and setting, but these chapters contain matter of profound importance and have exercised an enormous influence upon subsequent thought. They lay down a principle which governs all Greek thought about human life, viz. that it is only intelligible when viewed as directed towards some end or good. This is the Greek way of expressing that all human life involves an ideal element—something which it is not yet and which under certain conditions it is to be. In that sense Greek Moral Philosophy is essentially idealistic. Further it is always assumed that all human practical activity is directed or "oriented" to a _single_ end, and that that end is knowable or definable in advance of its realisation. To know it is not merely a matter of speculative interest, it is of the highest practical moment for only in the light of it can life be duly guided, and particularly only so can the state be properly organised and administered. This explains the stress laid throughout by Greek Moral Philosophy upon the necessity of knowledge as a condition of the best life. This knowledge is not, though it includes knowledge of the nature of man and his circumstances, it is knowledge of what is best—of man's supreme end or good.

But this end is not conceived as presented to him by a superior power nor even as something which _ought_ to be. The presentation of the Moral Ideal as Duty is almost absent. From the outset it is identified with the object of desire, of what we not merely judge desirable but actually do desire, or that which would, if realised, satisfy human desire. In fact it is what we all, wise and simple, agree in naming "Happiness" (Welfare or Well-being)

In what then does happiness consist? Aristotle summarily sets aside the more or less popular identifications of it with abundance of physical pleasures, with political power and honour, with the mere possession of such superior gifts or attainments as normally entitle men to these, with wealth. None of these can constitute the end or good of man as such. On the other hand, he rejects his master Plato's conception of a good which is the end of the whole universe, or at least dismisses it as irrelevant to his present enquiry. The good towards which all human desires and practical activities are directed must be one conformable to man's special nature and circumstances and attainable by his efforts. There is in Aristotle's theory of human conduct no trace of Plato's "other worldliness", he brings the moral ideal in Bacon's phrase down to "right earth"—and so closer to the facts and problems of actual human living. Turning from criticism of others he states his own positive view of Happiness, and, though he avowedly states it merely in outline his account is pregnant with significance. Human Happiness lies in activity or energising, and that in a way peculiar to man with his given nature and his given circumstances, it is not theoretical, but practical: it is the activity not of reason but still of a being who possesses reason and applies it, and it presupposes in that being the development, and not merely the natural possession, of certain relevant powers and capacities. The last is the prime condition of successful living and therefore of satisfaction, but Aristotle does not ignore other conditions, such as length of life, wealth and good luck, the absence or diminution of which render happiness not impossible, but difficult of attainment.

It is interesting to compare this account of Happiness with Mill's in _Utilitarianism_. Mill's is much the less consistent: at times he distinguishes and at times he identifies, happiness, pleasure, contentment, and satisfaction. He wavers between belief in its general attainability and an absence of hopefulness. He mixes up in an arbitrary way such ingredients as "not expecting more from life than it is capable of bestowing," "mental cultivation," "improved laws," etc., and in fact leaves the whole conception vague, blurred, and uncertain. Aristotle draws the outline with a firmer hand and presents a more definite ideal. He allows for the influence on happiness of conditions only partly, if at all, within the control of man, but he clearly makes the man positive determinant of man's happiness he in himself, and more particularly in what he makes directly of his own nature, and so indirectly of his circumstances. "'Tis in ourselves that we are thus or thus" But once more this does not involve an artificial or abstract isolation of the individual moral agent from his relation to other persons or things from his context in society and nature, nor ignore the relative dependence of his life upon a favourable environment.

The main factor which determines success or failure in human life is the acquisition of certain powers, for Happiness is just the exercise or putting forth of these in actual living, everything else is secondary and subordinate. These powers arise from the due development of certain natural aptitudes which belong (in various degrees) to human nature as such and therefore to all normal human beings. In their developed form they are known as virtues (the Greek means simply "goodnesses," "perfections," "excellences," or "fitnesses"), some of them are physical, but others are psychical, and among the latter some, and these distinctively or peculiarly human, are "rational," _i e_, presuppose the possession and exercise of mind or intelligence. These last

fall into two groups, which Aristotle distinguishes as Goodnesses of Intellect and Goodnesses of Character. They have in common that they all excite in us admiration and praise of their possessors, and that they are not natural endowments, but acquired characteristics But they differ in important ways. (1) the former are excellences or developed powers of the reason as such—of that in us which sees and formulates laws, rules, regularities systems, and is content in the vision of them, while the latter involve a submission or obedience to such rules of something in us which is in itself capricious and irregular, but capable of regulation, viz our instincts and feelings, (2) the former are acquired by study and instruction, the latter by discipline. The latter constitute "character," each of them as a "moral virtue" (literally "a goodness of character"), and upon them primarily depends the realisation of happiness. This is the case at least for the great majority of men, and for all men their possession is an indispensable basis of the best, _i e_, the most desirable life. They form the chief or central subject-matter of the _Ethics_.

Perhaps the truest way of conceiving Aristotle's meaning here is to regard a moral virtue as a form of obedience to a maxim or rule of conduct accepted by the agent as valid for a class of recurrent situations in human life. Such obedience requires knowledge of the rule and acceptance of it _as the rule_ of the agent's own actions, but not necessarily knowledge of its ground or of its systematic connexion with other similarly known and similarly accepted rules (It may be remarked that the Greek word usually translated "reason," means in almost all cases in the _Ethics_ such a rule, and not the faculty which apprehends, formulates, considers them).

The "moral virtues and vices" make up what we call character, and the important questions arise: (1) What is character? and (2) How is it formed? (for character in this sense is not a natural endowment; it is formed or produced). Aristotle deals with these questions in the reverse order. His answers are peculiar and distinctive—not that they are absolutely novel (for they are anticipated in Plato), but that by him they are for the first time distinctly and clearly formulated.

(1.) Character, good or bad, is produced by what Aristotle calls "habituation," that is, it is the result of the repeated doing of acts which have a similar or common quality. Such repetition acting upon natural aptitudes or propensities gradually fixes them in one or other of two opposite directions, giving them a bias towards good or evil. Hence the several acts which determine goodness or badness of character must be done in a certain way, and thus the formation of good character requires discipline and direction from without. Not that the agent himself contributes nothing to the formation of his character, but that at first he needs guidance. The point is not so much that the process cannot be safely left to Nature, but that it cannot be entrusted to merely intellectual instruction. The process is one of assimilation, largely by imitation and under direction and control. The result is a growing understanding of what is done, a choice of it for its own sake, a fixity and steadiness of purpose. Right acts and feelings become, through habit, easier and more pleasant, and the doing of them a "second nature." The agent acquires the power of doing them freely, willingly, more and more "of himself."

But what are "right" acts? In the first place, they are those that conform to a rule—to the right rule, and ultimately to reason. The Greeks never waver from the conviction that in the end moral conduct is essentially reasonable conduct. But there is a more significant way of describing their "rightness," and here for the first time Aristotle introduces his famous "Doctrine of the Mean." Reasoning from the analogy of "right" physical acts, he pronounces that rightness always means adaptation or adjustment to the special requirements of a situation. To this adjustment he gives a quantitative interpretation. To do (or to feel) what is right in a given situation is to do or to feel just the amount required—neither more nor less: to do wrong is to do or to feel too much or too little—to fall short of or over-shoot, "a mean" determined by the situation. The repetition of acts which lie in the mean is the cause of the formation of each and every "goodness of character," and for this "rules" can be given.

(2) What then is a "moral virtue," the result of such a process duly directed? It is no mere mood of feeling, no mere liability to emotion, no mere natural aptitude or endowment, it is a permanent _state_ of the agent's self, or, as we might in modern phrase put it, of his will, it consists in a steady self-imposed obedience to a rule of action in certain situations which frequently recur in human life. The rule prescribes the control and regulation within limits of the agent's natural impulses to act and feel thus and thus. The situations fall into groups which constitute the "fields" of the several "moral virtues", for each there is a rule, conformity to which secures rightness in the individual acts. Thus the moral ideal appears as a code of rules, accepted by the agent, but as yet _to him_ without rational justification and without system or unity. But the rules prescribe no mechanical uniformity: each within its limits permits variety, and the exactly right amount adopted to the requirements of the individual situation (and every actual situation is individual) must be determined by the intuition of the moment. There is no attempt to reduce the rich possibilities of right action to a single monotonous type. On the contrary, there are acknowledged to be many forms of moral virtue, and there is a long list of them, with their correlative vices enumerated.

The Doctrine of the Mean here takes a form in which it has impressed subsequent thinkers, but which has less importance than is usually ascribed to it. In the “Table of the Virtues and Vices,” each of the virtues is flanked by two opposite vices, which are respectively the excess and defect of that which in due measure constitutes the virtue. Aristotle tries to show that this is the case in regard to every virtue named and recognised as such, but his treatment is often forced and the endeavour is not very successful. Except as a convenient principle of arrangement of the various forms of praiseworthy or blameworthy characters, generally acknowledged as such by Greek opinion, this form of the doctrine is of no great significance.

Books III-V are occupied with a survey of the moral virtues and vices. These seem to have been undertaken in order to verify in detail the general account, but this aim is not kept steadily in view. Nor is there any well-considered principle of classification. What we find is a sort of portrait-gallery of the various types of moral excellence which the Greeks of the author’s age admired and strove to encourage. The discussion is full of acute, interesting and sometimes profound observations. Some of the types are those which are and will be admired at all times, but others are connected with peculiar features of Greek life which have now passed away. The most important is that of Justice or the Just Man, to which we may later return. But the discussion is preceded by an attempt to elucidate some difficult and obscure points in the general account of moral virtue and action (Book III, cc i-v). This section is concerned with the notion of Responsibility. The discussion designedly excludes what we may call the metaphysical issues of the problem, which here present themselves, it moves on the level of thought of the practical man, the statesman, and the legislator. Coercion and ignorance of relevant circumstances render acts involuntary and exempt their doer from responsibility, otherwise the act is voluntary and the agent responsible, choice or preference of what is done, and inner consent to the deed, are to be presumed. Neither passion nor ignorance of the right rule can extenuate responsibility. But there is a difference between acts done voluntarily and acts done of _set_ choice or purpose. The latter imply Deliberation. Deliberation involves thinking, thinking out means to ends: in deliberate acts the whole nature of the agent consents to and enters into the act, and in a peculiar sense they are his, they _are_ him in action, and the most significant evidence of what he is. Aristotle is unable wholly to avoid allusion to the metaphysical difficulties and what he does here say upon them is obscure and unsatisfactory. But he insists upon the importance in moral action of the agent’s inner consent, and on the reality of his individual responsibility. For his present purpose the metaphysical difficulties are irrelevant.

The treatment of Justice in Book V has always been a source of great difficulty to students of the _Ethics_. Almost more than any other part of the work it has exercised influence upon mediaeval and modern thought upon the subject. The distinctions and divisions have become part of the stock-in-trade of would be philosophic jurists. And yet, oddly enough, most of these distinctions have been misunderstood and the whole purport of the discussion misconceived. Aristotle is here dealing with justice in a restricted sense viz as that special goodness of character which is required of every adult citizen and which can be produced by early discipline or habituation. It is the temper or habitual attitude demanded of the citizen for the due exercise of his functions as taking part in the administration of the civic community—as a member of the judicature and executive. The Greek citizen was only exceptionally, and at rare intervals if ever, a law-maker while at any moment he might be called upon to act as a judge (juryman or arbitrator) or as an administrator. For the work of a legislator far more than the moral virtue of justice or fairmindedness was necessary, these were requisite to the rarer and higher “intellectual virtue” of practical wisdom. Then here, too, the discussion moves on a low level, and the raising of fundamental problems is excluded. Hence “distributive justice” is concerned not with the large question of the distribution of political power and privileges among the constituent members or classes of the state but with the smaller questions of the distribution among those of casual gains and even with the division among private claimants of a common fund or inheritance, while “corrective justice” is concerned solely with the management of legal redress. The whole treatment is confused by the unhappy attempt to give a precise mathematical form to the principles of justice in the various fields distinguished. Still it remains an interesting first endeavour to give greater exactness to some of the leading conceptions of jurisprudence.

Book VI appears to have in view two aims: (1) to describe goodness of intellect and discover its highest form or forms; (2) to show how this is related to goodness of character, and so to conduct generally. As all thinking is either theoretical or practical, goodness of intellect has _two_ supreme forms—Theoretical and Practical Wisdom. The first, which apprehends the eternal laws of the universe, has no direct relation to human conduct: the second is identical with that master science of human life of which the whole treatise, consisting of the _Ethics_ and the _Politics_, is an exposition. It is this science which supplies the right rules of conduct Taking them as they emerge in and from practical experience, it formulates them more precisely and organises them into a system where they are all seen to converge upon happiness. The mode in which such knowledge manifests itself is in the power to show that such and such rules of action follow from the very nature of the end or good for man. It presupposes and starts from a clear conception of the end and the wish for it as conceived, and it proceeds by a deduction which is dehberation writ large. In the man of

practical wisdom this process has reached its perfect result, and the code of right rules is apprehended as a system with a single principle and so as something wholly rational or reasonable He has not on each occasion to seek and find the right rule applicable to the situation, he produces it at once from within himself, and can at need justify it by exhibiting its rationale, _i.e._ , its connection with the end. This is the consummate form of reason applied to conduct, but there are minor forms of it, less independent or original, but nevertheless of great value, such as the power to think out the proper cause of policy in novel circumstances or the power to see the proper line of treatment to follow in a court of law.

The form of the thinking which enters into conduct is that which terminates in the production of a rule which declares some means to the end of life. The process presupposes _(a)_ a clear and just apprehension of the nature of that end—such as the _Ethics_ itself endeavours to supply; _(b)_ a correct perception of the conditions of action, _(a)_ at least is impossible except to a man whose character has been duly formed by discipline; it arises only in a man who has acquired moral virtue. For such action and feeling as forms bad character, blinds the eye of the soul and corrupts the moral principle, and the place of practical wisdom is taken by that parody of itself which Aristotle calls “cleverness”—the “wisdom” of the unscrupulous man of the world. Thus true practical wisdom and true goodness of character are interdependent; neither is genuinely possible or “completely” present without the other. This is Aristotle’s contribution to the discussion of the question, so central in Greek Moral Philosophy, of the relation of the intellectual and the passionate factors in conduct.

Aristotle is not an intuitionist, but he recognises the implication in conduct of a direct and immediate apprehension both of the end and of the character of his circumstances under which it is from moment to moment realised. The directness of such apprehension makes it analogous to sensation or sense-perception; but it is on his view in the end due to the existence or activity in man of that power in him which is the highest thing in his nature, and akin to or identical with the divine nature—mind, or intelligence. It is this which reveals to us what is best for us—the ideal of a happiness which is the object of our real wish and the goal of all our efforts. But beyond and above the practical ideal of what is best _for man_ begins to show itself another and still higher ideal—that of a life not distinctively human or in a narrow sense practical, yet capable of being participated in by man even under the actual circumstances of this world. For a time, however, this further and higher ideal is ignored.

The next book (Book VII.), is concerned partly with moral conditions, in which the agent seems to rise above the level of moral virtue or fall below that of moral vice, but partly and more largely with conditions in which the agent occupies a middle position between the two. Aristotle’s attention is here directed chiefly towards the phenomena of “Incontinence,” weakness of will or imperfect self-control. This condition was to the Greeks a matter of only too frequent experience, but it appeared to them peculiarly difficult to understand. How can a man know what is good or best for him, and yet chronically fail to act upon his knowledge? Socrates was driven to the paradox of denying the possibility, but the facts are too strong for him. Knowledge of the right rule may be present, nay the rightfulness of its authority may be acknowledged, and yet time after time it may be disobeyed; the will may be good and yet overmastered by the force of desire, so that the act done is contrary to the agent’s will. Nevertheless the act may be the agent’s, and the will therefore divided against itself. Aristotle is aware of the seriousness and difficulty of the problem, but in spite of the vividness with which he pictures, and the acuteness with which he analyses, the situation in which such action occurs, it cannot be said that he solves the problem. It is time that he rises above the abstract view of it as a conflict between reason and passion, recognising that passion is involved in the knowledge which in conduct prevails or is overborne, and that the force which leads to the wrong act is not blind or ignorant passion, but always has some reason in it. But he tends to lapse back into the abstraction, and his final account is perplexed and obscure. He finds the source of the phenomenon in the nature of the desire for bodily pleasures, which is not irrational but has something rational in it. Such pleasures are not necessarily or inherently bad, as has sometimes been maintained; on the contrary, they are good, but only in certain amounts or under certain conditions, so that the will is often misled, hesitates, and is lost.

Books VIII. and IX. (on Friendship) are almost an interruption of the argument. The subject-matter of them was a favourite topic of ancient writers, and the treatment is smoother and more orderly than elsewhere in the _Ethics_. The argument is clear, and may be left without comment to the readers. These books contain a necessary and attractive complement to the somewhat dry account of Greek morality in the preceding books, and there are in them profound reflections on what may be called the metaphysics of friendship or love.

At the beginning of Book X. we return to the topic of Pleasure, which is now regarded from a different point of view. In Book VII. the antagonists were those who over-emphasised the irrationality or badness of Pleasure: here it is rather those who so exaggerate its value as to confuse or identify it with the good or Happiness. But there is offered us in this section much more than criticism of the errors of others. Answers are given both to the psychological question, “What is Pleasure?” and to the ethical question, “What is its

value?" Pleasure, we are told, is the natural concomitant and index of perfect activity, distinguishable but inseparable from it—"the activity of a subject at its best acting upon an object at its best." It is therefore always and in itself a good, but its value rises and falls with that of the activity with which it is conjoined, and which it intensifies and perfects. Hence it follows that the highest and best pleasures are those which accompany the highest and best activity.

Pleasure is, therefore, a necessary element in the best life, but it is not the whole of it nor the principal ingredient. The value of a life depends upon the nature and worth of the activity which it involves; given the maximum of full free action, the maximum of pleasure necessary follows. But on what sort of life is such activity possible? This leads us back to the question, What is happiness? In what life can man find the fullest satisfaction for his desires? To this question Aristotle gives an answer which cannot but surprise us after what has preceded. True Happiness, great satisfaction, cannot be found by man in any form of "practical" life, no, not in the fullest and freest exercise possible of the "moral virtues," not in the life of the citizen or of the great soldier or statesman. To seek it there is to court failure and disappointment. It is to be found in the life of the onlooker, the disinterested spectator; or, to put it more distinctly, "in the life of the philosopher, the life of scientific and philosophic contemplation." The highest and most satisfying form of life possible to man is "the contemplative life"; it is only in a secondary sense and for those incapable of their life, that the practical or moral ideal is the best. It is time that such a life is not distinctively human, but it is the privilege of man to partake in it, and such participation, at however rare intervals and for however short a period, is the highest Happiness which human life can offer. All other activities have value only because and in so far as they render _this_ life possible.

But it must not be forgotten that Aristotle conceives of this life as one of intense activity or energising: it is just this which gives it its supremacy. In spite of the almost religious fervour with which he speaks of it ("the most orthodox of his disciples" paraphrases his meaning by describing its content as "the service and vision of God"), it is clear that he identified it with the life of the philosopher, as he understood it, a life of ceaseless intellectual activity in which at least at times all the distractions and disturbances inseparable from practical life seemed to disappear and become as nothing. This ideal was partly an inheritance from the more ardent idealism of his master Plato, but partly it was the expression of personal experience.

The nobility of this ideal cannot be questioned; the conception of the end of man or a life lived for truth—of a life blissfully absorbed in the vision of truth—is a lofty and inspiring one. But we cannot resist certain criticisms upon its presentation by Aristotle: (1) the relation of it to the lower ideal of practice is left somewhat obscure; (2) it is described in such a way as renders its realisation possible only to a gifted few, and under exceptional circumstances; (3) it seems in various ways, as regards its content, to be unnecessarily and unjustifiably limited. But it must be borne in mind that this is a first endeavour to determine its principle, and that similar failures have attended the attempts to describe the "religious" or the "spiritual" ideals of life, which have continually been suggested by the apparently inherent limitations of the "practical" or "moral" life, which is the subject of Moral Philosophy.

The Moral Ideal to those who have most deeply reflected on it leads to the thought of an Ideal beyond and above it, which alone gives it meaning, but which seems to escape from definite conception by man. The richness and variety of this Ideal ceaselessly invite, but as ceaselessly defy, our attempts to imprison it in a definite formula or portray it in detailed imagination. Yet the thought of it is and remains inexpungable from our minds.

This conception of the best life is not forgotten in the _Politics_ The end of life in the state is itself well-living and well-doing—a life which helps to produce the best life The great agency in the production of such life is the State operating through Law, which is Reason backed by Force. For its greatest efficiency there is required the development of a science of legislation. The main drift of what he says here is that the most desirable thing would be that the best reason of the community should be embodied in its laws. But so far as that is not possible, it still is true that anyone who would make himself and others better must become a miniature legislator—must study the general principles of law, morality, and education. The conception of πολιτικ■ with which he opened the _Ethics_ would serve as a guide to a father educating his children as well as to the legislator legislating for the state. Finding in his predecessors no developed doctrine on this subject, Aristotle proposes himself to undertake the construction of it, and sketches in advance the programme of the _Politics_ in the concluding sentence of the _Ethics_ His ultimate object is to answer the questions, What is the best form of Polity, how should each be constituted, and what laws and customs should it adopt and employ? Not till this answer is given will "the philosophy of human affairs" be complete.

On looking back it will be seen that the discussion of the central topic of the nature and formation of character has expanded into a Philosophy of Human Conduct, merging at its beginning and end into metaphysics The result is a Moral Philosophy set against a background of Political Theory and general Philosophy. The most characteristic features of this Moral Philosophy are due to the fact of its essentially teleological view of human life and action: (1) Every human activity, but especially every human practical

activity, is directed towards a simple End discoverable by reflection, and this End is conceived of as the object of universal human desire, as something to be enjoyed, not as something which ought to be done or enacted. Anstotle's Moral Philosophy is not hedonistic but it is eudæmomstic, the end is the enjoyment of Happiness, not the fulfilment of Duty. (2) Every human practical activity derives its value from its efficiency as a means to that end, it is good or bad, right or wrong, as it conduces or fails to conduce to Happiness Thus his Moral Philosophy is essentially utilitarian or prudential Right action presupposes Thought or Thinking, partly on the development of a clearer and distincter conception of the end of desire, partly as the deduction from that of rules which state the normally effective conditions of its realisation. The thinking involved in right conduct is calculation—calculation of means to an end fixed by nature and foreknowable Action itself is at its best just the realisation of a scheme preconceived and thought out beforehand, commending itself by its inherent attractiveness or promise of enjoyment.

This view has the great advantage of exhibiting morality as essentially reasonable, but the accompanying disadvantage of lowering it into a somewhat prosaic and unideal Prudentialism, nor is it saved from this by the tacking on to it, by a sort of after-thought, of the second and higher Ideal—an addition which ruins the coherence of the account without really transmuting its substance The source of our dissatisfaction with the whole theory lies deeper than in its tendency to identify the end with the maximum of enjoyment or satisfaction, or to regard the goodness or badness of acts and feelings as lying solely in their efficacy to produce such a result It arises from the application to morality of the distinction of means and end For this distinction, for all its plausibility and usefulness in ordinary thought and speech, cannot finally be maintained In morality—and this is vital to its character—everything is both means and end, and so neither in distinction or separation, and all thinking about it which presupposes the finality of this distinction wanders into misconception and error. The thinking which really matters in conduct is not a thinking which imaginatively forecasts ideals which promise to fulfil desire, or calculates means to their attainment—that is sometimes useful, sometimes harmful, and always subordinate, but thinking which reveals to the agent the situation in which he is to act, both, that is, the universal situation on which as man he always and everywhere stands, and the ever-varying and ever-novel situation in which he as this individual, here and now, finds himself. In such knowledge of given or historic fact lie the natural determinants of his conduct, in such knowledge alone lies the condition of his freedom and his good.

But this does not mean that Moral Philosophy has not still much to learn from Aristotle's _Ethics_. The work still remains one of the best introductions to a study of its important subject-matter, it spreads before us a view of the relevant facts, it reduces them to manageable compass and order, it raises some of the central problems, and makes acute and valuable suggestions towards their solution. Above all, it perpetually incites to renewed and independent reflection upon them.

J. A. SMITH

The following is a list of the works of Aristotle:—

First edition of works (with omission of Rhetorica, Poetica, and second book of Economica), 5 vols by Aldus Manutius, Venice, 1495 8, re impression supervised by Erasmus and with certain corrections by Grynaeus (including Rhetorica and Poetica), 1531, 1539, revised 1550, later editions were followed by that of Immanuel Bekker and Brandis (Greek and Latin), 5 vols. The 5th vol contains the Index by Bomtz, 1831-70, Didot edition (Greek and Latin), 5 vols 1848 74

ENGLISH TRANSLATIONS Edited by T Taylor, with Porphyry's Introduction, 9 vols, 1812, under editorship of J A Smith and W D Ross, II vols, 1908-31, Loeb editions Ethica, Rhetorica, Poetica, Physica, Politica, Metaphysica, 1926-33

Later editions of separate works _De Anima_ Torstrik, 1862, Trendelenburg, 2nd edition, 1877, with English translation, L Wallace, 1882, Biehl, 1884, 1896, with English, R D Hicks, 1907 _Ethica_ J S Brewer (Nicomachean), 1836, W E Jelf, 1856, J F T Rogers, 1865, A Grant, 1857 8, 1866, 1874, 1885, E Moore, 1871, 1878, 4th edition, 1890, Ramsauer (Nicomachean), 1878, Susemihl, 1878, 1880, revised by O Apelt, 1903, A Grant, 1885, I Bywater (Nicomachean), 1890, J Burnet, 1900

Historia Animalium Schneider, 1812, Aubert and Wimmer, 1860; Dittmeyer, 1907

Metaphysica Schwegler, 1848, W Christ, 1899

Organon Waitz, 1844 6

Poetica Vahlen, 1867, 1874, with Notes by E Moore, 1875, with English translation by E R Wharton, 1883, 1885, Uberweg, 1870, 1875, with German translation, Susemihl, 1874, Schmidt, 1875, Christ, 1878, I Bywater, 1898, T G Tucker, 1899

De Republica Athenientium Text and facsimile of Papyrus, F G Kenyon, 1891, 3rd edition, 1892, Kaibel and Wilamowitz-Moellendorf, 1891, 3rd edition, 1898, Van Herwerden and Leeuwen (from Kenyon's text), 1891, Blass, 1892, 1895, 1898, 1903, J E Sandys, 1893

Politica Susemihl, 1872, with German, 1878, 3rd edition, 1882, Susemihl and Hicks, 1894, etc, O Immisch, 1909

Physica C Prantl, 1879

Rhetorica Stahr, 1862, Sprengel (with Latin text), 1867, Cope and Sandys, 1877, Roemer, 1885, 1898

ENGLISH TRANSLATIONS OF ONE OR MORE WORKS De Anima (with Parva Naturalia), by W A Hammond, 1902 Ethica Of Morals to Nicomachus, by E Pargiter, 1745, with Politica by J Gillies, 1797, 1804, 1813, with Rhetorica and Poetica, by T Taylor, 1818, and later editions Nicomachean Ethics, 1819, mainly from text of Bekker by D P Chase, 1847, revised 1861, and later editions, with an introductory essay by G H Lewes (Camelot Classics) 1890, re-edited by J M Mitchell (New Universal Library), 1906, 1910, by R W Browne (Bohn's Classical Library), 1848, etc, by R Williams, 1869, 1876, by W M Hatch and others (with translation of paraphrase attributed to Andronicus of Rhodes), edited by E Hatch, 1879 by F H Peters, 1881, J E C Welldon, 1892, J Gillies (Lubbock's Hundred Books) 1893 Historia Animalium, by R Creswell (Bonn's Classical Library) 1848, with Treatise on Physiognomy, by T Taylor, 1809 Metaphysica, by T Taylor, 1801, by J H M Mahon (Bohn's Classical Library), 1848 Organon, with Porphyry's Introduction, by O F Owen (Bohn's Classical Library), 1848 Posterior Analytics, E Poste, 1850, E S Bourchier, 1901, On Fallacies, E Poste, 1866 Parva Naturaha (Greek and English), by G R T Ross, 1906, with De Anima, by W A Hammond, 1902 Youth and Old Age, Life and Death and Respiration, W Ogle 1897 Poetica, with Notes from the French of D Acier, 1705, by H J Pye, 1788, 1792, T Twining, 1789, 1812, with Preface and Notes by H Hamilton, 1851, Treatise on Rhetorica and Poetica, by T Hobbes (Bohn's Classical Library), 1850, by Wharton, 1883 (see Greek version), S H Butcher, 1895, 1898, 3rd edition, 1902, E S Bourchier, 1907, by Ingram Bywater, 1909 De Partibus Animalium, W Ogle, 1882 De Republica Athenientium, by E Poste, 1891, F G Kenyon, 1891, T J Dymes, 1891 De Virtutibus et Vitus, by W Bridgman, 1804 Politica, from the French of Regius, 1598, by W Ellis, 1776, 1778, 1888 (Morley's Universal Library), 1893 (Lubbock's Hundred Books) by E Walford (with Æconomics, and Life by Dr Gillies), (Bohn's Classical Library), 1848, J E. C. Welldon, 1883, B Jowett, 1885, with Introduction and Index by H W C Davis, 1905, Books i iii iv (vii) from Bekker's text by W E Bolland, with Introduction by A Lang, 1877. Problemata (with writings of other philosophers), 1597, 1607, 1680, 1684, etc. Rhetorica, A summary by T Hobbes, 1655 (?), new edition, 1759, by the translators of the Art of Thinking, 1686, 1816, by D M Crimmin, 1812, J Gillies, 1823, Anon 1847, J E C Welldon, 1886, R C Jebb, with Introduction and Supplementary Notes by J E Sandys, 1909 (see under Poetica and Ethica). Secreta Secretorum (supposititious work), Anon 1702, from the Hebrew version by M Gaster, 1907, 1908. Version by Lydgate and Burgh, edited by R Steele (E E T S), 1894, 1898.

LIFE, ETC J W Blakesley, 1839, A Crichton (Jardine's Naturalist's Library), 1843, JS Blackie, Four Phases of Morals, Socrates, Aristotle, etc, 1871, G Grote, Aristotle, edited by A Bain and G C Robertson, 1872, 1880, E Wallace, Outlines of the Philosophy of Aristotle, 1875, 1880, A Grant (Ancient Classics for English readers), 1877, T Davidson, Aristotle and Ancient Educational Ideals (Great Educators), 1892, F Sewall, Swedenborg and Aristotle, 1895, W A Heidel, The Necessary and the Contingent of the Aristotelian System (University of Chicago Contributions to Philosophy), 1896, F W Bain, On the Realisation of the Possible, and the Spirit of Aristotle, 1899, J H Hyslop, The Ethics of the Greek Philosophers, etc (Evolution of Ethics), 1903, M V Williams, Six Essays on the Platonic Theory of Knowledge as expounded in the later dialogues and reviewed by Aristotle, 1908, J M Watson, Aristotle's Criticism of Plato, 1909 A E Taylor, Aristotle, 1919, W D Ross, Aristotle, 1923.

ARISTOTLE'S ETHICS

BOOK I

Chapter I.

Every art, and every science reduced to a teachable form, and in like manner every action and moral choice, aims, it is thought, at some good: for which reason a common and by no means a bad description of the Chief Good is, "that which all things aim at."

Now there plainly is a difference in the Ends proposed: for in some cases they are acts of working, and in others certain works or tangible results beyond and beside the acts of working: and where there are certain Ends beyond and beside the actions, the works are in their nature better than the acts of working. Again, since actions and arts and sciences are many, the Ends likewise come to

be many: of the healing art, for instance, health; of the ship-building art, a vessel; of the military art, victory; and of domestic management, wealth; are respectively the Ends.

And whatever of such actions, arts, or sciences range under some one faculty (as under that of horsemanship the art of making bridles, and all that are connected with the manufacture of horse-furniture in general; this itself again, and every action connected with war, under the military art; and in the same way others under others), in all such, the Ends of the master-arts are more choice-worthy than those ranging under them, because it is with a view to the former that the latter are pursued.

(And in this comparison it makes no difference whether the acts of working are themselves the Ends of the actions, or something further beside them, as is the case in the arts and sciences we have been just speaking of.)

Since then of all things which may be done there is some one End which we desire for its own sake, and with a view to which we desire everything else; and since we do not choose in all instances with a further End in view (for then men would go on without limit, and so the desire would be unsatisfied and fruitless), this plainly must be the Chief Good, _i.e._ the best thing of all.

Surely then, even with reference to actual life and conduct, the knowledge of it must have great weight; and like archers, with a mark in view, we shall be more likely to hit upon what is right: and if so, we ought to try to describe, in outline at least, what it is and of which of the sciences and faculties it is the End.

Now one would naturally suppose it to be the End of that which is most commanding and most inclusive: and to this description, πολιτικ■[1] plainly answers: for this it is that determines which of the sciences should be in the communities, and which kind individuals are to learn, and what degree of proficiency is to be required. Again; we see also ranging under this the most highly esteemed faculties, such as the art military, and that of domestic management, and Rhetoric. Well then, since this uses all the other practical sciences, and moreover lays down rules as to what men are to do, and from what to abstain, the End of this must include the Ends of the rest, and so must be The Good of Man. And grant that this is the same to the individual and to the community, yet surely that of the latter is plainly greater and more perfect to discover and preserve: for to do this even for a single individual were a matter for contentment; but to do it for a whole nation, and for communities generally, were more noble and godlike.

Such then are the objects proposed by our treatise, which is of the nature of πολιτικ■: and I conceive I shall have spoken on them satisfactorily, if they be made as distinctly clear as the nature of the subject-matter will admit: for exactness must not be looked for in all discussions alike, any more than in all works of handicraft. Now the notions of nobleness and justice, with the examination of which πολιτικ■ is concerned, admit of variation and error to such a degree, that they are supposed by some to exist conventionally only, and not in the nature of things: but then, again, the things which are allowed to be goods admit of a similar error, because harm comes to many from them: for before now some have perished through wealth, and others through valour.

We must be content then, in speaking of such things and from such data, to set forth the truth roughly and in outline; in other words, since we are speaking of general matter and from general data, to draw also conclusions merely general. And in the same spirit should each person receive what we say: for the man of education will seek exactness so far in each subject as the nature of the thing admits, it being plainly much the same absurdity to put up with a mathematician who tries to persuade instead of proving, and to demand strict demonstrative reasoning of a Rhetorician.

Now each man judges well what he knows, and of these things he is a good judge: on each particular matter then he is a good judge who has been instructed in _it_, and in a general way the man of general mental cultivation.[2]

Hence the young man is not a fit student of Moral Philosophy, for he has no experience in the actions of life, while all that is said presupposes and is concerned with these: and in the next place, since he is apt to follow the impulses of his passions, he will hear as though he heard not, and to no profit, the end in view being practice and not mere knowledge.

And I draw no distinction between young in years, and youthful in temper and disposition: the defect to which I allude being no direct result of the time, but of living at the beck and call of passion, and following each object as it rises.[3] For to them that are such the knowledge comes to be unprofitable, as to those of imperfect self-control: but, to those who form their desires and act in accordance with reason, to have knowledge on these points must be very profitable.

Let thus much suffice by way of preface on these three points, the student, the spirit in which our observations should be received, and the object which we propose.

Chapter II.

And now, resuming the statement with which we commenced, since all knowledge and moral choice grasps at good of some kind or another, what good is that which we say πολιτικ■ aims at? or, in other words, what is the highest of all the goods which are the objects of action?

So far as name goes, there is a pretty general agreement: for HAPPINESS both the multitude and the refined few call it, and “living well” and “doing well” they conceive to be the same with “being happy;” but about the Nature of this Happiness, men dispute, and the multitude do not in their account of it agree with the wise. For some say it is some one of those things which are palpable and apparent, as pleasure or wealth or honour; in fact, some one thing, some another; nay, oftentimes the same man gives a different account of it; for when ill, he calls it health; when poor, wealth: and conscious of their own ignorance, men admire those who talk grandly and above their comprehension. Some again held it to be something by itself, other than and beside these many good things, which is in fact to all these the cause of their being good.

Now to sift all the opinions would be perhaps rather a fruitless task; so it shall suffice to sift those which are most generally current, or are thought to have some reason in them.

And here we must not forget the difference between reasoning from principles, and reasoning to principles: for with good cause did Plato too doubt about this, and enquire whether the right road is from principles or to principles, just as in the racecourse from the judges to the further end, or _vice versâ_.

Of course, we must begin with what is known; but then this is of two kinds, what we _do_ know, and what we _may_ know:[5] perhaps then as individuals we must begin with what we _do_ know. Hence the necessity that he should have been well trained in habits, who is to study, with any tolerable chance of profit, the principles of nobleness and justice and moral philosophy generally. For a principle is a matter of fact, and if the fact is sufficiently clear to a man there will be no need in addition of the reason for the fact. And he that has been thus trained either has principles already, or can receive them easily: as for him who neither has nor can receive them, let him hear his sentence from Hesiod:

He is best of all who of himself conceiveth all things; Good again is he too who can adopt a good suggestion; But whoso neither of himself conceiveth nor hearing from another Layeth it to heart;—he is a useless man.

Chapter III.

But to return from this digression.

Now of the Chief Good (_i.e._ of Happiness) men seem to form their notions from the different modes of life, as we might naturally expect: the many and most low conceive it to be pleasure, and hence they are content with the life of sensual enjoyment. For there are three lines of life which stand out prominently to view: that just mentioned, and the life in society, and, thirdly, the life of contemplation.

Now the many are plainly quite slavish, choosing a life like that of brute animals: yet they obtain some consideration, because many of the great share the tastes of Sardanapalus. The refined and active again conceive it to be honour: for this may be said to be the end of the life in society: yet it is plainly too superficial for the object of our search, because it is thought to rest with those who pay rather than with him who receives it, whereas the Chief Good we feel instinctively must be something which is our own, and not easily to be taken from us.

And besides, men seem to pursue honour, that they may believe themselves to be good:[6] for instance, they seek to be honoured by the wise, and by those among whom they are known, and for virtue: clearly then, in the opinion at least of these men, virtue is higher than honour. In truth, one would be much more inclined to think this to be the end of the life in society; yet this itself is plainly not sufficiently final: for it is conceived possible, that a man possessed of virtue might sleep or be inactive all through his life, or, as a third case, suffer the greatest evils and misfortunes: and the man who should live thus no one would call happy, except for mere disputation’s sake.[7]

And for these let thus much suffice, for they have been treated of at sufficient length in my Encyclia.[8]

A third line of life is that of contemplation, concerning which we shall make our examination in the following pages.[9]

As for the life of money-making, it is one of constraint, and wealth manifestly is not the good we are seeking, because it is for use, that is, for the sake of something further: and hence one would rather conceive the forementioned ends to be the right ones, for

men rest content with them for their own sakes. Yet, clearly, they are not the objects of our search either, though many words have been wasted on them.[10] So much then for these.

Again, the notion of one Universal Good (the same, that is, in all things), it is better perhaps we should examine, and discuss the meaning of it, though such an enquiry is unpleasant, because they are friends of ours who have introduced these ε■δη.[11] Still perhaps it may appear better, nay to be our duty where the safety of the truth is concerned, to upset if need be even our own theories, specially as we are lovers of wisdom: for since both are dear to us, we are bound to prefer the truth. Now they who invented this doctrine of ε■δη, did not apply it to those things in which they spoke of priority and posteriority, and so they never made any ■δ■α of numbers; but good is predicated in the categories of Substance, Quality, and Relation; now that which exists of itself, i.e. Substance, is prior in the nature of things to that which is relative, because this latter is an off-shoot, as it were, and result of that which is; on their own principle then there cannot be a common ■δ■α in the case of these.

In the next place, since good is predicated in as many ways as there are modes of existence [for it is predicated in the category of Substance, as God, Intellect—and in that of Quality, as The Virtues—and in that of Quantity, as The Mean—and in that of Relation, as The Useful—and in that of Time, as Opportunity—and in that of Place, as Abode; and other such like things], it manifestly cannot be something common and universal and one in all: else it would not have been predicated in all the categories, but in one only.

Thirdly, since those things which range under one ■δ■α are also under the cognisance of one science, there would have been, on their theory, only one science taking cognisance of all goods collectively: but in fact there are many even for those which range under one category: for instance, of Opportunity or Seasonableness (which I have before mentioned as being in the category of Time), the science is, in war, generalship; in disease, medical science; and of the Mean (which I quoted before as being in the category of Quantity), in food, the medical science; and in labour or exercise, the gymnastic science. A person might fairly doubt also what in the world they mean by very-this that or the other, since, as they would themselves allow, the account of the humanity is one and the same in the very-Man, and in any individual Man: for so far as the individual and the very-Man are both Man, they will not differ at all: and if so, then very-good and any particular good will not differ, in so far as both are good. Nor will it do to say, that the eternity of the very-good makes it to be more good; for what has lasted white ever so long, is no whiter than what lasts but for a day.

No. The Pythagoreans do seem to give a more credible account of the matter, who place “One” among the goods in their double list of goods and bads:[12] which philosophers, in fact, Speusippus[13] seems to have followed.

But of these matters let us speak at some other time. Now there is plainly a loophole to object to what has been advanced, on the plea that the theory I have attacked is not by its advocates applied to all good: but those goods only are spoken of as being under one ■δ■α, which are pursued, and with which men rest content simply for their own sakes: whereas those things which have a tendency to produce or preserve them in any way, or to hinder their contraries, are called good because of these other goods, and after another fashion. It is manifest then that the goods may be so called in two senses, the one class for their own sakes, the other because of these.

Very well then, let us separate the independent goods from the instrumental, and see whether they are spoken of as under one ■δ■α. But the question next arises, what kind of goods are we to call independent? All such as are pursued even when separated from other goods, as, for instance, being wise, seeing, and certain pleasures and honours (for these, though we do pursue them with some further end in view, one would still place among the independent goods)? or does it come in fact to this, that we can call nothing independent good except the ■δ■α, and so the concrete of it will be nought?

If, on the other hand, these are independent goods, then we shall require that the account of the goodness be the same clearly in all, just as that of the whiteness is in snow and white lead. But how stands the fact? Why of honour and wisdom and pleasure the accounts are distinct and different in so far as they are good. The Chief Good then is not something common, and after one ■δ■α.

But then, how does the name come to be common (for it is not seemingly a case of fortuitous equivocation)? Are different individual things called good by virtue of being from one source, or all conducing to one end, or rather by way of analogy, for that intellect is to the soul as sight to the body, and so on? However, perhaps we ought to leave these questions now, for an accurate investigation of them is more properly the business of a different philosophy. And likewise respecting the ■δ■α: for even if there is some one good predicated in common of all things that are good, or separable and capable of existing independently, manifestly it cannot be the object of human action or attainable by Man; but we are in search now of something that is so.[14]

It may readily occur to any one, that it would be better to attain a knowledge of it with a view to such concrete goods as are attainable and practical, because, with this as a kind of model in our hands, we shall the better know what things are good for us individually, and when we know them, we shall attain them.

Some plausibility, it is true, this argument possesses, but it is contradicted by the facts of the Arts and Sciences; for all these, though aiming at some good, and seeking that which is deficient, yet pretermit the knowledge of it: now it is not exactly probable that all artisans without exception should be ignorant of so great a help as this would be, and not even look after it; neither is it easy to see wherein a weaver or a carpenter will be profited in respect of his craft by knowing the very-good, or how a man will be the more apt to effect cures or to command an army for having seen the ■δ■α itself. For manifestly it is not health after this general and abstract fashion which is the subject of the physician's investigation, but the health of Man, or rather perhaps of this or that man; for he has to heal individuals.—Thus much on these points.

Chapter IV.

And now let us revert to the Good of which we are in search: what can it be? for manifestly it is different in different actions and arts: for it is different in the healing art and in the art military, and similarly in the rest. What then is the Chief Good in each? Is it not "that for the sake of which the other things are done?" and this in the healing art is health, and in the art military victory, and in that of house-building a house, and in any other thing something else; in short, in every action and moral choice the End, because in all cases men do everything else with a view to this. So that if there is some one End of all things which are and may be done, this must be the Good proposed by doing, or if more than one, then these.

Thus our discussion after some traversing about has come to the same point which we reached before. And this we must try yet more to clear up.

Now since the ends are plainly many, and of these we choose some with a view to others (wealth, for instance, musical instruments, and, in general, all instruments), it is clear that all are not final: but the Chief Good is manifestly something final; and so, if there is some one only which is final, this must be the object of our search: but if several, then the most final of them will be it.

Now that which is an object of pursuit in itself we call more final than that which is so with a view to something else; that again which is never an object of choice with a view to something else than those which are so both in themselves and with a view to this ulterior object: and so by the term "absolutely final," we denote that which is an object of choice always in itself, and never with a view to any other.

And of this nature Happiness is mostly thought to be, for this we choose always for its own sake, and never with a view to anything further: whereas honour, pleasure, intellect, in fact every excellence we choose for their own sakes, it is true (because we would choose each of these even if no result were to follow), but we choose them also with a view to happiness, conceiving that through their instrumentality we shall be happy: but no man chooses happiness with a view to them, nor in fact with a view to any other thing whatsoever.

The same result[15] is seen to follow also from the notion of self-sufficiency, a quality thought to belong to the final good. Now by sufficient for Self, we mean not for a single individual living a solitary life, but for his parents also and children and wife, and, in general, friends and countrymen; for man is by nature adapted to a social existence. But of these, of course, some limit must be fixed: for if one extends it to parents and descendants and friends' friends, there is no end to it. This point, however, must be left for future investigation: for the present we define that to be self-sufficient "which taken alone makes life choice-worthy, and to be in want of nothing;" now of such kind we think Happiness to be: and further, to be most choice-worthy of all things; not being reckoned with any other thing,[16] for if it were so reckoned, it is plain we must then allow it, with the addition of ever so small a good, to be more choice-worthy than it was before:[17] because what is put to it becomes an addition of so much more good, and of goods the greater is ever the more choice-worthy.

So then Happiness is manifestly something final and self-sufficient, being the end of all things which are and may be done.

Chapter V.

But, it may be, to call Happiness the Chief Good is a mere truism, and what is wanted is some clearer account of its real nature. Now this object may be easily attained, when we have discovered what is the work of man; for as in the case of flute-player, statuary, or artisan of any kind, or, more generally, all who have any work or course of action, their Chief Good and Excellence is

thought to reside in their work, so it would seem to be with man, if there is any work belonging to him.

Are we then to suppose, that while carpenter and cobbler have certain works and courses of action, Man as Man has none, but is left by Nature without a work? or would not one rather hold, that as eye, hand, and foot, and generally each of his members, has manifestly some special work; so too the whole Man, as distinct from all these, has some work of his own?[18]

What then can this be? not mere life, because that plainly is shared with him even by vegetables, and we want what is peculiar to him. We must separate off then the life of mere nourishment and growth, and next will come the life of sensation: but this again manifestly is common to horses, oxen, and every animal. There remains then a kind of life of the Rational Nature apt to act: and of this Nature there are two parts denominated Rational, the one as being obedient to Reason, the other as having and exerting it. Again, as this life is also spoken of in two ways,[19] we must take that which is in the way of actual working, because this is thought to be most properly entitled to the name. If then the work of Man is a working of the soul in accordance with reason, or at least not independently of reason, and we say that the work of any given subject, and of that subject good of its kind, are the same in kind (as, for instance, of a harp-player and a good harp-player, and so on in every case, adding to the work eminence in the way of excellence; I mean, the work of a harp-player is to play the harp, and of a good harp-player to play it well); if, I say, this is so, and we assume the work of Man to be life of a certain kind, that is to say a working of the soul, and actions with reason, and of a good man to do these things well and nobly, and in fact everything is finished off well in the way of the excellence which peculiarly belongs to it: if all this is so, then the Good of Man comes to be “a working of the Soul in the way of Excellence,” or, if Excellence admits of degrees, in the way of the best and most perfect Excellence.

And we must add, ■ν β■■ τελε■■;[20] for as it is not one swallow or one fine day that makes a spring, so it is not one day or a short time that makes a man blessed and happy.

Let this then be taken for a rough sketch of the Chief Good: since it is probably the right way to give first the outline, and fill it in afterwards. And it would seem that any man may improve and connect what is good in the sketch, and that time is a good discoverer and co-operator in such matters: it is thus in fact that all improvements in the various arts have been brought about, for any man may fill up a deficiency.

You must remember also what has been already stated, and not seek for exactness in all matters alike, but in each according to the subject-matter, and so far as properly belongs to the system. The carpenter and geometrician, for instance, enquire into the right line in different fashion: the former so far as he wants it for his work, the latter enquires into its nature and properties, because he is concerned with the truth.

So then should one do in other matters, that the incidental matters may not exceed the direct ones.

And again, you must not demand the reason either in all things alike,[21] because in some it is sufficient that the fact has been well demonstrated, which is the case with first principles; and the fact is the first step, _i.e._ starting-point or principle.

And of these first principles some are obtained by induction, some by perception,[22] some by a course of habituation, others in other different ways. And we must try to trace up each in their own nature, and take pains to secure their being well defined, because they have great influence on what follows: it is thought, I mean, that the starting-point or principle is more than half the whole matter, and that many of the points of enquiry come simultaneously into view thereby.

Chapter VI.

We must now enquire concerning Happiness, not only from our conclusion and the data on which our reasoning proceeds, but likewise from what is commonly said about it: because with what is true all things which really are are in harmony, but with that which is false the true very soon jars.

Now there is a common division of goods into three classes; one being called external, the other two those of the soul and body respectively, and those belonging to the soul we call most properly and specially good. Well, in our definition we assume that the actions and workings of the soul constitute Happiness, and these of course belong to the soul. And so our account is a good one, at least according to this opinion, which is of ancient date, and accepted by those who profess philosophy. Rightly too are certain actions and workings said to be the end, for thus it is brought into the number of the goods of the soul instead of the external. Agreeing also with our definition is the common notion, that the happy man lives well and does well, for it has been stated by us to be pretty much a kind of living well and doing well.

And further, the points required in Happiness are found in combination in our account of it.

For some think it is virtue, others practical wisdom, others a kind of scientific philosophy; others that it is these, or else some one of them, in combination with pleasure, or at least not independently of it; while others again take in external prosperity.

Of these opinions, some rest on the authority of numbers or antiquity, others on that of few, and those men of note: and it is not likely that either of these classes should be wrong in all points, but be right at least in some one, or even in most.

Now with those who assert it to be Virtue (Excellence), or some kind of Virtue, our account agrees: for working in the way of Excellence surely belongs to Excellence.

And there is perhaps no unimportant difference between conceiving of the Chief Good as in possession or as in use, in other words, as a mere state or as a working. For the state or habit[23] may possibly exist in a subject without effecting any good, as, for instance, in him who is asleep, or in any other way inactive; but the working cannot so, for it will of necessity act, and act well. And as at the Olympic games it is not the finest and strongest men who are crowned, but they who enter the lists, for out of these the prize-men are selected; so too in life, of the honourable and the good, it is they who act who rightly win the prizes.[24]

Their life too is in itself pleasant: for the feeling of pleasure is a mental sensation, and that is to each pleasant of which he is said to be fond: a horse, for instance, to him who is fond of horses, and a sight to him who is fond of sights: and so in like manner just acts to him who is fond of justice, and more generally the things in accordance with virtue to him who is fond of virtue. Now in the case of the multitude of men the things which they individually esteem pleasant clash, because they are not such by nature, whereas to the lovers of nobleness those things are pleasant which are such by nature: but the actions in accordance with virtue are of this kind, so that they are pleasant both to the individuals and also in themselves.

So then their life has no need of pleasure as a kind of additional appendage, but involves pleasure in itself. For, besides what I have just mentioned, a man is not a good man at all who feels no pleasure in noble actions,[25] just as no one would call that man just who does not feel pleasure in acting justly, or liberal who does not in liberal actions, and similarly in the case of the other virtues which might be enumerated: and if this be so, then the actions in accordance with virtue must be in themselves pleasurable. Then again they are certainly good and noble, and each of these in the highest degree; if we are to take as right the judgment of the good man, for he judges as we have said.

Thus then Happiness is most excellent, most noble, and most pleasant, and these attributes are not separated as in the well-known Delian inscription—

“Most noble is that which is most just, but best is health; And naturally most pleasant is the obtaining one’s desires.”

For all these co-exist in the best acts of working: and we say that Happiness is these, or one, that is, the best of them.

Still[26] it is quite plain that it does require the addition of external goods, as we have said: because without appliances it is impossible, or at all events not easy, to do noble actions: for friends, money, and political influence are in a manner instruments whereby many things are done: some things there are again a deficiency in which mars blessedness; good birth, for instance, or fine offspring, or even personal beauty: for he is not at all capable of Happiness who is very ugly, or is ill-born, or solitary and childless; and still less perhaps supposing him to have very bad children or friends, or to have lost good ones by death. As we have said already, the addition of prosperity of this kind does seem necessary to complete the idea of Happiness; hence some rank good fortune, and others virtue, with Happiness.

Chapter VII.

And hence too a question is raised, whether it is a thing that can be learned, or acquired by habituation or discipline of some other kind, or whether it comes in the way of divine dispensation, or even in the way of chance.

Now to be sure, if anything else is a gift of the Gods to men, it is probable that Happiness is a gift of theirs too, and specially because of all human goods it is the highest. But this, it may be, is a question belonging more properly to an investigation different from ours:[27] and it is quite clear, that on the supposition of its not being sent from the Gods direct, but coming to us by reason of virtue and learning of a certain kind, or discipline, it is yet one of the most Godlike things; because the prize and End of virtue is manifestly somewhat most excellent, nay divine and blessed.

It will also on this supposition be widely participated, for it may through learning and diligence of a certain kind exist in all who have not been maimed[28] for virtue.

And if it is better we should be happy thus than as a result of chance, this is in itself an argument that the case is so; because those things which are in the way of nature, and in like manner of art, and of every cause, and specially the best cause, are by nature in the best way possible: to leave them to chance what is greatest and most noble would be very much out of harmony with all these facts.[29]

The question may be determined also by a reference to our definition of Happiness, that it is a working of the soul in the way of excellence or virtue of a certain kind: and of the other goods, some we must have to begin with, and those which are co-operative and useful are given by nature as instruments.[30]

These considerations will harmonise also with what we said at the commencement: for we assumed the End of πολιτικ■ to be most excellent: now this bestows most care on making the members of the community of a certain character; good that is and apt to do what is honourable.

With good reason then neither ox nor horse nor any other brute animal do we call happy, for none of them can partake in such working: and for this same reason a child is not happy either, because by reason of his tender age he cannot yet perform such actions: if the term is applied, it is by way of anticipation.

For to constitute Happiness, there must be, as we have said, complete virtue and a complete life: for many changes and chances of all kinds arise during a life, and he who is most prosperous may become involved in great misfortunes in his old age, as in the heroic poems the tale is told of Priam: but the man who has experienced such fortune and died in wretchedness, no man calls happy.

Chapter VIII.

Are we then to call no man happy while he lives, and, as Solon would have us, look to the end? And again, if we are to maintain this position, is a man then happy when he is dead? or is not this a complete absurdity, specially in us who say Happiness is a working of a certain kind?

If on the other hand we do not assert that the dead man is happy, and Solon does not mean this, but only that one would then be safe in pronouncing a man happy, as being thenceforward out of the reach of evils and misfortunes, this too admits of some dispute, since it is thought that the dead has somewhat both of good and evil (if, as we must allow, a man may have when alive but not aware of the circumstances), as honour and dishonour, and good and bad fortune of children and descendants generally.

Nor is this view again without its difficulties: for, after a man has lived in blessedness to old age and died accordingly, many changes may befall him in right of his descendants; some of them may be good and obtain positions in life accordant to their merits, others again quite the contrary: it is plain too that the descendants may at different intervals or grades stand in all manner of relations to the ancestors.[31] Absurd indeed would be the position that even the dead man is to change about with them and become at one time happy and at another miserable. Absurd however it is on the other hand that the affairs of the descendants should in no degree and during no time affect the ancestors.

But we must revert to the point first raised,[32] since the present question will be easily determined from that.

If then we are to look to the end and then pronounce the man blessed, not as being so but as having been so at some previous time, surely it is absurd that when he _is_ happy the truth is not to be asserted of him, because we are unwilling to pronounce the living happy by reason of their liability to changes, and because, whereas we have conceived of happiness as something stable and no way easily changeable, the fact is that good and bad fortune are constantly circling about the same people: for it is quite plain, that if we are to depend upon the fortunes of men, we shall often have to call the same man happy, and a little while after miserable, thus representing our happy man,

“Chameleon-like, and based on rottenness.”

Is not this the solution? that to make our sentence dependent on the changes of fortune, is no way right: for not in them stands the well, or the ill, but though human life needs these as accessories (which we have allowed already), the workings in the way of virtue are what determine Happiness, and the contrary the contrary.

And, by the way, the question which has been here discussed, testifies incidentally to the truth of our account of Happiness.[33] For to nothing does a stability of human results attach so much as it does to the workings in the way of virtue, since these are held to be more abiding even than the sciences: and of these last again[34] the most precious are the most abiding, because the blessed live in them most and most continuously, which seems to be the reason why they are not forgotten. So then this stability which is sought will be in the happy man, and he will be such through life, since always, or most of all, he will be doing and contemplating the things which are in the way of virtue: and the various chances of life he will bear most nobly, and at all times and in all ways harmoniously, since he is the truly good man, or in the terms of our proverb “a faultless cube.”

And whereas the incidents of chance are many, and differ in greatness and smallness, the small pieces of good or ill fortune evidently do not affect the balance of life, but the great and numerous, if happening for good, will make life more blessed (for it is their nature to contribute to ornament, and the using of them comes to be noble and excellent), but if for ill, they bruise as it were and maim the blessedness: for they bring in positive pain, and hinder many acts of working. But still, even in these, nobleness shines through when a man bears contentedly many and great mischances not from insensibility to pain but because he is noble and high-spirited.

And if, as we have said, the acts of working are what determine the character of the life, no one of the blessed can ever become wretched, because he will never do those things which are hateful and mean. For the man who is truly good and sensible bears all fortunes, we presume, becomingly, and always does what is noblest under the circumstances, just as a good general employs to the best advantage the force he has with him; or a good shoemaker makes the handsomest shoe he can out of the leather which has been given him; and all other good artisans likewise. And if this be so, wretched never can the happy man come to be: I do not mean to say he will be blessed should he fall into fortunes like those of Priam.

Nor, in truth, is he shifting and easily changeable, for on the one hand from his happiness he will not be shaken easily nor by ordinary mischances, but, if at all, by those which are great and numerous; and, on the other, after such mischances he cannot regain his happiness in a little time; but, if at all, in a long and complete period, during which he has made himself master of great and noble things.

Why then should we not call happy the man who works in the way of perfect virtue, and is furnished with external goods sufficient for acting his part in the drama of life:[35] and this during no ordinary period but such as constitutes a complete life as we have been describing it.

Or we must add, that not only is he to live so, but his death must be in keeping with such life, since the future is dark to us, and Happiness we assume to be in every way an end and complete. And, if this be so, we shall call them among the living blessed who have and will have the things specified, but blessed _as Men_.[36]

On these points then let it suffice to have denned thus much.

Chapter IX.

Now that the fortunes of their descendants, and friends generally, contribute nothing towards forming the condition of the dead, is plainly a very heartless notion, and contrary to the current opinions.

But since things which befall are many, and differ in all kinds of ways, and some touch more nearly, others less, to go into minute particular distinctions would evidently be a long and endless task: and so it may suffice to speak generally and in outline.

If then, as of the misfortunes which happen to one’s self, some have a certain weight and turn the balance of life, while others are, so to speak, lighter; so it is likewise with those which befall all our friends alike; if further, whether they whom each suffering befalls be alive or dead makes much more difference than in a tragedy the presupposing or actual perpetration of the various crimes and horrors, we must take into our account this difference also, and still more perhaps the doubt concerning the dead whether they really partake of any good or evil; it seems to result from all these considerations, that if anything does pierce the veil and reach them, be the same good or bad, it must be something trivial and small, either in itself or to them; or at least of such a magnitude or such a kind as neither to make happy them that are not so otherwise, nor to deprive of their blessedness them that are.[37]

It is plain then that the good or ill fortunes of their friends do affect the dead somewhat: but in such kind and degree as neither to make the happy unhappy nor produce any other such effect.

Chapter X.

Having determined these points, let us examine with respect to Happiness, whether it belongs to the class of things praiseworthy or things precious; for to that of faculties[38] it evidently does not.

Now it is plain that everything which is a subject of praise is praised for being of a certain kind and bearing a certain relation to something else: for instance, the just, and the valiant, and generally the good man, and virtue itself, we praise because of the actions and the results: and the strong man, and the quick runner, and so forth, we praise for being of a certain nature and bearing a certain relation to something good and excellent (and this is illustrated by attempts to praise the gods; for they are presented in a ludicrous aspect[39] by being referred to our standard, and this results from the fact, that all praise does, as we have said, imply reference to a standard). Now if it is to such objects that praise belongs, it is evident that what is applicable to the best objects is not praise, but something higher and better: which is plain matter of fact, for not only do we call the gods blessed and happy, but of men also we pronounce those blessed who most nearly resemble the gods. And in like manner in respect of goods; no man thinks of praising Happiness as he does the principle of justice, but calls it blessed, as being somewhat more godlike and more excellent.

Eudoxus[40] too is thought to have advanced a sound argument in support of the claim of pleasure to the highest prize: for the fact that, though it is one of the good things, it is not praised, he took for an indication of its superiority to those which are subjects of praise: a superiority he attributed also to a god and the Chief Good, on the ground that they form the standard to which everything besides is referred. For praise applies to virtue, because it makes men apt to do what is noble; but encomia to definite works of body or mind.[41]

However, it is perhaps more suitable to a regular treatise on encomia to pursue this topic with exactness: it is enough for our purpose that from what has been said it is evident that Happiness belongs to the class of things precious and final. And it seems to be so also because of its being a starting-point; which it is, in that with a view to it we all do everything else that is done; now the starting-point and cause of good things we assume to be something precious and divine.

Chapter XI.

Moreover, since Happiness is a kind of working of the soul in the way of perfect Excellence, we must enquire concerning Excellence: for so probably shall we have a clearer view concerning Happiness; and again, he who is really a statesman is generally thought to have spent most pains on this, for he wishes to make the citizens good and obedient to the laws. (For examples of this class we have the lawgivers of the Cretans and Lacedæmonians and whatever other such there have been.) But if this investigation belongs properly to πολιτικ■, then clearly the enquiry will be in accordance with our original design.

Well, we are to enquire concerning Excellence, _i.e._ Human Excellence of course, because it was the Chief Good of Man and the Happiness of Man that we were enquiring of just now.

And by Human Excellence we mean not that of man's body but that of his soul; for we call Happiness a working of the Soul.

And if this is so, it is plain that some knowledge of the nature of the Soul is necessary for the statesman, just as for the oculist a knowledge of the whole body, and the more so in proportion as πολιτικ■ is more precious and higher than the healing art: and in fact physicians of the higher class do busy themselves much with the knowledge of the body.

So then the statesman is to consider the nature of the Soul: but he must do so with these objects in view, and so far only as may suffice for the objects of his special enquiry: for to carry his speculations to a greater exactness is perhaps a task more laborious than falls within his province.

In fact, the few statements made on the subject in my popular treatises are quite enough, and accordingly we will adopt them here: as, that the Soul consists of two parts, the Irrational and the Rational (as to whether these are actually divided, as are the parts of the body, and everything that is capable of division; or are only metaphysically speaking two, being by nature inseparable, as are convex and concave circumferences, matters not in respect of our present purpose). And of the Irrational, the one part seems common to other objects, and in fact vegetative; I mean the cause of nourishment and growth (for such a faculty of the Soul one would assume to exist in all things that receive nourishment, even in embryos, and this the same as in the perfect creatures; for this is more likely than that it should be a different one).

Now the Excellence of this manifestly is not peculiar to the human species but common to others: for this part and this faculty is thought to work most in time of sleep, and the good and bad man are least distinguishable while asleep; whence it is a common saying that during one half of life there is no difference between the happy and the wretched; and this accords with our

anticipations, for sleep is an inactivity of the soul, in so far as it is denominated good or bad, except that in some wise some of its movements find their way through the veil and so the good come to have better dreams than ordinary men. But enough of this: we must forego any further mention of the nutritive part, since it is not naturally capable of the Excellence which is peculiarly human.

And there seems to be another Irrational Nature of the Soul, which yet in a way partakes of Reason. For in the man who controls his appetites, and in him who resolves to do so and fails, we praise the Reason or Rational part of the Soul, because it exhorts aright and to the best course: but clearly there is in them, beside the Reason, some other natural principle which fights with and strains against the Reason. (For in plain terms, just as paralysed limbs of the body when their owners would move them to the right are borne aside in a contrary direction to the left, so is it in the case of the Soul, for the impulses of men who cannot control their appetites are to contrary points: the difference is that in the case of the body we do see what is borne aside but in the case of the soul we do not. But, it may be, not the less[42] on that account are we to suppose that there is in the Soul also somewhat besides the Reason, which is opposed to this and goes against it; as to _how_ it is different, that is irrelevant.)

But of Reason this too does evidently partake, as we have said: for instance, in the man of self-control it obeys Reason: and perhaps in the man of perfected self-mastery,[43] or the brave man, it is yet more obedient; in them it agrees entirely with the Reason.

So then the Irrational is plainly twofold: the one part, the merely vegetative, has no share of Reason, but that of desire, or appetition generally, does partake of it in a sense, in so far as it is obedient to it and capable of submitting to its rule. (So too in common phrase we say we have λ■γος of our father or friends, and this in a different sense from that in which we say we have λ■γος of mathematics.)[44]

Now that the Irrational is in some way persuaded by the Reason, admonition, and every act of rebuke and exhortation indicate. If then we are to say that this also has Reason, then the Rational, as well as the Irrational, will be twofold, the one supremely and in itself, the other paying it a kind of filial regard.

The Excellence of Man then is divided in accordance with this difference: we make two classes, calling the one Intellectual, and the other Moral; pure science, intelligence, and practical wisdom—Intellectual: liberality, and perfected self-mastery—Moral: in speaking of a man's Moral character, we do not say he is a scientific or intelligent but a meek man, or one of perfected self-mastery: and we praise the man of science in right of his mental state;[45] and of these such as are praiseworthy we call Excellences.

BOOK II

Chapter I.

Well: human Excellence is of two kinds, Intellectual and Moral:[1] now the Intellectual springs originally, and is increased subsequently, from teaching (for the most part that is[2]), and needs therefore experience and time; whereas the Moral comes from custom, and so the Greek term denoting it is but a slight deflection from the term denoting custom in that language.

From this fact it is plain that not one of the Moral Virtues comes to be in us merely by nature: because of such things as exist by nature, none can be changed by custom: a stone, for instance, by nature gravitating downwards, could never by custom be brought to ascend, not even if one were to try and accustom it by throwing it up ten thousand times; nor could file again be brought to descend, nor in fact could anything whose nature is in one way be brought by custom to be in another. The Virtues then come to be in us neither by nature, nor in despite of nature,[3] but we are furnished by nature with a capacity for receiving themu and are perfected in them through custom.

Again, in whatever cases we get things by nature, we get the faculties first and perform the acts of working afterwards; an illustration of which is afforded by the case of our bodily senses, for it was not from having often seen or heard that we got these senses, but just the reverse: we had them and so exercised them, but did not have them because we had exercised them. But the Virtues we get by first performing single acts of working, which, again, is the case of other things, as the arts for instance; for what we have to make when we have learned how, these we learn how to make by making: men come to be builders, for instance, by building; harp-players, by playing on the harp: exactly so, by doing just actions we come to be just; by doing the actions of self-mastery we come to be perfected in self-mastery; and by doing brave actions brave.

And to the truth of this testimony is borne by what takes place in communities: because the law-givers make the individual members good men by habituation, and this is the intention certainly of every law-giver, and all who do not effect it well fail of their intent; and herein consists the difference between a good Constitution and a bad.

Again, every Virtue is either produced or destroyed from and by the very same circumstances: art too in like manner; I mean it is by playing the harp that both the good and the bad harp-players are formed: and similarly builders and all the rest; by building well men will become good builders; by doing it badly bad ones: in fact, if this had not been so, there would have been no need of instructors, but all men would have been at once good or bad in their several arts without them.

So too then is it with the Virtues: for by acting in the various relations in which we are thrown with our fellow men, we come to be, some just, some unjust: and by acting in dangerous positions and being habituated to feel fear or confidence, we come to be, some brave, others cowards.

Similarly is it also with respect to the occasions of lust and anger: for some men come to be perfected in self-mastery and mild, others destitute of all self-control and passionate; the one class by behaving in one way under them, the other by behaving in another. Or, in one word, the habits are produced from the acts of working like to them: and so what we have to do is to give a certain character to these particular acts, because the habits formed correspond to the differences of these.

So then, whether we are accustomed this way or that straight from childhood, makes not a small but an important difference, or rather I would say it makes all the difference.

Chapter II.

Since then the object of the present treatise is not mere speculation, as it is of some others (for we are enquiring not merely that we may know what virtue is but that we may become virtuous, else it would have been useless), we must consider as to the particular actions how we are to do them, because, as we have just said, the quality of the habits that shall be formed depends on these.

Now, that we are to act in accordance with Right Reason is a general maxim, and may for the present be taken for granted: we will speak of it hereafter, and say both what Right Reason is, and what are its relations to the other virtues.[4]

But let this point be first thoroughly understood between us, that all which can be said on moral action must be said in outline, as it were, and not exactly: for as we remarked at the commencement, such reasoning only must be required as the nature of the subject-matter admits of, and matters of moral action and expediency have no fixedness any more than matters of health. And if the subject in its general maxims is such, still less in its application to particular cases is exactness attainable:[5] because these fall not under any art or system of rules, but it must be left in each instance to the individual agents to look to the exigencies of the particular case, as it is in the art of healing, or that of navigating a ship. Still, though the present subject is confessedly such, we must try and do what we can for it.

First then this must be noted, that it is the nature of such things to be spoiled by defect and excess; as we see in the case of health and strength (since for the illustration of things which cannot be seen we must use those that can), for excessive training impairs the strength as well as deficient: meat and drink, in like manner, in too great or too small quantities, impair the health: while in due proportion they cause, increase, and preserve it.

Thus it is therefore with the habits of perfected Self-Mastery and Courage and the rest of the Virtues: for the man who flies from and fears all things, and never stands up against anything, comes to be a coward; and he who fears nothing, but goes at everything, comes to be rash. In like manner too, he that tastes of every pleasure and abstains from none comes to lose all self-control; while he who avoids all, as do the dull and clownish, comes as it were to lose his faculties of perception: that is to say, the habits of perfected Self-Mastery and Courage are spoiled by the excess and defect, but by the mean state are preserved.

Furthermore, not only do the origination, growth, and marring of the habits come from and by the same circumstances, but also the acts of working after the habits are formed will be exercised on the same: for so it is also with those other things which are more directly matters of sight, strength for instance: for this comes by taking plenty of food and doing plenty of work, and the man who has attained strength is best able to do these: and so it is with the Virtues, for not only do we by abstaining from pleasures come to be perfected in Self-Mastery, but when we have come to be so we can best abstain from them: similarly too with Courage: for it is by accustoming ourselves to despise objects of fear and stand up against them that we come to be brave; and after we have come to be so we shall be best able to stand up against such objects.

And for a test of the formation of the habits we must take the pleasure or pain which succeeds the acts; for he is perfected in Self-Mastery who not only abstains from the bodily pleasures but is glad to do so; whereas he who abstains but is sorry to do it has not Self-Mastery: he again is brave who stands up against danger, either with positive pleasure or at least without any pain; whereas he who does it with pain is not brave.[6]

For Moral Virtue has for its object-matter pleasures and pains, because by reason of pleasure we do what is bad, and by reason of pain decline doing what is right (for which cause, as Plato observes, men should have been trained straight from their childhood to receive pleasure and pain from proper objects, for this is the right education). Again: since Virtues have to do with actions and feelings, and on every feeling and every action pleasure and pain follow, here again is another proof that Virtue has for its object-matter pleasure and pain. The same is shown also by the fact that punishments are effected through the instrumentality of these; because they are of the nature of remedies, and it is the nature of remedies to be the contraries of the ills they cure. Again, to quote what we said before: every habit of the Soul by its very nature has relation to, and exerts itself upon, things of the same kind as those by which it is naturally deteriorated or improved: now such habits do come to be vicious by reason of pleasures and pains, that is, by men pursuing or avoiding respectively, either such as they ought not, or at wrong times, or in wrong manner, and so forth (for which reason, by the way, some people define the Virtues as certain states of impassibility and utter quietude,[7] but they are wrong because they speak without modification, instead of adding “as they ought,” “as they ought not,” and “when,” and so on). Virtue then is assumed to be that habit which is such, in relation to pleasures and pains, as to effect the best results, and Vice the contrary.

The following considerations may also serve to set this in a clear light. There are principally three things moving us to choice and three to avoidance, the honourable, the expedient, the pleasant; and their three contraries, the dishonourable, the hurtful, and the painful: now the good man is apt to go right, and the bad man wrong, with respect to all these of course, but most specially with respect to pleasure: because not only is this common to him with all animals but also it is a concomitant of all those things which move to choice, since both the honourable and the expedient give an impression of pleasure.

Again, it grows up with us all from infancy, and so it is a hard matter to remove from ourselves this feeling, engrained as it is into our very life.

Again, we adopt pleasure and pain (some of us more, and some less) as the measure even of actions: for this cause then our whole business must be with them, since to receive right or wrong impressions of pleasure and pain is a thing of no little importance in respect of the actions. Once more; it is harder, as Heraclitus says, to fight against pleasure than against anger: now it is about that which is more than commonly difficult that art comes into being, and virtue too, because in that which is difficult the good is of a higher order: and so for this reason too both virtue and moral philosophy generally must wholly busy themselves respecting pleasures and pains, because he that uses these well will be good, he that does so ill will be bad.

Let us then be understood to have stated, that Virtue has for its object-matter pleasures and pains, and that it is either increased or marred by the same circumstances (differently used) by which it is originally generated, and that it exerts itself on the same circumstances out of which it was generated.

Chapter III.

Now I can conceive a person perplexed as to the meaning of our statement, that men must do just actions to become just, and those of self-mastery to acquire the habit of self-mastery; “for,” he would say, “if men are doing the actions they have the respective virtues already, just as men are grammarians or musicians when they do the actions of either art.” May we not reply by saying that it is not so even in the case of the arts referred to: because a man may produce something grammatical either by chance or the suggestion of another; but then only will he be a grammarian when he not only produces something grammatical but does so grammarian-wise, _i.e._ in virtue of the grammatical knowledge he himself possesses.

Again, the cases of the arts and the virtues are not parallel: because those things which are produced by the arts have their excellence in themselves, and it is sufficient therefore that these when produced should be in a certain state: but those which are produced in the way of the virtues, are, strictly speaking, actions of a certain kind (say of Justice or perfected Self-Mastery), not merely if in themselves they are in a certain state but if also he who does them does them being himself in a certain state, first if knowing what he is doing, next if with deliberate preference, and with such preference for the things’ own sake; and thirdly if being himself stable and unapt to change. Now to constitute possession of the arts these requisites are not reckoned in, excepting the one point of knowledge: whereas for possession of the virtues knowledge avails little or nothing, but the other requisites avail not a

little, but, in fact, are all in all, and these requisites as a matter of fact do come from oftentimes doing the actions of Justice and perfected Self-Mastery.

The facts,[8] it is true, are called by the names of these habits when they are such as the just or perfectly self-mastering man would do; but he is not in possession of the virtues who merely does these facts, but he who also so does them as the just and self-mastering do them.

We are right then in saying, that these virtues are formed in a man by his doing the actions; but no one, if he should leave them undone, would be even in the way to become a good man. Yet people in general do not perform these actions, but taking refuge in talk they flatter themselves they are philosophising, and that they will so be good men: acting in truth very like those sick people who listen to the doctor with great attention but do nothing that he tells them: just as these then cannot be well bodily under such a course of treatment, so neither can those be mentally by such philosophising.

Chapter IV.

Next, we must examine what Virtue is.[9] Well, since the things which come to be in the mind are, in all, of three kinds, Feelings, Capacities, States, Virtue of course must belong to one of the three classes.

By Feelings, I mean such as lust, anger, fear, confidence, envy, joy, friendship, hatred, longing, emulation, compassion, in short all such as are followed by pleasure or pain: by Capacities, those in right of which we are said to be capable of these feelings; as by virtue of which we are able to have been made angry, or grieved, or to have compassionated; by States, those in right of which we are in a certain relation good or bad to the aforementioned feelings; to having been made angry, for instance, we are in a wrong relation if in our anger we were too violent or too slack, but if we were in the happy medium we are in a right relation to the feeling. And so on of the rest.

Now Feelings neither the virtues nor vices are, because in right of the Feelings we are not denominated either good or bad, but in right of the virtues and vices we are.

Again, in right of the Feelings we are neither praised nor blamed,[10] (for a man is not commended for being afraid or being angry, nor blamed for being angry merely but for being so in a particular way), but in right of the virtues and vices we are.

Again, both anger and fear we feel without moral choice, whereas the virtues are acts of moral choice, or at least certainly not independent of it.

Moreover, in right of the Feelings we are said to be moved, but in right of the virtues and vices not to be moved, but disposed, in a certain way.

And for these same reasons they are not Capacities, for we are not called good or bad merely because we are able to feel, nor are we praised or blamed.

And again, Capacities we have by nature, but we do not come to be good or bad by nature, as we have said before.

Since then the virtues are neither Feelings nor Capacities, it remains that they must be States.

Chapter V.

Now what the genus of Virtue is has been said; but we must not merely speak of it thus, that it is a state but say also what kind of a state it is.

We must observe then that all excellence makes that whereof it is the excellence both to be itself in a good state and to perform its work well. The excellence of the eye, for instance, makes both the eye good and its work also: for by the excellence of the eye we see well. So too the excellence of the horse makes a horse good, and good in speed, and in carrying his rider, and standing up against the enemy. If then this is universally the case, the excellence of Man, i.e. Virtue, must be a state whereby Man comes to be good and whereby he will perform well his proper work. Now how this shall be it is true we have said already, but still perhaps it may throw light on the subject to see what is its characteristic nature.

In all quantity then, whether continuous or discrete,[11] one may take the greater part, the less, or the exactly equal, and these either with reference to the thing itself, or relatively to us: and the exactly equal is a mean between excess and defect. Now by the mean of the thing, _i.e._ absolute mean, I denote that which is equidistant from either extreme (which of course is one and the

same to all), and by the mean relatively to ourselves, that which is neither too much nor too little for the particular individual. This of course is not one nor the same to all: for instance, suppose ten is too much and two too little, people take six for the absolute mean; because it exceeds the smaller sum by exactly as much as it is itself exceeded by the larger, and this mean is according to arithmetical proportion.[12]

But the mean relatively to ourselves must not be so found ; for it does not follow, supposing ten minæ[13] is too large a quantity to eat and two too small, that the trainer will order his man six; because for the person who is to take it this also may be too much or too little: for Milo it would be too little, but for a man just commencing his athletic exercises too much: similarly too of the exercises themselves, as running or wrestling.

So then it seems every one possessed of skill avoids excess and defect, but seeks for and chooses the mean, not the absolute but the relative.

Now if all skill thus accomplishes well its work by keeping an eye on the mean, and bringing the works to this point (whence it is common enough to say of such works as are in a good state, “one cannot add to or take ought from them,” under the notion of excess or defect destroying goodness but the mean state preserving it), and good artisans, as we say, work with their eye on this, and excellence, like nature, is more exact and better than any art in the world, it must have an aptitude to aim at the mean.

It is moral excellence, _i.e._ Virtue, of course which I mean, because this it is which is concerned with feelings and actions, and in these there can be excess and defect and the mean: it is possible, for instance, to feel the emotions of fear, confidence, lust, anger, compassion, and pleasure and pain generally, too much or too little, and in either case wrongly; but to feel them when we ought, on what occasions, towards whom, why, and as, we should do, is the mean, or in other words the best state, and this is the property of Virtue.

In like manner too with respect to the actions, there may be excess and defect and the mean. Now Virtue is concerned with feelings and actions, in which the excess is wrong and the defect is blamed but the mean is praised and goes right; and both these circumstances belong to Virtue. Virtue then is in a sense a mean state, since it certainly has an aptitude for aiming at the mean.

Again, one may go wrong in many different ways (because, as the Pythagoreans expressed it, evil is of the class of the infinite, good of the finite), but right only in one; and so the former is easy, the latter difficult; easy to miss the mark, but hard to hit it: and for these reasons, therefore, both the excess and defect belong to Vice, and the mean state to Virtue; for, as the poet has it,

“Men may be bad in many ways, But good in one alone.”

Chapter VI.

Virtue then is “a state apt to exercise deliberate choice, being in the relative mean, determined by reason, and[14] as the man of practical wisdom would determine.”

It is a middle state between too faulty ones, in the way of excess on one side and of defect on the other: and it is so moreover, because the faulty states on one side fall short of, and those on the other exceed, what is right, both in the case of the feelings and the actions; but Virtue finds, and when found adopts, the mean.

And so, viewing it in respect of its essence and definition, Virtue is a mean state; but in reference to the chief good and to excellence it is the highest state possible.

But it must not be supposed that every action or every feeling is capable of subsisting in this mean state, because some there are which are so named as immediately to convey the notion of badness, as malevolence, shamelessness, envy; or, to instance in actions, adultery, theft, homicide; for all these and suchlike are blamed because they are in themselves bad, not the having too much or too little of them.

In these then you never can go right, but must always be wrong: nor in such does the right or wrong depend on the selection of a proper person, time, or manner (take adultery for instance), but simply doing any one soever of those things is being wrong.

You might as well require that there should be determined a mean state, an excess and a defect in respect of acting unjustly, being cowardly, or giving up all control of the passions: for at this rate there will be of excess and defect a mean state; of excess, excess; and of defect, defect.

But just as of perfected self-mastery and courage there is no excess and defect, because the mean is in one point of view the highest possible state, so neither of those faulty states can you have a mean state, excess, or defect, but howsoever done they are wrong: you cannot, in short, have of excess and defect a mean state, nor of a mean state excess and defect.

Chapter VII.

It is not enough, however, to state this in general terms, we must also apply it to particular instances, because in treatises on moral conduct general statements have an air of vagueness, but those which go into detail one of greater reality: for the actions after all must be in detail, and the general statements, to be worth anything, must hold good here.

We must take these details then from the well-known scheme.[15]

I. In respect of fears and confidence or boldness:

The Mean state is Courage: men may exceed, of course, either in absence of fear or in positive confidence: the former has no name (which is a common case), the latter is called rash: again, the man who has too much fear and too little confidence is called a coward.

II. In respect of pleasures and pains (but not all, and perhaps fewer pains than pleasures):

The Mean state here is perfected Self-Mastery, the defect total absence of Self-control. As for defect in respect of pleasure, there are really no people who are chargeable with it, so, of course, there is really no name for such characters, but, as they are conceivable, we will give them one and call them insensible.

III. In respect of giving and taking wealth[16] (_a_):

The mean state is Liberality, the excess Prodigality, the defect Stinginess: here each of the extremes involves really an excess and defect contrary to each other: I mean, the prodigal gives out too much and takes in too little, while the stingy man takes in too much and gives out too little. (It must be understood that we are now giving merely an outline and summary, intentionally: and we will, in a later part of the treatise, draw out the distinctions with greater exactness.)

IV. In respect of wealth (b):

There are other dispositions besides these just mentioned; a mean state called Munificence (for the munificent man differs from the liberal, the former having necessarily to do with great wealth, the latter with but small); the excess called by the names either of Want of taste or Vulgar Profusion, and the defect Paltriness (these also differ from the extremes connected with liberality, and the manner of their difference shall also be spoken of later).

V. In respect of honour and dishonour (a):

The mean state Greatness of Soul, the excess which may be called χαυν■τηϛ,[17] and the defect Littleness of Soul.

VI. In respect of honour and dishonour (b):

Now there is a state bearing the same relation to Greatness of Soul as we said just now Liberality does to Munificence, with the difference that is of being about a small amount of the same thing: this state having reference to small honour, as Greatness of Soul to great honour; a man may, of course, grasp at honour either more than he should or less; now he that exceeds in his grasping at it is called ambitious, he that falls short unambitious, he that is just as he should be has no proper name: nor in fact have the states, except that the disposition of the ambitious man is called ambition. For this reason those who are in either extreme lay claim to the mean as a debateable land, and we call the virtuous character sometimes by the name ambitious,[18] sometimes by that of unambitious, and we commend sometimes the one and sometimes the other. Why we do it shall be said in the subsequent part of the treatise; but now we will go on with the rest of the virtues after the plan we have laid down.

VII. In respect of anger:

Here too there is excess, defect, and a mean state; but since they may be said to have really no proper names, as we call the virtuous character Meek, we will call the mean state Meekness, and of the extremes, let the man who is excessive be denominated Passionate, and the faulty state Passionateness, and him who is deficient Angerless, and the defect Angerlessness.

There are also three other mean states, having some mutual resemblance, but still with differences; they are alike in that they all have for their object-matter intercourse of words and deeds, and they differ in that one has respect to truth herein, the other two to what is pleasant; and this in two ways, the one in relaxation and amusement, the other in all things which occur in daily life. We must say a word or two about these also, that we may the better see that in all matters the mean is praiseworthy, while the extremes are neither right nor worthy of praise but of blame.

Now of these, it is true, the majority have really no proper names, but still we must try, as in the other cases, to coin some for them for the sake of clearness and intelligibleness.

I. In respect of truth:

The man who is in the mean state we will call Truthful, and his state Truthfulness, and as to the disguise of truth, if it be on the side of exaggeration, Braggadocia, and him that has it a Braggadocio; if on that of diminution, Reserve and Reserved shall be the terms.

II. In respect of what is pleasant in the way of relaxation or amusement.

The mean state shall be called Easy-pleasantry, and the character accordingly a man of Easy-pleasantry; the excess Buffoonery, and the man a Buffoon; the man deficient herein a Clown, and his state Clownishness.

III. In respect of what is pleasant in daily life.

He that is as he should be may be called Friendly, and his mean state Friendliness: he that exceeds, if it be without any interested motive, somewhat too Complaisant, if with such motive, a Flatterer: he that is deficient and in all instances unpleasant, Quarrelsome and Cross.

There are mean states likewise in feelings and matters concerning them. Shamefacedness, for instance, is no virtue, still a man is praised for being shamefaced: for in these too the one is denominated the man in the mean state, the other in the excess; the Dumbfoundered, for instance, who is overwhelmed with shame on all and any occasions: the man who is in the defect, _i.e._ who has no shame at all in his composition, is called Shameless: but the right character Shamefaced.

Indignation against successful vice,[19] again, is a state in the mean between Envy and Malevolence: they all three have respect to pleasure and pain produced by what happens to one's neighbour: for the man who has this right feeling is annoyed at undeserved success of others, while the envious man goes beyond him and is annoyed at all success of others, and the malevolent falls so far short of feeling annoyance that he even rejoices [at misfortune of others].

But for the discussion of these also there will be another opportunity, as of Justice too, because the term is used in more senses than one. So after this we will go accurately into each and say how they are mean states: and in like manner also with respect to the Intellectual Excellences.

Chapter VIII.

Now as there are three states in each case, two faulty either in the way of excess or defect, and one right, which is the mean state, of course all are in a way opposed to one another; the extremes, for instance, not only to the mean but also to one another, and the mean to the extremes: for just as the half is greater if compared with the less portion, and less if compared with the greater, so the mean states, compared with the defects, exceed, whether in feelings or actions, and _vice versa_. The brave man, for instance, shows as rash when compared with the coward, and cowardly when compared with the rash; similarly too the man of perfected self-mastery, viewed in comparison with the man destitute of all perception, shows like a man of no self-control, but in comparison with the man who really has no self-control, he looks like one destitute of all perception: and the liberal man compared with the stingy seems prodigal, and by the side of the prodigal, stingy.

And so the extreme characters push away, so to speak, towards each other the man in the mean state; the brave man is called a rash man by the coward, and a coward by the rash man, and in the other cases accordingly. And there being this mutual opposition, the contrariety between the extremes is greater than between either and the mean, because they are further from one another than from the mean, just as the greater or less portion differ more from each other than either from the exact half.

Again, in some cases an extreme will bear a resemblance to the mean; rashness, for instance, to courage, and prodigality to liberality; but between the extremes there is the greatest dissimilarity. Now things which are furthest from one another[20] are defined to be contrary, and so the further off the more contrary will they be.

Further: of the extremes in some cases the excess, and in others the defect, is most opposed to the mean: to courage, for instance, not rashness which is the excess, but cowardice which is the defect; whereas to perfected self-mastery not insensibility which is the defect but absence of all self-control which is the excess.

And for this there are two reasons to be given; one from the nature of the thing itself, because from the one extreme being nearer and more like the mean, we do not put this against it, but the other; as, for instance, since rashness is thought to be nearer to courage than cowardice is, and to resemble it more, we put cowardice against courage rather than rashness, because those things which are further from the mean are thought to be more contrary to it. This then is one reason arising from the thing itself; there is another arising from our own constitution and make: for in each man's own case those things give the impression of being more contrary to the mean to which we individually have a natural bias. Thus we have a natural bias towards pleasures, for which reason we are much more inclined to the rejection of all self-control, than to self-discipline.

These things then to which the bias is, we call more contrary, and so total want of self-control (the excess) is more contrary than the defect is to perfected self-mastery.

Chapter IX.

Now that Moral Virtue is a mean state, and how it is so, and that it lies between two faulty states, one in the way of excess and another in the way of defect, and that it is so because it has an aptitude to aim at the mean both in feelings and actions, all this has been set forth fully and sufficiently.

And so it is hard to be good: for surely hard it is in each instance to find the mean, just as to find the mean point or centre of a circle is not what any man can do, but only he who knows how: just so to be angry, to give money, and be expensive, is what any man can do, and easy: but to do these to the right person, in due proportion, at the right time, with a right object, and in the right manner, this is not as before what any man can do, nor is it easy; and for this cause goodness is rare, and praiseworthy, and noble.

Therefore he who aims at the mean should make it his first care to keep away from that extreme which is more contrary than the other to the mean; just as Calypso in Homer advises Ulysses,

"Clear of this smoke and surge thy barque direct;"

because of the two extremes the one is always more, and the other less, erroneous; and, therefore, since to hit exactly on the mean is difficult, one must take the least of the evils as the safest plan;[21] and this a man will be doing, if he follows this method.

We ought also to take into consideration our own natural bias; which varies in each man's case, and will be ascertained from the pleasure and pain arising in us. Furthermore, we should force ourselves off in the contrary direction, because we shall find ourselves in the mean after we have removed ourselves far from the wrong side, exactly as men do in straightening bent timber.[22]

But in all cases we must guard most carefully against what is pleasant, and pleasure itself, because we are not impartial judges of it.

We ought to feel in fact towards pleasure as did the old counsellors towards Helen, and in all cases pronounce a similar sentence; for so by sending it away from us, we shall err the less.[23]

Well, to speak very briefly, these are the precautions by adopting which we shall be best able to attain the mean.

Still, perhaps, after all it is a matter of difficulty, and specially in the particular instances: it is not easy, for instance, to determine exactly in what manner, with what persons, for what causes, and for what length of time, one ought to feel anger: for we ourselves sometimes praise those who are defective in this feeling, and we call them meek; at another, we term the hot-tempered manly and spirited.

Then, again, he who makes a small deflection from what is right, be it on the side of too much or too little, is not blamed, only he who makes a considerable one; for he cannot escape observation. But to what point or degree a man must err in order to incur blame, it is not easy to determine exactly in words: nor in fact any of those points which are matter of perception by the Moral Sense: such questions are matters of detail, and the decision of them rests with the Moral Sense.[24]

At all events thus much is plain, that the mean state is in all things praiseworthy, and that practically we must deflect sometimes towards excess sometimes towards defect, because this will be the easiest method of hitting on the mean, that is, on what is right.

BOOK III

Chapter I.

Now since Virtue is concerned with the regulation of feelings and actions, and praise and blame arise upon such as are voluntary, while for the involuntary allowance is made, and sometimes compassion is excited, it is perhaps a necessary task for those who are investigating the nature of Virtue to draw out the distinction between what is voluntary and what involuntary; and it is certainly useful for legislators, with respect to the assigning of honours and punishments.

Involuntary actions then are thought to be of two kinds, being done either on compulsion, or by reason of ignorance. An action is, properly speaking, compulsory, when the origination is external to the agent, being such that in it the agent (perhaps we may more properly say the patient) contributes nothing; as if a wind were to convey you anywhere, or men having power over your person.

But when actions are done, either from fear of greater evils, or from some honourable motive, as, for instance, if you were ordered to commit some base act by a despot who had your parents or children in his power, and they were to be saved upon your compliance or die upon your refusal, in such cases there is room for a question whether the actions are voluntary or involuntary.

A similar question arises with respect to cases of throwing goods overboard in a storm: abstractedly no man throws away his property willingly, but with a view to his own and his shipmates' safety any one would who had any sense.

The truth is, such actions are of a mixed kind, but are most like voluntary actions; for they are choice-worthy at the time when they are being done, and the end or object of the action must be taken with reference to the actual occasion. Further, we must denominate an action voluntary or involuntary at the time of doing it: now in the given case the man acts voluntarily, because the originating of the motion of his limbs in such actions rests with himself; and where the origination is in himself it rests with himself to do or not to do.

Such actions then are voluntary, though in the abstract perhaps involuntary because no one would choose any of such things in and by itself.

But for such actions men sometimes are even praised, as when they endure any disgrace or pain to secure great and honourable equivalents; if _vice versâ_, then they are blamed, because it shows a base mind to endure things very disgraceful for no honourable object, or for a trifling one.

For some again no praise is given, but allowance is made; as where a man does what he should not by reason of such things as overstrain the powers of human nature, or pass the limits of human endurance.

Some acts perhaps there are for which compulsion cannot be pleaded, but a man should rather suffer the worst and die; how absurd, for instance, are the pleas of compulsion with which Alcmaeon in Euripides' play excuses his matricide!

But it is difficult sometimes to decide what kind of thing should be chosen instead of what, or what endured in preference to what, and much moreso to abide by one's decisions: for in general the alternatives are painful, and the actions required are base, and so praise or blame is awarded according as persons have been compelled or no.

What kind of actions then are to be called compulsory? may we say, simply and abstractedly whenever the cause is external and the agent contributes nothing; and that where the acts are in themselves such as one would not wish but choice-worthy at the present time and in preference to such and such things, and where the origination rests with the agent, the actions are in themselves involuntary but at the given time and in preference to such and such things voluntary; and they are more like voluntary than involuntary, because the actions consist of little details, and these are voluntary.

But what kind of things one ought to choose instead of what, it is not easy to settle, for there are many differences in particular instances.

But suppose a person should say, things pleasant and honourable exert a compulsive force (for that they are external and do compel); at that rate every action is on compulsion, because these are universal motives of action.

Again, they who act on compulsion and against their will do so with pain; but they who act by reason of what is pleasant or honourable act with pleasure.

It is truly absurd for a man to attribute his actions to external things instead of to his own capacity for being easily caught by them;[1] or, again, to ascribe the honourable to himself, and the base ones to pleasure.

So then that seems to be compulsory “whose origination is from without, the party compelled contributing nothing.”

Chapter II.

Now every action of which ignorance is the cause is not-voluntary, but that only is involuntary which is attended with pain and remorse; for clearly the man who has done anything by reason of ignorance, but is not annoyed at his own action, cannot be said to have done it _with_ his will because he did not know he was doing it, nor again _against_ his will because he is not sorry for it.

So then of the class “acting by reason of ignorance,” he who feels regret afterwards is thought to be an involuntary agent, and him that has no such feeling, since he certainly is different from the other, we will call a not-voluntary agent; for as there is a real difference it is better to have a proper name.

Again, there seems to be a difference between acting _because of_ ignorance and acting _with_ ignorance: for instance, we do not usually assign ignorance as the cause of the actions of the drunken or angry man, but either the drunkenness or the anger, yet they act not knowingly but with ignorance.

Again, every bad man is ignorant what he ought to do and what to leave undone, and by reason of such error men become unjust and wholly evil.

Again, we do not usually apply the term involuntary when a man is ignorant of his own true interest;[2] because ignorance which affects moral choice[3] constitutes depravity but not involuntariness: nor does any ignorance of principle (because for this men are blamed) but ignorance in particular details, wherein consists the action and wherewith it is concerned, for in these there is both compassion and allowance, because he who acts in ignorance of any of them acts in a proper sense involuntarily.

It may be as well, therefore, to define these particular details; what they are, and how many; viz. who acts, what he is doing, with respect to what or in what, sometimes with what, as with what instrument, and with what result;[4] as that of preservation, for instance, and how, as whether softly or violently.

All these particulars, in one and the same case, no man in his senses could be ignorant of; plainly not of the agent, being himself. But what he is doing a man may be ignorant, as men in speaking say a thing escaped them unawares; or as Aeschylus did with respect to the Mysteries, that he was not aware that it was unlawful to speak of them; or as in the case of that catapult accident the other day the man said he discharged it merely to display its operation. Or a person might suppose a son to be an enemy, as Merope did; or that the spear really pointed was rounded off; or that the stone was a pumice; or in striking with a view to save might kill; or might strike when merely wishing to show another, as people do in sham-fighting.

Now since ignorance is possible in respect to all these details in which the action consists, he that acted in ignorance of any of them is thought to have acted involuntarily, and he most so who was in ignorance as regards the most important, which are thought to be those in which the action consists, and the result.

Further, not only must the ignorance be of this kind, to constitute an action involuntary, but it must be also understood that the action is followed by pain and regret.

Chapter III.

Now since all involuntary action is either upon compulsion or by reason of ignorance, Voluntary Action would seem to be “that whose origination is in the agent, he being aware of the particular details in which the action consists.”

For, it may be, men are not justified by calling those actions involuntary, which are done by reason of Anger or Lust.

Because, in the first place, if this be so no other animal but man, and not even children, can be said to act voluntarily. Next, is it meant that we never act voluntarily when we act from Lust or Anger, or that we act voluntarily in doing what is right and involuntarily in doing what is discreditable? The latter supposition is absurd, since the cause is one and the same. Then as to the former, it is a strange thing to maintain actions to be involuntary which we are bound to grasp at: now there are occasions on which anger is a

duty,[5] and there are things which we are bound to lust after,[6] health, for instance, and learning.

Again, whereas actions strictly involuntary are thought to be attended with pain, those which are done to gratify lust are thought to be pleasant.

Again: how does the involuntariness make any difference[7] between wrong actions done from deliberate calculation, and those done by reason of anger? for both ought to be avoided, and the irrational feelings are thought to be just as natural to man as reason, and so of course must be such actions of the individual as are done from Anger and Lust. It is absurd then to class these actions among the involuntary.

Chapter IV.

Having thus drawn out the distinction between voluntary and involuntary action our next step is to examine into the nature of Moral Choice, because this seems most intimately connected with Virtue and to be a more decisive test of moral character than a man's acts are.

Now Moral Choice is plainly voluntary, but the two are not co-extensive, voluntary being the more comprehensive term; for first, children and all other animals share in voluntary action but not in Moral Choice; and next, sudden actions we call voluntary but do not ascribe them to Moral Choice.

Nor do they appear to be right who say it is lust or anger, or wish, or opinion of a certain kind; because, in the first place, Moral Choice is not shared by the irrational animals while Lust and Anger are. Next; the man who fails of self-control acts from Lust but not from Moral Choice; the man of self-control, on the contrary, from Moral Choice, not from Lust. Again: whereas Lust is frequently opposed to Moral Choice, Lust is not to Lust.

Lastly: the object-matter of Lust is the pleasant and the painful, but of Moral Choice neither the one nor the other. Still less can it be Anger, because actions done from Anger are thought generally to be least of all consequent on Moral Choice.

Nor is it Wish either, though appearing closely connected with it; because, in the first place, Moral Choice has not for its objects impossibilities, and if a man were to say he chose them he would be thought to be a fool; but Wish may have impossible things for its objects, immortality for instance.

Wish again may be exercised on things in the accomplishment of which one's self could have nothing to do, as the success of any particular actor or athlete; but no man chooses things of this nature, only such as he believes he may himself be instrumental in procuring.

Further: Wish has for its object the End rather, but Moral Choice the means to the End; for instance, we wish to be healthy but we choose the means which will make us so; or happiness again we wish for, and commonly say so, but to say we choose is not an appropriate term, because, in short, the province of Moral Choice seems to be those things which are in our own power.

Neither can it be Opinion; for Opinion is thought to be unlimited in its range of objects, and to be exercised as well upon things eternal and impossible as on those which are in our own power: again, Opinion is logically divided into true and false, not into good and bad as Moral Choice is.

However, nobody perhaps maintains its identity with Opinion simply; but it is not the same with opinion of any kind,[8] because by choosing good and bad things we are constituted of a certain character, but by having opinions on them we are not.

Again, we choose to take or avoid, and so on, but we opine what a thing is, or for what it is serviceable, or how; but we do not opine to take or avoid.

Further, Moral Choice is commended rather for having a right object than for being judicious, but Opinion for being formed in accordance with truth.

Again, we choose such things as we pretty well know to be good, but we form opinions respecting such as we do not know at all.

And it is not thought that choosing and opining best always go together, but that some opine the better course and yet by reason of viciousness choose not the things which they should.

It may be urged, that Opinion always precedes or accompanies Moral Choice; be it so, this makes no difference, for this is not the point in question, but whether Moral Choice is the same as Opinion of a certain kind.

Since then it is none of the aforementioned things, what is it, or how is it characterised? Voluntary it plainly is, but not all voluntary action is an object of Moral Choice. May we not say then, it is “that voluntary which has passed through a stage of previous deliberation?” because Moral Choice is attended with reasoning and intellectual process. The etymology of its Greek name seems to give a hint of it, being when analysed “chosen in preference to somewhat else.”

Chapter V.

Well then; do men deliberate about everything, and is anything soever the object of Deliberation, or are there some matters with respect to which there is none? (It may be as well perhaps to say, that by “object of Deliberation” is meant such matter as a sensible man would deliberate upon, not what any fool or madman might.)

Well: about eternal things no one deliberates; as, for instance, the universe, or the incommensurability of the diameter and side of a square.

Nor again about things which are in motion but which always happen in the same way either necessarily, or naturally, or from some other cause, as the solstices or the sunrise.

Nor about those which are variable, as drought and rains; nor fortuitous matters, as finding of treasure.

Nor in fact even about all human affairs; no Lacedæmonian, for instance, deliberates as to the best course for the Scythian government to adopt; because in such cases we have no power over the result.

But we do deliberate respecting such practical matters as are in our own power (which are what are left after all our exclusions).

I have adopted this division because causes seem to be divisible into nature, necessity, chance, and moreover intellect, and all human powers.

And as man in general deliberates about what man in general can effect, so individuals do about such practical things as can be effected through their own instrumentality.

Again, we do not deliberate respecting such arts or sciences as are exact and independent: as, for instance, about written characters, because we have no doubt how they should be formed; but we do deliberate on all buch things as are usually done through our own instrumentality, but not invariably in the same way; as, for instance, about matters connected with the healing art, or with money-making; and, again, more about piloting ships than gymnastic exercises, because the former has been less exactly determined, and so forth; and more about arts than sciences, because we more frequently doubt respecting the former.

So then Deliberation takes place in such matters as are under general laws, but still uncertain how in any given case they will issue, _i.e._ in which there is some indefiniteness; and for great matters we associate coadjutors in counsel, distrusting our ability to settle them alone.

Further, we deliberate not about Ends, but Means to Ends. No physician, for instance, deliberates whether he will cure, nor orator whether he will persuade, nor statesman whether he will produce a good constitution, nor in fact any man in any other function about his particular End; but having set before them a certain End they look how and through what means it may be accomplished: if there is a choice of means, they examine further which are easiest and most creditable; or, if there is but one means of accomplishing the object, then how it may be through this, this again through what, till they come to the first cause; and this will be the last found; for a man engaged in a process of deliberation seems to seek and analyse, as a man, to solve a problem, analyses the figure given him. And plainly not every search is Deliberation, those in mathematics to wit, but every Deliberation is a search, and the last step in the analysis is the first in the constructive process. And if in the course of their search men come upon an impossibility, they give it up; if money, for instance, be necessary, but cannot be got: but if the thing appears possible they then attempt to do it.

And by possible I mean what may be done through our own instrumentality (of course what may be done through our friends is through our own instrumentality in a certain sense, because the origination in such cases rests with us). And the object of search is sometimes the necessary instruments, sometimes the method of using them; and similarly in the rest sometimes through what, and sometimes how or through what.[9]

So it seems, as has been said, that Man is the originator of his actions; and Deliberation has for its object whatever may be done through one's own instrumentality, and the actions are with a view to other things; and so it is, not the End, but the Means to Ends on which Deliberation is employed.

Nor, again, is it employed on matters of detail, as whether the substance before me is bread, or has been properly cooked; for these come under the province of sense, and if a man is to be always deliberating, he may go on _ad infinitum_.

Further, exactly the same matter is the object both of Deliberation and Moral Choice; but that which is the object of Moral Choice is thenceforward separated off and definite,[10] because by object of Moral Choice is denoted that which after Deliberation has been preferred to something else: for each man leaves off searching how he shall do a thing when he has brought the origination up to himself, _i.e_. to the governing principle in himself,[11] because it is this which makes the choice. A good illustration of this is furnished by the old regal constitutions which Homer drew from, in which the Kings would announce to the commonalty what they had determined before.

Now since that which is the object of Moral Choice is something in our own power, which is the object of deliberation and the grasping of the Will, Moral Choice must be "a grasping after something in our own power consequent upon Deliberation:" because after having deliberated we decide, and then grasp by our Will in accordance with the result of our deliberation.[12]

Let this be accepted as a sketch of the nature and object of Moral Choice, that object being "Means to Ends."

Chapter VI.

That Wish has for its object-matter the End, has been already stated; but there are two opinions respecting it; some thinking that its object is real good, others whatever impresses the mind with a notion of good.

Now those who maintain that the object of Wish is real good are beset by this difficulty, that what is wished for by him who chooses wrongly is not really an object of Wish (because, on their theory, if it is an object of wish, it must be good, but it is, in the case supposed, evil). Those who maintain, on the contrary, that that which impresses the mind with a notion of good is properly the object of Wish, have to meet this difficulty, that there is nothing naturally an object of Wish but to each individual whatever seems good to him; now different people have different notions, and it may chance contrary ones.

But, if these opinions do not satisfy us, may we not say that, abstractedly and as a matter of objective truth, the really good is the object of Wish, but to each individual whatever impresses his mind with the notion of good.[13] And so to the good man that is an object of Wish which is really and truly so, but to the bad man anything may be; just as physically those things are wholesome to the healthy which are really so, but other things to the sick. And so too of bitter and sweet, and hot and heavy, and so on. For the good man judges in every instance correctly, and in every instance the notion conveyed to his mind is the true one.

For there are fair and pleasant things peculiar to, and so varying with, each state; and perhaps the most distinguishing characteristic of the good man is his seeing the truth in every instance, he being, in fact, the rule and measure of these matters.

The multitude of men seem to be deceived by reason of pleasure, because though it is not really a good it impresses their minds with the notion of goodness, so they choose what is pleasant as good and avoid pain as an evil.

Chapter VII.

Now since the End is the object of Wish, and the means to the End of Deliberation and Moral Choice, the actions regarding these matters must be in the way of Moral Choice, _i.e._ voluntary: but the acts of working out the virtues are such actions, and therefore Virtue is in our power.

And so too is Vice: because wherever it is in our power to do it is also in our power to forbear doing, and _vice versâ_: therefore if the doing (being in a given case creditable) is in our power, so too is the forbearing (which is in the same case discreditable), and _vice versâ_.

But if it is in our power to do and to forbear doing what is creditable or the contrary, and these respectively constitute the being good or bad, then the being good or vicious characters is in our power.

As for the well-known saying, "No man voluntarily is wicked or involuntarily happy," it is partly true, partly false; for no man is happy against his will, of course, but wickedness is voluntary. Or must we dispute the statements lately made, and not say that Man is the

originator or generator of his actions as much as of his children?

But if this is matter of plain manifest fact, and we cannot refer our actions to any other originations beside those in our own power, those things must be in our own power, and so voluntary, the originations of which are in ourselves.

Moreover, testimony seems to be borne to these positions both privately by individuals, and by law-givers too, in that they chastise and punish those who do wrong (unless they do so on compulsion, or by reason of ignorance which is not self-caused), while they honour those who act rightly, under the notion of being likely to encourage the latter and restrain the former. But such things as are not in our own power, _i.e._ not voluntary, no one thinks of encouraging us to do, knowing it to be of no avail for one to have been persuaded not to be hot (for instance), or feel pain, or be hungry, and so forth, because we shall have those sensations all the same.

And what makes the case stronger is this: that they chastise for the very fact of ignorance, when it is thought to be self-caused; to the drunken, for instance, penalties are double, because the origination in such case lies in a man's own self: for he might have helped getting drunk, and this is the cause of his ignorance.

Again, those also who are ignorant of legal regulations which they are bound to know, and which are not hard to know, they chastise; and similarly in all other cases where neglect is thought to be the cause of the ignorance, under the notion that it was in their power to prevent their ignorance, because they might have paid attention.

But perhaps a man is of such a character that he cannot attend to such things: still men are themselves the causes of having become such characters by living carelessly, and also of being unjust or destitute of self-control, the former by doing evil actions, the latter by spending their time in drinking and such-like; because the particular acts of working form corresponding characters, as is shown by those who are practising for any contest or particular course of action, for such men persevere in the acts of working.

As for the plea, that a man did not know that habits are produced from separate acts of working, we reply, such ignorance is a mark of excessive stupidity.

Furthermore, it is wholly irrelevant to say that the man who acts unjustly or dissolutely does not _wish_ to attain the habits of these vices: for if a man wittingly does those things whereby he must become unjust he is to all intents and purposes unjust voluntarily; but he cannot with a wish cease to be unjust and become just. For, to take the analogous case, the sick man cannot with a wish be well again, yet in a supposable case he is voluntarily ill because he has produced his sickness by living intemperately and disregarding his physicians. There was a time then when he might have helped being ill, but now he has let himself go he cannot any longer; just as he who has let a stone out of his hand cannot recall it,[14] and yet it rested with him to aim and throw it, because the origination was in his power. Just so the unjust man, and he who has lost all self-control, might originally have helped being what they are, and so they are voluntarily what they are; but now that they are become so they no longer have the power of being otherwise.

And not only are mental diseases voluntary, but the bodily are so in some men, whom we accordingly blame: for such as are naturally deformed no one blames, only such as are so by reason of want of exercise, and neglect: and so too of weakness and maiming: no one would think of upbraiding, but would rather compassionate, a man who is blind by nature, or from disease, or from an accident; but every one would blame him who was so from excess of wine, or any other kind of intemperance. It seems, then, that in respect of bodily diseases, those which depend on ourselves are censured, those which do not are not censured; and if so, then in the case of the mental disorders, those which are censured must depend upon ourselves.

But suppose a man to say, "that (by our own admission) all men aim at that which conveys to their minds an impression of good, and that men have no control over this impression, but that the End impresses each with a notion correspondent to his own individual character; that to be sure if each man is in a way the cause of his own moral state, so he will be also of the kind of impression he receives: whereas, if this is not so, no one is the cause to himself of doing evil actions, but he does them by reason of ignorance of the true End, supposing that through their means he will secure the chief good. Further, that this aiming at the End is no matter of one's own choice, but one must be born with a power of mental vision, so to speak, whereby to judge fairly and choose that which is really good; and he is blessed by nature who has this naturally well: because it is the most important thing and the fairest, and what a man cannot get or learn from another but will have such as nature has given it; and for this to be so given well and fairly would be excellence of nature in the highest and truest sense."

If all this be true, how will Virtue be a whit more voluntary than Vice? Alike to the good man and the bad, the End gives its impression and is fixed by nature or howsoever you like to say, and they act so and so, referring everything else to this End.

Whether then we suppose that the End impresses each man's mind with certain notions not merely by nature, but that there is somewhat also dependent on himself; or that the End is given by nature, and yet Virtue is voluntary because the good man does all the rest voluntarily, Vice must be equally so; because his own agency equally attaches to the bad man in the actions, even if not in the selection of the End.

If then, as is commonly said, the Virtues are voluntary (because we at least cooperate[15] in producing our moral states, and we assume the End to be of a certain kind according as we are ourselves of certain characters), the Vices must be voluntary also, because the cases are exactly similar.

Chapter VIII.

Well now, we have stated generally respecting the Moral Virtues, the genus (in outline), that they are mean states, and that they are habits, and how they are formed, and that they are of themselves calculated to act upon the circumstances out of which they were formed, and that they are in our own power and voluntary, and are to be done so as right Reason may direct.

But the particular actions and the habits are not voluntary in the same sense; for of the actions we are masters from beginning to end (supposing of course a knowledge of the particular details), but only of the origination of the habits, the addition by small particular accessions not being cognisiable (as is the case with sicknesses): still they are voluntary because it rested with us to use our circumstances this way or that.

Chapter IX.

Here we will resume the particular discussion of the Moral Virtues, and say what they are, what is their object-matter, and how they stand respectively related to it: of course their number will be thereby shown.

First, then, of Courage. Now that it is a mean state, in respect of fear and boldness, has been already said: further, the objects of our fears are obviously things fearful or, in a general way of statement, evils; which accounts for the common definition of fear, viz. "expectation of evil."

Of course we fear evils of all kinds: disgrace, for instance, poverty, disease, desolateness, death; but not all these seem to be the object-matter of the Brave man, because there are things which to fear is right and noble, and not to fear is base; disgrace, for example, since he who fears this is a good man and has a sense of honour, and he who does not fear it is shameless (though there are those who call him Brave by analogy, because he somewhat resembles the Brave man who agrees with him in being free from fear); but poverty, perhaps, or disease, and in fact whatever does not proceed from viciousness, nor is attributable to his own fault, a man ought not to fear: still, being fearless in respect of these would not constitute a man Brave in the proper sense of the term.

Yet we do apply the term[16] in right of the similarity of the cases; for there are men who, though timid in the dangers of war, are liberal men and are stout enough to face loss of wealth.

And, again, a man is not a coward for fearing insult to his wife or children, or envy, or any such thing; nor is he a Brave man for being bold when going to be scourged.

What kind of fearful things then do constitute the object-matter of the Brave man? first of all, must they not be the greatest, since no man is more apt to withstand what is dreadful. Now the object of the greatest dread is death, because it is the end of all things, and the dead man is thought to be capable neither of good nor evil. Still it would seem that the Brave man has not for his object-matter even death in every circumstance; on the sea, for example, or in sickness: in what circumstances then? must it not be in the most honourable? now such is death in war, because it is death in the greatest and most honourable danger; and this is confirmed by the honours awarded in communities, and by monarchs.

He then may be most properly denominated Brave who is fearless in respect of honourable death and such sudden emergencies as threaten death; now such specially are those which arise in the course of war.

It is not meant but that the Brave man will be fearless also on the sea (and in sickness), but not in the same way as sea-faring men; for these are light-hearted and hopeful by reason of their experience, while landsmen though Brave are apt to give themselves up for lost and shudder at the notion of such a death: to which it should be added that Courage is exerted in circumstances which

admit of doing something to help one’s self, or in which death would be honourable; now neither of these requisites attach to destruction by drowning or sickness.

Chapter X.

Again, fearful is a term of relation, the same thing not being so to all, and there is according to common parlance somewhat so fearful as to be beyond human endurance: this of course would be fearful to every man of sense, but those objects which are level to the capacity of man differ in magnitude and admit of degrees, so too the objects of confidence or boldness.

Now the Brave man cannot be frighted from his propriety (but of course only so far as he is man); fear such things indeed he will, but he will stand up against them as he ought and as right reason may direct, with a view to what is honourable, because this is the end of the virtue.

Now it is possible to fear these things too much, or too little, or again to fear what is not really fearful as if it were such. So the errors come to be either that a man fears when he ought not to fear at all, or that he fears in an improper way, or at a wrong time, and so forth; and so too in respect of things inspiring confidence. He is Brave then who withstands, and fears, and is bold, in respect of right objects, from a right motive, in right manner, and at right times: since the Brave man suffers or acts as he ought and as right reason may direct.

Now the end of every separate act of working is that which accords with the habit, and so to the Brave man Courage; which is honourable; therefore such is also the End, since the character of each is determined by the End.[17]

So honour is the motive from which the Brave man withstands things fearful and performs the acts which accord with Courage.

Of the characters on the side of Excess, he who exceeds in utter absence of fear has no appropriate name (I observed before that many states have none), but he would be a madman or inaccessible to pain if he feared nothing, neither earthquake, nor the billows, as they tell of the Celts.

He again who exceeds in confidence in respect of things fearful is rash. He is thought moreover to be a braggart, and to advance unfounded claims to the character of Brave: the relation which the Brave man really bears to objects of fear this man wishes to appear to bear, and so imitates him in whatever points he can; for this reason most of them exhibit a curious mixture of rashness and cowardice; because, affecting rashness in these circumstances, they do not withstand what is truly fearful.

The man moreover who exceeds in feeling fear is a coward, since there attach to him the circumstances of fearing wrong objects, in wrong ways, and so forth. He is deficient also in feeling confidence, but he is most clearly seen as exceeding in the case of pains; he is a fainthearted kind of man, for he fears all things: the Brave man is just the contrary, for boldness is the property of the light-hearted and hopeful.

So the coward, the rash, and the Brave man have exactly the same object-matter, but stand differently related to it: the two first-mentioned respectively exceed and are deficient, the last is in a mean state and as he ought to be. The rash again are precipitate, and, being eager before danger, when actually in it fall away, while the Brave are quick and sharp in action, but before are quiet and composed.

Well then, as has been said, Courage is a mean state in respect of objects inspiring boldness or fear, in the circumstances which have been stated, and the Brave man chooses his line and withstands danger either because to do so is honourable, or because not to do so is base. But dying to escape from poverty, or the pangs of love, or anything that is simply painful, is the act not of a Brave man but of a coward; because it is mere softness to fly from what is toilsome, and the suicide braves the terrors of death not because it is honourable but to get out of the reach of evil.

Chapter XI.

Courage proper is somewhat of the kind I have described, but there are dispositions, differing in five ways,[18] which also bear in common parlance the name of Courage.

We will take first that which bears most resemblance to the true, the Courage of Citizenship, so named because the motives which are thought to actuate the members of a community in braving danger are the penalties and disgrace held out by the laws to cowardice, and the dignities conferred on the Brave; which is thought to be the reason why those are the bravest people among whom cowards are visited with disgrace and the Brave held in honour.

Such is the kind of Courage Homer exhibits in his characters; Diomed and Hector for example. The latter says,

“Polydamas will be the first to fix Disgrace upon me.”

Diomed again,

“For Hector surely will hereafter say, Speaking in Troy, Tydides by my hand”—

This I say most nearly resembles the Courage before spoken of, because it arises from virtue, from a feeling of shame, and a desire of what is noble (that is, of honour), and avoidance of disgrace which is base.

In the same rank one would be inclined to place those also who act under compulsion from their commanders; yet are they really lower, because not a sense of honour but fear is the motive from which they act, and what they seek to avoid is not that which is base but that which is simply painful: commanders do in fact compel their men sometimes, as Hector says (to quote Homer again),

“But whomsoever I shall find cowering afar from the fight, The teeth of dogs he shall by no means escape.”

Those commanders who station staunch troops by doubtful ones,[19] or who beat their men if they flinch, or who draw their troops up in line with the trenches, or other similar obstacles, in their rear, do in effect the same as Hector, for they all use compulsion.

But a man is to be Brave, not on compulsion, but from a sense of honour.

In the next place, Experience and Skill in the various particulars is thought to be a species of Courage: whence Socrates also thought that Courage was knowledge.[20]

This quality is exhibited of course by different men under different circumstances, but in warlike matters, with which we are now concerned, it is exhibited by the soldiers (“the regulars”): for there are, it would seem, many things in war of no real importance[21] which these have been constantly used to see; so they have a show of Courage because other people are not aware of the real nature of these things. Then again by reason of their skill they are better able than any others to inflict without suffering themselves, because they are able to use their arms and have such as are most serviceable both with a view to offence and defence: so that their case is parallel to that of armed men fighting with unarmed or trained athletes with amateurs, since in contests of this kind those are the best fighters, not who are the bravest men, but who are the strongest and are in the best condition.

In fact, the regular troops come to be cowards whenever the danger is greater than their means of meeting it; supposing, for example, that they are inferior in numbers and resources: then they are the first to fly, but the mere militia stand and fall on the ground (which as you know really happened at the Hermæum),[22] for in the eyes of these flight was disgraceful and death preferable to safety bought at such a price: while “the regulars” originally went into the danger under a notion of their own superiority, but on discovering their error they took to flight,[23] having greater fear of death than of disgrace; but this is not the feeling of the Brave man.

Thirdly, mere Animal Spirit is sometimes brought under the term Courage: they are thought to be Brave who are carried on by mere Animal Spirit, as are wild beasts against those who have wounded them, because in fact the really Brave have much Spirit, there being nothing like it for going at danger of any kind; whence those frequent expressions in Homer, “infused strength into his spirit,” “roused his strength and spirit,” or again, “and keen strength in his nostrils,” “his blood boiled:” for all these seem to denote the arousing and impetuosity of the Animal Spirit.

Now they that are truly Brave act from a sense of honour, and this Animal Spirit co-operates with them; but wild beasts from pain, that is because they have been wounded, or are frightened; since if they are quietly in their own haunts, forest or marsh, they do not attack men. Surely they are not Brave because they rush into danger when goaded on by pain and mere Spirit, without any view of the danger: else would asses be Brave when they are hungry, for though beaten they will not then leave their pasture: profligate men besides do many bold actions by reason of their lust. We may conclude then that they are not Brave who are goaded on to meet danger by pain and mere Spirit; but still this temper which arises from Animal Spirit appears to be most natural, and would be Courage of the true kind if it could have added to it moral choice and the proper motive.

So men also are pained by a feeling of anger, and take pleasure in revenge; but they who fight from these causes may be good fighters, but they are not truly Brave (in that they do not act from a sense of honour, nor as reason directs, but merely from the present feeling), still they bear some resemblance to that character.

Nor, again, are the Sanguine and Hopeful therefore Brave: since their boldness in dangers arises from their frequent victories over numerous foes. The two characters are alike, however, in that both are confident; but then the Brave are so from the afore-mentioned causes, whereas these are so from a settled conviction of their being superior and not likely to suffer anything in return (they who are intoxicated do much the same, for they become hopeful when in that state); but when the event disappoints their expectations they run away: now it was said to be the character of a Brave man to withstand things which are fearful to man or produce that impression, because it is honourable so to do and the contrary is dishonourable.

For this reason it is thought to be a greater proof of Courage to be fearless and undisturbed under the pressure of sudden fear than under that which may be anticipated, because Courage then comes rather from a fixed habit, or less from preparation: since as to foreseen dangers a man might take his line even from calculation and reasoning, but in those which are sudden he will do so according to his fixed habit of mind.

Fifthly and lastly, those who are acting under Ignorance have a show of Courage and are not very far from the Hopeful; but still they are inferior inasmuch as they have no opinion of themselves; which the others have, and therefore stay and contest a field for some little time; but they who have been deceived fly the moment they know things to be otherwise than they supposed, which the Argives experienced when they fell on the Lacedæmonians, taking them for the men of Sicyon.

Chapter XII.

We have described then what kind of men the Brave are, and what they who are thought to be, but are not really, Brave.

It must be remarked, however, that though Courage has for its object-matter boldness and fear it has not both equally so, but objects of fear much more than the former; for he that under pressure of these is undisturbed and stands related to them as he ought is better entitled to the name of Brave than he who is properly affected towards objects of confidence. So then men are termed Brave for withstanding painful things.

It follows that Courage involves pain and is justly praised, since it is a harder matter to withstand things that are painful than to abstain from such as are pleasant.

It must not be thought but that the End and object of Courage is pleasant, but it is obscured by the surrounding circumstances: which happens also in the gymnastic games; to the boxers the End is pleasant with a view to which they act, I mean the crown and the honours; but the receiving the blows they do is painful and annoying to flesh and blood, and so is all the labour they have to undergo; and, as these drawbacks are many, the object in view being small appears to have no pleasantness in it.

If then we may say the same of Courage, of course death and wounds must be painful to the Brave man and against his will: still he endures these because it is honourable so to do or because it is dishonourable not to do so. And the more complete his virtue and his happiness so much the more will he be pained at the notion of death: since to such a man as he is it is best worth while to live, and he with full consciousness is deprived of the greatest goods by death, and this is a painful idea. But he is not the less Brave for feeling it to be so, nay rather it may be he is shown to be more so because he chooses the honour that may be reaped in war in preference to retaining safe possession of these other goods. The fact is that to act with pleasure does not belong to all the virtues, except so far as a man realises the End of his actions.

But there is perhaps no reason why not such men should make the best soldiers, but those who are less truly Brave but have no other good to care for: these being ready to meet danger and bartering their lives against small gain.

Let thus much be accepted as sufficient on the subject of Courage; the true nature of which it is not difficult to gather, in outline at least, from what has been said.

Chapter XIII.

Next let us speak of Perfected Self-Mastery, which seems to claim the next place to Courage, since these two are the Excellences of the Irrational part of the Soul.

That it is a mean state, having for its object-matter Pleasures, we have already said (Pains being in fact its object-matter in a less degree and dissimilar manner), the state of utter absence of self-control has plainly the same object-matter; the next thing then is to determine what kind of Pleasures.

Let Pleasures then be understood to be divided into mental and bodily: instances of the former being love of honour or of learning: it being plain that each man takes pleasure in that of these two objects which he has a tendency to like, his body being no way affected but rather his intellect. Now men are not called perfectly self-mastering or wholly destitute of self-control in respect of pleasures of this class: nor in fact in respect of any which are not bodily; those for example who love to tell long stories, and are prosy, and spend their days about mere chance matters, we call gossips but not wholly destitute of self-control, nor again those who are pained at the loss of money or friends.

It is bodily Pleasures then which are the object-matter of Perfected Self-Mastery, but not even all these indifferently: I mean, that they who take pleasure in objects perceived by the Sight, as colours, and forms, and painting, are not denominated men of Perfected Self-Mastery, or wholly destitute of self-control; and yet it would seem that one may take pleasure even in such objects, as one ought to do, or excessively, or too little.

So too of objects perceived by the sense of Hearing; no one applies the terms before quoted respectively to those who are excessively pleased with musical tunes or acting, or to those who take such pleasure as they ought.

Nor again to those persons whose pleasure arises from the sense of Smell, except incidentally:[24] I mean, we do not say men have no self-control because they take pleasure in the scent of fruit, or flowers, or incense, but rather when they do so in the smells of unguents and sauces: since men destitute of self-control take pleasure herein, because hereby the objects of their lusts are recalled to their imagination (you may also see other men take pleasure in the smell of food when they are hungry): but to take pleasure in such is a mark of the character before named since these are objects of desire to him.

Now not even brutes receive pleasure in right of these senses, except incidentally. I mean, it is not the scent of hares' flesh but the eating it which dogs take pleasure in, perception of which pleasure is caused by the sense of Smell. Or again, it is not the lowing of the ox but eating him which the lion likes; but of the fact of his nearness the lion is made sensible by the lowing, and so he appears to take pleasure in this. In like manner, he has no pleasure in merely seeing or finding a stag or wild goat, but in the prospect of a meal.

The habits of Perfect Self-Mastery and entire absence of self-control have then for their object-matter such pleasures as brutes also share in, for which reason they are plainly servile and brutish: they are Touch and Taste.

But even Taste men seem to make little or no use of; for to the sense of Taste belongs the distinguishing of flavours; what men do, in fact, who are testing the quality of wines or seasoning "made dishes."

But men scarcely take pleasure at all in these things, at least those whom we call destitute of self-control do not, but only in the actual enjoyment which arises entirely from the sense of Touch, whether in eating or in drinking, or in grosser lusts. This accounts for the wish said to have been expressed once by a great glutton, "that his throat had been formed longer than a crane's neck," implying that his pleasure was derived from the Touch.

The sense then with which is connected the habit of absence of self-control is the most common of all the senses, and this habit would seem to be justly a matter of reproach, since it attaches to us not in so far as we are men but in so far as we are animals. Indeed it is brutish to take pleasure in such things and to like them best of all; for the most respectable of the pleasures arising from the touch have been set aside; those, for instance, which occur in the course of gymnastic training from the rubbing and the warm bath: because the touch of the man destitute of self-control is not indifferently of _any_ part of the body but only of particular parts.

Now of lusts or desires some are thought to be universal, others peculiar and acquired; thus desire for food is natural since every one who really needs desires also food, whether solid or liquid, or both (and, as Homer says, the man in the prime of youth needs and desires intercourse with the other sex); but when we come to this or that particular kind, then neither is the desire universal nor in all men is it directed to the same objects. And therefore the conceiving of such desires plainly attaches to us as individuals. It must be admitted, however, that there is something natural in it: because different things are pleasant to different men and a preference of some particular objects to chance ones is universal. Well then, in the case of the desires which are strictly and properly natural few men go wrong and all in one direction, that is, on the side of too much: I mean, to eat and drink of such food as happens to be on the table till one is overfilled is exceeding in quantity the natural limit, since the natural desire is simply a supply of a real deficiency.

For this reason these men are called belly-mad, as filling it beyond what they ought, and it is the slavish who become of this character.

But in respect of the peculiar pleasures many men go wrong and in many different ways; for whereas the term “fond of so and so” implies either taking pleasure in wrong objects, or taking pleasure excessively, or as the mass of men do, or in a wrong way, they who are destitute of all self-control exceed in all these ways; that is to say, they take pleasure in some things in which they ought not to do so (because they are properly objects of detestation), and in such as it is right to take pleasure in they do so more than they ought and as the mass of men do.

Well then, that excess with respect to pleasures is absence of self-control, and blameworthy, is plain. But viewing these habits on the side of pains, we find that a man is not said to have the virtue for withstanding them (as in the case of Courage), nor the vice for not withstanding them; but the man destitute of self-control is such, because he is pained more than he ought to be at not obtaining things which are pleasant (and thus his pleasure produces pain to him), and the man of Perfected Self-Mastery is such in virtue of not being pained by their absence, that is, by having to abstain from what is pleasant.

Now the man destitute of self-control desires either all pleasant things indiscriminately or those which are specially pleasant, and he is impelled by his desire to choose these things in preference to all others; and this involves pain, not only when he misses the attainment of his objects but, in the very desiring them, since all desire is accompanied by pain. Surely it is a strange case this, being pained by reason of pleasure.

As for men who are defective on the side of pleasure, who take less pleasure in things than they ought, they are almost imaginary characters, because such absence of sensual perception is not natural to man: for even the other animals distinguish between different kinds of food, and like some kinds and dislike others. In fact, could a man be found who takes no pleasure in anything and to whom all things are alike, he would be far from being human at all: there is no name for such a character because it is simply imaginary.

But the man of Perfected Self-Mastery is in the mean with respect to these objects: that is to say, he neither takes pleasure in the things which delight the vicious man, and in fact rather dislikes them, nor at all in improper objects; nor to any great degree in any object of the class; nor is he pained at their absence; nor does he desire them; or, if he does, only in moderation, and neither more than he ought, nor at improper times, and so forth; but such things as are conducive to health and good condition of body, being also pleasant, these he will grasp at in moderation and as he ought to do, and also such other pleasant things as do not hinder these objects, and are not unseemly or disproportionate to his means; because he that should grasp at such would be liking such pleasures more than is proper; but the man of Perfected Self-Mastery is not of this character, but regulates his desires by the dictates of right reason.

Chapter XIV.

Now the vice of being destitute of all Self-Control seems to be more truly voluntary than Cowardice, because pleasure is the cause of the former and pain of the latter, and pleasure is an object of choice, pain of avoidance. And again, pain deranges and spoils the natural disposition of its victim, whereas pleasure has no such effect and is more voluntary and therefore more justly open to reproach.

It is so also for the following reason; that it is easier to be inured by habit to resist the objects of pleasure, there being many things of this kind in life and the process of habituation being unaccompanied by danger; whereas the case is the reverse as regards the objects of fear.

Again, Cowardice as a confirmed habit would seem to be voluntary in a different way from the particular instances which form the habit; because it is painless, but these derange the man by reason of pain so that he throws away his arms and otherwise behaves himself unseemly, for which reason they are even thought by some to exercise a power of compulsion.

But to the man destitute of Self-Control the particular instances are on the contrary quite voluntary, being done with desire and direct exertion of the will, but the general result is less voluntary: since no man desires to form the habit.

The name of this vice (which signifies etymologically unchastened-ness) we apply also to the faults of children, there being a certain resemblance between the cases: to which the name is primarily applied, and to which secondarily or derivatively, is not relevant to the present subject, but it is evident that the later in point of time must get the name from the earlier. And the metaphor seems to be a very good one; for whatever grasps after base things, and is liable to great increase, ought to be chastened; and to this description desire and the child answer most truly, in that children also live under the direction of desire and the grasping after what is pleasant is most prominently seen in these.

Unless then the appetite be obedient and subjected to the governing principle it will become very great: for in the fool the grasping after what is pleasant is insatiable and undiscriminating; and every acting out of the desire increases the kindred habit, and if the desires are great and violent in degree they even expel Reason entirely; therefore they ought to be moderate and few, and in no respect to be opposed to Reason. Now when the appetite is in such a state we denominate it obedient and chastened.

In short, as the child ought to live with constant regard to the orders of its educator, so should the appetitive principle with regard to those of Reason.

So then in the man of Perfected Self-Mastery, the appetitive principle must be accordant with Reason: for what is right is the mark at which both principles aim: that is to say, the man of perfected self-mastery desires what he ought in right manner and at right times, which is exactly what Reason directs. Let this be taken for our account of Perfected Self-Mastery.

BOOK IV

Chapter I.

We will next speak of Liberality. Now this is thought to be the mean state, having for its object-matter Wealth: I mean, the Liberal man is praised not in the circumstances of war, nor in those which constitute the character of perfected self-mastery, nor again in judicial decisions, but in respect of giving and receiving Wealth, chiefly the former. By the term Wealth I mean “all those things whose worth is measured by money.”

Now the states of excess and defect in regard of Wealth are respectively Prodigality and Stinginess: the latter of these terms we attach invariably to those who are over careful about Wealth, but the former we apply sometimes with a complex notion; that is to say, we give the name to those who fail of self-control and spend money on the unrestrained gratification of their passions; and this is why they are thought to be most base, because they have many vices at once.

It must be noted, however, that this is not a strict and proper use of the term, since its natural etymological meaning is to denote him who has one particular evil, viz. the wasting his substance: he is unsaved (as the term literally denotes) who is wasting away by his own fault; and this he really may be said to be; the destruction of his substance is thought to be a kind of wasting of himself, since these things are the means of living. Well, this is our acceptation of the term Prodigality.

Again. Whatever things are for use may be used well or ill, and Wealth belongs to this class. He uses each particular thing best who has the virtue to whose province it belongs: so that he will use Wealth best who has the virtue respecting Wealth, that is to say, the Liberal man.

Expenditure and giving are thought to be the using of money, but receiving and keeping one would rather call the possessing of it. And so the giving to proper persons is more characteristic of the Liberal man, than the receiving from proper quarters and forbearing to receive from the contrary. In fact generally, doing well by others is more characteristic of virtue than being done well by, and doing things positively honourable than forbearing to do things dishonourable; and any one may see that the doing well by others and doing things positively honourable attaches to the act of giving, but to that of receiving only the being done well by or forbearing to do what is dishonourable.

Besides, thanks are given to him who gives, not to him who merely forbears to receive, and praise even more. Again, forbearing to receive is easier than giving, the case of being too little freehanded with one’s own being commoner than taking that which is not one’s own.

And again, it is they who give that are denominated Liberal, while they who forbear to receive are commended, not on the score of Liberality but of just dealing, while for receiving men are not, in fact, praised at all.

And the Liberal are liked almost best of all virtuous characters, because they are profitable to others, and this their profitableness consists in their giving.

Furthermore: all the actions done in accordance with virtue are honourable, and done from the motive of honour: and the Liberal man, therefore, will give from a motive of honour, and will give rightly; I mean, to proper persons, in right proportion, at right times, and whatever is included in the term “right giving:” and this too with positive pleasure, or at least without pain, since whatever is done in accordance with virtue is pleasant or at least not unpleasant, most certainly not attended with positive pain.

But the man who gives to improper people, or not from a motive of honour but from some other cause, shall be called not Liberal but something else. Neither shall he be so denominated who does it with pain: this being a sign that he would prefer his wealth to the honourable action, and this is no part of the Liberal man's character; neither will such an one receive from improper sources, because the so receiving is not characteristic of one who values not wealth: nor again will he be apt to ask, because one who does kindnesses to others does not usually receive them willingly; but from proper sources (his own property, for instance) he will receive, doing this not as honourable but as necessary, that he may have somewhat to give: neither will he be careless of his own, since it is his wish through these to help others in need: nor will he give to chance people, that he may have wherewith to give to those to whom he ought, at right times, and on occasions when it is honourable so to do.

Again, it is a trait in the Liberal man's character even to exceed very much in giving so as to leave too little for himself, it being characteristic of such an one not to have a thought of self.

Now Liberality is a term of relation to a man's means, for the Liberal-ness depends not on the amount of what is given but on the moral state of the giver which gives in proportion to his means. There is then no reason why he should not be the more Liberal man who gives the less amount, if he has less to give out of.

Again, they are thought to be more Liberal who have inherited, not acquired for themselves, their means; because, in the first place, they have never experienced want, and next, all people love most their own works, just as parents do and poets.

It is not easy for the Liberal man to be rich, since he is neither apt to receive nor to keep but to lavish, and values not wealth for its own sake but with a view to giving it away. Hence it is commonly charged upon fortune that they who most deserve to be rich are least so. Yet this happens reasonably enough; it is impossible he should have wealth who does not take any care to have it, just as in any similar case.

Yet he will not give to improper people, nor at wrong times, and so on: because he would not then be acting in accordance with Liberality, and if he spent upon such objects, would have nothing to spend on those on which he ought: for, as I have said before, he is Liberal who spends in proportion to his means, and on proper objects, while he who does so in excess is prodigal (this is the reason why we never call despots prodigal, because it does not seem to be easy for them by their gifts and expenditure to go beyond their immense possessions).

To sum up then. Since Liberality is a mean state in respect of the giving and receiving of wealth, the Liberal man will give and spend on proper objects, and in proper proportion, in great things and in small alike, and all this with pleasure to himself; also he will receive from right sources, and in right proportion: because, as the virtue is a mean state in respect of both, he will do both as he ought, and, in fact, upon proper giving follows the correspondent receiving, while that which is not such is contrary to it. (Now those which follow one another come to co-exist in the same person, those which are contraries plainly do not.)

Again, should it happen to him to spend money beyond what is needful, or otherwise than is well, he will be vexed, but only moderately and as he ought; for feeling pleasure and pain at right objects, and in right manner, is a property of Virtue.

The Liberal man is also a good man to have for a partner in respect of wealth: for he can easily be wronged, since he values not wealth, and is more vexed at not spending where he ought to have done so than at spending where he ought not, and he relishes not the maxim of Simonides.

Chapter II.

But the Prodigal man goes wrong also in these points, for he is neither pleased nor pained at proper objects or in proper manner, which will become more plain as we proceed.

We have said already that Prodigality and Stinginess are respectively states of excess and defect, and this in two things, giving and receiving (expenditure of course we class under giving). Well now, Prodigality exceeds in giving and forbearing to receive and is deficient in receiving, while Stinginess is deficient in giving and exceeds in receiving, but it is in small things.

The two parts of Prodigality, to be sure, do not commonly go together; it is not easy, I mean, to give to all if you receive from none, because private individuals thus giving will soon find their means run short, and such are in fact thought to be prodigal. He that should combine both would seem to be no little superior to the Stingy man: for he may be easily cured, both by advancing in years, and also by the want of means, and he may come thus to the mean: he has, you see, already the _facts_ of the Liberal man, he gives and forbears to receive, only he does neither in right manner or well. So if he could be wrought upon by habituation in this

respect, or change in any other way, he would be a real Liberal man, for he will give to those to whom he should, and will forbear to receive whence he ought not. This is the reason too why he is thought not to be low in moral character, because to exceed in giving and in forbearing to receive is no sign of badness or meanness, but only of folly.

Well then, he who is Prodigal in this fashion is thought far superior to the Stingy man for the aforementioned reasons, and also because he does good to many, but the Stingy man to no one, not even to himself. But most Prodigals, as has been said, combine with their other faults that of receiving from improper sources, and on this point are Stingy: and they become grasping, because they wish to spend and cannot do this easily, since their means soon run short and they are necessitated to get from some other quarter; and then again, because they care not for what is honourable, they receive recklessly, and from all sources indifferently, because they desire to give but care not how or whence.

And for this reason their givings are not Liberal, inasmuch as they are not honourable, nor purely disinterested, nor done in right fashion; but they oftentimes make those rich who should be poor, and to those who are quiet respectable kind of people they will give nothing, but to flatterers, or those who subserve their pleasures in any way, they will give much. And therefore most of them are utterly devoid of self-restraint; for as they are open-handed they are liberal in expenditure upon the unrestrained gratification of their passions, and turn off to their pleasures because they do not live with reference to what is honourable.

Thus then the Prodigal, if unguided, slides into these faults; but if he could get care bestowed on him he might come to the mean and to what is right.

Stinginess, on the contrary, is incurable: old age, for instance, and incapacity of any kind, is thought to make people Stingy; and it is more congenial to human nature than Prodigality, the mass of men being fond of money rather than apt to give: moreover it extends far and has many phases, the modes of stinginess being thought to be many. For as it consists of two things, defect of giving and excess of receiving, everybody does not have it entire, but it is sometimes divided, and one class of persons exceed in receiving, the other are deficient in giving. I mean those who are designated by such appellations as sparing, close-fisted, niggards, are all deficient in giving; but other men's property they neither desire nor are willing to receive, in some instances from a real moderation and shrinking from what is base.

There are some people whose motive, either supposed or alleged, for keeping their property is this, that they may never be driven to do anything dishonourable: to this class belongs the skinflint, and every one of similar character, so named from the excess of not-giving. Others again decline to receive their neighbour's goods from a motive of fear; their notion being that it is not easy to take other people's things yourself without their taking yours: so they are content neither to receive nor give.

The other class again who are Stingy in respect of receiving exceed in that they receive anything from any source; such as they who work at illiberal employments, brothel keepers, and such-like, and usurers who lend small sums at large interest: for all these receive from improper sources, and improper amounts. Their common characteristic is base-gaining, since they all submit to disgrace for the sake of gain and that small; because those who receive great things neither whence they ought, nor what they ought (as for instance despots who sack cities and plunder temples), we denominate wicked, impious, and unjust, but not Stingy.

Now the dicer and bath-plunderer and the robber belong to the class of the Stingy, for they are given to base gain: both busy themselves and submit to disgrace for the sake of gain, and the one class incur the greatest dangers for the sake of their booty, while the others make gain of their friends to whom they ought to be giving.

So both classes, as wishing to make gain from improper sources, are given to base gain, and all such receivings are Stingy. And with good reason is Stinginess called the contrary of Liberality: both because it is a greater evil than Prodigality, and because men err rather in this direction than in that of the Prodigality which we have spoken of as properly and completely such.

Let this be considered as what we have to say respecting Liberality and the contrary vices.

Chapter III.

Next in order would seem to come a dissertation on Magnificence, this being thought to be, like liberality, a virtue having for its object-matter Wealth; but it does not, like that, extend to all transactions in respect of Wealth, but only applies to such as are expensive, and in these circumstances it exceeds liberality in respect of magnitude, because it is (what the very name in Greek hints at) fitting expense on a large scale: this term is of course relative: I mean, the expenditure of equipping and commanding a trireme is not the same as that of giving a public spectacle: "fitting" of course also is relative to the individual, and the matter

wherein and upon which he has to spend. And a man is not denominated Magnificent for spending as he should do in small or ordinary things, as, for instance,

“Oft to the wandering beggar did I give,”

but for doing so in great matters: that is to say, the Magnificent man is liberal, but the liberal is not thereby Magnificent. The falling short of such a state is called Meanness, the exceeding it Vulgar Profusion, Want of Taste, and so on; which are faulty, not because they are on an excessive scale in respect of right objects but, because they show off in improper objects, and in improper manner: of these we will speak presently. The Magnificent man is like a man of skill, because he can see what is fitting, and can spend largely in good taste; for, as we said at the commencement, the confirmed habit is determined by the separate acts of working, and by its object-matter.

Well, the expenses of the Magnificent man are great and fitting: such also are his works (because this secures the expenditure being not great merely, but befitting the work). So then the work is to be proportionate to the expense, and this again to the work, or even above it: and the Magnificent man will incur such expenses from the motive of honour, this being common to all the virtues, and besides he will do it with pleasure and lavishly; excessive accuracy in calculation being Mean. He will consider also how a thing may be done most beautifully and fittingly, rather, than for how much it may be done, and how at the least expense.

So the Magnificent man must be also a liberal man, because the liberal man will also spend what he ought, and in right manner: but it is the Great, that is to say tke large scale, which is distinctive of the Magnificent man, the object-matter of liberality being the same, and without spending more money than another man he will make the work more magnificent. I mean, the excellence of a possession and of a work is not the same: as a piece of property that thing is most valuable which is worth most, gold for instance; but as a work that which is great and beautiful, because the contemplation of such an object is admirable, and so is that which is Magnificent. So the excellence of a work is Magnificence on a large scale. There are cases of expenditure which we call honourable, such as are dedicatory offerings to the gods, and the furnishing their temples, and sacrifices, and in like manner everything that has reference to the Deity, and all such public matters as are objects of honourable ambition, as when men think in any case that it is their duty to furnish a chorus for the stage splendidly, or fit out and maintain a trireme, or give a general public feast.

Now in all these, as has been already stated, respect is had also to the rank and the means of the man who is doing them: because they should be proportionate to these, and befit not the work only but also the doer of the work. For this reason a poor man cannot be a Magnificent man, since he has not means wherewith to spend largely and yet becomingly; and if he attempts it he is a fool, inasmuch as it is out of proportion and contrary to propriety, whereas to be in accordance with virtue a thing must be done rightly.

Such expenditure is fitting moreover for those to whom such things previously belong, either through themselves or through their ancestors or people with whom they are connected, and to the high-born or people of high repute, and so on: because all these things imply greatness and reputation.

So then the Magnificent man is pretty much as I have described him, and Magnificence consists in such expenditures: because they are the greatest and most honourable: and of private ones such as come but once for all, marriage to wit, and things of that kind; and any occasion which engages the interest of the community in general, or of those who are in power; and what concerns receiving and despatching strangers; and gifts, and repaying gifts: because the Magnificent man is not apt to spend upon himself but on the public good, and gifts are pretty much in the same case as dedicatory offerings.

It is characteristic also of the Magnificent man to furnish his house suitably to his wealth, for this also in a way reflects credit; and again, to spend rather upon such works as are of long duration, these being most honourable. And again, propriety in each case, because the same things are not suitable to gods and men, nor in a temple and a tomb. And again, in the case of expenditures, each must be great of its kind, and great expense on a great object is most magnificent, that is in any case what is great in these particular things.

There is a difference too between greatness of a work and greatness of expenditure: for instance, a very beautiful ball or cup is magnificent as a present to a child, while the price of it is small and almost mean. Therefore it is characteristic of the Magnificent man to do magnificently whatever he is about: for whatever is of this kind cannot be easily surpassed, and bears a proper proportion to the expenditure.

Such then is the Magnificent man.

The man who is in the state of excess, called one of Vulgar Profusion, is in excess because he spends improperly, as has been said. I mean in cases requiring small expenditure he lavishes much and shows off out of taste; giving his club a feast fit for a wedding-party, or if he has to furnish a chorus for a comedy, giving the actors purple to wear in the first scene, as did the Megarians. And all such things he will do, not with a view to that which is really honourable, but to display his wealth, and because he thinks he shall be admired for these things; and he will spend little where he ought to spend much, and much where he should spend little.

The Mean man will be deficient in every case, and even where he has spent the most he will spoil the whole effect for want of some trifle; he is procrastinating in all he does, and contrives how he may spend the least, and does even that with lamentations about the expense, and thinking that he does all things on a greater scale than he ought.

Of course, both these states are faulty, but they do not involve disgrace because they are neither hurtful to others nor very unseemly.

Chapter IV.

The very name of Great-mindedness implies, that great things are its object-matter; and we will first settle what kind of things. It makes no difference, of course, whether we regard the moral state in the abstract or as exemplified in an individual.

Well then, he is thought to be Great-minded who values himself highly and at the same time justly, because he that does so without grounds is foolish, and no virtuous character is foolish or senseless. Well, the character I have described is Great-minded. The man who estimates himself lowly, and at the same time justly, is modest; but not Great-minded, since this latter quality implies greatness, just as beauty implies a large bodily conformation while small people are neat and well made but not beautiful.

Again, he who values himself highly without just grounds is a Vain man: though the name must not be applied to every case of unduly high self-estimation. He that values himself below his real worth is Small-minded, and whether that worth is great, moderate, or small, his own estimate falls below it. And he is the strongest case of this error who is really a man of great worth, for what would he have done had his worth been less?

The Great-minded man is then, as far as greatness is concerned, at the summit, but in respect of propriety he is in the mean, because he estimates himself at his real value (the other characters respectively are in excess and defect). Since then he justly estimates himself at a high, or rather at the highest possible rate, his character will have respect specially to one thing: this term “rate” has reference of course to external goods: and of these we should assume that to be the greatest which we attribute to the gods, and which is the special object of desire to those who are in power, and which is the prize proposed to the most honourable actions: now honour answers to these descriptions, being the greatest of external goods. So the Great-minded man bears himself as he ought in respect of honour and dishonour. In fact, without need of words, the Great-minded plainly have honour for their object-matter: since honour is what the great consider themselves specially worthy of, and according to a certain rate.

The Small-minded man is deficient, both as regards himself, and also as regards the estimation of the Great-minded: while the Vain man is in excess as regards himself, but does not get beyond the Great-minded man. Now the Great-minded man, being by the hypothesis worthy of the greatest things, must be of the highest excellence, since the better a man is the more is he worth, and he who is best is worth the most: it follows then, that to be truly Great-minded a man must be good, and whatever is great in each virtue would seem to belong to the Great-minded. It would no way correspond with the character of the Great-minded to flee spreading his hands all abroad; nor to injure any one; for with what object in view will he do what is base, in whose eyes nothing is great? in short, if one were to go into particulars, the Great-minded man would show quite ludicrously unless he were a good man: he would not be in fact deserving of honour if he were a bad man, honour being the prize of virtue and given to the good.

This virtue, then, of Great-mindedness seems to be a kind of ornament of all the other virtues, in that it makes them better and cannot be without them; and for this reason it is a hard matter to be really and truly Great-minded; for it cannot be without thorough goodness and nobleness of character.

Honour then and dishonour are specially the object-matter of the Great-minded man: and at such as is great, and given by good men, he will be pleased moderately as getting his own, or perhaps somewhat less for no honour can be quite adequate to perfect virtue: but still he will accept this because they have nothing higher to give him. But such as is given by ordinary people and on trifling grounds he will entirely despise, because these do not come up to his deserts: and dishonour likewise, because in his case there cannot be just ground for it.

Now though, as I have said, honour is specially the object-matter of the Great-minded man, I do not mean but that likewise in respect of wealth and power, and good or bad fortune of every kind, he will bear himself with moderation, fall out how they may, and neither in prosperity will he be overjoyed nor in adversity will he be unduly pained. For not even in respect of honour does he so bear himself; and yet it is the greatest of all such objects, since it is the cause of power and wealth being choice-worthy, for certainly they who have them desire to receive honour through them. So to whom honour even is a small thing to him will all other things also be so; and this is why such men are thought to be supercilious.

It seems too that pieces of good fortune contribute to form this character of Great-mindedness: I mean, the nobly born, or men of influence, or the wealthy, are considered to be entitled to honour, for they are in a position of eminence and whatever is eminent by good is more entitled to honour: and this is why such circumstances dispose men rather to Great-mindedness, because they receive honour at the hands of some men.

Now really and truly the good man alone is entitled to honour; only if a man unites in himself goodness with these external advantages he is thought to be more entitled to honour: but they who have them without also having virtue are not justified in their high estimate of themselves, nor are they rightly denominated Great-minded; since perfect virtue is one of the indispensable conditions to such & character.

Further, such men become supercilious and insolent, it not being easy to bear prosperity well without goodness; and not being able to bear it, and possessed with an idea of their own superiority to others, they despise them, and do just whatever their fancy prompts; for they mimic the Great-minded man, though they are not like him, and they do this in such points as they can, so without doing the actions which can only flow from real goodness they despise others. Whereas the Great-minded man despises on good grounds (for he forms his opinions truly), but the mass of men do it at random.

Moreover, he is not a man to incur little risks, nor does he court danger, because there are but few things he has a value for; but he will incur great dangers, and when he does venture he is prodigal of his life as knowing that there are terms on which it is not worth his while to live. He is the sort of man to do kindnesses, but he is ashamed to receive them; the former putting a man in the position of superiority, the latter in that of inferiority; accordingly he will greatly overpay any kindness done to him, because the original actor will thus be laid under obligation and be in the position of the party benefited. Such men seem likewise to remember those they have done kindnesses to, but not those from whom they have received them: because he who has received is inferior to him who has done the kindness and our friend wishes to be superior; accordingly he is pleased to hear of his own kind acts but not of those done to himself (and this is why, in Homer, Thetis does not mention to Jupiter the kindnesses she had done him, nor did the Lacedæmonians to the Athenians but only the benefits they had received).

Further, it is characteristic of the Great-minded man to ask favours not at all, or very reluctantly, but to do a service very readily; and to bear himself loftily towards the great or fortunate, but towards people of middle station affably; because to be above the former is difficult and so a grand thing, but to be above the latter is easy; and to be high and mighty towards the former is not ignoble, but to do it towards those of humble station would be low and vulgar; it would be like parading strength against the weak.

And again, not to put himself in the way of honour, nor to go where others are the chief men; and to be remiss and dilatory, except in the case of some great honour or work; and to be concerned in few things, and those great and famous. It is a property of him also to be open, both in his dislikes and his likings, because concealment is a consequent of fear. Likewise to be careful for reality rather than appearance, and talk and act openly (for his contempt for others makes him a bold man, for which same reason he is apt to speak the truth, except where the principle of reserve comes in), but to be reserved towards the generality of men.

And to be unable to live with reference to any other but a friend; because doing so is servile, as may be seen in that all flatterers are low and men in low estate are flatterers. Neither is his admiration easily excited, because nothing is great in his eyes; nor does he bear malice, since remembering anything, and specially wrongs, is no part of Great-mindedness, but rather overlooking them; nor does he talk of other men; in fact, he will not speak either of himself or of any other; he neither cares to be praised himself nor to have others blamed; nor again does he praise freely, and for this reason he is not apt to speak ill even of his enemies except to show contempt and insolence.

And he is by no means apt to make laments about things which cannot be helped, or requests about those which are trivial; because to be thus disposed with respect to these things is consequent only upon real anxiety about them. Again, he is the kind of man to acquire what is beautiful and unproductive rather than what is productive and profitable: this being rather the part of an independent man.

Also slow motion, deep-toned voice, and deliberate style of speech, are thought to be characteristic of the Great-minded man: for he who is earnest about few things is not likely to be in a hurry, nor he who esteems nothing great to be very intent: and sharp tones and quickness are the result of these.

Chapter V.

This then is my idea of the Great-minded man; and he who is in the defect is a Small-minded man, he who is in the excess a Vain man. However, as we observed in respect of the last character we discussed, these extremes are not thought to be vicious exactly, but only mistaken, for they do no harm.

The Small-minded man, for instance, being really worthy of good deprives himself of his deserts, and seems to have somewhat faulty from not having a sufficiently high estimate of his own desert, in fact from self-ignorance: because, but for this, he would have grasped after what he really is entitled to, and that is good. Still such characters are not thought to be foolish, but rather laggards. But the having such an opinion of themselves seems to have a deteriorating effect on the character: because in all cases men's aims are regulated by their supposed desert, and thus these men, under a notion of their own want of desert, stand aloof from honourable actions and courses, and similarly from external goods.

But the Vain are foolish and self-ignorant, and that palpably: because they attempt honourable things, as though they were worthy, and then they are detected. They also set themselves off, by dress, and carriage, and such-like things, and desire that their good circumstances may be seen, and they talk of them under the notion of receiving honour thereby. Small-mindedness rather than Vanity is opposed to Great-mindedness, because it is more commonly met with and is worse.

Chapter VI.

Well, the virtue of Great-mindedness has for its object great Honour, as we have said: and there seems to be a virtue having Honour also for its object (as we stated in the former book), which may seem to bear to Great-mindedness the same relation that Liberality does to Magnificence: that is, both these virtues stand aloof from what is great but dispose us as we ought to be disposed towards moderate and small matters. Further: as in giving and receiving of wealth there is a mean state, an excess, and a defect, so likewise in grasping after Honour there is the more or less than is right, and also the doing so from right sources and in right manner.

For we blame the lover of Honour as aiming at Honour more than he ought, and from wrong sources; and him who is destitute of a love of Honour as not choosing to be honoured even for what is noble. Sometimes again we praise the lover of Honour as manly and having a love for what is noble, and him who has no love for it as being moderate and modest (as we noticed also in the former discussion of these virtues).

It is clear then that since "Lover of so and so" is a term capable of several meanings, we do not always denote the same quality by the term "Lover of Honour;" but when we use it as a term of commendation we denote more than the mass of men are; when for blame more than a man should be.

And the mean state having no proper name the extremes seem to dispute for it as unoccupied ground: but of course where there is excess and defect there must be also the mean. And in point of fact, men do grasp at Honour more than they should, and less, and sometimes just as they ought; for instance, this state is praised, being a mean state in regard of Honour, but without any appropriate name. Compared with what is called Ambition it shows like a want of love for Honour, and compared with this it shows like Ambition, or compared with both, like both faults: nor is this a singular case among the virtues. Here the extreme characters appear to be opposed, because the mean has no name appropriated to it.

Chapter VII.

Meekness is a mean state, having for its object-matter Anger: and as the character in the mean has no name, and we may almost say the same of the extremes, we give the name of Meekness (leaning rather to the defect, which has no name either) to the character in the mean.

The excess may be called an over-aptness to Anger: for the passion is Anger, and the producing causes many and various. Now he who is angry at what and with whom he ought, and further, in right manner and time, and for proper length of time, is praised, so this Man will be Meek since Meekness is praised. For the notion represented by the term Meek man is the being imperturbable, and not being led away by passion, but being angry in that manner, and at those things, and for that length of time, which Reason may

direct. This character however is thought to err rather on the side of defect, inasmuch as he is not apt to take revenge but rather to make allowances and forgive. And the defect, call it Angerlessness or what you will, is blamed: I mean, they who are not angry at things at which they ought to be angry are thought to be foolish, and they who are angry not in right manner, nor in right time, nor with those with whom they ought; for a man who labours under this defect is thought to have no perception, nor to be pained, and to have no tendency to avenge himself, inasmuch as he feels no anger: now to bear with scurrility in one's own person, and patiently see one's own friends suffer it, is a slavish thing.

As for the excess, it occurs in all forms; men are angry with those with whom, and at things with which, they ought not to be, and more than they ought, and too hastily, and for too great a length of time. I do not mean, however, that these are combined in any one person: that would in fact be impossible, because the evil destroys itself, and if it is developed in its full force it becomes unbearable.

Now those whom we term the Passionate are soon angry, and with people with whom and at things at which they ought not, and in an excessive degree, but they soon cool again, which is the best point about them. And this results from their not repressing their anger, but repaying their enemies (in that they show their feeings by reason of their vehemence), and then they have done with it.

The Choleric again are excessively vehement, and are angry at everything, and on every occasion; whence comes their Greek name signifying that their choler lies high.

The Bitter-tempered are hard to reconcile and keep their anger for a long while, because they repress the feeling: but when they have revenged themselves then comes a lull; for the vengeance destroys their anger by producing pleasure in lieu of pain. But if this does not happen they keep the weight on their minds: because, as it does not show itself, no one attempts to reason it away, and digesting anger within one's self takes time. Such men are very great nuisances to themselves and to their best friends.

Again, we call those Cross-grained who are angry at wrong objects, and in excessive degree, and for too long a time, and who are not appeased without vengeance or at least punishing the offender.

To Meekness we oppose the excess rather than the defect, because it is of more common occurrence: for human nature is more disposed to take than to forgo revenge. And the Cross-grained are worse to live with [than they who are too phlegmatic].

Now, from what has been here said, that is also plain which was said before. I mean, it is no easy matter to define how, and with what persons, and at what kind of things, and how long one ought to be angry, and up to what point a person is right or is wrong. For he that transgresses the strict rule only a little, whether on the side of too much or too little, is not blamed: sometimes we praise those who are deficient in the feeling and call them Meek, sometimes we call the irritable Spirited as being well qualified for government. So it is not easy to lay down, in so many words, for what degree or kind of transgression a man is blameable: because the decision is in particulars, and rests therefore with the Moral Sense. Thus much, however, is plain, that the mean state is praiseworthy, in virtue of which we are angry with those with whom, and at those things with which, we ought to be angry, and in right manner, and so on; while the excesses and defects are blameable, slightly so if only slight, more so if greater, and when considerable very blameable.

It is clear, therefore, that the mean state is what we are to hold to.

This then is to be taken as our account of the various moral states which have Anger for their object-matter.

Chapter VIII.

Next, as regards social intercourse and interchange of words and acts, some men are thought to be Over-Complaisant who, with a view solely to giving pleasure, agree to everything and never oppose, but think their line is to give no pain to those they are thrown amongst: they, on the other hand, are called Cross and Contentious who take exactly the contrary line to these, and oppose in everything, and have no care at all whether they give pain or not.

Now it is quite clear of course, that the states I have named are blameable, and that the mean between them is praiseworthy, in virtue of which a man will let pass what he ought as he ought, and also will object in like manner. However, this state has no name appropriated, but it is most like Friendship; since the man who exhibits it is just the kind of man whom we would call the amiable friend, with the addition of strong earnest affection; but then this is the very point in which it differs from Friendship, that it is quite independent of any feeling or strong affection for those among whom the man mixes: I mean, that he takes everything as he ought, not from any feeling of love or hatred, but simply because his natural disposition leads him to do so; he will do it alike to those

whom he does know and those whom he does not, and those with whom he is intimate and those with whom he is not; only in each case as propriety requires, because it is not fitting to care alike for intimates and strangers, nor again to pain them alike.

It has been stated in a general way that his social intercourse will be regulated by propriety, and his aim will be to avoid giving pain and to contribute to pleasure, but with a constant reference to what is noble and expedient.

His proper object-matter seems to be the pleasures and pains which arise out of social intercourse, but whenever it is not honourable or even hurtful to him to contribute to pleasure, in these instances he will run counter and prefer to give pain.

Or if the things in question involve unseemliness to the doer, and this not inconsiderable, or any harm, whereas his opposition will cause some little pain, here he will not agree but will run counter.

Again, he will regulate differently his intercourse with great men and with ordinary men, and with all people according to the knowledge he has of them; and in like manner, taking in any other differences which may exist, giving to each his due, and in itself preferring to give pleasure and cautious not to give pain, but still guided by the results, I mean by what is noble and expedient according as they preponderate.

Again, he will inflict trifling pain with a view to consequent pleasure.

Well, the man bearing the mean character is pretty well such as I have described him, but he has no name appropriated to him: of those who try to give pleasure, the man who simply and disinterestedly tries to be agreeable is called Over-Complaisant, he who does it with a view to secure some profit in the way of wealth, or those things which wealth may procure, is a Flatterer: I have said before, that the man who is “always non-content” is Cross and Contentious. Here the extremes have the appearance of being opposed to one another, because the mean has no appropriate name.

Chapter IX.

The mean state which steers clear of Exaggeration has pretty much the same object-matter as the last we described, and likewise has no name appropriated to it. Still it may be as well to go over these states: because, in the first place, by a particular discussion of each we shall be better acquainted with the general subject of moral character, and next we shall be the more convinced that the virtues are mean states by seeing that this is universally the case.

In respect then of living in society, those who carry on this intercourse with a view to pleasure and pain have been already spoken of; we will now go on to speak of those who are True or False, alike in their words and deeds and in the claims which they advance.

Now the Exaggerator is thought to have a tendency to lay claim to things reflecting credit on him, both when they do not belong to him at all and also in greater degree than that in which they really do: whereas the Reserved man, on the contrary, denies those which really belong to him or else depreciates them, while the mean character being a Plain-matter-of-fact person is Truthful in life and word, admitting the existence of what does really belong to him and making it neither greater nor less than the truth.

It is possible of course to take any of these lines either with or without some further view: but in general men speak, and act, and live, each according to his particular character and disposition, unless indeed a man is acting from any special motive.

Now since falsehood is in itself low and blameable, while truth is noble and praiseworthy, it follows that the Truthful man (who is also in the mean) is praiseworthy, and the two who depart from strict truth are both blameable, but especially the Exaggerator.

We will now speak of each, and first of the Truthful man: I call him Truthful, because we are not now meaning the man who is true in his agreements nor in such matters as amount to justice or injustice (this would come within the province of a different virtue), but, in such as do not involve any such serious difference as this, the man we are describing is true in life and word simply because he is in a certain moral state.

And he that is such must be judged to be a good man: for he that has a love for Truth as such, and is guided by it in matters indifferent, will be so likewise even more in such as are not indifferent; for surely he will have a dread of falsehood as base, since he shunned it even in itself: and he that is of such a character is praiseworthy, yet he leans rather to that which is below the truth, this having an appearance of being in better taste because exaggerations are so hateful.

As for the man who lays claim to things above what really belongs to him _without_ any special motive, he is like a base man because he would not otherwise have taken pleasure in falsehood, but he shows as a fool rather than as a knave. But if a man

does this _with_ a special motive, suppose for honour or glory, as the Braggart does, then he is not so very blameworthy, but if, directly or indirectly, for pecuniary considerations, he is more unseemly.

Now the Braggart is such not by his power but by his purpose, that is to say, in virtue of his moral state, and because he is a man of a certain kind; just as there are liars who take pleasure in falsehood for its own sake while others lie from a desire of glory or gain. They who exaggerate with a view to glory pretend to such qualities as are followed by praise or highest congratulation; they who do it with a view to gain assume those which their neighbours can avail themselves of, and the absence of which can be concealed, as a man's being a skilful soothsayer or physician; and accordingly most men pretend to such things and exaggerate in this direction, because the faults I have mentioned are in them.

The Reserved, who depreciate their own qualities, have the appearance of being more refined in their characters, because they are not thought to speak with a view to gain but to avoid grandeur: one very common trait in such characters is their denying common current opinions, as Socrates used to do. There are people who lay claim falsely to small things and things the falsity of their pretensions to which is obvious; these are called Factotums and are very despicable.

This very Reserve sometimes shows like Exaggeration; take, for instance, the excessive plainness of dress affected by the Lacedæmonians: in fact, both excess and the extreme of deficiency partake of the nature of Exaggeration. But they who practise Reserve in moderation, and in cases in which the truth is not very obvious and plain, give an impression of refinement. Here it is the Exaggerator (as being the worst character) who appears to be opposed to the Truthful Man.

Chapter X.

Next, as life has its pauses and in them admits of pastime combined with Jocularity, it is thought that in this respect also there is a kind of fitting intercourse, and that rules may be prescribed as to the kind of things one should say and the manner of saying them; and in respect of hearing likewise (and there will be a difference between the saying and hearing such and such things). It is plain that in regard to these things also there will be an excess and defect and a mean.

Now they who exceed in the ridiculous are judged to be Buffoons and Vulgar, catching at it in any and every way and at any cost, and aiming rather at raising laughter than at saying what is seemly and at avoiding to pain the object of their wit. They, on the other hand, who would not for the world make a joke themselves and are displeased with such as do are thought to be Clownish and Stern. But they who are Jocular in good taste are denominated by a Greek term expressing properly ease of movement, because such are thought to be, as one may say, motions of the moral character; and as bodies are judged of by their motions so too are moral characters.

Now as the ridiculous lies on the surface, and the majority of men take more pleasure than they ought in Jocularity and Jesting, the Buffoons too get this name of Easy Pleasantry, as if refined and gentlemanlike; but that they differ from these, and considerably too, is plain from what has been said.

One quality which belongs to the mean state is Tact: it is characteristic of a man of Tact to say and listen to such things as are fit for a good man and a gentleman to say and listen to: for there are things which are becoming for such a one to say and listen to in the way of Jocularity, and there is a difference between the Jocularity of the Gentleman and that of the Vulgarian; and again, between that of the educated and uneducated man. This you may see from a comparison of the Old and New Comedy: in the former obscene talk made the fun; in the latter it is rather innuendo: and this is no slight difference _as regards decency_.

Well then, are we to characterise him who jests well by his saying what is becoming a gentleman, or by his avoiding to pain the object of his wit, or even by his giving him pleasure? or will not such a definition be vague, since different things are hateful and pleasant to different men?

Be this as it may, whatever he says such things will he also listen to, since it is commonly held that a man will do what he will bear to hear: this must, however, be limited; a man will not do quite all that he will hear: because jesting is a species of scurrility and there are some points of scurrility forbidden by law; it may be certain points of jesting should have been also so forbidden. So then the refined and gentlemanlike man will bear himself thus as being a law to himself. Such is the mean character, whether denominated the man of Tact or of Easy Pleasantry.

But the Buffoon cannot resist the ridiculous, sparing neither himself nor any one else so that he can but raise his laugh, saying things of such kind as no man of refinement would say and some which he would not even tolerate if said by others in his hearing.

The Clownish man is for such intercourse wholly useless: inasmuch as contributing nothing jocose of his own he is savage with all who do.

Yet some pause and amusement in life are generally judged to be indispensable.

The three mean states which have been described do occur in life, and the object-matter of all is interchange of words and deeds. They differ, in that one of them is concerned with truth, and the other two with the pleasurable: and of these two again, the one is conversant with the jocosities of life, the other with all other points of social intercourse.

Chapter XI.

To speak of Shame as a Virtue is incorrect, because it is much more like a feeling than a moral state. It is defined, we know, to be "a kind of fear of disgrace," and its effects are similar to those of the fear of danger, for they who feel Shame grow red and they who fear death turn pale. So both are evidently in a way physical, which is thought to be a mark of a feeling rather than a moral state.

Moreover, it is a feeling not suitable to every age, but only to youth: we do think that the young should be Shamefaced, because since they live at the beck and call of passion they do much that is wrong and Shame acts on them as a check. In fact, we praise such young men as are Shamefaced, but no one would ever praise an old man for being given to it, inasmuch as we hold that he ought not to do things which cause Shame; for Shame, since it arises at low bad actions, does not at all belong to the good man, because such ought not to be done at all: nor does it make any difference to allege that some things are disgraceful really, others only because they are thought so; for neither should be done, so that a man ought not to be in the position of feeling Shame. In truth, to be such a man as to do anything disgraceful is the part of a faulty character. And for a man to be such that he would feel Shame if he should do anything disgraceful, and to think that this constitutes him a good man, is absurd: because Shame is felt at voluntary actions only, and a good man will never voluntarily do what is base.

True it is, that Shame may be good on a certain supposition, as "if a man should do such things, he would feel Shame:" but then the Virtues are good in themselves, and not merely in supposed cases. And, granted that impudence and the not being ashamed to do what is disgraceful is base, it does not the more follow that it is good for a man to do such things and feel Shame.

Nor is Self-Control properly a Virtue, but a kind of mixed state: however, all about this shall be set forth in a future Book.

BOOK V

Chapter I.

Now the points for our enquiry in respect of Justice and Injustice are, what kind of actions are their object-matter, and what kind of a mean state Justice is, and between what points the abstract principle of it, i.e. the Just, is a mean. And our enquiry shall be, if you please, conducted in the same method as we have observed in the foregoing parts of this Treatise.

We see then that all men mean by the term Justice a moral state such that in consequence of it men have the capacity of doing what is just, and actually do it, and wish it:[1] similarly also with respect to Injustice, a moral state such that in consequence of it men do unjustly and wish what is unjust: let us also be content then with these as a ground-work sketched out.

I mention the two, because the same does not hold with regard to States whether of mind or body as with regard to Sciences or Faculties: I mean that whereas it is thought that the same Faculty or Science embraces contraries, a State will not: from health, for instance, not the contrary acts are done but the healthy ones only; we say a man walks healthily when he walks as the healthy man would.

However, of the two contrary states the one may be frequently known from the other, and oftentimes the states from their subject-matter: if it be seen clearly what a good state of body is, then is it also seen what a bad state is, and from the things which belong to a good state of body the good state itself is seen, and _vice versâ_. If, for instance, the good state is firmness of flesh it follows that the bad state is flabbiness of flesh; and whatever causes firmness of flesh is connected with the good state.

It follows moreover in general,[2] that if of two contrary terms the one is used in many senses so also will the other be; as, for instance, if "the Just," then also "the Unjust." Now Justice and Injustice do seem to be used respectively in many senses, but, because the line of demarcation between these is very fine and minute,[3] it commonly escapes notice that they are thus used, and it is not plain and manifest as where the various significations of terms are widely different for in these last the visible difference is

great, for instance, the word κλε■ς is used equivocally to denote the bone which is under the neck of animals and the instrument with which people close doors.

Let it be ascertained then in how many senses the term “Unjust man” is used. Well, he who violates the law, and he who is a grasping man, and the unequal man, are all thought to be Unjust and so manifestly the Just man will be, the man who acts according to law, and the equal man “The Just” then will be the lawful and the equal, and “the Unjust” the unlawful and the unequal.

Well, since the Unjust man is also a grasping man, he will be so, of course, with respect to good things, but not of every kind, only those which are the subject-matter of good and bad fortune and which are in themselves always good but not always to the individual.[4] Yet men pray for and pursue these things: this they should not do but pray that things which are in the abstract good may be so also to them, and choose what is good for themselves.

But the Unjust man does not always choose actually the greater part, but even sometimes the less; as in the case of things which are simply evil: still, since the less evil is thought to be in a manner a good and the grasping is after good, therefore even in this case he is thought to be a grasping man, _i.e._ one who strives for more good than fairly falls to his share: of course he is also an unequal man, this being an inclusive and common term.

Chapter II.

We said that the violator of Law is Unjust, and the keeper of the Law Just: further, it is plain that all Lawful things are in a manner Just, because by Lawful we understand what have been defined by the legislative power and each of these we say is Just. The Laws too give directions on all points, aiming either at the common good of all, or that of the best, or that of those in power (taking for the standard real goodness or adopting some other estimate); in one way we mean by Just, those things which are apt to produce and preserve happiness and its ingredients for the social community.

Further, the Law commands the doing the deeds not only of the brave man (as not leaving the ranks, nor flying, nor throwing away one’s arms), but those also of the perfectly self-mastering man, as abstinence from adultery and wantonness; and those of the meek man, as refraining from striking others or using abusive language: and in like manner in respect of the other virtues and vices commanding some things and forbidding others, rightly if it is a good law, in a way somewhat inferior if it is one extemporised.

Now this Justice is in fact perfect Virtue, yet not simply so but as exercised towards one’s neighbour: and for this reason Justice is thought oftentimes to be the best of the Virtues, and

“neither Hesper nor the Morning-star So worthy of our admiration:”

and in a proverbial saying we express the same;

“All virtue is in Justice comprehended.”

And it is in a special sense perfect Virtue because it is the practice of perfect Virtue. And perfect it is because he that has it is able to practise his virtue towards his neighbour and not merely on himself; I mean, there are many who can practise virtue in the regulation of their own personal conduct who are wholly unable to do it in transactions with their neighbour. And for this reason that saying of Bias is thought to be a good one,

“Rule will show what a man is;”

for he who bears Rule is necessarily in contact with others, i.e. in a community. And for this same reason Justice alone of all the Virtues is thought to be a good to others, because it has immediate relation to some other person, inasmuch as the Just man does what is advantageous to another, either to his ruler or fellow-subject. Now he is the basest of men who practises vice not only in his own person,[5] but towards his friends also; but he the best who practises virtue not merely in his own person but towards his neighbour, for this is a matter of some difficulty.

However, Justice in this sense is not a part of Virtue but is co-extensive with Virtue; nor is the Injustice which answers to it a part of Vice but co-extensive with Vice. Now wherein Justice in this sense differs from Virtue appears from what has been said: it is the same really, but the point of view is not the same: in so far as it has respect to one’s neighbour it is Justice, in so far as it is such and such a moral state it is simply Virtue.

Chapter III.

But the object of our enquiry is Justice, in the sense in which it is a part of Virtue (for there is such a thing, as we commonly say), and likewise with respect to particular Injustice. And of the existence of this last the following consideration is a proof: there are many vices by practising which a man acts unjustly, of course, but does not grasp at more than his share of good; if, for instance, by reason of cowardice he throws away his shield, or by reason of ill-temper he uses abusive language, or by reason of stinginess does not give a friend pecuniary assistance; but whenever he does a grasping action, it is often in the way of none of these vices, certainly not in all of them, still in the way of some vice or other (for we blame him), and in the way of Injustice. There is then some kind of Injustice distinct from that co-extensive with Vice and related to it as a part to a whole, and some “Unjust” related to that which is co-extensive with violation of the law as a part to a whole.

Again, suppose one man seduces a man’s wife with a view to gain and actually gets some advantage by it,[6] and another does the same from impulse of lust, at an expense of money and damage; this latter will be thought to be rather destitute of self-mastery than a grasping man, and the former Unjust but not destitute of self-mastery: now why? plainly because of his gaining.

Again, all other acts of Injustice we refer to some particular depravity, as, if a man commits adultery, to abandonment to his passions; if he deserts his comrade, to cowardice; if he strikes another, to anger: but if he gains by the act to no other vice than to Injustice.

Thus it is clear that there is a kind of Injustice different from and besides that which includes all Vice, having the same name because the definition is in the same genus; for both have their force in dealings with others, but the one acts upon honour, or wealth, or safety, or by whatever one name we can include all these things, and is actuated by pleasure attendant on gain, while the other acts upon all things which constitute the sphere of the good man’s action.

Chapter IV.

Now that there is more than one kind of Justice, and that there is one which is distinct from and besides that which is co-extensive with, Virtue, is plain: we must next ascertain what it is, and what are its characteristics.

Well, the Unjust has been divided into the unlawful and the unequal, and the Just accordingly into the lawful and the equal: the aforementioned Injustice is in the way of the unlawful. And as the unequal and the more[7] are not the same, but differing as part to whole (because all more is unequal, but not all unequal more), so the Unjust and the Injustice we are now in search of are not the same with, but other than, those before mentioned, the one being the parts, the other the wholes; for this particular Injustice is a part of the Injustice co-extensive with Vice, and likewise this Justice of the Justice co-extensive with Virtue. So that what we have now to speak of is the particular Justice and Injustice, and likewise the particular Just and Unjust.

Here then let us dismiss any further consideration of the Justice ranking as co-extensive with Virtue (being the practice of Virtue in all its bearings towards others), and of the co-relative Injustice (being similarly the practice of Vice). It is clear too, that we must separate off the Just and the Unjust involved in these: because one may pretty well say that most lawful things are those which naturally result in action from Virtue in its fullest sense, because the law enjoins the living in accordance with each Virtue and forbids living in accordance with each Vice. And the producing causes of Virtue in all its bearings are those enactments which have been made respecting education for society.

By the way, as to individual education, in respect of which a man is simply good without reference to others, whether it is the province of πολιτικ■ or some other science we must determine at a future time: for it may be it is not the same thing to be a good man and a good citizen in every case.[8]

Chapter V.

Now of the Particular Justice, and the Just involved in it, one species is that which is concerned in the distributions of honour, or wealth, or such other things as are to be shared among the members of the social community (because in these one man as compared with another may have either an equal or an unequal share), and the other is that which is Corrective in the various transactions between man and man.

And of this latter there are two parts: because of transactions some are voluntary and some involuntary; voluntary, such as follow; selling, buying, use, bail, borrowing, deposit, hiring: and this class is called voluntary because the origination of these transactions is voluntary.

The involuntary again are either such as effect secrecy; as theft, adultery, poisoning, pimping, kidnapping of slaves, assassination, false witness; or accompanied with open violence; as insult, bonds, death, plundering, maiming, foul language, slanderous abuse.

Chapter VI.

Well, the unjust man we have said is unequal, and the abstract “Unjust” unequal: further, it is plain that there is some mean of the unequal, that is to say, the equal or exact half (because in whatever action there is the greater and the less there is also the equal, i.e. the exact half). If then the Unjust is unequal the Just is equal, which all must allow without further proof: and as the equal is a mean the Just must be also a mean. Now the equal implies two terms at least: it follows then that the Just is both a mean and equal, and these to certain persons; and, in so far as it is a mean, between certain things (that is, the greater and the less), and, so far as it is equal, between two, and in so far as it is just it is so to certain persons. The Just then must imply four terms at least, for those[9] to which it is just are two, and the terms representing the things are two.

And there will be the same equality between the terms representing the persons, as between those representing the things: because as the latter are to one another so are the former: for if the persons are not equal they must not have equal shares; in fact this is the very source of all the quarrelling and wrangling in the world, when either they who are equal have and get awarded to them things not equal, or being not equal those things which are equal. Again, the necessity of this equality of ratios is shown by the common phrase “according to rate,” for all agree that the Just in distributions ought to be according to some rate: but what that rate is to be, all do not agree; the democrats are for freedom, oligarchs for wealth, others for nobleness of birth, and the aristocratic party for virtue.

The Just, then, is a certain proportionable thing. For proportion does not apply merely to number in the abstract,[10] but to number generally, since it is equality of ratios, and implies four terms at least (that this is the case in what may be called discrete proportion is plain and obvious, but it is true also in continual proportion, for this uses the one term as two, and mentions it twice; thus A:B:C may be expressed A:B::B:C. In the first, B is named twice; and so, if, as in the second, B is actually written twice, the proportionals will be four): and the Just likewise implies four terms at the least, and the ratio between the two pair of terms is the same, because the persons and the things are divided similarly. It will stand then thus, A:B::C:D, and then permutando A:C::B:D, and then (supposing C and D to represent the things) A+C:B+D::A:B. The distribution in fact consisting in putting together these terms thus: and if they are put together so as to preserve this same ratio, the distribution puts them together justly.[11] So then the joining together of the first and third and second and fourth proportionals is the Just in the distribution, and this Just is the mean relatively to that which violates the proportionate, for the proportionate is a mean and the Just is proportionate. Now mathematicians call this kind of proportion geometrical: for in geometrical proportion the whole is to the whole as each part to each part. Furthermore this proportion is not continual, because the person and thing do not make up one term.

The Just then is this proportionate, and the Unjust that which violates the proportionate; and so there comes to be the greater and the less: which in fact is the case in actual transactions, because he who acts unjustly has the greater share and he who is treated unjustly has the less of what is good: but in the case of what is bad this is reversed: for the less evil compared with the greater comes to be reckoned for good, because the less evil is more choice-worthy than the greater, and what is choice-worthy is good, and the more so the greater good.

This then is the one species of the Just.

Chapter VII.

And the remaining one is the Corrective, which arises in voluntary as well as involuntary transactions. Now this just has a different form from the aforementioned; for that which is concerned in distribution of common property is always according to the aforementioned proportion: I mean that, if the division is made out of common property, the shares will bear the same proportion to one another as the original contributions did: and the Unjust which is opposite to this Just is that which violates the proportionate.

But the Just which arises in transactions between men is an equal in a certain sense, and the Unjust an unequal, only not in the way of that proportion but of arithmetical.[12] Because it makes no difference whether a robbery, for instance, is committed by a good man on a bad or by a bad man on a good, nor whether a good or a bad man has committed adultery: the law looks only to the difference created by the injury and treats the men as previously equal, where the one does and the other suffers injury, or the one has done and the other suffered harm. And so this Unjust, being unequal, the judge endeavours to reduce to equality again, because really when the one party has been wounded and the other has struck him, or the one kills and the other dies, the suffering

and the doing are divided into unequal shares; well, the judge tries to restore equality by penalty, thereby taking from the gain.

For these terms gain and loss are applied to these cases, though perhaps the term in some particular instance may not be strictly proper, as gain, for instance, to the man who has given a blow, and loss to him who has received it: still, when the suffering has been estimated, the one is called loss and the other gain.

And so the equal is a mean between the more and the less, which represent gain and loss in contrary ways (I mean, that the more of good and the less of evil is gain, the less of good and the more of evil is loss): between which the equal was stated to be a mean, which equal we say is Just: and so the Corrective Just must be the mean between loss and gain. And this is the reason why, upon a dispute arising, men have recourse to the judge: going to the judge is in fact going to the Just, for the judge is meant to be the personification of the Just.[13] And men seek a judge as one in the mean, which is expressed in a name given by some to judges (μεσ■διοι, or middle-men) under the notion that if they can hit on the mean they shall hit on the Just. The Just is then surely a mean since the judge is also.

So it is the office of a judge to make things equal, and the line, as it were, having been unequally divided, he takes from the greater part that by which it exceeds the half, and adds this on to the less. And when the whole is divided into two exactly equal portions then men say they have their own, when they have gotten the equal; and the equal is a mean between the greater and the less according to arithmetical equality.

This, by the way, accounts for the etymology of the term by which we in Greek express the ideas of Just and Judge; (δ■καιον quasi δ■χαιον, that is in two parts, and δικ■στης quasi διχ■στης, he who divides into two parts). For when from one of two equal magnitudes somewhat has been taken and added to the other, this latter exceeds the former by twice that portion: if it had been merely taken from the former and not added to the latter, then the latter would have exceeded the former only by that one portion; but in the other case, the greater exceeds the mean by one, and the mean exceeds also by one that magnitude from which the portion was taken. By this illustration, then, we obtain a rule to determine what one ought to take from him who has the greater, and what to add to him who has the less. The excess of the mean over the less must be added to the less, and the excess of the greater over the mean be taken from the greater.

Thus let there be three straight lines equal to one another. From one of them cut off a portion, and add as much to another of them. The whole line thus made will exceed the remainder of the first-named line, by twice the portion added, and will exceed the untouched line by that portion.[14] And these terms loss and gain are derived from voluntary exchange: that is to say, the having more than what was one's own is called gaining, and the having less than one's original stock is called losing; for instance, in buying or selling, or any other transactions which are guaranteed by law: but when the result is neither more nor less, but exactly the same as there was originally,[15] people say they have their own, and neither lose nor gain.

So then the Just we have been speaking of is a mean between loss and gain arising in involuntary transactions; that is, it is the having the same after the transaction as one had before it took place.

Chapter VIII.

There are people who have a notion that Reciprocation is simply just, as the Pythagoreans said: for they defined the Just simply and without qualification as "That which reciprocates with another." But this simple Reciprocation will not fit on either to the Distributive Just, or the Corrective (and yet this is the interpretation they put on the Rhadamanthian rule of Just,

If a man should suffer what he hath done, then there would be straightforward justice;")

for in many cases differences arise: as, for instance, suppose one in authority has struck a man, he is not to be struck in turn; or if a man has struck one in authority, he must not only be struck but punished also.[16] And again, the voluntariness or involuntariness of actions makes a great difference.

But in dealings of exchange such a principle of Justice as this Reciprocation forms the bond of union, but then it must be Reciprocation according to proportion and not exact equality, because by proportionate reciprocity of action the social community is held together, For either Reciprocation of evil is meant, and if this be not allowed it is thought to be a servile condition of things: or else Reciprocation of good, and if this be not effected then there is no admission to participation which is the very bond of their union.

And this is the moral of placing the Temple of the Graces (χ■ριτες) in the public streets; to impress the notion that there may be requital, this being peculiar to χ■ρις[17] because a man ought to requite with a good turn the man who has done him a favour and then to become himself the originator of another χ■ρις, by doing him a favour.

Now the acts of mutual giving in due proportion may be represented by the diameters of a parallelogram, at the four angles of which the parties and their wares are so placed that the side connecting the parties be opposite to that connecting the wares, and each party be connected by one side with his own ware, as in the accompanying diagram.

[Illustration]

The builder is to receive from the shoemaker of his ware, and to give him of his own: if then there be first proportionate equality, and _then_ the Reciprocation takes place, there will be the just result which we are speaking of: if not, there is not the equal, nor will the connection stand: for there is no reason why the ware of the one may not be better than that of the other, and therefore before the exchange is made they must have been equalised. And this is so also in the other arts: for they would have been destroyed entirely if there were not a correspondence in point of quantity and quality between the producer and the consumer. For, we must remember, no dealing arises between two of the same kind, two physicians, for instance; but say between a physician and agriculturist, or, to state it generally, between those who are different and not equal, but these of course must have been equalised before the exchange can take place.

It is therefore indispensable that all things which can be exchanged should be capable of comparison, and for this purpose money has come in, and comes to be a kind of medium, for it measures all things and so likewise the excess and defect; for instance, how many shoes are equal to a house or a given quantity of food. As then the builder to the shoemaker, so many shoes must be to the house (or food, if instead of a builder an agriculturist be the exchanging party); for unless there is this proportion there cannot be exchange or dealing, and this proportion cannot be unless the terms are in some way equal; hence the need, as was stated above, of some one measure of all things. Now this is really and truly the Demand for them, which is the common bond of all such dealings. For if the parties were not in want at all or not similarly of one another's wares, there would either not be any exchange, or at least not the same.

And money has come to be, by general agreement, a representative of Demand: and the account of its Greek name νομισμα is this, that it is what it is not naturally but by custom or law (ν■μος), and it rests with us to change its value, or make it wholly useless.

Very well then, there will be Reciprocation when the terms have been equalised so as to stand in this proportion; Agriculturist : Shoemaker : : wares of Shoemaker : wares of Agriculturist; but you must bring them to this form of proportion when they exchange, otherwise the one extreme will combine both exceedings of the mean:[18] but when they have exactly their own then they are equal and have dealings, because the same equality can come to be in their case. Let A represent an agriculturist, C food, B a shoemaker, D his wares equalised with A's. Then the proportion will be correct, A:B::C:D; _now_ Reciprocation will be practicable, if it were not, there would have been no dealing.

Now that what connects men in such transactions is Demand, as being some one thing, is shown by the fact that, when either one does not want the other or neither want one another, they do not exchange at all: whereas they do[19] when one wants what the other man has, wine for instance, giving in return corn for exportation.

And further, money is a kind of security to us in respect of exchange at some future time (supposing that one wants nothing now that we shall have it when we do): the theory of money being that whenever one brings it one can receive commodities in exchange: of course this too is liable to depreciation, for its purchasing power is not always the same, but still it is of a more permanent nature than the commodities it represents. And this is the reason why all things should have a price set upon them, because thus there may be exchange at any time, and if exchange then dealing. So money, like a measure, making all things commensurable equalises them: for if there was not exchange there would not have been dealing, nor exchange if there were not equality, nor equality if there were not the capacity of being commensurate: it is impossible that things so greatly different should be really commensurate, but we can approximate sufficiently for all practical purposes in reference to Demand. The common measure must be some one thing, and also from agreement (for which reason it is called ν■μισμα), for this makes all things commensurable: in fact, all things are measured by money. Let B represent ten minæ, A a house worth five minæ, or in other words half B, C a bed worth 1/10th of B: it is clear then how many beds are equal to one house, namely, five.

It is obvious also that exchange was thus conducted before the existence of money: for it makes no difference whether you give for a house five beds or the price of five beds.

Chapter IX.

We have now said then what the abstract Just and Unjust are, and these having been defined it is plain that just acting is a mean between acting unjustly and being acted unjustly towards: the former being equivalent to having more, and the latter to having less.

But Justice, it must be observed, is a mean state not after the same manner as the forementioned virtues, but because it aims at producing the mean, while Injustice occupies _both_ the extremes.

And Justice is the moral state in virtue of which the just man is said to have the aptitude for practising the Just in the way of moral choice, and for making division between, himself and another, or between two other men, not so as to give to himself the greater and to his neighbour the less share of what is choice-worthy and contrariwise of what is hurtful, but what is proportionably equal, and in like manner when adjudging the rights of two other men.

Injustice is all this with respect to the Unjust: and since the Unjust is excess or defect of what is good or hurtful respectively, in violation of the proportionate, therefore Injustice is both excess and defect because it aims at producing excess and defect; excess, that is, in a man's own case of what is simply advantageous, and defect of what is hurtful: and in the case of other men in like manner generally speaking, only that the proportionate is violated not always in one direction as before but whichever way it happens in the given case. And of the Unjust act the less is being acted unjustly towards, and the greater the acting unjustly towards others.[20]

Let this way of describing the nature of Justice and Injustice, and likewise the Just and the Unjust generally, be accepted as sufficient.

Chapter X.

[Again, since a man may do unjust acts and not yet have formed a character of injustice, the question arises whether a man is unjust in each particular form of injustice, say a thief, or adulterer, or robber, by doing acts of a given character.

We may say, I think, that this will not of itself make any difference; a man may, for instance, have had connection with another's wife, knowing well with whom he was sinning, but he may have done it not of deliberate choice but from the impulse of passion: of course he acts unjustly, but he has not necessarily formed an unjust character: that is, he may have stolen yet not be a thief; or committed an act of adultery but still not be an adulterer, and so on in other cases which might be enumerated.][21]

Of the relation which Reciprocation bears to the Just we have already spoken: and here it should be noticed that the Just which we are investigating is both the Just in the abstract and also as exhibited in Social Relations, which latter arises in the case of those who live in communion with a view to independence and who are free and equal either proportionately or numerically.[22]

It follows then that those who are not in this position have not among themselves the Social Just, but still Just of some kind and resembling that other. For Just implies mutually acknowledged law, and law the possibility of injustice, for adjudication is the act of distinguishing between the Just and the Unjust.

And among whomsoever there is the possibility of injustice among these there is that of acting unjustly; but it does not hold conversely that injustice attaches to all among whom there is the possibility of acting unjustly, since by the former we mean giving one's self the larger share of what is abstractedly good and the less of what is abstractedly evil.

This, by the way, is the reason why we do not allow a man to govern, but Principle, because a man governs for himself and comes to be a despot: but the office of a ruler is to be guardian of the Just and therefore of the Equal. Well then, since he seems to have no peculiar personal advantage, supposing him a Just man, for in this case he does not allot to himself the larger share of what is abstractedly good unless it falls to his share proportionately (for which reason he really governs for others, and so Justice, men say, is a good not to one's self so much as to others, as was mentioned before), therefore some compensation must be given him, as there actually is in the shape of honour and privilege; and wherever these are not adequate there rulers turn into despots.

But the Just which arises in the relations of Master and Father, is not identical with, but similar to, these; because there is no possibility of injustice towards those things which are absolutely one's own; and a slave or child (so long as this last is of a certain age and not separated into an independent being), is, as it were, part of a man's self, and no man chooses to hurt himself, for which

reason there cannot be injustice towards one's own self: therefore neither is there the social Unjust or Just, which was stated to be in accordance with law and to exist between those among whom law naturally exists, and these were said to be they to whom belongs equality of ruling and being ruled.

Hence also there is Just rather between a man and his wife than between a man and his children or slaves; this is in fact the Just arising in domestic relations: and this too is different from the Social Just.

Further, this last-mentioned Just is of two kinds, natural and conventional; the former being that which has everywhere the same force and does not depend upon being received or not; the latter being that which originally may be this way or that indifferently but not after enactment: for instance, the price of ransom being fixed at a mina, or the sacrificing a goat instead of two sheep; and again, all cases of special enactment, as the sacrificing to Brasidas as a hero; in short, all matters of special decree.

But there are some men who think that all the Justs are of this latter kind, and on this ground: whatever exists by nature, they say, is unchangeable and has everywhere the same force; fire, for instance, burns not here only but in Persia as well, but the Justs they see changed in various places.

Now this is not really so, and yet it is in a way (though among the gods perhaps by no means): still even amongst ourselves there is somewhat existing by nature: allowing that everything is subject to change, still there is that which does exist by nature, and that which does not.[23]

Nay, we may go further, and say that it is practically plain what among things which can be otherwise does exist by nature, and what does not but is dependent upon enactment and conventional, even granting that both are alike subject to be changed: and the same distinctive illustration will apply to this and other cases; the right hand is naturally the stronger, still some men may become equally strong in both.

A parallel may be drawn between the Justs which depend upon convention and expedience, and measures; for wine and corn measures are not equal in all places, but where men buy they are large, and where these same sell again they are smaller: well, in like manner the Justs which are not natural, but of human invention, are not everywhere the same, for not even the forms of government are, and yet there is one only which by nature would be best in all places.

Chapter XI.

Now of Justs and Lawfuls each bears to the acts which embody and exemplify it the relation of an universal to a particular; the acts being many, but each of the principles only singular because each is an universal. And so there is a difference between an unjust act and the abstract Unjust, and the just act and the abstract Just: I mean, a thing is unjust in itself, by nature or by ordinance; well, when this has been embodied in act, there is an unjust act, but not till then, only some unjust thing.[24] And similarly of a just act. (Perhaps δικαιοπρ■γημα is more correctly the common or generic term for just act, the word δικα■ωμα, which I have here used, meaning generally and properly the act corrective of the unjust act.) Now as to each of them, what kinds there are, and how many, and what is their object-matter, we must examine afterwards.

For the present we proceed to say that, the Justs and the Unjusts being what have been mentioned, a man is said to act unjustly or justly when he embodies these abstracts in voluntary actions, but when in involuntary, then he neither acts unjustly or justly except accidentally; I mean that the being just or unjust is really only accidental to the agents in such cases.

So both unjust and just actions are limited by the being voluntary or the contrary: for when an embodying of the Unjust is voluntary, then it is blamed and is at the same time also an unjust action: but, if voluntariness does not attach, there will be a thing which is in itself unjust but not yet an unjust action.

By voluntary, I mean, as we stated before, whatsoever of things in his own power a man does with knowledge, and the absence of ignorance as to the person to whom, or the instrument with which, or the result with which he does; as, for instance, whom he strikes, what he strikes him with, and with what probable result; and each of these points again, not accidentally nor by compulsion; as supposing another man were to seize his hand and strike a third person with it, here, of course, the owner of the hand acts not voluntarily, because it did not rest with him to do or leave undone: or again, it is conceivable that the person struck may be his father, and he may know that it is a man, or even one of the present company, whom he is striking, but not know that it is his father. And let these same distinctions be supposed to be carried into the case of the result and in fact the whole of any given action. In fine then, that is involuntary which is done through ignorance, or which, not resulting from ignorance, is not in the agent's control or

is done on compulsion.

I mention these cases, because there are many natural things which we do and suffer knowingly but still no one of which is either voluntary or involuntary, growing old, or dying, for instance.

Again, accidentality may attach to the unjust in like manner as to the just acts. For instance, a man may have restored what was deposited with him, but against his will and from fear of the consequences of a refusal: we must not say that he either does what is just, or does justly, except accidentally: and in like manner the man who through compulsion and against his will fails to restore a deposit, must be said to do unjustly, or to do what is unjust, accidentally only.

Again, voluntary actions we do either from deliberate choice or without it; from it, when we act from previous deliberation; without it, when without any previous deliberation. Since then hurts which may be done in transactions between man and man are threefold, those mistakes which are attended with ignorance are, when a man either does a thing not to the man to whom he meant to do it, or not the thing he meant to do, or not with the instrument, or not with the result which he intended: either he did not think he should hit him at all, or not with this, or this is not the man he thought he should hit, or he did not think this would be the result of the blow but a result has followed which he did not anticipate; as, for instance, he did it not to wound but merely to prick him; or it is not the man whom, or the way in which, he meant.

Now when the hurt has come about contrary to all reasonable expectation, it is a Misadventure; when though not contrary to expectation yet without any viciousness, it is a Mistake; for a man makes a mistake when the origination of the cause rests with himself, he has a misadventure when it is external to himself. When again he acts with knowledge, but not from previous deliberation, it is an unjust action; for instance, whatever happens to men from anger or other passions which are necessary or natural: for when doing these hurts or making these mistakes they act unjustly of course and their actions are unjust, still they are not yet confirmed unjust or wicked persons by reason of these, because the hurt did not arise from depravity in the doer of it: but when it does arise from deliberate choice, then the doer is a confirmed unjust and depraved man.

And on this principle acts done from anger are fairly judged not to be from malice prepense, because it is not the man who acts in wrath who is the originator really but he who caused his wrath. And again, the question at issue in such cases is not respecting the fact but respecting the justice of the case, the occasion of anger being a notion of injury.[25] I mean, that the parties do not dispute about the fact, as in questions of contract (where one of the two must be a rogue, unless real forgetfulness can be pleaded), but, admitting the fact, they dispute on which side the justice of the case lies (the one who plotted against the other, _i.e._ the real aggressor, of course, cannot be ignorant),[26] so that the one thinks there is injustice committed while the other does not.

Well then, a man acts unjustly if he has hurt another of deliberate purpose, and he who commits such acts of injustice is _ipso facto_ an unjust character when they are in violation of the proportionate or the equal; and in like manner also a man is a just character when he acts justly of deliberate purpose, and he does act justly if he acts voluntarily.

Then as for involuntary acts of harm, they are either such as are excusable or such as are not: under the former head come all errors done not merely in ignorance but from ignorance; under the latter all that are done not from ignorance but in ignorance caused by some passion which is neither natural nor fairly attributable to human infirmity.

Chapter XII.

Now a question may be raised whether we have spoken with sufficient distinctness as to being unjustly dealt with, and dealing unjustly towards others.

First, whether the case is possible which Euripides has put, saying somewhat strangely,

“My mother he hath slain; the tale is short, Either he willingly did slay her willing, Or else with her will but against his own.”

I mean then, is it really possible for a person to be unjustly dealt with with his own consent, or must every case of being unjustly dealt with be against the will of the sufferer as every act of unjust dealing is voluntary?

And next, are cases of being unjustly dealt with to be ruled all one way as every act of unjust dealing is voluntary? or may we say that some cases are voluntary and some involuntary?

Similarly also as regards being justly dealt with: all just acting is voluntary, so that it is fair to suppose that the being dealt with unjustly or justly must be similarly opposed, as to being either voluntary or involuntary.

Now as for being justly dealt with, the position that every case of this is voluntary is a strange one, for some are certainly justly dealt with without their will.[27] The fact is a man may also fairly raise this question, whether in every case he who has suffered what is unjust is therefore unjustly dealt with, or rather that the case is the same with suffering as it is with acting; namely that in both it is possible to participate in what is just, but only accidentally. Clearly the case of what is unjust is similar: for doing things in themselves unjust is not identical with acting unjustly, nor is suffering them the same as being unjustly dealt with. So too of acting justly and being justly dealt with, since it is impossible to be unjustly dealt with unless some one else acts unjustly or to be justly dealt with unless some one else acts justly.

Now if acting unjustly is simply “hurting another voluntarily” (by which I mean, knowing whom you are hurting, and wherewith, and how you are hurting him), and the man who fails of self-control voluntarily hurts himself, then this will be a case of being voluntarily dealt unjustly with, and it will be possible for a man to deal unjustly with himself. (This by the way is one of the questions raised, whether it is possible for a man to deal unjustly with himself.) Or again, a man may, by reason of failing of self-control, receive hurt from another man acting voluntarily, and so here will be another case of being unjustly dealt with voluntarily.

The solution, I take it, is this: the definition of being unjustly dealt with is not correct, but we must add, to the hurting with the knowledge of the person hurt and the instrument and the manner of hurting him, the fact of its being against the wish of the man who is hurt.

So then a man may be hurt and suffer what is in itself unjust voluntarily, but unjustly dealt with voluntarily no man can be: since no man wishes to be hurt, not even he who fails of self-control, who really acts contrary to his wish: for no man wishes for that which he does not _think_ to be good, and the man who fails of self-control does not what he thinks he ought to do.

And again, he that gives away his own property (as Homer says Glaucus gave to Diomed, “armour of gold for brass, armour worth a hundred oxen for that which was worth but nine”) is not unjustly dealt with, because the giving rests entirely with himself; but being unjustly dealt with does not, there must be some other person who is dealing unjustly towards him.

With respect to being unjustly dealt with then, it is clear that it is not voluntary.

Chapter XIII.

There remain yet two points on which we purposed to speak: first, is he chargeable with an unjust act who in distribution has _given_ the larger share to one party contrary to the proper rate, or he that _has_ the larger share? next, can a man deal unjustly by himself?

In the first question, if the first-named alternative is possible and it is the distributor who acts unjustly and not he who has the larger share, then supposing that a person knowingly and willingly gives more to another than to himself here is a case of a man dealing unjustly by himself; which, in fact, moderate men are thought to do, for it is a characteristic of the equitable man to take less than his due.

Is not this the answer? that the case is not quite fairly stated, because of some other good, such as credit or the abstract honourable, in the supposed case the man did get the larger share. And again, the difficulty is solved by reference to the definition of unjust dealing: for the man suffers nothing contrary to his own wish, so that, on this score at least, he is not unjustly dealt with, but, if anything, he is hurt only.

It is evident also that it is the distributor who acts unjustly and not the man who has the greater share: because the mere fact of the abstract Unjust attaching to what a man does, does not constitute unjust action, but the doing this voluntarily: and voluntariness attaches to that quarter whence is the origination of the action, which clearly is in the distributor not in the receiver. And again the term doing is used in several senses; in one sense inanimate objects kill, or the hand, or the slave by his master’s bidding; so the man in question does not act unjustly but does things which are in themselves unjust.

Again, suppose that a man has made a wrongful award in ignorance; in the eye of the law he does not act unjustly nor is his awarding unjust, but yet he is in a certain sense: for the Just according to law and primary or natural Just are not coincident: but, if he knowingly decided unjustly, then he himself as well as the receiver got the larger share, that is, either of favour from the receiver or private revenge against the other party: and so the man who decided unjustly from these motives gets a larger share, in exactly

the same sense as a man would who received part of the actual matter of the unjust action: because in this case the man who wrongly adjudged, say a field, did not actually get land but money by his unjust decision.

Chapter XIV.

Now men suppose that acting Unjustly rests entirely with themselves, and conclude that acting Justly is therefore also easy. But this is not really so; to have connection with a neighbour's wife, or strike one's neighbour, or give the money with one's hand, is of course easy and rests with one's self: but the doing these acts with certain inward dispositions neither is easy nor rests entirely with one's self. And in like way, the knowing what is Just and what Unjust men think no great instance of wisdom because it is not hard to comprehend those things of which the laws speak. They forget that these are not Just actions, except accidentally: to be Just they must be done and distributed in a certain manner: and this is a more difficult task than knowing what things are wholesome; for in this branch of knowledge it is an easy matter to know honey, wine, hellebore, cautery, or the use of the knife, but the knowing how one should administer these with a view to health, and to whom and at what time, amounts in fact to being a physician.

From this very same mistake they suppose also, that acting Unjustly is equally in the power of the Just man, for the Just man no less, nay even more, than the Unjust, may be able to do the particular acts; he may be able to have intercourse with a woman or strike a man; or the brave man to throw away his shield and turn his back and run this way or that. True: but then it is not the mere doing these things which constitutes acts of cowardice or injustice (except accidentally), but the doing them with certain inward dispositions: just as it is not the mere using or not using the knife, administering or not administering certain drugs, which constitutes medical treatment or curing, but doing these things in a certain particular way.

Again the abstract principles of Justice have their province among those who partake of what is abstractedly good, and can have too much or too little of these.[28] Now there are beings who cannot have too much of them, as perhaps the gods; there are others, again, to whom no particle of them is of use, those who are incurably wicked to whom all things are hurtful; others to whom they are useful to a certain degree: for this reason then the province of Justice is among _Men_.

Chapter XV.

We have next to speak of Equity and the Equitable, that is to say, of the relations of Equity to Justice and the Equitable to the Just; for when we look into the matter the two do not appear identical nor yet different in kind; and we sometimes commend the Equitable and the man who embodies it in his actions, so that by way of praise we commonly transfer the term also to other acts instead of the term good, thus showing that the more Equitable a thing is the better it is: at other times following a certain train of reasoning we arrive at a difficulty, in that the Equitable though distinct from the Just is yet praiseworthy; it seems to follow either that the Just is not good or the Equitable not Just, since they are by hypothesis different; or if both are good then they are identical.

This is a tolerably fair statement of the difficulty which on these grounds arises in respect of the Equitable; but, in fact, all these may be reconciled and really involve no contradiction: for the Equitable is Just, being also better than one form of Just, but is not better than the Just as though it were different from it in kind: Just and Equitable then are identical, and, both being good, the Equitable is the better of the two.

What causes the difficulty is this; the Equitable is Just, but not the Just which is in accordance with written law, being in fact a correction of that kind of Just. And the account of this is, that every law is necessarily universal while there are some things which it is not possible to speak of rightly in any universal or general statement. Where then there is a necessity for general statement, while a general statement cannot apply rightly to all cases, the law takes the generality of cases, being fully aware of the error thus involved; and rightly too notwithstanding, because the fault is not in the law, or in the framer of the law, but is inherent in the nature of the thing, because the matter of all action is necessarily such.

When then the law has spoken in general terms, and there arises a case of exception to the general rule, it is proper, in so far as the lawgiver omits the case and by reason of his universality of statement is wrong, to set right the omission by ruling it as the lawgiver himself would rule were he there present, and would have provided by law had he foreseen the case would arise. And so the Equitable is Just but better than one form of Just; I do not mean the abstract Just but the error which arises out of the universality of statement: and this is the nature of the Equitable, "a correction of Law, where Law is defective by reason of its universality."

This is the reason why not all things are according to law, because there are things about which it is simply impossible to lay down a law, and so we want special enactments for particular cases. For to speak generally, the rule of the undefined must be itself

undefined also, just as the rule to measure Lesbian building is made of lead: for this rule shifts according to the form of each stone and the special enactment according to the facts of the case in question.

It is clear then what the Equitable is; namely that it is Just but better than one form of Just: and hence it appears too who the Equitable man is: he is one who has a tendency to choose and carry out these principles, and who is not apt to press the letter of the law on the worse side but content to waive his strict claims though backed by the law: and this moral state is Equity, being a species of Justice, not a different moral state from Justice.

Chapter XVI.

The answer to the second of the two questions indicated above, “whether it is possible for a man to deal unjustly by himself,” is obvious from what has been already stated.

In the first place, one class of Justs is those which are enforced by law in accordance with Virtue in the most extensive sense of the term: for instance, the law does not bid a man kill himself; and whatever it does not bid it forbids: well, whenever a man does hurt contrary to the law (unless by way of requital of hurt), voluntarily, i.e. knowing to whom he does it and wherewith, he acts Unjustly. Now he that from rage kills himself, voluntarily, does this in contravention of Right Reason, which the law does not permit. He therefore acts Unjustly: but towards whom? towards the Community, not towards himself (because he suffers with his own consent, and no man can be Unjustly dealt with with his own consent), and on this principle the Community punishes him; that is a certain infamy is attached to the suicide as to one who acts Unjustly towards the Community.

Next, a man cannot deal Unjustly by himself in the sense in which a man is Unjust who only does Unjust acts without being entirely bad (for the two things are different, because the Unjust man is in a way bad, as the coward is, not as though he were chargeable with badness in the full extent of the term, and so he does not act Unjustly in this sense), because if it were so then it would be possible for the same thing to have been taken away from and added to the same person:[29] but this is really not possible, the Just and the Unjust always implying a plurality of persons.

Again, an Unjust action must be voluntary, done of deliberate purpose, and aggressive (for the man who hurts because he has first suffered and is merely requiting the same is not thought to act Unjustly), but here the man does to himself and suffers the same things at the same time.

Again, it would imply the possibility of being Unjustly dealt with with one’s own consent.

And, besides all this, a man cannot act Unjustly without his act falling under some particular crime; now a man cannot seduce his own wife, commit a burglary on his own premises, or steal his own property.

After all, the general answer to the question is to allege what was settled respecting being Unjustly dealt with with one’s own consent.

Chapter XVII.

It is obvious, moreover, that being Unjustly dealt by and dealing Unjustly by others are both wrong; because the one is having less, the other having more, than the mean, and the case is parallel to that of the healthy in the healing art, and that of good condition in the art of training: but still the dealing Unjustly by others is the worst of the two, because this involves wickedness and is blameworthy; wickedness, I mean, either wholly, or nearly so (for not all voluntary wrong implies injustice), but the being Unjustly dealt by does not involve wickedness or injustice.

In itself then, the being Unjustly dealt by is the least bad, but accidentally it may be the greater evil of the two. However, scientific statement cannot take in such considerations; a pleurisy, for instance, is called a greater physical evil than a bruise: and yet this last may be the greater accidentally; it may chance that a bruise received in a fall may cause one to be captured by the enemy and slain.

Further: Just, in the way of metaphor and similitude, there may be I do not say between a man and himself exactly but between certain parts of his nature; but not Just of every kind, only such as belongs to the relation of master and slave, or to that of the head of a family. For all through this treatise the rational part of the Soul has been viewed as distinct from the irrational.

Now, taking these into consideration, there is thought to be a possibility of injustice towards one’s self, because herein it is possible for men to suffer somewhat in contradiction of impulses really their own; and so it is thought that there is Just of a certain kind

between these parts mutually, as between ruler and ruled.

Let this then be accepted as an account of the distinctions which we recognise respecting Justice and the rest of the moral virtues.[30]

BOOK VI

Chapter I.

Having stated in a former part of this treatise that men should choose the mean instead of either the excess or defect, and that the mean is according to the dictates of Right Reason; we will now proceed to explain this term.

For in all the habits which we have expressly mentioned, as likewise in all the others, there is, so to speak, a mark with his eye fixed on which the man who has Reason tightens or slacks his rope;[1] and there is a certain limit of those mean states which we say are in accordance with Right Reason, and lie between excess on the one hand and defect on the other.

Now to speak thus is true enough but conveys no very definite meaning: as, in fact, in all other pursuits requiring attention and diligence on which skill and science are brought to bear; it is quite true of course to say that men are neither to labour nor relax too much or too little, but in moderation, and as Right Reason directs; yet if this were all a man had he would not be greatly the wiser; as, for instance, if in answer to the question, what are proper applications to the body, he were to be told, “Oh! of course, whatever the science of medicine, and in such manner as the physician, directs.”

And so in respect of the mental states it is requisite not merely that this should be true which has been already stated, but further that it should be expressly laid down what Right Reason is, and what is the definition of it.

Chapter II.

Now in our division of the Excellences of the Soul, we said there were two classes, the Moral and the Intellectual: the former we have already gone through; and we will now proceed to speak of the others, premising a few words respecting the Soul itself. It was stated before, you will remember, that the Soul consists of two parts, the Rational, and Irrational: we must now make a similar division of the Rational.

Let it be understood then that there are two parts of the Soul possessed of Reason; one whereby we realise those existences whose causes cannot be otherwise than they are, and one whereby we realise those which can be otherwise than they are,[2] (for there must be, answering to things generically different, generically different parts of the soul naturally adapted to each, since these parts of the soul possess their knowledge in virtue of a certain resemblance and appropriateness in themselves to the objects of which they are percipients);[3] and let us name the former, “that which is apt to know,” the latter, “that which is apt to calculate” (because deliberating and calculating are the same, and no one ever deliberates about things which cannot be otherwise than they are: and so the Calculative will be one part of the Rational faculty of the soul).

We must discover, then, which is the best state of each of these, because that will be the Excellence of each; and this again is relative to the work each has to do.[4]

There are in the Soul three functions on which depend moral action and truth; Sense, Intellect, Appetition, whether vague Desire or definite Will. Now of these Sense is the originating cause of no moral action, as is seen from the fact that brutes have Sense but are in no way partakers of moral action.[5]

[Intellect and Will are thus connected,] what in the Intellectual operation is Affirmation and Negation that in the Will is Pursuit and Avoidance, And so, since Moral Virtue is a State apt to exercise Moral Choice and Moral Choice is Will consequent on deliberation, the Reason must be true and the Will right, to constitute good Moral Choice, and what the Reason affirms the Will must pursue.[6]

Now this Intellectual operation and this Truth is what bears upon Moral Action; of course truth and falsehood must be the good and the bad of that Intellectual Operation which is purely Speculative, and concerned neither with action nor production, because this is manifestly the work of every Intellectual faculty, while of the faculty which is of a mixed Practical and Intellectual nature, the work is that Truth which, as I have described above, corresponds to the right movement of the Will.

Now the starting-point of moral action is Moral Choice, (I mean, what actually sets it in motion, not the final cause,)[7] and of Moral Choice, Appetition, and Reason directed to a certain result: and thus Moral Choice is neither independent of intellect, i. e. intellectual operation, nor of a certain moral state: for right or wrong action cannot be, independently of operation of the Intellect, and moral character.

But operation of the Intellect by itself moves nothing, only when directed to a certain result, i. e. exercised in Moral Action: (I say nothing of its being exercised in production, because this function is originated by the former: for every one who makes makes with a view to somewhat further; and that which is or may be made, is not an End in itself, but only relatively to somewhat else, and belonging to some one:[8] whereas that which is or may be done is an End in itself, because acting well is an End in itself, and this is the object of the Will,) and so Moral Choice is either[9] Intellect put in a position of Will-ing, or Appetition subjected to an Intellectual Process. And such a Cause is Man.

But nothing which is done and past can be the object of Moral Choice; for instance, no man chooses to have sacked Troy; because, in fact, no one ever deliberates about what is past, but only about that which is future, and which may therefore be influenced, whereas what has been cannot not have been: and so Agathon is right in saying

“Of this alone is Deity bereft, To make undone whatever hath been done.”

Thus then Truth is the work of both the Intellectual Parts of the Soul; those states therefore are the Excellences of each in which each will best attain truth.

Chapter III.

Commencing then from the point stated above we will now speak of these Excellences again. Let those faculties whereby the Soul attains truth in Affirmation or Negation, be assumed to be in number five:[10] viz. Art, Knowledge, Practical Wisdom, Science, Intuition: (Supposition and Opinion I do not include, because by these one may go wrong.)

What Knowledge is, is plain from the following of considerations, if one is to speak accurately, instead of being led away by resemblances. For we all conceive that what we strictly speaking know, cannot be otherwise than it is, because as to those things which can be otherwise than they are, we are uncertain whether they are or are not, the moment they cease to be within the sphere of our actual observation.

So then, whatever comes within the range of Knowledge is by necessity, and therefore eternal, (because all things are so which exist necessarily,) and all eternal things are without beginning, and indestructible.

Again, all Knowledge is thought to be capable of being taught, and what comes within its range capable of being learned. And all teaching is based upon previous knowledge; (a statement you will find in the Analytics also,)[11] for there are two ways of teaching, by Syllogism and by Induction. In fact. Induction is the source of universal propositions, and Syllogism reasons from these universals.[12] Syllogism then may reason from principles which cannot be themselves proved Syllogistically: and therefore must by Induction.

So Knowledge is “a state or mental faculty apt to demonstrate syllogistically,” &c. as in the Analytics:[13] because a man, strictly and properly speaking, _knows_, when he establishes his conclusion in a certain way, and the principles are known to him: for if they are not better known to him than the conclusion, such knowledge as he has will be merely accidental.

Let thus much be accepted as a definition of Knowledge.

Chapter IV.

Matter which may exist otherwise than it actually does in any given case (commonly called Contingent) is of two kinds, that which is the object of Making, and that which is the object of Doing; now Making and Doing are two different things (as we show in the exoteric treatise), and so that state of mind, conjoined with Reason, which is apt to Do, is distinct from that also conjoined with Reason, which is apt to Make: and for this reason they are not included one by the other, that is, Doing is not Making, nor Making Doing.[14] Now[15] as Architecture is an Art, and is the same as “a certain state of mind, conjoined with Reason, which is apt to Make,” and as there is no Art which is not such a state, nor any such state which is not an Art, Art, in its strict and proper sense, must be “a state of mind, conjoined with true Reason, apt to Make.”

Now all Art has to do with production, and contrivance, and seeing how any of those things may be produced which may either be or not be, and the origination of which rests with the maker and not with the thing made.

And, so neither things which exist or come into being necessarily, nor things in the way of nature, come under the province of Art, because these are self-originating. And since Making and Doing are distinct, Art must be concerned with the former and not the latter. And in a certain sense Art and Fortune are concerned with the same things, as, Agathon says by the way,

“Art Fortune loves, and is of her beloved.”

So Art, as has been stated, is “a certain state of mind, apt to Make, conjoined with true Reason;” its absence, on the contrary, is the same state conjoined with false Reason, and both are employed upon Contingent matter.

Chapter V.

As for Practical Wisdom, we shall ascertain its nature by examining to what kind of persons we in common language ascribe it.[16]

It is thought then to be the property of the Practically Wise man to be able to deliberate well respecting what is good and expedient for himself, not in any definite line,[17] as what is conducive to health or strength, but what to living well. A proof of this is that we call men Wise in this or that, when they calculate well with a view to some good end in a case where there is no definite rule. And so, in a general way of speaking, the man who is good at deliberation will be Practically Wise. Now no man deliberates respecting things which cannot be otherwise than they are, nor such as lie not within the range of his own action: and so, since Knowledge requires strict demonstrative reasoning, of which Contingent matter does not admit (I say Contingent matter, because all matters of deliberation must be Contingent and deliberation cannot take place with respect to things which are Necessarily), Practical Wisdom cannot be Knowledge nor Art; nor the former, because what falls under the province of Doing must be Contingent; not the latter, because Doing and Making are different in kind.

It remains then that it must be “a state of mind true, conjoined with Reason, and apt to Do, having for its object those things which are good or bad for Man:” because of Making something beyond itself is always the object, but cannot be of Doing because the very well-doing is in itself an End.

For this reason we think Pericles and men of that stamp to be Practically Wise, because they can see what is good for themselves and for men in general, and we also think those to be such who are skilled in domestic management or civil government. In fact, this is the reason why we call the habit of perfected self-mastery by the name which in Greek it bears, etymologically signifying “that which preserves the Practical Wisdom:” for what it does preserve is the Notion I have mentioned, _i.e._ of one’s own true interest.[18]

For it is not every kind of Notion which the pleasant and the painful corrupt and pervert, as, for instance, that “the three angles of every rectilineal triangle are equal to two right angles,” but only those bearing on moral action.

For the Principles of the matters of moral action are the final cause of them:[19] now to the man who has been corrupted by reason of pleasure or pain the Principle immediately becomes obscured, nor does he see that it is his duty to choose and act in each instance with a view to this final cause and by reason of it: for viciousness has a tendency to destroy the moral Principle: and so Practical Wisdom must be “a state conjoined with reason, true, having human good for its object, and apt to do.”

Then again Art admits of degrees of excellence, but Practical Wisdom does not:[20] and in Art he who goes wrong purposely is preferable to him who does so unwittingly,[21] but not so in respect of Practical Wisdom or the other Virtues. It plainly is then an Excellence of a certain kind, and not an Art.

Now as there are two parts of the Soul which have Reason, it must be the Excellence of the Opinionative [which we called before calculative or deliberative], because both Opinion and Practical Wisdom are exercised upon Contingent matter. And further, it is not simply a state conjoined with Reason, as is proved by the fact that such a state may be forgotten and so lost while Practical Wisdom cannot.

Chapter VI.

Now Knowledge is a conception concerning universals and Necessary matter, and there are of course certain First Principles in all trains of demonstrative reasoning (that is of all Knowledge because this is connected with reasoning): that faculty, then, which

takes in the first principles of that which comes under the range of Knowledge, cannot be either Knowledge, or Art, or Practical Wisdom: not Knowledge, because what is the object of Knowledge must be derived from demonstrative reasoning; not either of the other two, because they are exercised upon Contingent matter only. Nor can it be Science which takes in these, because the Scientific Man must in some cases depend on demonstrative Reasoning.

It comes then to this: since the faculties whereby we always attain truth and are never deceived when dealing with matter Necessary or even Contingent are Knowledge, Practical Wisdom, Science, and Intuition, and the faculty which takes in First Principles cannot be any of the three first; the last, namely Intuition, must be it which performs this function.

Chapter VII.

Science is a term we use principally in two meanings: in the first place, in the Arts we ascribe it to those who carry their arts to the highest accuracy;[22] Phidias, for instance, we call a Scientific or cunning sculptor; Polycleitus a Scientific or cunning statuary; meaning, in this instance, nothing else by Science than an excellence of art: in the other sense, we think some to be Scientific in a general way, not in any particular line or in any particular thing, just as Homer says of a man in his Margites; “Him the Gods made neither a digger of the ground, nor ploughman, nor in any other way Scientific.”

So it is plain that Science must mean the most accurate of all Knowledge; but if so, then the Scientific man must not merely know the deductions from the First Principles but be in possession of truth respecting the First Principles. So that Science must be equivalent to Intuition and Knowledge; it is, so to speak, Knowledge of the most precious objects, _with a head on_.[23]

I say of the most precious things, because it is absurd to suppose πολιτικ■,[24] or Practical Wisdom, to be the highest, unless it can be shown that Man is the most excellent of all that exists in the Universe. Now if “healthy” and “good” are relative terms, differing when applied to men or to fish, but “white” and “straight” are the same always, men must allow that the Scientific is the same always, but the Practically Wise varies: for whatever provides all things well for itself, to this they would apply the term Practically Wise, and commit these matters to it; which is the reason, by the way, that they call some brutes Practically Wise, such that is as plainly have a faculty of forethought respecting their own subsistence.

And it is quite plain that Science and πολιτικ■ cannot be identical: because if men give the name of Science to that faculty which is employed upon what is expedient for themselves, there will be many instead of one, because there is not one and the same faculty employed on the good of all animals collectively, unless in the same sense as you may say there is one art of healing with respect to all living beings.

If it is urged that man is superior to all other animals, that makes no difference: for there are many other things more Godlike in their nature than Man, as, most obviously, the elements of which the Universe is composed.[25]

It is plain then that Science is the union of Knowledge and Intuition, and has for its objects those things which are most precious in their nature. Accordingly, Anexagoras, Thales, and men of that stamp, people call Scientific, but not Practically Wise because they see them ignorant of what concerns themselves; and they say that what they know is quite out of the common run certainly, and wonderful, and hard, and very fine no doubt, but still useless because they do not seek after what is good for them as men.

Chapter VIII.

But Practical Wisdom is employed upon human matters, and such as are objects of deliberation (for we say, that to deliberate well is most peculiarly the work of the man who possesses this Wisdom), and no man deliberates about things which cannot be otherwise than they are, nor about any save those that have some definite End and this End good resulting from Moral Action; and the man to whom we should give the name of Good in Counsel, simply and without modification, is he who in the way of calculation has a capacity for attaining that of practical goods which is the best for Man.

Nor again does Practical Wisdom consist in a knowledge of general principles only, but it is necessary that one should know also the particular details, because it is apt to act, and action is concerned with details: for which reason sometimes men who have not much knowledge are more practical than others who have; among others, they who derive all they know from actual experience: suppose a man to know, for instance, that light meats are easy of digestion and wholesome, but not what kinds of meat are light, he will not produce a healthy state; that man will have a much better chance of doing so, who knows that the flesh of birds is light and wholesome. Since then Practical Wisdom is apt to act, one ought to have both kinds of knowledge, or, if only one, the knowledge of details rather than of Principles. So there will be in respect of Practical Wisdom the distinction of supreme and subordinate.[26]

Further: πολιτικ■ and Practical Wisdom are the same mental state, but the point of view is not the same.

Of Practical Wisdom exerted upon a community that which I would call the Supreme is the faculty of Legislation; the subordinate, which is concerned with the details, generally has the common name πολιτικ■, and its functions are Action and Deliberation (for the particular enactment is a matter of action, being the ultimate issue of this branch of Practical Wisdom, and therefore people commonly say, that these men alone are really engaged in government, because they alone act, filling the same place relatively to legislators, that workmen do to a master).[27]

Again, that is thought to be Practical Wisdom in the most proper sense which has for its object the interest of the Individual: and this usually appropriates the common name: the others are called respectively Domestic Management, Legislation, Executive Government divided into two branches, Deliberative and Judicial.[28] Now of course, knowledge for one's self is one kind of knowledge, but it admits of many shades of difference: and it is a common notion that the man who knows and busies himself about his own concerns merely is the man of Practical Wisdom, while they who extend their solicitude to society at large are considered meddlesome.

Euripides has thus embodied this sentiment; "How," says one of his Characters, "How foolish am I, who whereas I might have shared equally, idly numbered among the multitude of the army *** for them that are busy and meddlesome [Jove hates]," because the generality of mankind seek their own good and hold that this is their proper business. It is then from this opinion that the notion has arisen that such men are the Practically-Wise. And yet it is just possible that the good of the individual cannot be secured independently of connection with a family or a community. And again, how a man should manage his own affairs is sometimes not quite plain, and must be made a matter of enquiry.[29]

A corroboration of what I have said is[30] the fact, that the young come to be geometricians, and mathematicians, and Scientific in such matters, but it is not thought that a young man can come to be possessed of Practical Wisdom: now the reason is, that this Wisdom has for its object particular facts, which come to be known from experience, which a young man has not because it is produced only by length of time.

By the way, a person might also enquire,[31] why a boy may be made a mathematician but not Scientific or a natural philosopher. Is not this the reason? that mathematics are taken in by the process of abstraction, but the principles of Science[32] and natural philosophy must be gained by experiment; and the latter young men talk of but do not realise, while the nature of the former is plain and clear.

Again, in matter of practice, error attaches either to the general rule, in the process of deliberation, or to the particular fact: for instance, this would be a general rule, "All water of a certain gravity is bad;" the particular fact, "this water is of that gravity."

And that Practical Wisdom is not Knowledge is plain, for it has to do with the ultimate issue,[33] as has been said, because every object of action is of this nature.

To Intuition it is opposed, for this takes in those principles which cannot be proved by reasoning, while Practical Wisdom is concerned with the ultimate particular fact which cannot be realised by Knowledge but by Sense; I do not mean one of the five senses, but the same by which we take in the mathematical fact, that no rectilineal figure can be contained by less than three lines, i.e. that a triangle is the ultimate figure, because here also is a stopping point.

This however is Sense rather than Practical Wisdom, which is of another kind.[34]

Chapter IX.

Now the acts of enquiring and deliberating differ, though deliberating is a kind of enquiring. We ought to ascertain about Good Counsel likewise what it is, whether a kind of Knowledge, or Opinion, or Happy Conjecture, or some other kind of faculty. Knowledge it obviously is not, because men do not enquire about what they know, and Good Counsel is a kind of deliberation, and the man who is deliberating is enquiring and calculating.

Neither is it Happy Conjecture; because this is independent of reasoning, and a rapid operation; but men deliberate a long time, and it is a common saying that one should execute speedily what has been resolved upon in deliberation, but deliberate slowly.

Quick perception of causes[35] again is a different faculty from good counsel, for it is a species of Happy Conjecture. Nor is Good Counsel Opinion of any kind.

Well then, since he who deliberates ill goes wrong, and he who deliberates well does so rightly, it is clear that Good Counsel is rightness of some kind, but not of Knowledge nor of Opinion: for Knowledge cannot be called right because it cannot be wrong, and Rightness of Opinion is Truth: and again, all which is the object of opinion is definitely marked out.[36]

Still, however, Good Counsel is not independent of Reason, Does it remain then that it is a rightness of Intellectual Operation simply, because this does not amount to an assertion; and the objection to Opinion was that it is not a process of enquiry but already a definite assertion; whereas whosoever deliberates, whether well or ill, is engaged in enquiry and calculation.

Well, Good Counsel is a Rightness of deliberation, and so the first question must regard the nature and objects of deliberation. Now remember Rightness is an equivocal term; we plainly do not mean Rightness of any kind whatever; the ■κρατ■ς, for instance, or the bad man, will obtain by his calculation what he sets before him as an object, and so he may be said to have deliberated _rightly_ in one sense, but will have attained a great evil. Whereas to have deliberated well is thought to be a good, because Good Counsel is Rightness of deliberation of such a nature as is apt to attain good.

But even this again you may get by false reasoning, and hit upon the right effect though not through right means,[37] your middle term being fallacious: and so neither will this be yet Good Counsel in consequence of which you get what you ought but not through proper means.

Again, one man may hit on a thing after long deliberation, another quickly. And so that before described will not be yet Good Counsel, but the Rightness must be with reference to what is expedient; and you must have a proper end in view, pursue it in a right manner and right time.

Once more. One may deliberate well either generally or towards some particular End.[38] Good counsel in the general then is that which goes right towards that which is the End in a general way of consideration; in particular, that which does so towards some particular End.

Since then deliberating well is a quality of men possessed of Practical Wisdom, Good Counsel must be “Rightness in respect of what conduces to a given End, of which[39] Practical Wisdom is the true conception.”

Chapter X.

There is too the faculty of Judiciousness, and also its absence, in virtue of which we call men Judicious or the contrary.

Now Judiciousness is neither entirely identical with Knowledge or Opinion (for then all would have been Judicious), nor is it any one specific science, as medical science whose object matter is things wholesome; or geometry whose object matter is magnitude: for it has not for its object things which always exist and are immutable, nor of those things which come into being just any which may chance; but those in respect of which a man might doubt and deliberate.

And so it has the same object matter as Practical Wisdom; yet the two faculties are not identical, because Practical Wisdom has the capacity for commanding and taking the initiative, for its End is “what one should do or not do:” but Judiciousness is only apt to decide upon suggestions (though we do in Greek put “well” on to the faculty and its concrete noun, these really mean exactly the same as the plain words), and Judiciousness is neither the having Practical Wisdom, nor attaining it: but just as learning is termed συνι■ναι when a man uses his knowledge, so judiciousness consists in employing the Opinionative faculty in judging concerning those things which come within the province of Practical Wisdom, when another enunciates them; and not judging merely, but judging well (for ε■ and καλ■ς mean exactly the same thing). And the Greek name of this faculty is derived from the use of the term συνι■ναι in learning: μανθ■νειν and συνι■ναι being often used as synonymous.

The faculty called γν■μη,[40] in right of which we call men ε■γν■μονες, or say they have γν■μη, is “the right judgment of the equitable man.” A proof of which is that we most commonly say that the equitable man has a tendency to make allowance, and the making allowance in certain cases is equitable. And συγγν■μη (the word denoting allowance) is right γν■μη having a capacity of making equitable decisions, By “right” I mean that of the Truthful man.

Chapter XI.

Now all these mental states[41] tend to the same object, as indeed common language leads us to expect: I mean, we speak of γν■μη, Judiciousness, Practical Wisdom, and Practical Intuition, attributing the possession of γν■μη and Practical Intuition to the same Individuals whom we denominate Practically-Wise and Judicious: because all these faculties are employed upon the

extremes,[42] i.e. on particular details; and in right of his aptitude for deciding on the matters which come within the province of the Practically-Wise, a man is Judicious and possessed of good γν■μη; i.e. he is disposed to make allowance, for considerations of equity are entertained by all good men alike in transactions with their fellows.

And all matters of Moral Action belong to the class of particulars, otherwise called extremes: for the man of Practical Wisdom must know them, and Judiciousness and γν■μη are concerned with matters of Moral Actions, which are extremes.

Intuition, moreover, takes in the extremes at both ends:[43] I mean, the first and last terms must be taken in not by reasoning but by Intuition [so that Intuition comes to be of two kinds], and that which belongs to strict demonstrative reasonings takes in immutable, i.e. Necessary, first terms; while that which is employed in practical matters takes in the extreme, the Contingent, and the minor Premiss:[44] for the minor Premisses are the source of the Final Cause, Universals being made up out of Particulars.[45] To take in these, of course, we must have Sense, i.e. in other words Practical Intuition.

And for this reason these are thought to be simply gifts of nature; and whereas no man is thought to be Scientific by nature, men are thought to have γν■μη, and Judiciousness, and Practical Intuition: a proof of which is that we think these faculties are a consequence even of particular ages, and this given age has Practical Intuition and γν■μη, we say, as if under the notion that nature is the cause. And thus Intuition is both the beginning and end, because the proofs are based upon the one kind of extremes and concern the other.

And so[46] one should attend to the undemonstrable dicta and opinions of the skilful, the old and the Practically-Wise, no less than to those which are based on strict reasoning, because they see aright, having gained their power of moral vision from experience.

Chapter XII.

Well, we have now stated the nature and objects of Practical Wisdom and Science respectively, and that they belong each to a different part of the Soul. But I can conceive a person questioning their utility. “Science,” he would say, “concerns itself with none of the causes of human happiness (for it has nothing to do with producing anything): Practical Wisdom has this recommendation, I grant, but where is the need of it, since its province is those things which are just and honourable, and good for man, and these are the things which the good man as such does; but we are not a bit the more apt to do them because we know them, since the Moral Virtues are Habits; just as we are not more apt to be healthy or in good condition from mere knowledge of what relates to these (I mean,[47] of course, things so called not from their producing health, etc., but from their evidencing it in a particular subject), for we are not more apt to be healthy and in good condition merely from knowing the art of medicine or training.

“If it be urged that _knowing what is_ good does not by itself make a Practically-Wise man but _becoming_ good; still this Wisdom will be no use either to those that are good, and so have it already, or to those who have it not; because it will make no difference to them whether they have it themselves or put themselves under the guidance of others who have; and we might be contented to be in respect of this as in respect of health: for though we wish to be healthy still we do not set about learning the art of healing.

“Furthermore, it would seem to be strange that, though lower in the scale than Science, it is to be its master; which it is, because whatever produces results takes the rule and directs in each matter.”

This then is what we are to talk about, for these are the only points now raised.

Now first we say that being respectively Excellences of different parts of the Soul they must be choice-worthy, even on the supposition that they neither of them produce results.

In the next place we say that they _do_ produce results; that Science makes Happiness, not as the medical art but as healthiness makes health:[48] because, being a part of Virtue in its most extensive sense, it makes a man happy by being possessed and by working.

Next, Man’s work _as Man_ is accomplished by virtue of Practical Wisdom and Moral Virtue, the latter giving the right aim and direction, the former the right means to its attainment;[49] but of the fourth part of the Soul, the mere nutritive principle, there is no such Excellence, because nothing is in its power to do or leave undone.[50]

As to our not being more apt to do what is noble and just by reason of possessing Practical Wisdom, we must begin a little higher up,[51] taking this for our starting-point. As we say that men may do things in themselves just and yet not be just men; for instance, when men do what the laws require of them, either against their will, or by reason of ignorance or something else, at all events not

for the sake of the things themselves; and yet they do what they ought and all that the good man should do; so it seems that to be a good man one must do each act in a particular frame of mind, I mean from Moral Choice and for the sake of the things themselves which are done. Now it is Virtue which makes the Moral Choice right, but whatever is naturally required to carry out that Choice comes under the province not of Virtue but of a different faculty. We must halt, as it were, awhile, and speak more clearly on these points.

There is then a certain faculty, commonly named Cleverness, of such a nature as to be able to do and attain whatever conduces to _any_ given purpose: now if that purpose be a good one the faculty is praiseworthy; if otherwise, it goes by a name which, denoting strictly the ability, implies the willingness to do _anything_; we accordingly call the Practically-Wise Clever, and also those who can and will do anything.[52]

Now Practical Wisdom is not identical with Cleverness, nor is it without this power of adapting means to ends: but this Eye of the Soul (as we may call it) does not attain its proper state without goodness, as we have said before and as is quite plain, because the syllogisms into which Moral Action may be analysed have for their Major Premiss,[53] “since —— is the End and the Chief Good”[54] (fill up the blank with just anything you please, for we merely want to exhibit the Form, so that anything will do), but _how_ this blank should be filled is seen only by the good man: because Vice distorts the moral vision and causes men to be deceived in respect of practical principles.[55]

It is clear, therefore, that a man cannot be a Practically-Wise, without being a good, man.

We must enquire again also about Virtue: for it may be divided into Natural Virtue and Matured, which two bear to each other a relation similar to that which Practical Wisdom bears to Cleverness, one not of identity but resemblance. I speak of Natural Virtue, because men hold that each of the moral dispositions attach to us all somehow by nature: we have dispositions[56] towards justice, self-mastery and courage, for instance, immediately from our birth: but still we seek Goodness in its highest sense as something distinct from these, and that these dispositions should attach to us in a somewhat different fashion.[57] Children and brutes have these natural states, but then they are plainly hurtful unless combined with an intellectual element: at least thus much is matter of actual experience and observation, that as a strong body destitute of sight must, if set in motion, fall violently because it has not sight, so it is also in the case we are considering: but if it can get the intellectual element it then excels in acting. Just so the Natural State of Virtue, being like this strong body, will then be Virtue in the highest sense when it too is combined with the intellectual element.

So that, as in the case of the Opinionative faculty, there are two forms, Cleverness and Practical Wisdom; so also in the case of the Moral there are two, Natural Virtue and Matured; and of these the latter cannot be formed without Practical Wisdom.[58]

This leads some to say that all the Virtues are merely intellectual Practical Wisdom, and Socrates was partly right in his enquiry and partly wrong: wrong in that he thought all the Virtues were merely intellectual Practical Wisdom, right in saying they were not independent of that faculty.

A proof of which is that now all, in defining Virtue, add on the “state” [mentioning also to what standard it has reference, namely that] “which is accordant with Right Reason:” now “right” means in accordance with Practical Wisdom. So then all seem to have an instinctive notion that that state which is in accordance with Practical Wisdom is Virtue; however, we must make a slight change in their statement, because that state is Virtue, not merely which is in accordance with but which implies the possession of Right Reason; which, upon such matters, is Practical Wisdom. The difference between us and Socrates is this: he thought the Virtues were reasoning processes (_i.e._ that they were all instances of Knowledge in its strict sense), but we say they imply the possession of Reason.

From what has been said then it is clear that one cannot be, strictly speaking, good without Practical Wisdom nor Practically-Wise without moral goodness.

And by the distinction between Natural and Matured Virtue one can meet the reasoning by which it might be argued “that the Virtues are separable because the same man is not by nature most inclined to all at once so that he will have acquired this one before he has that other:” we would reply that this is possible with respect to the Natural Virtues but not with respect to those in right of which a man is denominated simply good: because they will all belong to him together with the one faculty of Practical Wisdom.

It is plain too that even had it not been apt to act we should have needed it, because it is the Excellence of a part of the Soul; and that the moral choice cannot be right independently of Practical Wisdom and Moral Goodness; because this gives the right End,

that causes the doing these things which conduce to the End.

Then again, it is not Master of Science (i.e. of the superior part of the Soul), just as neither is the healing art Master of health; for it does not make use of it, but looks how it may come to be: so it commands for the sake of it but does not command it.

The objection is, in fact, about as valid as if a man should say πολιτικ■ governs the gods because it gives orders about all things in the communty.

APPENDIX

On ■πισπ■μη, from I. Post. Analyt. chap. i. and ii.

(Such parts only are translated as throw light on the Ethics.)

All teaching, and all intellectual learning, proceeds on the basis of previous knowledge, as will appear on an examination of all. The Mathematical Sciences, and every other system, draw their conclusions in this method. So too of reasonings, whether by syllogism, or induction: for both teach through what is previously known, the former assuming the premisses as from wise men, the latter proving universals from the evidentness of the particulars. In like manner too rhetoricians persuade, either through examples (which amounts to induction), or through enthymemes (which amounts to syllogism).

CHAP. II

Well, we suppose that we _know_ things (in the strict and proper sense of the word) when we suppose ourselves to know the cause by reason of which the thing is to be the cause of it; and that this cannot be otherwise. It is plain that the idea intended to be conveyed by the term _knowing_ is something of this kind; because they who do not really know suppose themselves thus related to the matter in hand and they who do know really are so that of whatsoever there is properly speaking Knowledge this cannot be otherwise than it is Whether or no there is another way of knowing we will say afterwards, but we do say that we know through demonstration, by which I mean a syllogism apt to produce Knowledge, i.e. in right of which through having it, we know.

If Knowledge then is such as we have described it, the Knowledge produced by demonstrative reasoning must be drawn from premisses _true_ and _first_, and _incapable of syllogistic proof_, and _better known_, and _prior in order of time_, and _causes of the conclusion_, for so the principles will be akin to the conclusion demonstrated.

(Syllogism, of course there may be without such premisses, but it will not be demonstration because it will not produce knowledge).

True, they must be, because it is impossible to know that which is not.

First, that is indemonstrable, because, if demonstrable, he cannot be said to _know_ them who has no demonstration of them for knowing such things as are demonstrable is the same as having demonstration of them.

Causes they must be, and _better known_, and _prior_ in time, _causes_, because we then know when we are acquainted with the cause, and _prior_, if causes, and _known beforehand_, not merely comprehended in idea but known to exist (The terms prior, and better known, bear two senses for _prior by nature_ and _prior relatively to ourselves_ are not the same, nor _better known by nature_, and _better known to us_ I mean, by _prior_ and _better known relatively to ourselves_, such things as are nearer to sensation, but abstractedly so such as are further Those are furthest which are most universal those nearest which are particulars, and these are mutually opposed.)

And by _first_, I mean _principles akin to the conclusion_, for principle means the same as first And the principle or first step in demonstration is a proposition incapable of syllogistic proof, _i.e._ one to which there is none prior. Now of such syllogistic principles I call that a θ■σις which you cannot demonstrate, and which is unnecessary with a view to learning something else. That which is necessary in order to learn something else is an Axiom.

Further, since one is to believe and know the thing by having a syllogism of the kind called demonstration, and what constitutes it to be such is the nature of the premisses, it is necessary not merely to _know before_, but to _know better than the conclusion_, either all or at least some of, the principles, because that which is the cause of a quality inhering in something else always inheres itself more as the cause of our loving is itself more lovable. So, since the principles are the cause of our knowing and behoving we know and believe them more, because by reason of them we know also the conclusion following.

Further: the man who is to have the Knowledge which comes through demonstration must not merely know and believe his principles better than he does his conclusion, but he must believe nothing more firmly than the contradictories of those principles out of which the contrary fallacy may be constructed: since he who _knows_, is to be simply and absolutely infallible.

BOOK VII

Chapter I.

Next we must take a different point to start from,[1] and observe that of what is to be avoided in respect of moral character there are three forms; Vice, Imperfect Self-Control, and Brutishness. Of the two former it is plain what the contraries are, for we call the one Virtue, the other Self-Control; and as answering to Brutishness it will be most suitable to assign Superhuman, i.e. heroical and godlike Virtue, as, in Homer, Priam says of Hector “that he was very excellent, nor was he like the offspring of mortal man, but of a god.” and so, if, as is commonly said, men are raised to the position of gods by reason of very high excellence in Virtue, the state opposed to the Brutish will plainly be of this nature: because as brutes are not virtuous or vicious so neither are gods; but the state of these is something more precious than Virtue, of the former something different in kind from Vice.

And as, on the one hand, it is a rare thing for a man to be godlike (a term the Lacedæmonians are accustomed to use when they admire a man exceedingly; σε■ος ■ν■ρ they call him), so the brutish man is rare; the character is found most among barbarians, and some cases of it are caused by disease or maiming; also such men as exceed in vice all ordinary measures we therefore designate by this opprobrious term. Well, we must in a subsequent place make some mention of this disposition, and Vice has been spoken of before: for the present we must speak of Imperfect Self-Control and its kindred faults of Softness and Luxury, on the one hand, and of Self-Control and Endurance on the other; since we are to conceive of them, not as being the same states exactly as Virtue and Vice respectively, nor again as differing in kind.

And we should adopt the same course as before, i.e. state the phenomena, and, after raising and discussing difficulties which suggest themselves, then exhibit, if possible, all the opinions afloat respecting these affections of the moral character; or, if not all, the greater part and the most important: for we may consider we have illustrated the matter sufficiently when the difficulties have been solved, and such theories as are most approved are left as a residuum.

The chief points may be thus enumerated. It is thought,

I. That Self-Control and Endurance belong to the class of things good and praiseworthy, while Imperfect Self-Control and Softness belong to that of things low and blameworthy.

II. That the man of Self-Control is identical with the man who is apt to abide by his resolution, and the man of Imperfect Self-Control with him who is apt to depart from his resolution.

III. That the man of Imperfect Self-Control does things at the instigation of his passions, knowing them to be wrong, while the man of Self-Control, knowing his lusts to be wrong, refuses, by the influence of reason, to follow their suggestions.

IV. That the man of Perfected Self-Mastery unites the qualities of Self-Control and Endurance, and some say that every one who unites these is a man of Perfect Self-Mastery, others do not.

V. Some confound the two characters of the man who has _no_ Self-Control, and the man of _Imperfect Self-Control_, while others distinguish between them.

VI. It is sometimes said that the man of Practical Wisdom cannot be a man of Imperfect Self-Control, sometimes that men who are Practically Wise and Clever are of Imperfect Self-Control.

VII. Again, men are said to be of Imperfect Self-Control, not simply but with the addition of the thing wherein, as in respect of anger, of honour, and gain.

These then are pretty well the common statements.

Chapter II.

Now a man may raise a question as to the nature of the right conception in violation of which a man fails of Self-Control.

That he can so fail when _knowing_ in the strict sense what is right some say is impossible: for it is a strange thing, as Socrates thought, that while Knowledge is present in his mind something else should master him and drag him about like a slave. Socrates in fact contended generally against the theory, maintaining there is no such state as that of Imperfect Self-Control, for that no one acts contrary to what is best conceiving it to be best but by reason of ignorance what is best.

With all due respect to Socrates, his account of the matter is at variance with plain facts, and we must enquire with respect to the affection, if it be caused by ignorance what is the nature of the ignorance: for that the man so failing does not suppose his acts to be right before he is under the influence of passion is quite plain.[2]

There are people who partly agree with Socrates and partly not: that nothing can be stronger than Knowledge they agree, but that no man acts in contravention of his conviction of what is better they do not agree; and so they say that it is not Knowledge, but only Opinion, which the man in question has and yet yields to the instigation of his pleasures.

But then, if it is Opinion and not Knowledge, that is it the opposing conception be not strong but only mild (as in the case of real doubt), the not abiding by it in the face of strong lusts would be excusable: but wickedness is not excusable, nor is anything which deserves blame.

Well then, is it Practical Wisdom which in this case offers opposition: for that is the strongest principle? The supposition is absurd, for we shall have the same man uniting Practical Wisdom and Imperfect Self-Control, and surely no single person would maintain that it is consistent with the character of Practical Wisdom to do voluntarily what is very wrong; and besides we have shown before that the very mark of a man of this character is aptitude to act, as distinguished from mere knowledge of what is right; because he is a man conversant with particular details, and possessed of all the other virtues.

Again, if the having strong and bad lusts is necessary to the idea of the man of Self-Control, this character cannot be identical with the man of Perfected Self-Mastery, because the having strong desires or bad ones does not enter into the idea of this latter character: and yet the man of Self-Control must have such: for suppose them good; then the moral state which should hinder a man from following their suggestions must be bad, and so Self-Control would not be in all cases good: suppose them on the other hand to be weak and not wrong, it would be nothing grand; nor anything great, supposing them to be wrong and weak.

Again, if Self-Control makes a man apt to abide by all opinions without exception, it may be bad, as suppose the case of a false opinion: and if Imperfect Self-Control makes a man apt to depart from all without exception, we shall have cases where it will be good; take that of Neoptolemus in the Philoctetes of Sophocles, for instance: he is to be praised for not abiding by what he was persuaded to by Ulysses, because he was pained at being guilty of falsehood.

Or again, false sophistical reasoning presents a difficulty: for because men wish to prove paradoxes that they may be counted clever when they succeed, the reasoning that has been used becomes a difficulty: for the intellect is fettered; a man being unwilling to abide by the conclusion because it does not please his judgment, but unable to advance because he cannot disentangle the web of sophistical reasoning.

Or again, it is conceivable on this supposition that folly joined with Imperfect Self-Control may turn out, in a given case, goodness: for by reason of his imperfection of self-control a man acts in a way which contradicts his notions; now his notion is that what is really good is bad and ought not to be done; and so he will eventually do what is good and not what is bad.

Again, on the same supposition, the man who acting on conviction pursues and chooses things because they are pleasant must be thought a better man than he who does so not by reason of a quasi-rational conviction but of Imperfect Self-Control: because he is more open to cure by reason of the possibility of his receiving a contrary conviction. But to the man of Imperfect Self-Control would apply the proverb, “when water chokes, what should a man drink then?” for had he never been convinced at all in respect of what he does,[3] then by a conviction in a contrary direction he might have stopped in his course; but now though he has had convictions he notwithstanding acts against them.

Again, if any and every thing is the object-matter of Imperfect and Perfect Self-Control, who is the man of Imperfect Self-Control simply? because no one unites all cases of it, and we commonly say that some men are so simply, not adding any particular thing in which they are so.

Well, the difficulties raised are pretty near such as I have described them, and of these theories we must remove some and leave others as established; because the solving of a difficulty is a positive act of establishing something as true.

Chapter III.

Now we must examine first whether men of Imperfect Self-Control act with a knowledge of what is right or not: next, if with such knowledge, in what sense; and next what are we to assume is the object-matter of the man of Imperfect Self-Control, and of the man of Self-Control; I mean, whether pleasure and pain of all kinds or certain definite ones; and as to Self-Control and Endurance, whether these are designations of the same character or different. And in like manner we must go into all questions which are connected with the present.

But the real starting point of the enquiry is, whether the two characters of Self-Control and Imperfect Self-Control are distinguished by their object-matter, or their respective relations to it. I mean, whether the man of Imperfect Self-Control is such simply by virtue of having such and such object-matter; or not, but by virtue of his being related to it in such and such a way, or by virtue of both: next, whether Self-Control and Imperfect Self-Control are unlimited in their object-matter: because he who is designated without any addition a man of Imperfect Self-Control is not unlimited in his object-matter, but has exactly the same as the man who has lost all Self-Control: nor is he so designated because of his relation to this object-matter merely (for then his character would be identical with that just mentioned, loss of all Self-Control), but because of his relation to it being such and such. For the man who has lost all Self-Control is led on with deliberate moral choice, holding that it is his line to pursue pleasure as it rises: while the man of Imperfect Self-Control does not think that he ought to pursue it, but does pursue it all the same.

Now as to the notion that it is True Opinion and not Knowledge in contravention of which men fail in Self-Control, it makes no difference to the point in question, because some of those who hold Opinions have no doubt about them but suppose themselves to have accurate Knowledge; if then it is urged that men holding Opinions will be more likely than men who have Knowledge to act in contravention of their conceptions, as having but a moderate belief in them; we reply, Knowledge will not differ in this respect from Opinion: because some men believe their own Opinions no less firmly than others do their positive Knowledge: Heraclitus is a case in point.

Rather the following is the account of it: the term _knowing_ has two senses; both the man who does not use his Knowledge, and he who does, are said to _know_: there will be a difference between a man's acting wrongly, who though possessed of Knowledge does not call it into operation, and his doing so who has it and actually exercises it: the latter is a strange case, but the mere having, if not exercising, presents no anomaly.

Again, as there are two kinds of propositions affecting action,[4] universal and particular, there is no reason why a man may not act against his Knowledge, having both propositions in his mind, using the universal but not the particular, for the particulars are the objects of moral action.

There is a difference also in universal propositions;[5] a universal proposition may relate partly to a man's self and partly to the thing in question: take the following for instance; "dry food is good for every man," this may have the two minor premisses, "this is a man," and "so and so is dry food;" but whether a given substance is so and so a man either has not the Knowledge or does not exert it. According to these different senses there will be an immense difference, so that for a man to _know_ in the one sense, and yet act wrongly, would be nothing strange, but in any of the other senses it would be a matter for wonder.

Again, men may have Knowledge in a way different from any of those which have been now stated: for we constantly see a man's state so differing by having and not using Knowledge, that he has it in a sense and also has not; when a man is asleep, for instance, or mad, or drunk: well, men under the actual operation of passion are in exactly similar conditions; for anger, lust, and some other such-like things, manifestly make changes even in the body, and in some they even cause madness; it is plain then that we must say the men of Imperfect Self-Control are in a state similar to these.

And their saying what embodies Knowledge is no proof of their actually then exercising it, because they who are under the operation of these passions repeat demonstrations; or verses of Empedocles,[6] just as children, when first learning, string words together, but as yet know nothing of their meaning, because they must grow into it, and this is a process requiring time: so that we must suppose these men who fail in Self-Control to say these moral sayings just as actors do.

Furthermore, a man may look at the account of the phænomenon in the following way, from an examination of the actual working of the mind: All action may be analysed into a syllogism, in which the one premiss is an universal maxim and the other concerns particulars of which Sense [moral or physical, as the case may be] is cognisant: now when one results from these two, it follows necessarily that, as far as theory goes the mind must assert the conclusion, and in practical propositions the man must act

accordingly.

For instance, let the universal be, “All that is sweet should be tasted,” the particular, “This is sweet;” it follows necessarily that he who is able and is not hindered should not only draw, but put in practice, the conclusion “This is to be tasted.” When then there is in the mind one universal proposition forbidding to taste, and the other “All that is sweet is pleasant” with its minor “This is sweet” (which is the one that really works), and desire happens to be in the man, the first universal bids him avoid this but the desire leads him on to taste; for it has the power of moving the various organs: and so it results that he fails in Self-Control, in a certain sense under the influence of Reason and Opinion not contrary in itself to Reason but only accidentally so; because it is the desire that is contrary to Right Reason, but not the Opinion:[7] and so for this reason brutes are not accounted of Imperfect Self-Control, because they have no power of conceiving universals but only of receiving and retaining particular impressions.

As to the manner in which the ignorance is removed and the man of Imperfect Self-Control recovers his Knowledge, the account is the same as with respect to him who is drunk or asleep, and is not peculiar to this affection, so physiologists[8] are the right people to apply to. But whereas the minor premiss of every practical syllogism is an opinion on matter cognisable by Sense and determines the actions; he who is under the influence of passion either has not this, or so has it that his having does not amount to _knowing_ but merely saying, as a man when drunk might repeat Empedocles’ verses; and because the minor term[9] is neither universal, nor is thought to have the power of producing Knowledge in like manner as the universal term: and so the result which Socrates was seeking comes out, that is to say, the affection does not take place in the presence of that which is thought to be specially and properly Knowledge, nor is this dragged about by reason of the affection, but in the presence of that Knowledge which is conveyed by Sense.

Let this account then be accepted of the question respecting the failure in Self-Control, whether it is with Knowledge, and the manner in which such failure is possible or not, though a man possesses Knowledge.

Chapter IV.

The next question to be discussed is whether there is a character to be designated by the term “of Imperfect Self-Control” simply, or whether all who are so are to be accounted such, in respect of some particular thing; and, if there is such a character, what is his object-matter.

Now that pleasures and pains are the object-matter of men of Self-Control and of Endurance, and also of men of Imperfect Self-Control and Softness, is plain.

Further, things which produce pleasure are either necessary, or objects of choice in themselves but yet admitting of excess. All bodily things which produce pleasure are necessary; and I call such those which relate to food and other grosser appetities, in short such bodily things as we assumed were the Object-matter of absence of Self-Control and of Perfected Self-Mastery.

The other class of objects are not necessary, but objects of choice in themselves: I mean, for instance, victory, honour, wealth, and such-like good or pleasant things. And those who are excessive in their liking for such things contrary to the principle of Right Reason which is in their own breasts we do not designate men of Imperfect Self-Control simply, but with the addition of the thing wherein, as in respect of money, or gain, or honour, or anger, and not simply; because we consider them as different characters and only having that title in right of a kind of resemblance (as when we add to a man’s name “conqueror in the Olympic games” the account of him as Man differs but little from the account of him as the Man who conquered in the Olympic games, but still it is different). And a proof of the real difference between these so designated with an addition and those simply so called is this, that Imperfect Self-Control is blamed, not as an error merely but also as being a vice, either wholly or partially; but none of these other cases is so blamed.

But of those who have for their object-matter the bodily enjoyments, which we say are also the object-matter of the man of Perfected Self-Mastery and the man who has lost all Self-Control, he that pursues excessive pleasures and too much avoids[10] things which are painful (as hunger and thirst, heat and cold, and everything connected with touch and taste), not from moral choice but in spite of his moral choice and intellectual conviction, is termed “a man of Imperfect Self-Control,” not with the addition of any particular object-matter as we do in respect of want of control of anger but simply.

And a proof that the term is thus applied is that the kindred term “Soft” is used in respect of these enjoyments but not in respect of any of those others. And for this reason we put into the same rank the man of Imperfect Self-Control, the man who has lost it entirely, the man who has it, and the man of Perfected Self-Mastery; but not any of those other characters, because the former

have for their object-matter the same pleasures and pains: but though they have the same object-matter, they are not related to it in the same way, but two of them act upon moral choice, two without it. And so we should say that man is more entirely given up to his passions who pursues excessive pleasures, and avoids moderate pains, being either not at all, or at least but little, urged by desire, than the man who does so because his desire is very strong: because we think what would the former be likely to do if he had the additional stimulus of youthful lust and violent pain consequent on the want of those pleasures which we have denominated necessary?

Well then, since of desires and pleasures there are some which are in kind honourable and good (because things pleasant are divisible, as we said before, into such as are naturally objects of choice, such as are naturally objects of avoidance, and such as are in themselves indifferent, money, gain, honour, victory, for instance); in respect of all such and those that are indifferent, men are blamed not merely[11] for being affected by or desiring or liking them, but for exceeding in any way in these feelings.

And so they are blamed, whosoever in spite of Reason are mastered by, that is pursue, any object, though in its nature noble and good; they, for instance, who are more earnest than they should be respecting honour, or their children or parents; not but what these are good objects and men are praised for being earnest about them: but still they admit of excess; for instance, if any one, as Niobe did, should fight even against the gods, or feel towards his father as Satyrus, who got therefrom the nickname of φιλοπ■τωρ, because he was thought to be very foolish.

Now depravity there is none in regard of these things, for the reason assigned above, that each of them in itself is a thing naturally choice-worthy, yet the excesses in respect of them are wrong and matter for blame: and similarly there is no Imperfect Self-Control in respect of these things; that being not merely a thing that should be avoided but blameworthy.

But because of the resemblance of the affection to the Imperfection of Self-Control the term is used with the addition in each case of the particular object-matter, just as men call a man a bad physician, or bad actor, whom they would not think of calling simply bad. As then in these cases we do not apply the term simply because each of the states is not a vice, but only like a vice in the way of analogy,[12] so it is plain that in respect of Imperfect Self-Control and Self-Control we must limit the names to those states which have the same object-matter as Perfected Self-Mastery and utter loss of Self-Control, and that we do apply it to the case of anger only in the way of resemblance: for which reason, with an addition, we designate a man of Imperfect Self-Control in respect of anger, as of honour or of gain.

Chapter V.

As there are some things naturally pleasant, and of these two kinds; those, namely, which are pleasant generally, and those which are so relatively to particular kinds of animals and men; so there are others which are not naturally pleasant but which come to be so in consequence either of maimings, or custom, or depraved natural tastes: and one may observe moral states similar to those we have been speaking of, having respectively these classes of things for their object-matter.

I mean the Brutish, as in the case of the female who, they say, would rip up women with child and eat the foetus; or the tastes which are found among the savage tribes bordering on the Pontus, some liking raw flesh, and some being cannibals, and some lending one another their children to make feasts of; or what is said of Phalaris. These are instances of Brutish states, caused in some by disease or madness; take, for instance, the man who sacrificed and ate his mother, or him who devoured the liver of his fellow-servant. Instances again of those caused by disease or by custom, would be, plucking out of hair, or eating one's nails, or eating coals and earth.[13] Now wherever nature is really the cause no one would think of calling men of Imperfect Self-Control, ... nor, in like manner, such as are in a diseased state through custom.

The having any of these inclinations is something foreign to what is denominated Vice, just as Brutishness is: and when a man has them his mastering them is not properly Self-Control, nor his being mastered by them Imperfection of Self-Control in the proper sense, but only in the way of resemblance; just as we may say a man of ungovernable wrath fails of Self-Control in respect of anger but not simply fails of Self-Control. For all excessive folly, cowardice, absence of Self-Control, or irritability, are either Brutish or morbid. The man, for instance, who is naturally afraid of all things, even if a mouse should stir, is cowardly after a Brutish sort; there was a man again who, by reason of disease, was afraid of a cat: and of the fools, they who are naturally destitute of Reason and live only by Sense are Brutish, as are some tribes of the far-off barbarians, while others who are so by reason of diseases, epileptic or frantic, are in morbid states.

So then, of these inclinations, a man may sometimes merely have one without yielding to it: I mean, suppose that Phalaris had restrained his unnatural desire to eat a child: or he may both have and yield to it. As then Vice when such as belongs to human nature is called Vice simply, while the other is so called with the addition of “brutish” or “morbid,” but not simply Vice, so manifestly there is Brutish and Morbid Imperfection of Self-Control, but that alone is entitled to the name without any qualification which is of the nature of utter absence of Self-Control, as it is found in Man.

Chapter VI.

It is plain then that the object-matter of Imperfect Self-Control and Self-Control is restricted to the same as that of utter absence of Self-Control and that of Perfected Self-Mastery, and that the rest is the object-matter of a different species so named metaphorically and not simply: we will now examine the position, “that Imperfect Self-Control in respect of Anger is less disgraceful than that in respect of Lusts.”

In the first place, it seems that Anger does in a way listen to Reason but mishears it; as quick servants who run out before they have heard the whole of what is said and then mistake the order; dogs, again, bark at the slightest stir, before they have seen whether it be friend or foe; just so Anger, by reason of its natural heat and quickness, listening to Reason, but without having heard the command of Reason, rushes to its revenge. That is to say, Reason or some impression on the mind shows there is insolence or contempt[14] in the offender, and then Anger, reasoning as it were that one ought to fight against what is such, fires up immediately: whereas Lust, if Reason or Sense, as the case may be, merely says a thing is sweet, rushes to the enjoyment of it: and so Anger follows Reason in a manner, but Lust does not and is therefore more disgraceful: because he that cannot control his anger yields in a manner to Reason, but the other to his Lust and not to Reason at all.

Again, a man is more excusable for following such desires as are natural, just as he is for following such Lusts as are common to all and to that degree in which they are common. Now Anger and irritability are more natural than Lusts when in excess and for objects not necessary. (This was the ground of the defence the man made who beat his father, “My father,” he said, “used to beat his, and his father his again, and this little fellow here,” pointing to his child, “will beat me when he is grown a man: it runs in the family.” And the father, as he was being dragged along, bid his son leave off beating him at the door, because he had himself been used to drag his father so far and no farther.)

Again, characters are less unjust in proportion as they involve less insidiousness. Now the Angry man is not insidious, nor is Anger, but quite open: but Lust is: as they say of Venus,

“Cyprus-born Goddess, _weaver of deceits_”

Or Homer of the girdle called the Cestus,

“Persuasiveness _cheating_ e’en the subtlest mind.”

And so since this kind of Imperfect Self-Control is more unjust, it is also more disgraceful than that in respect of Anger, and is simply Imperfect Self-Control, and Vice in a certain sense.

Again, no man feels pain in being insolent, but every one who acts through Anger does act with pain; and he who acts insolently does it with pleasure. If then those things are most unjust with which we have most right to be angry, then Imperfect Self-Control, arising from Lust, is more so than that arising from Anger: because in Anger there is no insolence.[15]

Well then, it is clear that Imperfect Self-Control in respect of Lusts is more disgraceful than that in respect of Anger, and that the object-matter of Self-Control, and the Imperfection of it, are bodily Lusts and pleasures; but of these last we must take into account the differences; for, as was said at the commencement, some are proper to the human race and natural both in kind and degree, others Brutish, and others caused by maimings and diseases.

Now the first of these only are the object-matter of Perfected Self-Mastery and utter absence of Self-Control; and therefore we never attribute either of these states to Brutes (except metaphorically, and whenever any one kind of animal differs entirely from another in insolence, mischievousness, or voracity), because they have not moral choice or process of deliberation, but are quite different from that kind of creature just as are madmen from other men.

Brutishness is not so low in the scale as Vice, yet it is to be regarded with more fear: because it is not that the highest principle has been corrupted, as in the human creature, but the subject has it not at all.

It is much the same, therefore, as if one should compare an inanimate with an animate being, which were the worse: for the badness of that which has no principle of origination is always less harmful; now Intellect is a principle of origination. A similar case would be the comparing injustice and an unjust man together: for in different ways each is the worst: a bad man would produce ten thousand times as much harm as a bad brute.

Chapter VII.

Now with respect to the pleasures and pains which come to a man through Touch and Taste, and the desiring or avoiding such (which we determined before to constitute the object-matter of the states of utter absence of Self-Control and Perfected Self-Mastery), one may be so disposed as to yield to temptations to which most men would be superior, or to be superior to those to which most men would yield: in respect of pleasures, these characters will be respectively the man of Imperfect Self-Control, and the man of Self-Control; and, in respect of pains, the man of Softness and the man of Endurance: but the moral state of most men is something between the two, even though they lean somewhat to the worse characters.

Again, since of the pleasures indicated some are necessary and some are not, others are so to a certain degree but not the excess or defect of them, and similarly also of Lusts and pains, the man who pursues the excess of pleasant things, or such as are in themselves excess, or from moral choice, for their own sake, and not for anything else which is to result from them, is a man utterly void of Self-Control: for he must be incapable of remorse, and so incurable, because he that has not remorse is incurable. (He that has too little love of pleasure is the opposite character, and the man of Perfected Self-Mastery the mean character.) He is of a similar character who avoids the bodily pains, not because he _cannot_, but because he _chooses not to_, withstand them.

But of the characters who go wrong without _choosing_ so to do, the one is led on by reason of pleasure, the other because he avoids the pain it would cost him to deny his lust; and so they are different the one from the other. Now every one would pronounce a man worse for doing something base without any impulse of desire, or with a very slight one, than for doing the same from the impulse of a very strong desire; for striking a man when not angry than if he did so in wrath: because one naturally says, “What would he have done had he been under the influence of passion?” (and on this ground, by the bye, the man utterly void of Self-Control is worse than he who has it imperfectly). However, of the two characters which have been mentioned,[16] [as included in that of utter absence of Self-Control], the one is rather Softness, the other properly the man of no Self-Control.

Furthermore, to the character of Imperfect Self-Control is opposed that of Self-Control, and to that of Softness that of Endurance: because Endurance consists in continued resistance but Self-Control in actual mastery, and continued resistance and actual mastery are as different as not being conquered is from conquering; and so Self-Control is more choice-worthy than Endurance.

Again, he who fails when exposed to those temptations against which the common run of men hold out, and are well able to do so, is Soft and Luxurious (Luxury being a kind of Softness): the kind of man, I mean, to let his robe drag in the dirt to avoid the trouble of lifting it, and who, aping the sick man, does not however suppose himself wretched though he is like a wretched man. So it is too with respect to Self-Control and the Imperfection of it: if a man yields to pleasures or pains which are violent and excessive it is no matter for wonder, but rather for allowance if he made what resistance he could (instances are, Philoctetes in Theodectes’ drama when wounded by the viper; or Cercyon in the Alope of Carcinus, or men who in trying to suppress laughter burst into a loud continuous fit of it, as happened, you remember, to Xenophantus), but it is a matter for wonder when a man yields to and cannot contend against those pleasures or pains which the common herd are able to resist; always supposing his failure not to be owing to natural constitution or disease, I mean, as the Scythian kings are constitutionally Soft, or the natural difference between the sexes.

Again, the man who is a slave to amusement is commonly thought to be destitute of Self-Control, but he really is Soft; because amusement is an act of relaxing, being an act of resting, and the character in question is one of those who exceed due bounds in respect of this.

Moreover of Imperfect Self-Control there are two forms, Precipitancy and Weakness: those who have it in the latter form though they have made resolutions do not abide by them by reason of passion; the others are led by passion because they have never formed any resolutions at all: while there are some who, like those who by tickling themselves beforehand get rid of ticklishness, having felt and seen beforehand the approach of temptation, and roused up themselves and their resolution, yield not to passion; whether the temptation be somewhat pleasant or somewhat painful. The Precipitate form of Imperfect Self-Control they are most liable to who are constitutionally of a sharp or melancholy temperament: because the one by reason of the swiftness, the other by reason of the violence, of their passions, do not wait for Reason, because they are disposed to follow whatever notion is impressed upon their minds.

Again, the man utterly destitute of Self-Control, as was observed before, is not given to remorse: for it is part of his character that he abides by his moral choice: but the man of Imperfect Self-Control is almost made up of remorse: and so the case is not as we determined it before, but the former is incurable and the latter may be cured: for depravity is like chronic diseases, dropsy and consumption for instance, but Imperfect Self-Control is like acute disorders: the former being a continuous evil, the latter not so. And, in fact, Imperfect Self-Control and Confirmed Vice are different in kind: the latter being imperceptible to its victim, the former not so.[17]

But, of the different forms of Imperfect Self-Control, those are better who are carried off their feet by a sudden access of temptation than they who have Reason but do not abide by it; these last being overcome by passion less in degree, and not wholly without premeditation as are the others: for the man of Imperfect Self-Control is like those who are soon intoxicated and by little wine and less than the common run of men.

Well then, that Imperfection of Self-Control is not Confirmed Viciousness is plain: and yet perhaps it is such in a way, because in one sense it is contrary to moral choice and in another the result of it:[18] at all events, in respect of the actions, the case is much like what Demodocus said of the Miletians. “The people of Miletus are not fools, but they do just the kind of things that fools do;” and so they of Imperfect Self-Control are not unjust, but they do unjust acts.

But to resume. Since the man of Imperfect Self-Control is of such a character as to follow bodily pleasures in excess and in defiance of Right Reason, without acting on any deliberate conviction, whereas the man utterly destitute of Self-Control does act upon a conviction which rests on his natural inclination to follow after these pleasures; the former may be easily persuaded to a different course, but the latter not: for Virtue and Vice respectively preserve and corrupt the moral principle; now the motive is the principle or starting point in moral actions, just as axioms and postulates are in mathematics: and neither in morals nor mathematics is it Reason which is apt to teach the principle; but Excellence, either natural or acquired by custom, in holding right notions with respect to the principle. He who does this in morals is the man of Perfected Self-Mastery, and the contrary character is the man utterly destitute of Self-Control.

Again, there is a character liable to be taken off his feet in defiance of Right Reason because of passion; whom passion so far masters as to prevent his acting in accordance with Right Reason, but not so far as to make him be convinced that it is his proper line to follow after such pleasures without limit: this character is the man of Imperfect Self- Control, better than he who is utterly destitute of it, and not a bad man simply and without qualification: because in him the highest and best part, i.e. principle, is preserved: and there is another character opposed to him who is apt to abide by his resolutions, and not to depart from them; at all events, not at the instigation of passion.

It is evident then from all this, that Self-Control is a good state and the Imperfection of it a bad one.

Chapter VIII.

Next comes the question, whether a man is a man of Self-Control for abiding by his conclusions and moral choice be they of what kind they may, or only by the right one; or again, a man of Imperfect Self-Control for not abiding by his conclusions and moral choice be they of whatever kind; or, to put the case we did before, is he such for not abiding by false conclusions and wrong moral choice?

Is not this the truth, that _incidentally_ it is by conclusions and moral choice of any kind that the one character abides and the other does not, but _per se_ true conclusions and right moral choice:[19] to explain what is meant by incidentally, and _per se_; suppose a man chooses or pursues this thing for the sake of that, he is said to pursue and choose that _per se_, but this only incidentally. For the term _per se_ we use commonly the word “simply,” and so, in a way, it is opinion of any kind soever by which the two characters respectively abide or not, but he is “simply” entitled to the designations who abides or not by the true opinion.

There are also people, who have a trick of abiding by their, own opinions, who are commonly called Positive, as they who are hard to be persuaded, and whose convictions are not easily changed: now these people bear some resemblance to the character of Self-Control, just as the prodigal to the liberal or the rash man to the brave, but they are different in many points. The man of Self-Control does not change by reason of passion and lust, yet when occasion so requires he will be easy of persuasion: but the Positive man changes not at the call of Reason, though many of this class take up certain desires and are led by their pleasures. Among the class of Positive are the Opinionated, the Ignorant, and the Bearish: the first, from the motives of pleasure and pain: I mean, they have the pleasurable feeling of a kind of victory in not having their convictions changed, and they are pained when their

decrees, so to speak, are reversed: so that, in fact, they rather resemble the man of Imperfect Self-Control than the man of Self-Control.

Again, there are some who depart from their resolutions not by reason of any Imperfection of Self-Control; take, for instance, Neoptolemus in the Philoctetes of Sophocles. Here certainly pleasure was the motive of his departure from his resolution, but then it was one of a noble sort: for to be truthful was noble in his eyes and he had been persuaded by Ulysses to lie.

So it is not every one who acts from the motive of pleasure who is utterly destitute of Self-Control or base or of Imperfect Self-Control, only he who acts from the impulse of a base pleasure.

Chapter IX.

Moreover as there is a character who takes less pleasure than he ought in bodily enjoyments, and he also fails to abide by the conclusion of his Reason,[20] the man of Self-Control is the mean between him and the man of Imperfect Self-Control: that is to say, the latter fails to abide by them because of somewhat too much, the former because of somewhat too little; while the man of Self-Control abides by them, and never changes by reason of anything else than such conclusions.

Now of course since Self-Control is good both the contrary States must be bad, as indeed they plainly are: but because the one of them is seen in few persons, and but rarely in them, Self-Control comes to be viewed as if opposed only to the Imperfection of it, just as Perfected Self-Mastery is thought to be opposed only to utter want of Self-Control.

Again, as many terms are used in the way of similitude, so people have come to talk of the Self-Control of the man of Perfected Self-Mastery in the way of similitude: for the man of Self-Control and the man of Perfected Self-Mastery have this in common, that they do nothing against Right Reason on the impulse of bodily pleasures, but then the former has bad desires, the latter not; and the latter is so constituted as not even to feel pleasure contrary to his Reason, the former feels but does not yield to it.

Like again are the man of Imperfect Self-Control and he who is utterly destitute of it, though in reality distinct: both follow bodily pleasures, but the latter under a notion that it is the proper line for him to take, his former without any such notion.

And it is not possible for the same man to be at once a man of Practical Wisdom and of Imperfect Self-Control: because the character of Practical Wisdom includes, as we showed before, goodness of moral character. And again, it is not knowledge merely, but aptitude for action, which constitutes Practical Wisdom: and of this aptitude the man of Imperfect Self-Control is destitute. But there is no reason why the Clever man should not be of Imperfect Self-Control: and the reason why some men are occasionally thought to be men of Practical Wisdom, and yet of Imperfect Self-Control, is this, that Cleverness differs from Practical Wisdom in the way I stated in a former book, and is very near it so far as the intellectual element is concerned but differs in respect of the moral choice.

Nor is the man of Imperfect Self-Control like the man who both has and calls into exercise his knowledge, but like the man who, having it, is overpowered by sleep or wine. Again, he acts voluntarily (because he knows, in a certain sense, what he does and the result of it), but he is not a confirmed bad man, for his moral choice is good, so he is at all events only half bad. Nor is he unjust, because he does not act with deliberate intent: for of the two chief forms of the character, the one is not apt to abide by his deliberate resolutions, and the other, the man of constitutional strength of passion, is not apt to deliberate at all.

So in fact the man of Imperfect Self-Control is like a community which makes all proper enactments, and has admirable laws, only does not act on them, verifying the scoff of Anaxandrides,

“That State did will it, which cares nought for laws;”

whereas the bad man is like one which acts upon its laws, but then unfortunately they are bad ones.

Imperfection of Self-Control and Self-Control, after all, are above the average state of men; because he of the latter character is more true to his Reason, and the former less so, than is in the power of most men.

Again, of the two forms of Imperfect Self-Control that is more easily cured which they have who are constitutionally of strong passions, than that of those who form resolutions and break them; and they that are so through habituation than they that are so naturally; since of course custom is easier to change than nature, because the very resemblance of custom to nature is what constitutes the difficulty of changing it; as Evenus says,

“Practice, I say, my friend, doth long endure, And at the last is even very nature.”

We have now said then what Self-Control is, what Imperfection of Self-Control, what Endurance, and what Softness, and how these states are mutually related.

APPENDIX. Book VII. Chapters 12 to 15. (Bekker.)

To consider the subject of Pleasure and Pain falls within the province of the Social-Science Philosopher, since he it is who has to fix the Master-End which is to guide us in dominating any object absolutely evil or good.

But we may say more: an enquiry into their nature is absolutely necessary. First, because we maintained that Moral Virtue and Moral Vice are both concerned with Pains and Pleasures: next, because the greater part of mankind assert that Happiness must include Pleasure (which by the way accounts for the word they use, μακ■ριος; χα■ρειν being the root of that word).

Now some hold that no one Pleasure is good, either in itself or as a matter of result, because Good and Pleasure are not identical. Others that some Pleasures are good but the greater number bad. There is yet a third view; granting that every Pleasure is good, still the Chief Good cannot possibly be Pleasure.

In support of the first opinion (that Pleasure is utterly not-good) it is urged that:

1. Every Pleasure is a sensible process towards a complete state; but no such process is akin to the end to be attained: _e.g._ no process of building to the completed house.

2. The man of Perfected Self-Mastery avoids Pleasures.

3. The man of Practical Wisdom aims at avoiding Pain, not at attaining Pleasure.

4. Pleasures are an impediment to thought, and the more so the more keenly they are felt. An obvious instance will readily occur.

5. Pleasure cannot be referred to any Art: and yet every good is the result of some Art.

6. Children and brutes pursue Pleasures.

In support of the second (that not all Pleasures are good), That there are some base and matter of reproach, and some even hurtful: because some things that are pleasant produce disease.

In support of the third (that Pleasure is not the Chief Good), That it is not an End but a process towards creating an End.

This is, I think, a fair account of current views on the matter.

But that the reasons alleged do not prove it either to be not-good or the Chief Good is plain from the following considerations.

First. Good being either absolute or relative, of course the natures and states embodying it will be so too; therefore also the movements and the processes of creation. So, of those which are thought to be bad some will be bad absolutely, but relatively not bad, perhaps even choice-worthy; some not even choice-worthy relatively to any particular person, only at certain times or for a short time but not in themselves choice-worthy.

Others again are not even Pleasures at all though they produce that impression on the mind: all such I mean as imply pain and whose purpose is cure; those of sick people, for instance.

Next, since Good may be either an active working or a state, those [κιν■σεις or γεν■σεις] which tend to place us in our natural state are pleasant incidentally because of that tendency: but the active working is really in the desires excited in the remaining (sound) part of our state or nature: for there are Pleasures which have no connection with pain or desire: the acts of contemplative intellect, for instance, in which case there is no deficiency in the nature or state of him who performs the acts.

A proof of this is that the same pleasant thing does not produce the sensation of Pleasure when the natural state is being filled up or completed as when it is already in its normal condition: in this latter case what give the sensation are things pleasant _per se_, in the former even those things which are contrary. I mean, you find people taking pleasure in sharp or bitter things of which no one is naturally or in itself pleasant; of course not therefore the Pleasures arising from them, because it is obvious that as is the classification of pleasant things such must be that of the Pleasures arising from them.

Next, it does not follow that there must be something else better than any given pleasure because (as some say) the End must be better than the process which creates it. For it is not true that all Pleasures are processes or even attended by any process, but (some are) active workings or even Ends: in fact they result not from our coming to be something but from our using our powers. Again, it is not true that the End is, in every case, distinct from the process: it is true only in the case of such processes as conduce to the perfecting of the natural state.

For which reason it is wrong to say that Pleasure is “a sensible process of production.” For “process etc.” should be substituted “active working of the natural state,” for “sensible” “unimpeded.” The reason of its being thought to be a “process etc.” is that it is good in the highest sense: people confusing “active working” and “process,” whereas they really are distinct.

Next, as to the argument that there are bad Pleasures because some things which are pleasant are also hurtful to health, it is the same as saying that some healthful things are bad for “business.” In this sense, of course, both may be said to be bad, but then this does not make them out to be bad _simpliciter_: the exercise of the pure Intellect sometimes hurts a man’s health: but what hinders Practical Wisdom or any state whatever is, not the Pleasure peculiar to, but some Pleasure foreign to it: the Pleasures arising from the exercise of the pure Intellect or from learning only promote each.

Next. “No Pleasure is the work of any Art.” What else would you expect? No active working is the work of any Art, only the faculty of so working. Still the perfumer’s Art or the cook’s are thought to belong to Pleasure.

Next. “The man of Perfected Self-Mastery avoids Pleasures.” “The man of Practical Wisdom aims at escaping Pain rather than at attaining Pleasure.”

“Children and brutes pursue Pleasures.”

One answer will do for all.

We have already said in what sense all Pleasures are good _per se_ and in what sense not all are good: it is the latter class that brutes and children pursue, such as are accompanied by desire and pain, that is the bodily Pleasures (which answer to this description) and the excesses of them: in short, those in respect of which the man utterly destitute of Self-Control is thus utterly destitute. And it is the absence of the pain arising from these Pleasures that the man of Practical Wisdom aims at. It follows that these Pleasures are what the man of Perfected Self-Mastery avoids: for obviously he has Pleasures peculiarly his own.

Then again, it is allowed that Pain is an evil and a thing to be avoided partly as bad _per se_, partly as being a hindrance in some particular way. Now the contrary of that which is to be avoided, _quâ_ it is to be avoided, _i.e._ evil, is good. Pleasure then must be _a_ good.

The attempted answer of Speusippus, “that Pleasure may be opposed and yet not contrary to Pain, just as the greater portion of any magnitude is contrary to the less but only opposed to the exact half,” will not hold: for he cannot say that Pleasure is identical with evil of any kind.

Again. Granting that some Pleasures are low, there is no reason why some particular Pleasure may not be very good, just as some particular Science may be although there are some which are low.

Perhaps it even follows, since each state may have active working unimpeded, whether the active workings of all be Happiness or that of some one of them, that this active working, if it be unimpeded, must be choice-worthy: now Pleasure is exactly this. So that the Chief Good may be Pleasure of some kind, though most Pleasures be (let us assume) low _per se_.

And for this reason all men think the happy life is pleasant, and interweave Pleasure with Happiness. Reasonably enough: because Happiness is perfect, but no impeded active working is perfect; and therefore the happy man needs as an addition the goods of the body and the goods external and fortune that in these points he may not be fettered. As for those who say that he who is being tortured on the wheel, or falls into great misfortunes is happy provided only he be good, they talk nonsense, whether they mean to do so or not. On the other hand, because fortune is needed as an addition, some hold good fortune to be identical with Happiness: which it is not, for even this in excess is a hindrance, and perhaps then has no right to be called good fortune since it is good only in so far as it contributes to Happiness.

The fact that all animals, brute and human alike, pursue Pleasure, is some presumption of its being in a sense the Chief Good;

("There must be something in what most folks say,") only as one and the same nature or state neither is nor is thought to be the best, so neither do all pursue the same Pleasure, Pleasure nevertheless all do. Nay further, what they pursue is, perhaps, not what they think nor what they would say they pursue, but really one and the same: for in all there is some instinct above themselves. But the bodily Pleasures have received the name exclusively, because theirs is the most frequent form and that which is universally partaken of; and so, because to many these alone are known they believe them to be the only ones which exist.

It is plain too that, unless Pleasure and its active working be good, it will not be true that the happy man's life embodies Pleasure: for why will he want it on the supposition that it is not good and that he can live even with Pain? because, assuming that Pleasure is not good, then Pain is neither evil nor good, and so why should he avoid it?

Besides, the life of the good man is not more pleasurable than any other unless it be granted that his active workings are so too.

Some enquiry into the bodily Pleasures is also necessary for those who say that some Pleasures, to be sure, are highly choice-worthy (the good ones to wit), but not the bodily Pleasures; that is, those which are the object-matter of the man utterly destitute of Self-Control.

If so, we ask, why are the contrary Pains bad? they cannot be (on their assumption) because the contrary of bad is good.

May we not say that the necessary bodily Pleasures are good in the sense in which that which is not-bad is good? or that they are good only up to a certain point? because such states or movements as cannot have too much of the better cannot have too much of Pleasure, but those which can of the former can also of the latter. Now the bodily Pleasures do admit of excess: in fact the low bad man is such because he pursues the excess of them instead of those which are necessary (meat, drink, and the objects of other animal appetites do give pleasure to all, but not in right manner or degree to all). But his relation to Pain is exactly the contrary: it is not excessive Pain, but Pain at all, that he avoids [which makes him to be in this way too a bad low man], because only in the case of him who pursues excessive Pleasure is Pain contrary to excessive Pleasure.

It is not enough however merely to state the truth, we should also show how the false view arises; because this strengthens conviction. I mean, when we have given a probable reason why that impresses people as true which really is not true, it gives them a stronger conviction of the truth. And so we must now explain why the bodily Pleasures appear to people to be more choice-worthy than any others.

The first obvious reason is, that bodily Pleasure drives out Pain; and because Pain is felt in excess men pursue Pleasure in excess, _i.e._ generally bodily Pleasure, under the notion of its being a remedy for that Pain. These remedies, moreover, come to be violent ones; which is the very reason they are pursued, since the impression they produce on the mind is owing to their being looked at side by side with their contrary.

And, as has been said before, there are the two following reasons why bodily Pleasure is thought to be not-good.

1. Some Pleasures of this class are actings of a low nature, whether congenital as in brutes, or acquired by custom as in low bad men.

2. Others are in the nature of cures, cures that is of some deficiency; now of course it is better to have [the healthy state] originally than that it should accrue afterwards.

(But some Pleasures result when natural states are being perfected: these therefore are good as a matter of result.)

Again, the very fact of their being violent causes them to be pursued by such as can relish no others: such men in fact create violent thirsts for themselves (if harmless ones then we find no fault, if harmful then it is bad and low) because they have no other things to take pleasure in, and the neutral state is distasteful to some people constitutionally; for toil of some kind is inseparable from life, as physiologists testify, telling us that the acts of seeing or hearing are painful, only that we are used to the pain and do not find it out.

Similarly in youth the constant growth produces a state much like that of vinous intoxication, and youth is pleasant. Again, men of the melancholic temperament constantly need some remedial process (because the body, from its temperament, is constantly being worried), and they are in a chronic state of violent desire. But Pleasure drives out Pain; not only such Pleasure as is directly contrary to Pain but even any Pleasure provided it be strong: and this is how men come to be utterly destitute of Self-Mastery, _i.e._ low and bad.

But those Pleasures which are unconnected with Pains do not admit of excess: _i.e._ such as belong to objects which are naturally pleasant and not merely as a matter of result: by the latter class I mean such as are remedial, and the reason why these are thought to be pleasant is that the cure results from the action in some way of that part of the constitution which remains sound. By “pleasant naturally” I mean such as put into action a nature which is pleasant.

The reason why no one and the same thing is invariably pleasant is that our nature is, not simple, but complex, involving something different from itself (so far as we are corruptible beings). Suppose then that one part of this nature be doing something, this something is, to the other part, unnatural: but, if there be an equilibrium of the two natures, then whatever is being done is indifferent. It is obvious that if there be any whose nature is simple and not complex, to such a being the same course of acting will always be the most pleasurable.

For this reason it is that the Divinity feels Pleasure which is always one, _i.e._ simple: not motion merely but also motionlessness acts, and Pleasure resides rather in the absence than in the presence of motion.

The reason why the Poet’s dictum “change is of all things most pleasant” is true, is “a baseness in our blood;” for as the bad man is easily changeable, bad must be also the nature that craves change, _i.e._ it is neither simple nor good.

We have now said our say about Self-Control and its opposite; and about Pleasure and Pain. What each is, and how the one set is good the other bad. We have yet to speak of Friendship.

BOOK VIII

Chapter I.

Next would seem properly to follow a dissertation on Friendship: because, in the first place, it is either itself a virtue or connected with virtue; and next it is a thing most necessary for life, since no one would choose to live without friends though he should have all the other good things in the world: and, in fact, men who are rich or possessed of authority and influence are thought to have special need of friends: for where is the use of such prosperity if there be taken away the doing of kindnesses of which friends are the most usual and most commendable objects? Or how can it be kept or preserved without friends? because the greater it is so much the more slippery and hazardous: in poverty moreover and all other adversities men think friends to be their only refuge.

Furthermore, Friendship helps the young to keep from error: the old, in respect of attention and such deficiencies in action as their weakness makes them liable to; and those who are in their prime, in respect of noble deeds (“They _two_ together going,” Homer says, you may remember), because they are thus more able to devise plans and carry them out.

Again, it seems to be implanted in us by Nature: as, for instance, in the parent towards the offspring and the offspring towards the parent (not merely in the human species, but likewise in birds and most animals), and in those of the same tribe towards one another, and specially in men of the same nation; for which reason we commend those men who love their fellows: and one may see in the course of travel how close of kin and how friendly man is to man.

Furthermore, Friendship seems to be the bond of Social Communities, and legislators seem to be more anxious to secure it than Justice even. I mean, Unanimity is somewhat like to Friendship, and this they certainly aim at and specially drive out faction as being inimical.

Again, where people are in Friendship Justice is not required;[1] but, on the other hand, though they are just they need Friendship in addition, and that principle which is most truly just is thought to partake of the nature of Friendship.

Lastly, not only is it a thing necessary but honourable likewise: since we praise those who are fond of friends, and the having numerous friends is thought a matter of credit to a man; some go so far as to hold, that “good man” and “friend” are terms synonymous.

Chapter II.

Yet the disputed points respecting it are not few: some men lay down that it is a kind of resemblance, and that men who are like one another are friends: whence come the common sayings, “Like will to like,” “Birds of a feather,” and so on. Others, on the contrary, say, that all such come under the maxim, “Two of a trade never agree.”[2]

Again, some men push their enquiries on these points higher and reason physically: as Euripides, who says,

“The earth by drought consumed doth love the rain, And the great heaven, overcharged with rain, Doth love to fall in showers upon the earth.”

Heraclitus, again, maintains, that “contrariety is expedient, and that the best agreement arises from things differing, and that all things come into being in the way of the principle of antagonism.”

Empedocles, among others, in direct opposition to these, affirms, that “like aims at like.”

These physical questions we will take leave to omit, inasmuch as they are foreign to the present enquiry; and we will examine such as are proper to man and concern moral characters and feelings: as, for instance, “Does Friendship arise among all without distinction, or is it impossible for bad men to be friends?” and, “Is there but one species of Friendship, or several?” for they who ground the opinion that there is but one on the fact that Friendship admits of degrees hold that upon insufficient proof; because things which are different in species admit likewise of degrees (on this point we have spoken before).

Chapter III.

Our view will soon be cleared on these points when we have ascertained what is properly the object-matter of Friendship: for it is thought that not everything indiscriminately, but some peculiar matter alone, is the object of this affection; that is to say, what is good, or pleasurable, or useful. Now it would seem that that is useful through which accrues any good or pleasure, and so the objects of Friendship, as absolute Ends, are the good and the pleasurable.

A question here arises; whether it is good absolutely or that which is good to the individuals, for which men feel Friendship (these two being sometimes distinct): and similarly in respect of the pleasurable. It seems then that each individual feels it towards that which is good to himself, and that abstractedly it is the real good which is the object of Friendship, and to each individual that which is good to each. It comes then to this; that each individual feels Friendship not for what _is_ but for that which _conveys to his mind the impression of being_ good to himself. But this will make no real difference, because that which is truly the object of Friendship will also convey this impression to the mind.

There are then three causes from which men feel Friendship: but the term is not applied to the case of fondness for things inanimate because there is no requital of the affection nor desire for the good of those objects: it certainly savours of the ridiculous to say that a man fond of wine wishes well to it: the only sense in which it is true being that he wishes it to be kept safe and sound for his own use and benefit.[3] But to the friend they say one should wish all good for his sake. And when men do thus wish good to another (he not reciprocating the feeling), people call them Kindly; because Friendship they describe as being “Kindliness between persons who reciprocate it.” But must they not add that the feeling must be mutually known? for many men are kindly disposed towards those whom they have never seen but whom they conceive to be amiable or useful: and this notion amounts to the same thing as a real feeling between them.

Well, these are plainly Kindly-disposed towards one another: but how can one call them friends while their mutual feelings are unknown to one another? to complete the idea of Friendship, then, it is requisite that they have kindly feelings towards one another, and wish one another good from one of the aforementioned causes, and that these kindly feelings should be mutually known.

Chapter IV.

As the motives to Friendship differ in kind so do the respective feelings and Friendships. The species then of Friendship are three, in number equal to the objects of it, since in the line of each there may be “mutual affection mutually known.”

Now they who have Friendship for one another desire one another’s good according to the motive of their Friendship; accordingly they whose motive is utility have no Friendship for one another really, but only in so far as some good arises to them from one another.

And they whose motive is pleasure are in like case: I mean, they have Friendship for men of easy pleasantry, not because they are of a given character but because they are pleasant to themselves. So then they whose motive to Friendship is utility love their friends for what is good to themselves; they whose motive is pleasure do so for what is pleasurable to themselves; that is to say, not in so far as the friend beloved _is_ but in so far as he is useful or pleasurable. These Friendships then are a matter of result: since the object is not beloved in that he is the man he is but in that he furnishes advantage or pleasure as the case may be.

Such Friendships are of course very liable to dissolution if the parties do not continue alike: I mean, that the others cease to have any Friendship for them when they are no longer pleasurable or useful. Now it is the nature of utility not to be permanent but constantly varying: so, of course, when the motive which made them friends is vanished, the Friendship likewise dissolves; since it existed only relatively to those circumstances.

Friendship of this kind is thought to exist principally among the old (because men at that time of life pursue not what is pleasurable but what is profitable); and in such, of men in their prime and of the young, as are given to the pursuit of profit. They that are such have no intimate intercourse with one another; for sometimes they are not even pleasurable to one another; nor, in fact, do they desire such intercourse unless their friends are profitable to them, because they are pleasurable only in so far as they have hopes of advantage. With these Friendships is commonly ranked that of hospitality.

But the Friendship of the young is thought to be based on the motive of pleasure: because they live at the beck and call of passion and generally pursue what is pleasurable to themselves and the object of the present moment: and as their age changes so likewise do their pleasures.

This is the reason why they form and dissolve Friendships rapidly: since the Friendship changes with the pleasurable object and such pleasure changes quickly.

The young are also much given up to Love; this passion being, in great measure, a matter of impulse and based on pleasure: for which cause they conceive Friendships and quickly drop them, changing often in the same day: but these wish for society and intimate intercourse with their friends, since they thus attain the object of their Friendship.

Chapter V.

That then is perfect Friendship which subsists between those who are good and whose similarity consists in their goodness: for these men wish one another's good in similar ways; in so far as they are good (and good they are in themselves); and those are specially friends who wish good to their friends for their sakes, because they feel thus towards them on their own account and not as a mere matter of result; so the Friendship between these men continues to subsist so long as they are good; and goodness, we know, has in it a principle of permanence.

Moreover, each party is good abstractedly and also relatively to his friend, for all good men are not only abstractedly good but also useful to one another. Such friends are also mutually pleasurable because all good men are so abstractedly, and also relatively to one another, inasmuch as to each individual those actions are pleasurable which correspond to his nature, and all such as are like them. Now when men are good these will be always the same, or at least similar.

Friendship then under these circumstances is permanent, as we should reasonably expect, since it combines in itself all the requisite qualifications of friends. I mean, that Friendship of whatever kind is based upon good or pleasure (either abstractedly or relatively to the person entertaining the sentiment of Friendship), and results from a similarity of some sort; and to this kind belong all the aforementioned requisites in the parties themselves, because in this the parties are similar, and so on:[4] moreover, in it there is the abstractedly good and the abstractedly pleasant, and as these are specially the object-matter of Friendship so the feeling and the state of Friendship is found most intense and most excellent in men thus qualified.

Rare it is probable Friendships of this kind will be, because men of this kind are rare. Besides, all requisite qualifications being presupposed, there is further required time and intimacy: for, as the proverb says, men cannot know one another "till they have eaten the requisite quantity of salt together;" nor can they in fact admit one another to intimacy, much less be friends, till each has appeared to the other and been proved to be a fit object of Friendship. They who speedily commence an interchange of friendly actions may be said to wish to be friends, but they are not so unless they are also proper objects of Friendship and mutually known to be such: that is to say, a desire for Friendship may arise quickly but not Friendship itself.

Well, this Friendship is perfect both in respect of the time and in all other points; and exactly the same and similar results accrue to each party from the other; which ought to be the case between friends.

The friendship based upon the pleasurable is, so to say, a copy of this, since the good are sources of pleasure to one another: and that based on utility likewise, the good being also useful to one another. Between men thus connected Friendships are most permanent when the same result accrues to both from one another, pleasure, for instance; and not merely so but from the same source, as in the case of two men of easy pleasantry; and not as it is in that of a lover and the object of his affection, these not

deriving their pleasure from the same causes, but the former from seeing the latter and the latter from receiving the attentions of the former: and when the bloom of youth fades the Friendship sometimes ceases also, because then the lover derives no pleasure from seeing and the object of his affection ceases to receive the attentions which were paid before: in many cases, however, people so connected continue friends, if being of similar tempers they have come from custom to like one another's disposition.

Where people do not interchange pleasure but profit in matters of Love, the Friendship is both less intense in degree and also less permanent: in fact, they who are friends because of advantage commonly part when the advantage ceases; for, in reality, they never were friends of one another but of the advantage.

So then it appears that from motives of pleasure or profit bad men may be friends to one another, or good men to bad men or men of neutral character to one of any character whatever: but disinterestedly, for the sake of one another, plainly the good alone can be friends; because bad men have no pleasure even in themselves unless in so far as some advantage arises.

And further, the Friendship of the good is alone superior to calumny; it not being easy for men to believe a third person respecting one whom they have long tried and proved: there is between good men mutual confidence, and the feeling that one's friend would never have done one wrong, and all other such things as are expected in Friendship really worthy the name; but in the other kinds there is nothing to prevent all such suspicions.

I call them Friendships, because since men commonly give the name of friends to those who are connected from motives of profit (which is justified by political language, for alliances between states are thought to be contracted with a view to advantage), and to those who are attached to one another by the motive of pleasure (as children are), we may perhaps also be allowed to call such persons friends, and say there are several species of Friendship; primarily and specially that of the good, in that they are good, and the rest only in the way of resemblance: I mean, people connected otherwise are friends in that way in which there arises to them somewhat good and some mutual resemblance (because, we must remember the pleasurable is good to those who are fond of it).

These secondary Friendships, however, do not combine very well; that is to say, the same persons do not become friends by reason of advantage and by reason of the pleasurable, for these matters of result are not often combined. And Friendship having been divided into these kinds, bad men will be friends by reason of pleasure or profit, this being their point of resemblance; while the good are friends for one another's sake, that is, in so far as they are good.

These last may be termed abstractedly and simply friends, the former as a matter of result and termed friends from their resemblance to these last.

Chapter VI.

Further; just as in respect of the different virtues some men are termed good in respect of a certain inward state, others in respect of acts of working, so is it in respect of Friendship: I mean, they who live together take pleasure in, and impart good to, one another: but they who are asleep or are locally separated do not perform acts, but only are in such a state as to act in a friendly way if they acted at all: distance has in itself no direct effect upon Friendship, but only prevents the acting it out: yet, if the absence be protracted, it is thought to cause a forgetfulness even of the Friendship: and hence it has been said, "many and many a Friendship doth want of intercourse destroy."

Accordingly, neither the old nor the morose appear to be calculated for Friendship, because the pleasurableness in them is small, and no one can spend his days in company with that which is positively painful or even not pleasurable; since to avoid the painful and aim at the pleasurable is one of the most obvious tendencies of human nature. They who get on with one another very fairly, but are not in habits of intimacy, are rather like people having kindly feelings towards one another than friends; nothing being so characteristic of friends as the living with one another, because the necessitous desire assistance, and the happy companionship, they being the last persons in the world for solitary existence: but people cannot spend their time together unless they are mutually pleasurable and take pleasure in the same objects, a quality which is thought to appertain to the Friendship of companionship.

Chapter VII.

The connection then subsisting between the good is Friendship _par excellence_, as has already been frequently said: since that which is abstractedly good or pleasant is thought to be an object of Friendship and choice-worthy, and to each individual whatever is such to him; and the good man to the good man for both these reasons.

(Now the entertaining the sentiment is like a feeling, but Friendship itself like a state: because the former may have for its object even things inanimate, but requital of Friendship is attended with moral choice which proceeds from a moral state: and again, men wish good to the objects of their Friendship for their sakes, not in the way of a mere feeling but of moral state.)

And the good, in loving their friend, love their own good (inasmuch as the good man, when brought into that relation, becomes a good to him with whom he is so connected), so that either party loves his own good, and repays his friend equally both in wishing well and in the pleasurable: for equality is said to be a tie of Friendship. Well, these points belong most to the Friendship between good men.

But between morose or elderly men Friendship is less apt to arise, because they are somewhat awkward-tempered, and take less pleasure in intercourse and society; these being thought to be specially friendly and productive of Friendship: and so young men become friends quickly, old men not so (because people do not become friends with any, unless they take pleasure in them); and in like manner neither do the morose. Yet men of these classes entertain kindly feelings towards one another: they wish good to one another and render mutual assistance in respect of their needs, but they are not quite friends, because they neither spend their time together nor take pleasure in one another, which circumstances are thought specially to belong to Friendship.

To be a friend to many people, in the way of the perfect Friendship, is not possible; just as you cannot be in love with many at once: it is, so to speak, a state of excess which naturally has but one object; and besides, it is not an easy thing for one man to be very much pleased with many people at the same time, nor perhaps to find many really good. Again, a man needs experience, and to be in habits of close intimacy, which is very difficult.

But it _is_ possible to please many on the score of advantage and pleasure: because there are many men of the kind, and the services may be rendered in a very short time.

Of the two imperfect kinds that which most resembles the perfect is the Friendship based upon pleasure, in which the same results accrue from both and they take pleasure in one another or in the same objects; such as are the Friendships of the young, because a generous spirit is most found in these. The Friendship because of advantage is the connecting link of shopkeepers.

Then again, the very happy have no need of persons who are profitable, but of pleasant ones they have because they wish to have people to live intimately with; and what is painful they bear for a short time indeed, but continuously no one could support it, nay, not even the Chief Good itself, if it were painful to him individually: and so they look out for pleasant friends: perhaps they ought to require such to be good also; and good moreover to themselves individually, because then they will have all the proper requisites of Friendship.

Men in power are often seen to make use of several distinct friends: for some are useful to them and others pleasurable, but the two are not often united: because they do not, in fact, seek such as shall combine pleasantness and goodness, nor such as shall be useful for honourable purposes: but with a view to attain what is pleasant they look out for men of easy-pleasantry; and again, for men who are clever at executing any business put into their hands: and these qualifications are not commonly found united in the same man.

It has been already stated that the good man unites the qualities of pleasantness and usefulness: but then such a one will not be a friend to a superior unless he be also his superior in goodness: for if this be not the case, he cannot, being surpassed in one point, make things equal by a proportionate degree of Friendship.[5] And characters who unite superiority of station and goodness are not common.

Chapter VIII.

Now all the kinds of Friendship which have been already mentioned exist in a state of equality, inasmuch as either the same results accrue to both and they wish the same things to one another, or else they barter one thing against another; pleasure, for instance, against profit: it has been said already that Friendships of this latter kind are less intense in degree and less permanent.

And it is their resemblance or dissimilarity to the same thing which makes them to be thought to be and not to be Friendships: they show like Friendships in right of their likeness to that which is based on virtue (the one kind having the pleasurable, the other the profitable, both of which belong also to the other); and again, they do not show like Friendships by reason of their unlikeness to that true kind; which unlikeness consists herein, that while that is above calumny and so permanent these quickly change and differ in many other points.

But there is another form of Friendship, that, namely, in which the one party is superior to the other; as between father and son, elder and younger, husband and wife, ruler and ruled. These also differ one from another: I mean, the Friendship between parents and children is not the same as between ruler and the ruled, nor has the father the same towards the son as the son towards the father, nor the husband towards the wife as she towards him; because the work, and therefore the excellence, of each of these is different, and different therefore are the causes of their feeling Friendship; distinct and different therefore are their feelings and states of Friendship.

And the same results do not accrue to each from the other, nor in fact ought they to be looked for: but, when children render to their parents what they ought to the authors of their being, and parents to their sons what they ought to their offspring, the Friendship between such parties will be permanent and equitable.

Further; the feeling of Friendship should be in a due proportion in all Friendships which are between superior and inferior; I mean, the better man, or the more profitable, and so forth, should be the object of a stronger feeling than he himself entertains, because when the feeling of Friendship comes to be after a certain rate then equality in a certain sense is produced, which is thought to be a requisite in Friendship.

(It must be remembered, however, that the equal is not in the same case as regards Justice and Friendship: for in strict Justice the exactly proportioned equal ranks first, and the actual numerically equal ranks second, while in Friendship this is exactly reversed.)

And that equality is thus requisite is plainly shown by the occurrence of a great difference of goodness or badness, or prosperity, or something else: for in this case, people are not any longer friends, nay they do not even feel that they ought to be. The clearest illustration is perhaps the case of the gods, because they are most superior in all good things. It is obvious too, in the case of kings, for they who are greatly their inferiors do not feel entitled to be friends to them; nor do people very insignificant to be friends to those of very high excellence or wisdom. Of course, in such cases it is out of the question to attempt to define up to what point they may continue friends: for you may remove many points of agreement and the Friendship last nevertheless; but when one of the parties is very far separated (as a god from men), it cannot continue any longer.

This has given room for a doubt, whether friends do really wish to their friends the very highest goods, as that they may be gods: because, in case the wish were accomplished, they would no longer have them for friends, nor in fact would they have the good things they had, because friends are good things. If then it has been rightly said that a friend wishes to his friend good things for that friend’s sake, it must be understood that he is to remain such as he now is: that is to say, he will wish the greatest good to him of which as man he is capable: yet perhaps not all, because each man desires good for himself most of all.

It is thought that desire for honour makes the mass of men wish rather to be the objects of the feeling of Friendship than to entertain it themselves (and for this reason they are fond of flatterers, a flatterer being a friend inferior or at least pretending to be such and rather to entertain towards another the feeling of Friendship than to be himself the object of it), since the former is thought to be nearly the same as being honoured, which the mass of men desire. And yet men seem to choose honour, not for its own sake, but incidentally:[6] I mean, the common run of men delight to be honoured by those in power because of the hope it raises; that is they think they shall get from them anything they may happen to be in want of, so they delight in honour as an earnest of future benefit. They again who grasp at honour at the hands of the good and those who are really acquainted with their merits desire to confirm their own opinion about themselves: so they take pleasure in the conviction that they are good, which is based on the sentence of those who assert it. But in being the objects of Friendship men delight for its own sake, and so this may be judged to be higher than being honoured and Friendship to be in itself choice-worthy. Friendship, moreover, is thought to consist in feeling, rather than being the object of, the sentiment of Friendship, which is proved by the delight mothers have in the feeling: some there are who give their children to be adopted and brought up by others, and knowing them bear this feeling towards them never seeking to have it returned, if both are not possible; but seeming to be content with seeing them well off and bearing this feeling themselves towards them, even though they, by reason of ignorance, never render to them any filial regard or love.

Since then Friendship stands rather in the entertaining, than in being the object of, the sentiment, and they are praised who are fond of their friends, it seems that entertaining the sentiment is the Excellence of friends; and so, in whomsoever this exists in due proportion these are stable friends and their Friendship is permanent. And in this way may they who are unequal best be friends, because they may thus be made equal.

Equality, then, and similarity are a tie to Friendship, and specially the similarity of goodness, because good men, being stable in themselves, are also stable as regards others, and neither ask degrading services nor render them, but, so to say, rather prevent

them: for it is the part of the good neither to do wrong themselves nor to allow their friends in so doing.

The bad, on the contrary, have no principle of stability: in fact, they do not even continue like themselves: only they come to be friends for a short time from taking delight in one another's wickedness. Those connected by motives of profit, or pleasure, hold together somewhat longer: so long, that is to say, as they can give pleasure or profit mutually.

The Friendship based on motives of profit is thought to be most of all formed out of contrary elements: the poor man, for instance, is thus a friend of the rich, and the ignorant of the man of information; that is to say, a man desiring that of which he is, as it happens, in want, gives something else in exchange for it. To this same class we may refer the lover and beloved, the beautiful and the ill-favoured. For this reason lovers sometimes show in a ridiculous light by claiming to be the objects of as intense a feeling as they themselves entertain: of course if they are equally fit objects of Friendship they are perhaps entitled to claim this, but if they have nothing of the kind it is ridiculous.

Perhaps, moreover, the contrary does not aim at its contrary for its own sake but incidentally: the mean is really what is grasped at; it being good for the dry, for instance, not to become wet but to attain the mean, and so of the hot, etc.

However, let us drop these questions, because they are in fact somewhat foreign to our purpose.

Chapter IX.

It seems too, as was stated at the commencement, that Friendship and Justice have the same object-matter, and subsist between the same persons: I mean that in every Communion there is thought to be some principle of Justice and also some Friendship: men address as friends, for instance, those who are their comrades by sea, or in war, and in like manner also those who are brought into Communion with them in other ways: and the Friendship, because also the Justice, is co-extensive with the Communion, This justifies the common proverb, "the goods of friends are common," since Friendship rests upon Communion.

Now brothers and intimate companions have all in common, but other people have their property separate, and some have more in common and others less, because the Friendships likewise differ in degree. So too do the various principles of Justice involved, not being the same between parents and children as between brothers, nor between companions as between fellow-citizens merely, and so on of all the other conceivable Friendships. Different also are the principles of Injustice as regards these different grades, and the acts become intensified by being done to friends; for instance, it is worse to rob your companion than one who is merely a fellow-citizen; to refuse help to a brother than to a stranger; and to strike your father than any one else. So then the Justice naturally increases with the degree of Friendship, as being between the same parties and of equal extent.

All cases of Communion are parts, so to say, of the great Social one, since in them men associate with a view to some advantage and to procure some of those things which are needful for life; and the great Social Communion is thought originally to have been associated and to continue for the sake of some advantage: this being the point at which legislators aim, affirming that to be just which is generally expedient.

All the other cases of Communion aim at advantage in particular points; the crew of a vessel at that which is to result from the voyage which is undertaken with a view to making money, or some such object; comrades in war at that which is to result from the war, grasping either at wealth or victory, or it may be a political position; and those of the same tribe, or Demus, in like manner.

Some of them are thought to be formed for pleasure's sake, those, for instance, of bacchanals or club-fellows, which are with a view to Sacrifice or merely company. But all these seem to be ranged under the great Social one, inasmuch as the aim of this is, not merely the expediency of the moment but, for life and at all times; with a view to which the members of it institute sacrifices and their attendant assemblies, to render honour to the gods and procure for themselves respite from toil combined with pleasure. For it appears that sacrifices and religious assemblies in old times were made as a kind of first-fruits after the ingathering of the crops, because at such seasons they had most leisure.

So then it appears that all the instances of Communion are parts of the great Social one: and corresponding Friendships will follow upon such Communions.

Chapter X.

Of Political Constitutions there are three kinds; and equal in number are the deflections from them, being, so to say, corruptions of them.

The former are Kingship, Aristocracy, and that which recognises the principle of wealth, which it seems appropriate to call Timocracy (I give to it the name of a political constitution because people commonly do so). Of these the best is Monarchy, and Timocracy the worst.

From Monarchy the deflection is Despotism; both being Monarchies but widely differing from each other; for the Despot looks to his own advantage, but the King to that of his subjects: for he is in fact no King who is not thoroughly independent and superior to the rest in all good things, and he that is this has no further wants: he will not then have to look to his own advantage but to that of his subjects, for he that is not in such a position is a mere King elected by lot for the nonce.

But Despotism is on a contrary footing to this Kingship, because the Despot pursues his own good: and in the case of this its inferiority is most evident, and what is worse is contrary to what is best. The Transition to Despotism is made from Kingship, Despotism being a corrupt form of Monarchy, that is to say, the bad King comes to be a Despot.

From Aristocracy to Oligarchy the transition is made by the fault of the Rulers in distributing the public property contrary to right proportion; and giving either all that is good, or the greatest share, to themselves; and the offices to the same persons always, making wealth their idol; thus a few bear rule and they bad men in the place of the best.

From Timocracy the transition is to Democracy, they being contiguous: for it is the nature of Timocracy to be in the hands of a multitude, and all in the same grade of property are equal. Democracy is the least vicious of all, since herein the form of the constitution undergoes least change.

Well, these are generally the changes to which the various Constitutions are liable, being the least in degree and the easiest to make.

Likenesses, and, as it were, models of them, one may find even in Domestic life: for instance, the Communion between a Father and his Sons presents the figure of Kingship, because the children are the Father's care: and hence Homer names Jupiter Father because Kingship is intended to be a paternal rule. Among the Persians, however, the Father's rule is Despotic, for they treat their Sons as slaves. (The relation of Master to Slaves is of the nature of Despotism because the point regarded herein is the Master's interest): this now strikes me to be as it ought, but the Persian custom to be mistaken; because for different persons there should be different rules.

Between Husband and Wife the relation takes the form of Aristocracy, because he rules by right and in such points only as the Husband should, and gives to the Wife all that befits her to have. Where the Husband lords it in everything he changes the relation into an Oligarchy; because he does it contrary to right and not as being the better of the two. In some instances the Wives take the reins of government, being heiresses: here the rule is carried on not in right of goodness but by reason of wealth and power, as it is in Oligarchies.

Timocracy finds its type in the relation of Brothers: they being equal except as to such differences as age introduces: for which reason, if they are very different in age, the Friendship comes to be no longer a fraternal one: while Democracy is represented specially by families which have no head (all being there equal), or in which the proper head is weak and so every member does that which is right in his own eyes.

Chapter XI.

Attendant then on each form of Political Constitution there plainly is Friendship exactly co-extensive with the principle of Justice; that between a King and his Subjects being in the relation of a superiority of benefit, inasmuch as he benefits his subjects; it being assumed that he is a good king and takes care of their welfare as a shepherd tends his flock; whence Homer (to quote him again) calls Agamemnon, "shepherd of the people." And of this same kind is the Paternal Friendship, only that it exceeds the former in the greatness of the benefits done; because the father is the author of being (which is esteemed the greatest benefit) and of maintenance and education (these things are also, by the way, ascribed to ancestors generally): and by the law of nature the father has the right of rule over his sons, ancestors over their descendants, and the king over his subjects.

These friendships are also between superiors and inferiors, for which reason parents are not merely loved but also honoured. The principle of Justice also between these parties is not exactly the same but according to proportiton, because so also is the Friendship.

Now between Husband and Wife there is the same Friendship as in Aristocracy: for the relation is determined by relative excellence, and the better person has the greater good and each has what befits: so too also is the principle of Justice between them.

The Fraternal Friendship is like that of Companions, because brothers are equal and much of an age, and such persons have generally like feelings and like dispositions. Like to this also is the Friendship of a Timocracy, because the citizens are intended to be equal and equitable: rule, therefore, passes from hand to hand, and is distributed on equal terms: so too is the Friendship accordingly.

In the deflections from the constitutional forms, just as the principle of Justice is but small so is the Friendship also: and least of all in the most perverted form: in Despotism there is little or no Friendship. For generally wherever the ruler and the ruled have nothing in common there is no Friendship because there is no Justice; but the case is as between an artisan and his tool, or between soul and body, and master and slave; all these are benefited by those who use them, but towards things inanimate there is neither Friendship nor Justice: nor even towards a horse or an ox, or a slave _quâ_ slave, because there is nothing in common: a slave as such is an animate tool, a tool an inanimate slave. _Quâ_ slave, then, there is no Friendship towards him, only _quâ_ man: for it is thought that there is some principle of Justice between every man, and every other who can share in law and be a party to an agreement; and so somewhat of Friendship, in so far as he is man. So in Despotisms the Friendships and the principle of Justice are inconsiderable in extent, but in Democracies they are most considerable because they who are equal have much in common.

Chapter XII.

Now of course all Friendship is based upon Communion, as has been already stated: but one would be inclined to separate off from the rest the Friendship of Kindred, and that of Companions: whereas those of men of the same city, or tribe, or crew, and all such, are more peculiarly, it would seem, based upon Communion, inasmuch as they plainly exist in right of some agreement expressed or implied: among these one may rank also the Friendship of Hospitality,

The Friendship of Kindred is likewise of many kinds, and appears in all its varieties to depend on the Parental: parents, I mean, love their children as being a part of themselves, children love their parents as being themselves somewhat derived from them. But parents know their offspring more than these know that they are from the parents, and the source is more closely bound to that which is produced than that which is produced is to that which formed it: of course, whatever is derived from one's self is proper to that from which it is so derived (as, for instance, a tooth or a hair, or any other thing whatever to him that has it): but the source to it is in no degree proper, or in an inferior degree at least.

Then again the greater length of time comes in: the parents love their offspring from the first moment of their being, but their offspring them only after a lapse of time when they have attained intelligence or instinct. These considerations serve also to show why mothers have greater strength of affection than fathers.

Now parents love their children as themselves (since what is derived from themselves becomes a kind of other Self by the fact of separation), but children their parents as being sprung from them. And brothers love one another from being sprung from the same; that is, their sameness with the common stock creates a sameness with one another;[7] whence come the phrases, "same blood," "root," and so on. In fact they are the same, in a sense, even in the separate distinct individuals.

Then again the being brought up together, and the nearness of age, are a great help towards Friendship, for a man likes one of his own age and persons who are used to one another are companions, which accounts for the resemblance between the Friendship of Brothers and that of Companions.

And cousins and all other relatives derive their bond of union from these, that is to say, from their community of origin: and the strength of this bond varies according to their respective distances from the common ancestor.

Further: the Friendship felt by children towards parents, and by men towards the gods, is as towards something good and above them; because these have conferred the greatest possible benefits, in that they are the causes of their being and being nourished, and of their having been educated after they were brought into being.

And Friendship of this kind has also the pleasurable and the profitable more than that between persons unconnected by blood, in proportion as their life is also more shared in common. Then again in the Fraternal Friendship there is all that there is in that of Companions, and more in the good, and generally in those who are alike; in proportion as they are more closely tied and from their

very birth have a feeling of affection for one another to begin with, and as they are more like in disposition who spring from the same stock and have grown up together and been educated alike: and besides this they have the greatest opportunities in respect of time for proving one another, and can therefore depend most securely upon the trial.

Between Husband and Wife there is thought to be Friendship by a law of nature: man being by nature disposed to pair, more than to associate in Communities: in proportion as the family is prior in order of time and more absolutely necessary than the Community. And procreation is more common to him with other animals; all the other animals have Communion thus far, but human creatures cohabit not merely for the sake of procreation but also with a view to life in general::[8] because in this connection the works are immediately divided, and some belong to the man, others to the woman: thus they help one the other, putting what is peculiar to each into the common stock.

And for these reasons this Friendship is thought to combine the profitable and the pleasurable: it will be also based upon virtue if they are good people; because each has goodness and they may take delight in this quality in each other. Children too are thought to be a tie: accordingly the childless sooner separate, for the children are a good common to both and anything in common is a bond of union.

The question how a man is to live with his wife, or (more generally) one friend with another, appears to be no other than this, how it is just that they should: because plainly there is not the same principle of Justice between a friend and friend, as between strangers, or companions, or mere chance fellow-travellers.

Chapter XIII.

There are then, as was stated at the commencement of this book, three kinds of Friendship, and in each there may be friends on a footing of equality and friends in the relation of superior and inferior; we find, I mean, that people who are alike in goodness, become friends, and better with worse, and so also pleasant people; again, because of advantage people are friends, either balancing exactly their mutual profitableness or differing from one another herein. Well then, those who are equal should in right of this equality be equalised also by the degree of their Friendship and the other points, and those who are on a footing of inequality by rendering Friendship in proportion to the superiority of the other party.

Fault-finding and blame arises, either solely or most naturally, in Friendship of which utility is the motive: for they who are friends by reason of goodness, are eager to do kindnesses to one another because this is a natural result of goodness and Friendship; and when men are vying with each other for this End there can be no fault-finding nor contention: since no one is annoyed at one who entertains for him the sentiment of Friendship and does kindnesses to him, but if of a refined mind he requites him with kind actions. And suppose that one of the two exceeds the other, yet as he is attaining his object he will not find fault with his friend, for good is the object of each party.

Neither can there well be quarrels between men who are friends for pleasure’s sake: because supposing them to delight in living together then both attain their desire; or if not a man would be put in a ridiculous light who should find fault with another for not pleasing him, since it is in his power to forbear intercourse with him. But the Friendship because of advantage is very liable to fault-finding; because, as the parties use one another with a view to advantage, the requirements are continually enlarging, and they think they have less than of right belongs to them, and find fault because though justly entitled they do not get as much as they want: while they who do the kindnesses, can never come up to the requirements of those to whom they are being done.

It seems also, that as the Just is of two kinds, the unwritten and the legal, so Friendship because of advantage is of two kinds, what may be called the Moral, and the Legal: and the most fruitful source of complaints is that parties contract obligations and discharge them not in the same line of Friendship. The Legal is upon specified conditions, either purely tradesmanlike from hand to hand or somewhat more gentlemanly as regards time but still by agreement a _quid pro quo_.

In this Legal kind the obligation is clear and admits of no dispute, the friendly element is the delay in requiring its discharge: and for this reason in some countries no actions can be maintained at Law for the recovery of such debts, it being held that they who have dealt on the footing of credit must be content to abide the issue.

That which may be termed the Moral kind is not upon specified conditions, but a man gives as to his friend and so on: but still he expects to receive an equivalent, or even more, as though he had not given but lent: he also will find fault, because he does not get the obligation discharged in the same way as it was contracted.

Now this results from the fact, that all men, or the generality at least, _wish_ what is honourable, but, when tested, _choose_ what is profitable; and the doing kindnesses disinterestedly is honourable while receiving benefits is profitable. In such cases one should, if able, make a return proportionate to the good received, and do so willingly, because one ought not to make a disinterested friend[9] of a man against his inclination: one should act, I say, as having made a mistake originally in receiving kindness from one from whom one ought not to have received it, he being not a friend nor doing the act disinterestedly; one should therefore discharge one's self of the obligation as having received a kindness on specified terms: and if able a man would engage to repay the kindness, while if he were unable even the doer of it would not expect it of him: so that if he is able he ought to repay it. But one ought at the first to ascertain from whom one is receiving kindness, and on what understanding, that on that same understanding one may accept it or not.

A question admitting of dispute is whether one is to measure a kindness by the good done to the receiver of it, and make this the standard by which to requite, or by the kind intention of the doer?

For they who have received kindnesses frequently plead in depreciation that they have received from their benefactors such things as were small for them to give, or such as they themselves could have got from others: while the doers of the kindnesses affirm that they gave the best they had, and what could not have been got from others, and under danger, or in such-like straits.

May we not say, that as utility is the motive of the Friendship the advantage conferred on the receiver must be the standard? because he it is who requests the kindness and the other serves him in his need on the understanding that he is to get an equivalent: the assistance rendered is then exactly proportionate to the advantage which the receiver has obtained, and he should therefore repay as much as he gained by it, or even more, this being more creditable.

In Friendships based on goodness, the question, of course, is never raised, but herein the motive of the doer seems to be the proper standard, since virtue and moral character depend principally on motive.

Chapter XIV.

Quarrels arise also in those Friendships in which the parties are unequal because each party thinks himself entitled to the greater share, and of course, when this happens, the Friendship is broken up.

The man who is better than the other thinks that having the greater share pertains to him of right, for that more is always awarded to the good man: and similarly the man who is more profitable to another than that other to him: "one who is useless," they say, "ought not to share equally, for it comes to a tax, and not a Friendship, unless the fruits of the Friendship are reaped in proportion to the works done:" their notion being, that as in a money partnership they who contribute more receive more so should it be in Friendship likewise.

On the other hand, the needy man and the less virtuous advance the opposite claim: they urge that "it is the very business of a good friend to help those who are in need, else what is the use of having a good or powerful friend if one is not to reap the advantage at all?"

Now each seems to advance a right claim and to be entitled to get more out of the connection than the other, only _not more of the same thing_: but the superior man should receive more respect, the needy man more profit: respect being the reward of goodness and beneficence, profit being the aid of need.

This is plainly the principle acted upon in Political Communities: he receives no honour who gives no good to the common stock: for the property of the Public is given to him who does good to the Public, and honour is the property of the Public; it is not possible both to make money out of the Public and receive honour likewise; because no one will put up with the less in every respect: so to him who suffers loss as regards money they award honour, but money to him who can be paid by gifts: since, as has been stated before, the observing due proportion equalises and preserves Friendship.

Like rules then should be observed in the intercourse of friends who are unequal; and to him who advantages another in respect of money, or goodness, that other should repay honour, making requital according to his power; because Friendship requires what is possible, not what is strictly due, this being not possible in all cases, as in the honours paid to the gods and to parents: no man could ever make the due return in these cases, and so he is thought to be a good man who pays respect according to his ability.

For this reason it may be judged never to be allowable for a son to disown his father, whereas a father may his son: because he that owes is bound to pay; now a son can never, by anything he has done, fully requite the benefits first conferred on him by his

father, and so is always a debtor. But they to whom anything is owed may cast off their debtors: therefore the father may his son. But at the same time it must perhaps be admitted, that it seems no father ever _would_ sever himself utterly from a son, except in a case of exceeding depravity: because, independently of the natural Friendship, it is like human nature not to put away from one's self the assistance which a son might render. But to the son, if depraved, assisting his father is a thing to be avoided, or at least one which he will not be very anxious to do; most men being willing enough to receive kindness, but averse to doing it as unprofitable.

Let thus much suffice on these points.

BOOK IX

Chapter I.

Well, in all the Friendships the parties to which are dissimilar it is the proportionate which equalises and preserves the Friendship, as has been already stated: I mean, in the Social Friendship the cobbler, for instance, gets an equivalent for his shoes after a certain rate; and the weaver, and all others in like manner. Now in this case a common measure has been provided in money, and to this accordingly all things are referred and by this are measured: but in the Friendship of Love the complaint is sometimes from the lover that, though he loves exceedingly, his love is not requited; he having perhaps all the time nothing that can be the object of Friendship: again, oftentimes from the object of love that he who as a suitor promised any and every thing now performs nothing. These cases occur because the Friendship of the lover for the beloved object is based upon pleasure, that of the other for him upon utility, and in one of the parties the requisite quality is not found: for, as these are respectively the grounds of the Friendship, the Friendship comes to be broken up because the motives to it cease to exist: the parties loved not one another but qualities in one another which are not permanent, and so neither are the Friendships: whereas the Friendship based upon the moral character of the parties, being independent and disinterested, is permanent, as we have already stated.

Quarrels arise also when the parties realise different results and not those which they desire; for the not attaining one's special object is all one, in this case, with getting nothing at all: as in the well-known case where a man made promises to a musician, rising in proportion to the excellence of his music; but when, the next morning, the musician claimed the performance of his promises, he said that he had given him pleasure for pleasure: of course, if each party had intended this, it would have been all right: but if the one desires amusement and the other gain, and the one gets his object but the other not, the dealing cannot be fair: because a man fixes his mind upon what he happens to want, and will give so and so for that specific thing.

The question then arises, who is to fix the rate? the man who first gives, or the man who first takes? because, _primâ facie_, the man who first gives seems to leave the rate to be fixed by the other party. This, they say, was in fact the practice of Protagoras: when he taught a man anything he would bid the learner estimate the worth of the knowledge gained by his own private opinion; and then he used to take so much from him. In such cases some people adopt the rule,

"With specified reward a friend should be content."

They are certainly fairly found fault with who take the money in advance and then do nothing of what they said they would do, their promises having been so far beyond their ability; for such men do not perform what they agreed, The Sophists, however, are perhaps obliged to take this course, because no one would give a sixpence for their knowledge. These then, I say, are fairly found fault with, because they do not what they have already taken money for doing.

In cases where no stipulation as to the respective services is made they who disinterestedly do the first service will not raise the question (as we have said before), because it is the nature of Friendship, based on mutual goodness to be reference to the intention of the other, the intention being characteristic of the true friend and of goodness.

And it would seem the same rule should be laid down for those who are connected with one another as teachers and learners of philosophy; for here the value of the commodity cannot be measured by money, and, in fact, an exactly equivalent price cannot be set upon it, but perhaps it is sufficient to do what one can, as in the case of the gods or one's parents.

But where the original giving is not upon these terms but avowedly for some return, the most proper course is perhaps for the requital to be such as _both_ shall allow to be proportionate, and, where this cannot be, then for the receiver to fix the value would seem to be not only necessary but also fair: because when the first giver gets that which is equivalent to the advantage received by the other, or to what he would have given to secure the pleasure he has had, then he has the value from him: for not only is this

seen to be the course adopted in matters of buying and selling but also in some places the law does not allow of actions upon voluntary dealings; on the principle that when one man has trusted another he must be content to have the obligation discharged in the same spirit as he originally contracted it: that is to say, it is thought fairer for the trusted, than for the trusting, party, to fix the value. For, in general, those who have and those who wish to get things do not set the same value on them: what is their own, and what they give in each case, appears to them worth a great deal: but yet the return is made according to the estimate of those who have received first, it should perhaps be added that the receiver should estimate what he has received, not by the value he sets upon it now that he has it, but by that which he set upon it before he obtained it.

Chapter II.

Questions also arise upon such points as the following: Whether one's father has an unlimited claim on one's services and obedience, or whether the sick man is to obey his physician? or, in an election of a general, the warlike qualities of the candidates should be alone regarded?

In like manner whether one should do a service rather to one's friend or to a good man? whether one should rather requite a benefactor or give to one's companion, supposing that both are not within one's power?

Is not the true answer that it is no easy task to determine all such questions accurately, inasmuch as they involve numerous differences of all kinds, in respect of amount and what is honourable and what is necessary? It is obvious, of course, that no one person can unite in himself all claims. Again, the requital of benefits is, in general, a higher duty than doing unsolicited kindnesses to one's companion; in other words, the discharging of a debt is more obligatory upon one than the duty of giving to a companion. And yet this rule may admit of exceptions; for instance, which is the higher duty? for one who has been ransomed out of the hands of robbers to ransom in return his ransomer, be he who he may, or to repay him on his demand though he has not been taken by robbers, or to ransom his own father? for it would seem that a man ought to ransom his father even in preference to himself.

Well then, as has been said already, as a general rule the debt should be discharged, but if in a particular case the giving greatly preponderates as being either honourable or necessary, we must be swayed by these considerations: I mean, in some cases the requital of the obligation previously existing may not be equal; suppose, for instance, that the original benefactor has conferred a kindness on a good man, knowing him to be such, whereas this said good man has to repay it believing him to be a scoundrel.

And again, in certain cases no obligation lies on a man to lend to one who has lent to him; suppose, for instance, that a bad man lent to him, as being a good man, under the notion that he should get repaid, whereas the said good man has no hope of repayment from him being a bad man. Either then the case is really as we have supposed it and then the claim is not equal, or it is not so but supposed to be; and still in so acting people are not to be thought to act wrongly. In short, as has been oftentimes stated before, all statements regarding feelings and actions can be definite only in proportion as their object-matter is so; it is of course quite obvious that all people have not the same claim upon one, nor are the claims of one's father unlimited; just as Jupiter does not claim all kinds of sacrifice without distinction: and since the claims of parents, brothers, companions, and benefactors, are all different, we must give to each what belongs to and befits each.

And this is seen to be the course commonly pursued: to marriages men commonly invite their relatives, because these are from a common stock and therefore all the actions in any way pertaining thereto are common also: and to funerals men think that relatives ought to assemble in preference to other people, for the same reason.

And it would seem that in respect of maintenance it is our duty to assist our parents in preference to all others, as being their debtors, and because it is more honourable to succour in these respects the authors of our existence than ourselves. Honour likewise we ought to pay to our parents just as to the gods, but then, not all kinds of honour: not the same, for instance, to a father as to a mother: nor again to a father the honour due to a scientific man or to a general but that which is a father's due, and in like manner to a mother that which is a mother's.

To all our elders also the honour befitting their age, by rising up in their presence, turning out of the way for them, and all similar marks of respect: to our companions again, or brothers, frankness and free participation in all we have. And to those of the same family, or tribe, or city, with ourselves, and all similarly connected with us, we should constantly try to render their due, and to discriminate what belongs to each in respect of nearness of connection, or goodness, or intimacy: of course in the case of those of the same class the discrimination is easier; in that of those who are in different classes it is a matter of more trouble. This, however, should not be a reason for giving up the attempt, but we must observe the distinctions so far as it is practicable to do so.

Chapter III.

A question is also raised as to the propriety of dissolving or not dissolving those Friendships the parties to which do not remain what they were when the connection was formed.

Now surely in respect of those whose motive to Friendship is utility or pleasure there can be nothing wrong in breaking up the connection when they no longer have those qualities; because they were friends [not of one another, but] of those qualities: and, these having failed, it is only reasonable to expect that they should cease to entertain the sentiment.

But a man has reason to find fault if the other party, being really attached to him because of advantage or pleasure, pretended to be so because of his moral character: in fact, as we said at the commencement, the most common source of quarrels between friends is their not being friends on the same grounds as they suppose themselves to be.

Now when a man has been deceived in having supposed himself to excite the sentiment of Friendship by reason of his moral character, the other party doing nothing to indicate he has but himself to blame: but when he has been deceived by the pretence of the other he has a right to find fault with the man who has so deceived him, aye even more than with utterers of false coin, in proportion to the greater preciousness of that which is the object-matter of the villany.

But suppose a man takes up another as being a good man, who turns out, and is found by him, to be a scoundrel, is he bound still to entertain Friendship for him? or may we not say at once it is impossible? since it is not everything which is the object-matter of Friendship, but only that which is good; and so there is no obligation to be a bad man's friend, nor, in fact, ought one to be such: for one ought not to be a lover of evil, nor to be assimilated to what is base; which would be implied, because we have said before, like is friendly to like.

Are we then to break with him instantly? not in all cases; only where our friends are incurably depraved; when there is a chance of amendment we are bound to aid in repairing the moral character of our friends even more than their substance, in proportion as it is better and more closely related to Friendship. Still he who should break off the connection is not to be judged to act wrongly, for he never was a friend to such a character as the other now is, and therefore, since the man is changed and he cannot reduce him to his original state, he backs out of the connection.

To put another case: suppose that one party remains what he was when the Friendship was formed, while the other becomes morally improved and widely different from his friend in goodness; is the improved character to treat the other as a friend?

May we not say it is impossible? The case of course is clearest where there is a great difference, as in the Friendships of boys: for suppose that of two boyish friends the one still continues a boy in mind and the other becomes a man of the highest character, how can they be friends? since they neither are pleased with the same objects nor like and dislike the same things: for these points will not belong to them as regards one another, and without them it was assumed they cannot be friends because they cannot live in intimacy: and of the case of those who cannot do so we have spoken before.

Well then, is the improved party to bear himself towards his former friend in no way differently to what he would have done had the connection never existed?

Surely he ought to bear in mind the intimacy of past times, and just as we think ourselves bound to do favours for our friends in preference to strangers, so to those who have been friends and are so no longer we should allow somewhat on the score of previous Friendship, whenever the cause of severance is not excessive depravity on their part.

Chapter IV.

Now the friendly feelings which are exhibited towards our friends, and by which Friendships are characterised, seem to have sprung out of those which we entertain toward ourselves.

I mean, people define a friend to be "one who intends and does what is good (or what he believes to be good) to another for that other's sake," or "one who wishes his friend to be and to live for that friend's own sake" (which is the feeling of mothers towards their children, and of friends who have come into collision). Others again, "one who lives with another and chooses the same objects," or "one who sympathises with his friend in his sorrows and in his joys" (this too is especially the case with mothers).

Well, by some one of these marks people generally characterise Friendship: and each of these the good man has towards himself, and all others have them in so far as they suppose themselves to be good. (For, as has been said before, goodness, that is the

good man, seems to be a measure to every one else.)

For he is at unity in himself, and with every part of his soul he desires the same objects; and he wishes for himself both what is, and what he believes to be, good; and he does it (it being characteristic of the good man to work at what is good), and for the sake of himself, inasmuch as he does it for the sake of his Intellectual Principle which is generally thought to be a man's Self. Again, he wishes himself And specially this Principle whereby he is an intelligent being, to live and be preserved in life, because existence is a good to him that is a good man.

But it is to himself that each individual wishes what is good, and no man, conceiving the possibility of his becoming other than he now is, chooses that that New Self should have all things indiscriminately: a god, for instance, has at the present moment the Chief Good, but he has it in right of being whatever he actually now is: and the Intelligent Principle must be judged to be each man's Self, or at least eminently so [though other Principles help, of course, to constitute him the man he is].

Furthermore, the good man wishes to continue to live with himself; for he can do it with pleasure, in that his memories of past actions are full of delight and his anticipations of the future are good and such are pleasurable. Then, again, he has good store of matter for his Intellect to contemplate, and he most especially sympathises with his Self in its griefs and joys, because the objects which give him pain and pleasure are at all times the same, not one thing to-day and a different one to-morrow: because he is not given to repentance,[1] if one may so speak. It is then because each of these feelings are entertained by the good man towards his own Self and a friend feels towards a friend as towards himself (a friend being in fact another Self), that Friendship is thought to be some one of these things and they are accounted friends in whom they are found. Whether or no there can really be Friendship between a man and his Self is a question we will not at present entertain: there may be thought to be Friendship, in so far as there are two or more of the aforesaid requisites, and because the highest degree of Friendship, in the usual acceptation of that term, resembles the feeling entertained by a man towards himself.

But it may be urged that the aforesaid requisites are to all appearance found in the common run of men, though they are men of a low stamp.

May it not be answered, that they share in them only in so far as they please themselves, and conceive themselves to be good? for certainly, they are not either really, or even apparently, found in any one of those who are very depraved and villainous; we may almost say not even in those who are bad men at all: for they are at variance with themselves and lust after different things from those which in cool reason they wish for, just as men who fail of Self-Control: I mean, they choose things which, though hurtful, are pleasurable, in preference to those which in their own minds they believe to be good: others again, from cowardice and indolence, decline to do what still they are convinced is best for them: while they who from their depravity have actually done many dreadful actions hate and avoid life, and accordingly kill themselves: and the wicked seek others in whose company to spend their time, but fly from themselves because they have many unpleasant subjects of memory, and can only look forward to others like them when in solitude but drown their remorse in the company of others: and as they have nothing to raise the sentiment of Friendship so they never feel it towards themselves.

Neither, in fact, can they who are of this character sympathise with their Selves in their joys and sorrows, because their soul is, as it were, rent by faction, and the one principle, by reason of the depravity in them, is grieved at abstaining from certain things, while the other and better principle is pleased thereat; and the one drags them this way and the other that way, as though actually tearing them asunder.[2] And though it is impossible actually to have at the same time the sensations of pain and pleasure; yet after a little time the man is sorry for having been pleased, and he could wish that those objects had not given him pleasure; for the wicked are full of remorse.

It is plain then that the wicked man cannot be in the position of a friend even towards himself, because he has in himself nothing which can excite the sentiment of Friendship. If then to be thus is exceedingly wretched it is a man's duty to flee from wickedness with all his might and to strive to be good, because thus may he be friends with himself and may come to be a friend to another.

Chapter V.

Kindly Feeling, though resembling Friendship, is not identical with it, because it may exist in reference to those whom we do not know and without the object of it being aware of its existence, which Friendship cannot. (This, by the way, has also been said before.) And further, it is not even Affection because it does not imply intensity nor yearning, which are both consequences of Affection. Again Affection requires intimacy but Kindly Feeling may arise quite suddenly, as happens sometimes in respect of men

against whom people are matched in any way, I mean they come to be kindly disposed to them and sympathise in their wishes, but still they would not join them in any action, because, as we said, they conceive this feeling of kindness suddenly and so have but a superficial liking.

What it does seem to be is the starting point of a Friendship; just as pleasure, received through the sight, is the commencement of Love: for no one falls in love without being first pleased with the personal appearance of the beloved object, and yet he who takes pleasure in it does not therefore necessarily love, but when he wearies for the object in its absence and desires its presence. Exactly in the same way men cannot be friends without having passed through the stage of Kindly Feeling, and yet they who are in that stage do not necessarily advance to Friendship: they merely have an inert wish for the good of those toward whom they entertain the feeling, but would not join them in any action, nor put themselves out of the way for them. So that, in a metaphorical way of speaking, one might say that it is dormant Friendship, and when it has endured for a space and ripened into intimacy comes to be real Friendship; but not that whose object is advantage or pleasure, because such motives cannot produce even Kindly Feeling.

I mean, he who has received a kindness requites it by Kindly Feeling towards his benefactor, and is right in so doing: but he who wishes another to be prosperous, because he has hope of advantage through his instrumentality, does not seem to be kindly disposed to that person but rather to himself; just as neither is he his friend if he pays court to him for any interested purpose.

Kindly Feeling always arises by reason of goodness and a certain amiability, when one man gives another the notion of being a fine fellow, or brave man, etc., as we said was the case sometimes with those matched against one another.

Chapter VI.

Unity of Sentiment is also plainly connected with Friendship, and therefore is not the same as Unity of Opinion, because this might exist even between people unacquainted with one another.

Nor do men usually say people are united in sentiment merely because they agree in opinion on _any_ point, as, for instance, on points of astronomical science (Unity of Sentiment herein not having any connection with Friendship), but they say that Communities have Unity of Sentiment when they agree respecting points of expediency and take the same line and carry out what has been determined in common consultation.

Thus we see that Unity of Sentiment has for its object matters of action, and such of these as are of importance, and of mutual, or, in the case of single States, common, interest: when, for instance, all agree in the choice of magistrates, or forming alliance with the Lacedæmonians, or appointing Pittacus ruler (that is to say, supposing he himself was willing). But when each wishes himself to be in power (as the brothers in the Phœnissæ), they quarrel and form parties: for, plainly, Unity of Sentiment does not merely imply that each entertains the same idea be it what it may, but that they do so in respect of the same object, as when both the populace and the sensible men of a State desire that the best men should be in office, because then all attain their object.

Thus Unity of Sentiment is plainly a social Friendship, as it is also said to be: since it has for its object-matter things expedient and relating to life.

And this Unity exists among the good: for they have it towards themselves and towards one another, being, if I may be allowed the expression, in the same position: I mean, the wishes of such men are steady and do not ebb and flow like the Euripus, and they wish what is just and expedient and aim at these things in common.

The bad, on the contrary, can as little have Unity of Sentiment as they can be real friends, except to a very slight extent, desiring as they do unfair advantage in things profitable while they shirk labour and service for the common good: and while each man wishes for these things for himself he is jealous of and hinders his neighbour: and as they do not watch over the common good it is lost. The result is that they quarrel while they are for keeping one another to work but are not willing to perform their just share.

Chapter VII.

Benefactors are commonly held to have more Friendship for the objects of their kindness than these for them: and the fact is made a subject of discussion and enquiry, as being contrary to reasonable expectation.

The account of the matter which satisfies most persons is that the one are debtors and the others creditors: and therefore that, as in the case of actual loans the debtors wish their creditors out of the way while the creditors are anxious for the preservation of their

debtors, so those who have done kindnesses desire the continued existence of the people they have done them to, under the notion of getting a return of their good offices, while these are not particularly anxious about requital.

Epicharmus, I suspect, would very probably say that they who give this solution judge from their own baseness; yet it certainly is like human nature, for the generality of men have short memories on these points, and aim rather at receiving than conferring benefits.

But the real cause, it would seem, rests upon nature, and the case is not parallel to that of creditors; because in this there is no affection to the persons, but merely a wish for their preservation with a view to the return: whereas, in point of fact, they who have done kindnesses feel friendship and love for those to whom they have done them, even though they neither are, nor can by possibility hereafter be, in a position to serve their benefactors.

And this is the case also with artisans; every one, I mean, feels more affection for his own work than that work possibly could for him if it were animate. It is perhaps specially the case with poets: for these entertain very great affection for their poems, loving them as their own children. It is to this kind of thing I should be inclined to compare the case of benefactors: for the object of their kindness is their own work, and so they love this more than this loves its creator.

And the account of this is that existence is to all a thing choice-worthy and an object of affection; now we exist by acts of working, that is, by living and acting; he then that has created a given work exists, it may be said, by his act of working: therefore he loves his work because he loves existence. And this is natural, for the work produced displays in act what existed before potentially.

Then again, the benefactor has a sense of honour in right of his action, so that he may well take pleasure in him in whom this resides; but to him who has received the benefit there is nothing honourable in respect of his benefactor, only something advantageous which is both less pleasant and less the object of Friendship.

Again, pleasure is derived from the actual working out of a present action, from the anticipation of a future one, and from the recollection of a past one: but the highest pleasure and special object of affection is that which attends on the actual working. Now the benefactor's work abides (for the honourable is enduring), but the advantage of him who has received the kindness passes away.

Again, there is pleasure in recollecting honourable actions, but in recollecting advantageous ones there is none at all or much less (by the way though, the contrary is true of the expectation of advantage).

Further, the entertaining the feeling of Friendship is like acting on another; but being the object of the feeling is like being acted upon.

So then, entertaining the sentiment of Friendship, and all feelings connected with it, attend on those who, in the given case of a benefaction, are the superior party.

Once more: all people value most what has cost them much labour in the production; for instance, people who have themselves made their money are fonder of it than those who have inherited it: and receiving kindness is, it seems, unlaborious, but doing it is laborious. And this is the reason why the female parents are most fond of their offspring; for their part in producing them is attended with most labour, and they know more certainly that they are theirs. This feeling would seem also to belong to benefactors.

Chapter VIII.

A question is also raised as to whether it is right to love one's Self best, or some one else: because men find fault with those who love themselves best, and call them in a disparaging way lovers of Self; and the bad man is thought to do everything he does for his own sake merely, and the more so the more depraved he is; accordingly men reproach him with never doing anything unselfish: whereas the good man acts from a sense of honour (and the more so the better man he is), and for his friend's sake, and is careless of his own interest.

But with these theories facts are at variance, and not unnaturally: for it is commonly said also that a man is to love most him who is most his friend, and he is most a friend who wishes good to him to whom he wishes it for that man's sake even though no one knows. Now these conditions, and in fact all the rest by which a friend is characterised, belong specially to each individual in respect of his Self: for we have said before that all the friendly feelings are derived to others from those which have Self primarily for their object. And all the current proverbs support this view; for instance, "one soul," "the goods of friends are common," "equality

is a tie of Friendship," "the knee is nearer than the shin." For all these things exist specially with reference to a man's own Self: he is specially a friend to himself and so he is bound to love himself the most.

It is with good reason questioned which of the two parties one should follow, both having plausibility on their side. Perhaps then, in respect of theories of this kind, the proper course is to distinguish and define how far each is true, and in what way. If we could ascertain the sense in which each uses the term "Self-loving," this point might be cleared up.

Well now, they who use it disparagingly give the name to those who, in respect of wealth, and honours, and pleasures of the body, give to themselves the larger share: because the mass of mankind grasp after these and are earnest about them as being the best things; which is the reason why they are matters of contention. They who are covetous in regard to these gratify their lusts and passions in general, that is to say the irrational part of their soul: now the mass of mankind are so disposed, for which reason the appellation has taken its rise from that mass which is low and bad. Of course they are justly reproached who are Self-loving in this sense.

And that the generality of men are accustomed to apply the term to denominate those who do give such things to themselves is quite plain: suppose, for instance, that a man were anxious to do, more than other men, acts of justice, or self-mastery, or any other virtuous acts, and, in general, were to secure to himself that which is abstractedly noble and honourable, no one would call him Self-loving, nor blame him.

Yet might such an one be judged to be more truly Self-loving: certainly he gives to himself the things which are most noble and most good, and gratifies that Principle of his nature which is most rightfully authoritative, and obeys it in everything: and just as that which possesses the highest authority is thought to constitute a Community or any other system, so also in the case of Man: and so he is most truly Self-loving who loves and gratifies this Principle.

Again, men are said to have, or to fail of having, self-control, according as the Intellect controls or not, it being plainly implied thereby that this Principle constitutes each individual; and people are thought to have done of themselves, and voluntarily, those things specially which are done with Reason.

It is plain, therefore, that this Principle does, either entirely or specially constitute the individual man, and that the good man specially loves this. For this reason then he must be specially Self-loving, in a kind other than that which is reproached, and as far superior to it as living in accordance with Reason is to living at the beck and call of passion, and aiming at the truly noble to aiming at apparent advantage.

Now all approve and commend those who are eminently earnest about honourable actions, and if all would vie with one another in respect of the καλ■ν, and be intent upon doing what is most truly noble and honourable, society at large would have all that is proper while each individual in particular would have the greatest of goods, Virtue being assumed to be such.

And so the good man ought to be Self-loving: because by doing what is noble he will have advantage himself and will do good to others: but the bad man ought not to be, because he will harm himself and his neighbours by following low and evil passions. In the case of the bad man, what he ought to do and what he does are at variance, but the good man does what he ought to do, because all Intellect chooses what is best for itself and the good man puts himself under the direction of Intellect.

Of the good man it is true likewise that he does many things for the sake of his friends and his country, even to the extent of dying for them, if need be: for money and honours, and, in short, all the good things which others fight for, he will throw away while eager to secure to himself the καλ■ν: he will prefer a brief and great joy to a tame and enduring one, and to live nobly for one year rather than ordinarily for many, and one great and noble action to many trifling ones. And this is perhaps that which befals men who die for their country and friends; they choose great glory for themselves: and they will lavish their own money that their friends may receive more, for hereby the friend gets the money but the man himself the καλ■ν; so, in fact he gives to himself the greater good. It is the same with honours and offices; all these things he will give up to his friend, because this reflects honour and praise on himself: and so with good reason is he esteemed a fine character since he chooses the honourable before all things else. It is possible also to give up the opportunities of action to a friend; and to have caused a friend's doing a thing may be more noble than having done it one's self.

In short, in all praiseworthy things the good man does plainly give to himself a larger share of the honourable. In this sense it is right to be Self-loving, in the vulgar acceptation of the term it is not.

Chapter IX.

A question is raised also respecting the Happy man, whether he will want Friends, or no?

Some say that they who are blessed and independent have no need of Friends, for they already have all that is good, and so, as being independent, want nothing further: whereas the notion of a friend's office is to be as it were a second Self and procure for a man what he cannot get by himself: hence the saying,

"When Fortune gives us good, what need we Friends?"

On the other hand, it looks absurd, while we are assigning to the Happy man all other good things, not to give him Friends, which are, after all, thought to be the greatest of external goods.

Again, if it is more characteristic of a friend to confer than to receive kindnesses, and if to be beneficent belongs to the good man and to the character of virtue, and if it is more noble to confer kindnesses on friends than strangers, the good man will need objects for his benefactions. And out of this last consideration springs a question whether the need of Friends be greater in prosperity or adversity, since the unfortunate man wants people to do him kindnesses and they who are fortunate want objects for their kind acts.

Again, it is perhaps absurd to make our Happy man a solitary, because no man would choose the possession of all goods in the world on the condition of solitariness, man being a social animal and formed by nature for living with others: of course the Happy man has this qualification since he has all those things which are good by nature: and it is obvious that the society of friends and good men must be preferable to that of strangers and ordinary people, and we conclude, therefore, that the Happy man does need Friends.

But then, what do they mean whom we quoted first, and how are they right? Is it not that the mass of mankind mean by Friends those who are useful? and of course the Happy man will not need such because he has all good things already; neither will he need such as are Friends with a view to the pleasurable, or at least only to a slight extent; because his life, being already pleasurable, does not want pleasure imported from without; and so, since the Happy man does not need Friends of these kinds, he is thought not to need any at all.

But it may be, this is not true: for it was stated originally, that Happiness is a kind of Working; now Working plainly is something that must come into being, not be already there like a mere piece of property.

If then the being happy consists in living and working, and the good man's working is in itself excellent and pleasurable (as we said at the commencement of the treatise), and if what is our own reckons among things pleasurable, and if we can view our neighbours better than ourselves and their actions better than we can our own, then the actions of their Friends who are good men are pleasurable to the good; inasmuch as they have both the requisites which are naturally pleasant. So the man in the highest state of happiness will need Friends of this kind, since he desires to contemplate good actions, and actions of his own, which those of his friend, being a good man, are.

Again, common opinion requires that the Happy man live with pleasure to himself: now life is burthensome to a man in solitude, for it is not easy to work continuously by one's self, but in company with, and in regard to others, it is easier, and therefore the working, being pleasurable in itself will be more continuous (a thing which should be in respect of the Happy man); for the good man, in that he is good takes pleasure in the actions which accord with Virtue and is annoyed at those which spring from Vice, just as a musical man is pleased with beautiful music and annoyed by bad. And besides, as Theognis says, Virtue itself may be improved by practice, from living with the good.

And, upon the following considerations more purely metaphysical, it will probably appear that the good friend is naturally choice-worthy to the good man. We have said before, that whatever is naturally good is also in itself good and pleasant to the good man; now the fact of living, so far as animals are concerned, is characterised generally by the power of sentience, in man it is characterised by that of sentience, or of rationality (the faculty of course being referred to the actual operation of the faculty, certainly the main point is the actual operation of it); so that living seems mainly to consist in the act of sentience or exerting rationality: now the fact of living is in itself one of the things that are good and pleasant (for it is a definite totality, and whatever is such belongs to the nature of good), but what is naturally good is good to the good man: for which reason it seems to be pleasant to all. (Of course one must not suppose a life which is depraved and corrupted, nor one spent in pain, for that which is such is indefinite as are its inherent qualities: however, what is to be said of pain will be clearer in what is to follow.)

If then the fact of living is in itself good and pleasant (and this appears from the fact that all desire it, and specially those who are good and in high happiness; their course of life being most choice-worthy and their existence most choice-worthy likewise), then also he that sees perceives that he sees; and he that hears perceives that he hears; and he that walks perceives that he walks; and in all the other instances in like manner there is a faculty which reflects upon and perceives the fact that we are working, so that we can perceive that we perceive and intellectually know that we intellectually know: but to perceive that we perceive or that we intellectually know is to perceive that we exist, since existence was defined to be perceiving or intellectually knowing. Now to perceive that one lives is a thing pleasant in itself, life being a thing naturally good, and the perceiving of the presence in ourselves of things naturally good being pleasant.

Therefore the fact of living is choice-worthy, and to the good specially so since existence is good and pleasant to them: for they receive pleasure from the internal consciousness of that which in itself is good.

But the good man is to his friend as to himself, friend being but a name for a second Self; therefore as his own existence is choice-worthy to each so too, or similarly at least, is his friend's existence. But the ground of one's own existence being choice-worthy is the perceiving of one's self being good, any such perception being in itself pleasant. Therefore one ought to be thoroughly conscious of one's friend's existence, which will result from living with him, that is sharing in his words and thoughts: for this is the meaning of the term as applied to the human species, not mere feeding together as in the case of brutes.

If then to the man in a high state of happiness existence is in itself choice-worthy, being naturally good and pleasant, and so too a friend's existence, then the friend also must be among things choice-worthy. But whatever is choice-worthy to a man he should have or else he will be in this point deficient. The man therefore who is to come up to our notion "Happy" will need good Friends.

Chapter X.

Are we then to make our friends as numerous as possible? or, as in respect of acquaintance it is thought to have been well said "have not thou many acquaintances yet be not without;" so too in respect of Friendship may we adopt the precept, and say that a man should not be without friends, nor again have exceeding many friends?

Now as for friends who are intended for use, the maxim I have quoted will, it seems, fit in exceedingly well, because to requite the services of many is a matter of labour, and a whole life would not be long enough to do this for them. So that, if more numerous than what will suffice for one's own life, they become officious, and are hindrances in respect of living well: and so we do not want them. And again of those who are to be for pleasure a few are quite enough, just like sweetening in our food.

But of the good are we to make as many as ever we can, or is there any measure of the number of friends, as there is of the number to constitute a Political Community? I mean, you cannot make one out of ten men, and if you increase the number to one hundred thousand it is not any longer a Community. However, the number is not perhaps some one definite number but any between certain extreme limits.

Well, of friends likewise there is a limited number, which perhaps may be laid down to be the greatest number with whom it would be possible to keep up intimacy; this being thought to be one of the greatest marks of Friendship, and it being quite obvious that it is not possible to be intimate with many, in other words, to part one's self among many. And besides it must be remembered that they also are to be friends to one another if they are all to live together: but it is a matter of difficulty to find this in many men at once.

It comes likewise to be difficult to bring home to one's self the joys and sorrows of many: because in all probability one would have to sympathise at the same time with the joys of this one and the sorrows of that other.

Perhaps then it is well not to endeavour to have very many friends but so many as are enough for intimacy: because, in fact, it would seem not to be possible to be very much a friend to many at the same time: and, for the same reason, not to be in love with many objects at the same time: love being a kind of excessive Friendship which implies but one object: and all strong emotions must be limited in the number towards whom they are felt.

And if we look to facts this seems to be so: for not many at a time become friends in the way of companionship, all the famous Friendships of the kind are between _two_ persons: whereas they who have many friends, and meet everybody on the footing of intimacy, seem to be friends really to no one except in the way of general society; I mean the characters denominated as over-complaisant.

To be sure, in the way merely of society, a man may be a friend to many without being necessarily over-complaisant, but being truly good: but one cannot be a friend to many because of their virtue, and for the persons' own sake; in fact, it is a matter for contentment to find even a few such.

Chapter XI.

Again: are friends most needed in prosperity or in adversity? they are required, we know, in both states, because the unfortunate need help and the prosperous want people to live with and to do kindnesses to: for they have a desire to act kindly to some one.

To have friends is more necessary in adversity, and therefore in this case useful ones are wanted; and to have them in prosperity is more honourable, and this is why the prosperous want good men for friends, it being preferable to confer benefits on, and to live with, these. For the very presence of friends is pleasant even in adversity: since men when grieved are comforted by the sympathy of their friends.

And from this, by the way, the question might be raised, whether it is that they do in a manner take part of the weight of calamities, or only that their presence, being pleasurable, and the consciousness of their sympathy, make the pain of the sufferer less.

However, we will not further discuss whether these which have been suggested or some other causes produce the relief, at least the effect we speak of is a matter of plain fact.

But their presence has probably a mixed effect: I mean, not only is the very seeing friends pleasant, especially to one in misfortune, and actual help towards lessening the grief is afforded (the natural tendency of a friend, if he is gifted with tact, being to comfort by look and word, because he is well acquainted with the sufferer's temper and disposition and therefore knows what things give him pleasure and pain), but also the perceiving a friend to be grieved at his misfortunes causes the sufferer pain, because every one avoids being cause of pain to his friends. And for this reason they who are of a manly nature are cautious not to implicate their friends in their pain; and unless a man is exceedingly callous to the pain of others he cannot bear the pain which is thus caused to his friends: in short, he does not admit men to wail with him, not being given to wail at all: women, it is true, and men who resemble women, like to have others to groan with them, and love such as friends and sympathisers. But it is plain that it is our duty in all things to imitate the highest character.

On the other hand, the advantages of friends in our prosperity are the pleasurable intercourse and the consciousness that they are pleased at our good fortune.

It would seem, therefore, that we ought to call in friends readily on occasion of good fortune, because it is noble to be ready to do good to others: but on occasion of bad fortune, we should do so with reluctance; for we should as little as possible make others share in our ills; on which principle goes the saying, "I am unfortunate, let that suffice." The most proper occasion for calling them in is when with small trouble or annoyance to themselves they can be of very great use to the person who needs them.

But, on the contrary, it is fitting perhaps to go to one's friends in their misfortunes unasked and with alacrity (because kindness is the friend's office and specially towards those who are in need and who do not demand it as a right, this being more creditable and more pleasant to both); and on occasion of their good fortune to go readily, if we can forward it in any way (because men need their friends for this likewise), but to be backward in sharing it, any great eagerness to receive advantage not being creditable.

One should perhaps be cautious not to present the appearance of sullenness in declining the sympathy or help of friends, for this happens occasionally.

It appears then that the presence of friends is, under all circumstances, choice-worthy.

Chapter XII.

May we not say then that, as seeing the beloved object is most prized by lovers and they choose this sense rather than any of the others because Love

"Is engendered in the eyes, With gazing fed,"

in like manner intimacy is to friends most choice-worthy, Friendship being communion? Again, as a man is to himself so is he to his friend; now with respect to himself the perception of his own existence is choice-worthy, therefore is it also in respect of his friend.

And besides, their Friendship is acted out in intimacy, and so with good reason they desire this. And whatever in each man's opinion constitutes existence, or whatsoever it is for the sake of which they choose life, herein they wish their friends to join with them; and so some men drink together, others gamble, others join in gymnastic exercises or hunting, others study philosophy together: in each case spending their days together in that which they like best of all things in life, for since they wish to be intimate with their friends they do and partake in those things whereby they think to attain this object.

Therefore the Friendship of the wicked comes to be depraved; for, being unstable, they share in what is bad and become depraved in being made like to one another: but the Friendship of the good is good, growing with their intercourse; they improve also, as it seems, by repeated acts, and by mutual correction, for they receive impress from one another in the points which give them pleasure; whence says the Poet,

"Thou from the good, good things shalt surely learn."

Here then we will terminate our discourse of Friendship. The next thing is to go into the subject of Pleasure.

BOOK X

Chapter I.

Next, it would seem, follows a discussion respecting Pleasure, for it is thought to be most closely bound up with our kind: and so men train the young, guiding them on their course by the rudders of Pleasure and Pain. And to like and dislike what one ought is judged to be most important for the formation of good moral character: because these feelings extend all one's life through, giving a bias towards and exerting an influence on the side of Virtue and Happiness, since men choose what is pleasant and avoid what is painful.

Subjects such as these then, it would seem, we ought by no means to pass by, and specially since they involve much difference of opinion. There are those who call Pleasure the Chief Good; there are others who on the contrary maintain that it is exceedingly bad;[1] some perhaps from a real conviction that such is the case, others from a notion that it is better, in reference to our life and conduct, to show up Pleasure as bad, even if it is not so really; arguing that, as the mass of men have a bias towards it and are the slaves of their pleasures, it is right to draw them to the contrary, for that so they may possibly arrive at the mean.[2]

I confess I suspect the soundness of this policy; in matters respecting men's feelings and actions theories are less convincing than facts: whenever, therefore, they are found conflicting with actual experience, they not only are despised but involve the truth in their fall: he, for instance, who deprecates Pleasure, if once seen to aim at it, gets the credit of backsliding to it as being universally such as he said it was, the mass of men being incapable of nice distinctions.

Real accounts, therefore, of such matters seem to be most expedient, not with a view to knowledge merely but to life and conduct: for they are believed as being in harm with facts, and so they prevail with the wise to live in accordance with them.

But of such considerations enough: let us now proceed to the current maxims respecting Pleasure.

Chapter II.

Now Eudoxus thought Pleasure to be the Chief Good because he saw all, rational and irrational alike, aiming at it: and he argued that, since in all what was the object of choice must be good and what most so the best, the fact of all being drawn to the same thing proved this thing to be the best for all: "For each," he said, "finds what is good for itself just as it does its proper nourishment, and so that which is good for all, and the object of the aim of all, is their Chief Good."

(And his theories were received, not so much for their own sake, as because of his excellent moral character; for he was thought to be eminently possessed of perfect self-mastery, and therefore it was not thought that he said these things because he was a lover of Pleasure but that he really was so convinced.)

And he thought his position was not less proved by the argument from the contrary: that is, since Pain was in itself an object of avoidance to all the contrary must be in like manner an object of choice.

Again he urged that that is most choice-worthy which we choose, not by reason of, or with a view to, anything further; and that Pleasure is confessedly of this kind because no one ever goes on to ask to what purpose he is pleased, feeling that Pleasure is in

itself choice-worthy.

Again, that when added to any other good it makes it more choice-worthy; as, for instance, to actions of justice, or perfected self-mastery; and good can only be increased by itself.

However, this argument at least seems to prove only that it belongs to the class of goods, and not that it does so more than anything else: for every good is more choicewortby in combination with some other than when taken quite alone. In fact, it is by just such an argument that Plato proves that Pleasure is not the Chief Good:[3] “For,” says he, “the life of Pleasure is more choice-worthy in combination with Practical Wisdom than apart from it; but, if the compound better then simple Pleasure cannot be the Chief Good; because the very Chief Good cannot by any addition become choice-worthy than it is already:” and it is obvious that nothing else can be the Chief Good, which by combination with any of the things in themselves good comes to be more choice-worthy.

What is there then of such a nature? (meaning, of course, whereof we can partake; because that which we are in search of must be such).

As for those who object that “what all aim at is not necessarily good,” I confess I cannot see much in what they say, because what all _think_ we say _is_. And he who would cut away this ground from under us will not bring forward things more dependable: because if the argument had rested on the desires of irrational creatures there might have been something in what he says, but, since the rational also desire Pleasure, how can his objection be allowed any weight? and it may be that, even in the lower animals, there is some natural good principle above themselves which aims at the good peculiar to them.

Nor does that seem to be sound which is urged respecting the argument from the contrary: I mean, some people say “it does not follow that Pleasure must be good because Pain is evil, since evil may be opposed to evil, and both evil and good to what is indifferent:” now what they say is right enough in itself but does not hold in the present instance. If both Pleasure and Pain were bad both would have been objects of avoidance; or if neither then neither would have been, at all events they must have fared alike: but now men do plainly avoid the one as bad and choose the other as good, and so there is a complete opposition.

Nor again is Pleasure therefore excluded from being good because it does not belong to the class of qualities:[4] the acts of Virtue are not qualities, neither is Happiness [yet surely both are goods].

Again, they say the Chief Good is limited but Pleasure unlimited, in that it admits of degrees.

Now if they judge this from the act of feeling Pleasure then the same thing will apply to justice and all the other virtues,[5] in respect of which clearly it is said that men are more or less of such and such characters (according to the different virtues), they are more just or more brave, or one may practise justice and self-mastery more or less.

If, on the other hand, they judge in respect of the Pleasures themselves then it may be they miss the true cause, namely that some are unmixed and others mixed: for just as health being in itself limited, admits of degrees, why should not Pleasure do so and yet be limited? in the former case we account for it by the fact that there is not the same adjustment of parts in all men, nor one and the same always in the same individual: but health, though relaxed, remains up to a certain point, and differs in degrees; and of course the same may be the case with Pleasure.

Again, assuming the Chief Good to be perfect and all Movements[6] and Generations imperfect, they try to shew that Pleasure is a Movement and a Generation.

Yet they do not seem warranted in saying even that it is a Movement: for to every Movement are thought to belong swiftness and slowness, and if not in itself, as to that of the universe, yet relatively: but to Pleasure neither of these belongs: for though one may have got quickly into the state Pleasure, as into that of anger, one cannot be in the state quickly,[7] nor relatively to the state of any other person; but we can walk or grow, and so on, quickly or slowly.

Of course it is possible to change into the state of Pleasure quickly or slowly, but to act in the state (by which, I mean, have the perception of Pleasure) quickly, is not possible.

And how can it be a Generation? because, according to notions generally held, not _any_thing is generated from _any_thing, but a thing resolves itself into that out of which it was generated: whereas of that of which Pleasure is a Generation Pain is a Destruction.

Again, they say that Pain is a lack of something suitable to nature and Pleasure a supply of it.

But these are affections of the body: now if Pleasure really is a supplying of somewhat suitable to nature, that must feel the Pleasure in which the supply takes place, therefore the body of course: yet this is not thought to be so: neither then is Pleasure a supplying, only a person of course will be pleased when a supply takes place just as he will be pained when he is cut short.

This notion would seem to have arisen out of the Pains and Pleasures connected with natural nourishment; because, when people have felt a lack and so have had Pain first, they, of course, are pleased with the supply of their lack.

But this is not the case with all Pleasures: those attendant on mathematical studies, for instance, are unconnected with any Pain; and of such as attend on the senses those which arise through the sense of Smell; and again, many sounds, and sights, and memories, and hopes: now of what can these be Generations? because there has been here no lack of anything to be afterwards supplied.

And to those who bring forward disgraceful Pleasures we may reply that these are not really pleasant things; for it does not follow because they are pleasant to the ill-disposed that we are to admit that they are pleasant except to them; just as we should not say that those things are really wholesome, or sweet, or bitter, which are so to the sick, or those objects really white which give that impression to people labouring under ophthalmia.[8]

Or we might say thus, that the Pleasures are choice-worthy but not as derived from these sources: just as wealth is, but not as the price of treason; or health, but not on the terms of eating anything however loathsome.

Or again, may we not say that Pleasures differ in kind? those derived from honourable objects, for instance are different from those arising from disgraceful ones; and it is not possible to experience the Pleasure of the just man without being just, or of the musical man without being musical; and so on of others.

The distinction commonly drawn between the friend and the flatterer would seem to show clearly either that Pleasure is not a good, or that there are different kinds of Pleasure: for the former is thought to have good as the object of his intercourse, the latter Pleasure only; and this last is reproached, but the former men praise as having different objects in his intercourse.

Again, no one would choose to live with a child's intellect all his life through, though receiving the highest possible Pleasure from such objects as children receive it from; or to take Pleasure in doing any of the most disgraceful things, though sure never to be pained.

There are many things also about which we should be diligent even though they brought no Pleasure; as seeing, remembering, knowing, possessing the various Excellences; and the fact that Pleasures do follow on these naturally makes no difference, because we should certainly choose them even though no Pleasure resulted from them.

It seems then to be plain that Pleasure is not the Chief Good, nor is every kind of it choice-worthy: and that there are some choice-worthy in themselves, differing in kind, _i.e._ in the sources from which they are derived. Let this then suffice by way of an account of the current maxims respecting Pleasure and Pain.

Chapter III.

Now what it is, and how characterised, will be more plain if we take up the subject afresh.

An act of Sight is thought to be complete at any moment; that is to say, it lacks nothing the accession of which subsequently will complete its whole nature.

Well, Pleasure resembles this: because it is a whole, as one may say; and one could not at any moment of time take a Pleasure whose whole nature would be completed by its lasting for a longer time. And for this reason it is not a Movement: for all Movement takes place in time of certain duration and has a certain End to accomplish; for instance, the Movement of house-building[9] is then only complete when the builder has produced what he intended, that is, either in the whole time [necessary to complete the whole design], or in a given portion.[10] But all the subordinate Movements are incomplete in the parts of the time, and are different in kind from the whole movement and from one another (I mean, for instance, that the fitting the stones together is a Movement different from that of fluting the column, and both again from the construction of the Temple as a whole: but this last is complete as lacking nothing to the result proposed; whereas that of the basement, or of the triglyph, is incomplete, because each is a Movement of a part merely).

As I said then, they differ in kind, and you cannot at any time you choose find a Movement complete in its whole nature, but, if at all, in the whole time requisite.

And so it is with the Movement of walking and all others: for, if motion be a Movement from one place to another place, then of it too there are different kinds, flying, walking, leaping, and such-like. And not only so, but there are different kinds even in walking: the where-from and where-to are not the same in the whole Course as in a portion of it; nor in one portion as in another; nor is crossing this line the same as crossing that: because a man is not merely crossing a line but a line in a given place, and this is in a different place from that.

Of Movement I have discoursed exactly in another treatise. I will now therefore only say that it seems not to be complete at any given moment; and that most movements are incomplete and specifically different, since the whence and whither constitute different species.

But of Pleasure the whole nature is complete at any given moment: it is plain then that Pleasure and Movement must be different from one another, and that Pleasure belongs to the class of things whole and complete. And this might appear also from the impossibility of moving except in a definite time, whereas there is none with respect to the sensation of Pleasure, for what exists at the very present moment is a kind of “whole.”

From these considerations then it is plain that people are not warranted in saying that Pleasure is a Movement or a Generation: because these terms are not applicable to all things, only to such as are divisible and not “wholes:” I mean that of an act of Sight there is no Generation, nor is there of a point, nor of a monad, nor is any one of these a Movement or a Generation: neither then of Pleasure is there Movement or Generation, because it is, as one may say, “a whole.”[11]

Chapter IV.

Now since every Percipient Faculty works upon the Object answering to it, and perfectly the Faculty in a good state upon the most excellent of the Objects within its range (for Perfect Working is thought to be much what I have described; and we will not raise any question about saying “the Faculty” works, instead of, “that subject wherein the Faculty resides”), in each case the best Working is that of the Faculty in its best state upon the best of the Objects answering to it. And this will be, further, most perfect and most pleasant: for Pleasure is attendant upon every Percipient Faculty, and in like manner on every intellectual operation and speculation; and that is most pleasant which is most perfect, and that most perfect which is the Working of the best Faculty upon the most excellent of the Objects within its range.

And Pleasure perfects the Working. But Pleasure does not perfect it in the same way as the Faculty and Object of Perception do, being good; just as health and the physician are not in similar senses causes of a healthy state.

And that Pleasure does arise upon the exercise of every Percipient Faculty is evident, for we commonly say that sights and sounds are pleasant; it is plain also that this is especially the case when the Faculty is most excellent and works upon a similar Object: and when both the Object and Faculty of Perception are such, Pleasure will always exist, supposing of course an agent and a patient.

Furthermore, Pleasure perfects the act of Working not in the way of an inherent state but as a supervening finish, such as is bloom in people at their prime. Therefore so long as the Object of intellectual or sensitive Perception is such as it should be and also the Faculty which discerns or realises the Object, there will be Pleasure in the Working: because when that which has the capacity of being acted on and that which is apt to act are alike and similarly related, the same result follows naturally.

How is it then that no one feels Pleasure continuously? is it not that he wearies, because all human faculties are incapable of unintermitting exertion; and so, of course, Pleasure does not arise either, because that follows upon the act of Working. But there are some things which please when new, but afterwards not in the like way, for exactly the same reason: that at first the mind is roused and works on these Objects with its powers at full tension; just as they who are gazing stedfastly at anything; but afterwards the act of Working is not of the kind it was at first, but careless, and so the Pleasure too is dulled.

Again, a person may conclude that all men grasp at Pleasure, because all aim likewise at Life and Life is an act of Working, and every man works at and with those things which also he best likes; the musical man, for instance, works with his hearing at music; the studious man with his intellect at speculative questions, and so forth. And Pleasure perfects the acts of Working, and so Life after which men grasp. No wonder then that they aim also at Pleasure, because to each it perfects Life, which is itself choice-worthy. (We will take leave to omit the question whether we choose Life for Pleasure’s sake of Pleasure for Life’s sake;

because these two plainly are closely connected and admit not of separation; since Pleasure comes not into being without Working, and again, every Working Pleasure perfects.)

And this is one reason why Pleasures are thought to differ in kind, because we suppose that things which differ in kind must be perfected by things so differing: it plainly being the case with the productions of Nature and Art; as animals, and trees, and pictures, and statues, and houses, and furniture; and so we suppose that in like manner acts of Working which are different in kind are perfected by things differing in kind. Now Intellectual Workings differ specifically from those of the Senses, and these last from one another; therefore so do the Pleasures which perfect them.

This may be shown also from the intimate connection subsisting between each Pleasure and the Working which it perfects: I mean, that the Pleasure proper to any Working increases that Working; for they who work with Pleasure sift all things more closely and carry them out to a greater degree of nicety; for instance, those men become geometricians who take Pleasure in geometry, and they apprehend particular points more completely: in like manner men who are fond of music, or architecture, or anything else, improve each on his own pursuit, because they feel Pleasure in them. Thus the Pleasures aid in increasing the Workings, and things which do so aid are proper and peculiar: but the things which are proper and peculiar to others specifically different are themselves also specifically different.

Yet even more clearly may this be shown from the fact that the Pleasures arising from one kind of Workings hinder other Workings; for instance, people who are fond of flute-music cannot keep their attention to conversation or discourse when they catch the sound of a flute; because they take more Pleasure in flute-playing than in the Working they are at the time engaged on; in other words, the Pleasure attendant on flute-playing destroys the Working of conversation or discourse.

Much the same kind of thing takes place in other cases, when a person is engaged in two different Workings at the same time: that is, the pleasanter of the two keeps pushing out the other, and, if the disparity in pleasantness be great, then more and more till a man even ceases altogether to work at the other.

This is the reason why, when we are very much pleased with anything whatever, we do nothing else, and it is only when we are but moderately pleased with one occupation that we vary it with another: people, for instance, who eat sweetmeats in the theatre do so most when the performance is indifferent.

Since then the proper and peculiar Pleasure gives accuracy to the Workings and makes them more enduring and better of their kind, while those Pleasures which are foreign to them mar them, it is plain there is a wide difference between them: in fact, Pleasures foreign to any Working have pretty much the same effect as the Pains proper to it,[12] which, in fact, destroy the Workings; I mean, if one man dislikes writing, or another calculation, the one does not write, the other does not calculate; because, in each case, the Working is attended with some Pain: so then contrary effects are produced upon the Workings by the Pleasures and Pains proper to them, by which I mean those which arise upon the Working, in itself, independently of any other circumstances. As for the Pleasures foreign to a Working, we have said already that they produce a similar effect to the Pain proper to it; that is they destroy the Working, only not in like way.

Well then, as Workings differ from one another in goodness and badness, some being fit objects of choice, others of avoidance, and others in their nature indifferent, Pleasures are similarly related; since its own proper Pleasure attends or each Working: of course that proper to a good Working is good, that proper to a bad, bad: for even the desires for what is noble are praiseworthy, and for what is base blameworthy.

Furthermore, the Pleasures attendant on Workings are more closely connected with them even than the desires after them: for these last are separate both in time and nature, but the former are close to the Workings, and so indivisible from them as to raise a question whether the Working and the Pleasure are identical; but Pleasure does not seem to be an Intellectual Operation nor a Faculty of Perception, because that is absurd; but yet it gives some the impression of being the same from not being separated from these.

As then the Workings are different so are their Pleasures; now Sight differs from Touch in purity, and Hearing and Smelling from Taste; therefore, in like manner, do their Pleasures; and again, Intellectual Pleasures from these Sensual, and the different kinds both of Intellectual and Sensual from one another.

It is thought, moreover, that each animal has a Pleasure proper to itself, as it has a proper Work; that Pleasure of course which is attendant on the Working. And the soundness of this will appear upon particular inspection: for horse, dog, and man have different

Pleasures; as Heraclitus says, an ass would sooner have hay than gold; in other words, provender is pleasanter to asses than gold. So then the Pleasures of animals specifically different are also specifically different, but those of the same, we may reasonably suppose, are without difference.

Yet in the case of human creatures they differ not a little: for the very same things please some and pain others: and what are painful and hateful to some are pleasant to and liked by others. The same is the case with sweet things: the same will not seem so to the man in a fever as to him who is in health: nor will the invalid and the person in robust health have the same notion of warmth. The same is the case with other things also.

Now in all such cases that is held to _be_ which impresses the good man with the notion of being such and such; and if this is a second maxim (as it is usually held to be), and Virtue, that is, the Good man, in that he is such, is the measure of everything, then those must be real Pleasures which gave him the impression of being so and those things pleasant in which he takes Pleasure. Nor is it at all astonishing that what are to him unpleasant should give another person the impression of being pleasant, for men are liable to many corruptions and marrings; and the things in question are not pleasant really, only to these particular persons, and to them only as being thus disposed.

Well of course, you may say, it is obvious that we must assert those which are confessedly disgraceful to be real Pleasures, except to depraved tastes: but of those which are thought to be good what kind, or which, must we say is _The Pleasure of Man?_ is not the answer plain from considering the Workings, because the Pleasures follow upon these?

If then there be one or several Workings which belong to the perfect and blessed man, the Pleasures which perfect these Workings must be said to be specially and properly _The Pleasures of Man;_ and all the rest in a secondary sense, and in various degrees according as the Workings are related to those highest and best ones.

Chapter V.

Now that we have spoken about the Excellences of both kinds, and Friendship in its varieties, and Pleasures, it remains to sketch out Happiness, since we assume that to be the one End of all human things: and we shall save time and trouble by recapitulating what was stated before.

Well then, we said that it is not a State merely; because, if it were, it might belong to one who slept all his life through and merely vegetated, or to one who fell into very great calamities: and so, if these possibilities displease us and we would rather put it into the rank of some kind of Working (as was also said before), and Workings are of different kinds (some being necessary and choice-worthy with a view to other things, while others are so in themselves), it is plain we must rank Happiness among those choice-worthy for their own sakes and not among those which are so with a view to something further: because Happiness has no lack of anything but is self-sufficient.

By choice-worthy in themselves are meant those from which nothing is sought beyond the act of Working: and of this kind are thought to be the actions according to Virtue, because doing what is noble and excellent is one of those things which are choice-worthy for their own sake alone.

And again, such amusements as are pleasant; because people do not choose them with any further purpose: in fact they receive more harm than profit from them, neglecting their persons and their property. Still the common run of those who are judged happy take refuge in such pastimes, which is the reason why they who have varied talent in such are highly esteemed among despots; because they make themselves pleasant in those things which these aim at, and these accordingly want such men.

Now these things are thought to be appurtenances of Happiness because men in power spend their leisure herein: yet, it may be, we cannot argue from the example of such men: because there is neither Virtue nor Intellect necessarily involved in having power, and yet these are the only sources of good Workings: nor does it follow that because these men, never having tasted pure and generous Pleasure, take refuge in bodily ones, we are therefore to believe them to be more choice-worthy: for children too believe that those things are most excellent which are precious in their eyes.

We may well believe that as children and men have different ideas as to what is precious so too have the bad and the good: therefore, as we have many times said, those things are really precious and pleasant which seem so to the good man: and as to each individual that Working is most choice-worthy which is in accordance with his own state to the good man that is so which is in accordance with Virtue.

Happiness then stands not in amusement; in fact the very notion is absurd of the End being amusement, and of one's toiling and enduring hardness all one's life long with a view to amusement: for everything in the world, so to speak, we choose with some further End in view, except Happiness, for that is the End comprehending all others. Now to take pains and to labour with a view to amusement is plainly foolish and very childish: but to amuse one's self with a view to steady employment afterwards, as Anacharsis says, is thought to be right: for amusement is like rest, and men want rest because unable to labour continuously.

Rest, therefore, is not an End, because it is adopted with a view to Working afterwards.

Again, it is held that the Happy Life must be one in the way of Excellence, and this is accompanied by earnestness,[13] and stands not in amusement. Moreover those things which are done in earnest, we say, are better than things merely ludicrous and joined with amusement: and we say that the Working of the better part, or the better man, is more earnest; and the Working of the better is at once better and more capable of Happiness.

Then, again, as for bodily Pleasures, any ordinary person, or even a slave, might enjoy them, just as well as the best man living but Happiness no one supposes a slave to share except so far as it is implied in life: because Happiness stands not in such pastimes but in the Workings in the way of Excellence, as has also been stated before.

Chapter VI.

Now if Happiness is a Working in the way of Excellence of course that Excellence must be the highest, that is to say, the Excellence of the best Principle. Whether then this best Principle is Intellect or some other which is thought naturally to rule and to lead and to conceive of noble and divine things, whether being in its own nature divine or the most divine of all our internal Principles, the Working of this in accordance with its own proper Excellence must be the perfect Happiness.

That it is Contemplative has been already stated: and this would seem to be consistent with what we said before and with truth: for, in the first place, this Working is of the highest kind, since the Intellect is the highest of our internal Principles and the subjects with which it is conversant the highest of all which fall within the range of our knowledge.

Next, it is also most Continuous: for we are better able to contemplate than to do anything else whatever, continuously.

Again, we think Pleasure must be in some way an ingredient in Happiness, and of all Workings in accordance with Excellence that in the way of Science is confessedly most pleasant: at least the pursuit of Science is thought to contain Pleasures admirable for purity and permanence; and it is reasonable to suppose that the employment is more pleasant to those who have mastered, than to those who are yet seeking for, it.[14]

And the Self-Sufficiency which people speak of will attach chiefly to the Contemplative Working: of course the actual necessaries of life are needed alike by the man of science, and the just man, and all the other characters; but, supposing all sufficiently supplied with these, the just man needs people towards whom, and in concert with whom, to practise his justice; and in like manner the man of perfected self-mastery, and the brave man, and so on of the rest; whereas the man of science can contemplate and speculate even when quite alone, and the more entirely he deserves the appellation the more able is he to do so: it may be he can do better for having fellow-workers but still he is certainly most Self-Sufficient.

Again, this alone would seem to be rested in for its own sake, since nothing results from it beyond the fact of having contemplated; whereas from all things which are objects of moral action we do mean to get something beside the doing them, be the same more or less.

Also, Happiness is thought to stand in perfect rest;[15] for we toil that we may rest, and war that we may be at peace. Now all the Practical Virtues require either society or war for their Working, and the actions regarding these are thought to exclude rest; those of war entirely, because no one chooses war, nor prepares for war, for war's sake: he would indeed be thought a bloodthirsty villain who should make enemies of his friends to secure the existence of fighting and bloodshed. The Working also of the statesman excludes the idea of rest, and, beside the actual work of government, seeks for power and dignities or at least Happiness for the man himself and his fellow-citizens: a Happiness distinct[16] from the national Happiness, which we evidently seek as being different and distinct.

If then of all the actions in accordance with the various virtues those of policy and war are pre-eminent in honour and greatness, and these are restless, and aim at some further End and are not choice-worthy for their own sakes, but the Working of the Intellect, being apt for contemplation, is thought to excel in earnestness, and to aim at no End beyond itself and to have Pleasure of its own

which helps to increase the Working, and if the attributes of Self-Sufficiency, and capacity of rest, and unweariedness (as far as is compatible with the infirmity of human nature), and all other attributes of the highest Happiness, plainly belong to this Working, this must be perfect Happiness, if attaining a complete duration of life, which condition is added because none of the points of Happiness is incomplete.

But such a life will be higher than mere human nature, because a man will live thus, not in so far as he is man but in so far as there is in him a divine Principle: and in proportion as this Principle excels his composite nature so far does the Working thereof excel that in accordance with any other kind of Excellence: and therefore, if pure Intellect, as compared with human nature, is divine, so too will the life in accordance with it be divine compared with man's ordinary life.

Yet must we not give ear to those who bid one as man to mind only man's affairs, or as mortal only mortal things; but, so far as we can, make ourselves like immortals and do all with a view to living in accordance with the highest Principle in us, for small as it may be in bulk yet in power and preciousness it far more excels all the others.

In fact this Principle would seem to constitute each man's "Self," since it is supreme and above all others in goodness it _would_ be absurd then for a man not to choose his own life but that of some other.

And here will apply an observation made before, that whatever is proper to each is naturally best and pleasantest to him: such then is to Man the life in accordance with pure Intellect (since this Principle is most truly Man), and if so, then it is also the happiest.

And second in degree of Happiness will be that Life which is in accordance with the other kind of Excellence, for the Workings in accordance with this are proper to Man: I mean, we do actions of justice, courage, and the other virtues, towards one another, in contracts, services of different kinds, and in all kinds of actions and feelings too, by observing what is befitting for each: and all these plainly are proper to man. Further, the Excellence of the Moral character is thought to result in some points from physical circumstances, and to be, in many, very closely connected with the passions.

Again, Practical Wisdom[17] and Excellence of the Moral character are very closely united; since the Principles of Practical Wisdom are in accordance with the Moral Virtues and these are right when they accord with Practical Wisdom.

These moreover, as bound up with the passions, must belong to the composite nature, and the Excellences or Virtues of the composite nature are proper to man: therefore so too will be the life and Happiness which is in accordance with them. But that of the Pure Intellect is separate and distinct: and let this suffice upon the subject, since great exactness is beyond our purpose,

It would seem, moreover, to require supply of external goods to a small degree, or certainly less than the Moral Happiness: for, as far as necessaries of life are concerned, we will suppose both characters to need them equally (though, in point of fact, the man who lives in society does take more pains about his person and all that kind of thing; there will really be some little difference), but when we come to consider their Workings there will be found a great difference.

I mean, the liberal man must have money to do his liberal actions with, and the just man to meet his engagements (for mere intentions are uncertain, and even those who are unjust make a pretence of _wishing_ to do justly), and the brave man must have power, if he is to perform any of the actions which appertain to his particular Virtue, and the man of perfected self-mastery must have opportunity of temptation, else how shall he or any of the others display his real character?

(By the way, a question is sometimes raised, whether the moral choice or the actions have most to do with Virtue, since it consists in both: it is plain that the perfection of virtuous action requires both: but for the actions many things are required, and the greater and more numerous they are the more.) But as for the man engaged in Contemplative Speculation, not only are such things unnecessary for his Working, but, so to speak, they are even hindrances: as regards the Contemplation at least; because of course in so far as he is Man and lives in society he chooses to do what Virtue requires, and so he will need such things for maintaining his character as Man though not as a speculative philosopher.

And that the perfect Happiness must be a kind of Contemplative Working may appear also from the following consideration: our conception of the gods is that they are above all blessed and happy: now what kind of Moral actions are we to attribute to them? those of justice? nay, will they not be set in a ridiculous light if represented as forming contracts, and restoring deposits, and so on? well then, shall we picture them performing brave actions, withstanding objects of fear and meeting dangers, because it is noble to do so? or liberal ones? but to whom shall they be giving? and further, it is absurd to think they have money or anything of the kind. And as for actions of perfected self-mastery, what can theirs be? would it not be a degrading praise that they have no bad desires?

In short, if one followed the subject into all details all the circumstances connected with Moral actions would appear trivial and unworthy of Gods.

Still, every one believes that they live, and therefore that they Work because it is not supposed that they sleep their time away like Endymion: now if from a living being you take away Action, still more if Creation, what remains but Contemplation? So then the Working of the Gods, eminent in blessedness, will be one apt for Contemplative Speculation; and of all human Workings that will have the greatest capacity for Happiness which is nearest akin to this.

A corroboration of which position is the fact that the other animals do not partake of Happiness, being completely shut out from any such Working.

To the Gods then all their life is blessed; and to men in so far as there is in it some copy of such Working, but of the other animals none is happy because it in no way shares in Contemplative Speculation.

Happiness then is co-extensive with this Contemplative Speculation, and in proportion as people have the act of Contemplation so far have they also the being happy, not incidentally, but in the way of Contemplative Speculation because it is in itself precious.

Chapter VII.

So Happiness must be a kind of Contemplative Speculation; but since it is Man we are speaking of he will need likewise External Prosperity, because his Nature is not by itself sufficient for Speculation, but there must be health of body, and nourishment, and tendance of all kinds.

However, it must not be thought, because without external goods a man cannot enjoy high Happiness, that therefore he will require many and great goods in order to be happy: for neither Self-sufficiency, nor Action, stand in Excess, and it is quite possible to act nobly without being ruler of sea and land, since even with moderate means a man may act in accordance with Virtue.

And this may be clearly seen in that men in private stations are thought to act justly, not merely no less than men in power but even more: it will be quite enough that just so much should belong to a man as is necessary, for his life will be happy who works in accordance with Virtue.

Solon perhaps drew a fair picture of the Happy, when he said that they are men moderately supplied with external goods, and who have achieved the most noble deeds, as he thought, and who have lived with perfect self-mastery: for it is quite possible for men of moderate means to act as they ought.

Anaxagoras also seems to have conceived of the Happy man not as either rich or powerful, saying that he should not wonder if he were accounted a strange man in the judgment of the multitude: for they judge by outward circumstances of which alone they have any perception.

And thus the opinions of the Wise seem to be accordant with our account of the matter: of course such things carry some weight, but truth, in matters of moral action, is judged from facts and from actual life, for herein rests the decision. So what we should do is to examine the preceding statements by referring them to facts and to actual life, and when they harmonise with facts we may accept them, when they are at variance with them conceive of them as mere theories.

Now he that works in accordance with, and pays observance to, Pure Intellect, and tends this, seems likely to be both in the best frame of mind and dearest to the Gods: because if, as is thought, any care is bestowed on human things by the Gods then it must be reasonable to think that they take pleasure in what is best and most akin to themselves (and this must be the Pure Intellect); and that they requite with kindness those who love and honour this most, as paying observance to what is dear to them, and as acting rightly and nobly. And it is quite obvious that the man of Science chiefly combines all these: he is therefore dearest to the Gods, and it is probable that he is at the same time most Happy.

Thus then on this view also the man of Science will be most Happy.

Chapter VIII.

Now then that we have said enough in our sketchy kind of way on these subjects; I mean, on the Virtues, and also on Friendship and Pleasure; are we to suppose that our original purpose is completed? Must we not rather acknowledge, what is commonly said, that in matters of moral action mere Speculation and Knowledge is not the real End but rather Practice: and if so, then neither in

respect of Virtue is Knowledge enough; we must further strive to have and exert it, and take whatever other means there are of becoming good.

Now if talking and writing were of themselves sufficient to make men good, they would justly, as Theognis observes have reaped numerous and great rewards, and the thing to do would be to provide them: but in point of fact, while they plainly have the power to guide and stimulate the generous among the young and to base upon true virtuous principle any noble and truly high-minded disposition, they as plainly are powerless to guide the mass of men to Virtue and goodness; because it is not their nature to be amenable to a sense of shame but only to fear; nor to abstain from what is low and mean because it is disgraceful to do it but because of the punishment attached to it: in fact, as they live at the beck and call of passion, they pursue their own proper pleasures and the means of securing them, and they avoid the contrary pains; but as for what is noble and truly pleasurable they have not an idea of it, inasmuch as they have never tasted of it.

Men such as these then what mere words can transform? No, indeed! it is either actually impossible, or a task of no mean difficulty, to alter by words what has been of old taken into men's very dispositions: and, it may be, it is a ground for contentment if with all the means and appliances for goodness in our hands we can attain to Virtue.

The formation of a virtuous character some ascribe to Nature, some to Custom, and some to Teaching. Now Nature's part, be it what it may, obviously does not rest with us, but belongs to those who in the truest sense are fortunate, by reason of certain divine agency,

Then, as for Words and Precept, they, it is to be feared, will not avail with all; but it may be necessary for the mind of the disciple to have been previously prepared for liking and disliking as he ought; just as the soil must, to nourish the seed sown. For he that lives in obedience to passion cannot hear any advice that would dissuade him, nor, if he heard, understand: now him that is thus how can one reform? in fact, generally, passion is not thought to yield to Reason but to brute force. So then there must be, to begin with, a kind of affinity to Virtue in the disposition; which must cleave to what is honourable and loath what is disgraceful. But to get right guidance towards Virtue from the earliest youth is not easy unless one is brought up under laws of such kind; because living with self-mastery and endurance is not pleasant to the mass of men, and specially not to the young. For this reason the food, and manner of living generally, ought to be the subject of legal regulation, because things when become habitual will not be disagreeable.

Yet perhaps it is not sufficient that men while young should get right food and tendance, but, inasmuch as they will have to practise and become accustomed to certain things even after they have attained to man's estate, we shall want laws on these points as well, and, in fine, respecting one's whole life, since the mass of men are amenable to compulsion rather than Reason, and to punishment rather than to a sense of honour.

And therefore some men hold that while lawgivers should employ the sense of honour to exhort and guide men to Virtue, under the notion that they will then obey who have been well trained in habits; they should impose chastisement and penalties on those who disobey and are of less promising nature; and the incurable expel entirely: because the good man and he who lives under a sense of honour will be obedient to reason; and the baser sort, who grasp at pleasure, will be kept in check, like beasts of burthen by pain. Therefore also they say that the pains should be such as are most contrary to the pleasures which are liked.

As has been said already, he who is to be good must have been brought up and habituated well, and then live accordingly under good institutions, and never do what is low and mean, either against or with his will. Now these objects can be attained only by men living in accordance with some guiding Intellect and right order, with power to back them.

As for the Paternal Rule, it possesses neither strength nor compulsory power, nor in fact does the Rule of any one man, unless he is a king or some one in like case: but the Law has power to compel, since it is a declaration emanating from Practical Wisdom and Intellect. And people feel enmity towards their fellow-men who oppose their impulses, however rightly they may do so: the Law, on the contrary, is not the object of hatred, though enforcing right rules.

The Lacedæmonian is nearly the only State in which the framer of the Constitution has made any provision, it would seem, respecting the food and manner of living of the people: in most States these points are entirely neglected, and each man lives just as he likes, ruling his wife and children Cyclops-Fashion.

Of course, the best thing would be that there should be a right Public System and that we should be able to carry it out: but, since as a public matter those points are neglected, the duty would seem to devolve upon each individual to contribute to the cause of

Virtue with his own children and friends, or at least to make this his aim and purpose: and this, it would seem, from what has been said, he will be best able to do by making a Legislator of himself: since all public systems, it is plain, are formed by the instrumentality of laws and those are good which are formed by that of good laws: whether they are written or unwritten, whether they are applied to the training of one or many, will not, it seems, make any difference, just as it does not in music, gymnastics, or any other such accomplishments, which are gained by practice.

For just as in Communities laws and customs prevail, so too in families the express commands of the Head, and customs also: and even more in the latter, because of blood-relationship and the benefits conferred: for there you have, to begin with, people who have affection and are naturally obedient to the authority which controls them.

Then, furthermore, Private training has advantages over Public, as in the case of the healing art: for instance, as a general rule, a man who is in a fever should keep quiet, and starve; but in a particular case, perhaps, this may not hold good; or, to take a different illustration, the boxer will not use the same way of fighting with all antagonists.

It would seem then that the individual will be most exactly attended to under Private care, because so each will be more likely to obtain what is expedient for him. Of course, whether in the art of healing, or gymnastics, or any other, a man will treat individual cases the better for being acquainted with general rules; as, “that so and so is good for all, or for men in such and such cases:” because general maxims are not only said to be but are the object-matter of sciences: still this is no reason against the possibility of a man’s taking excellent care of some _one_ case, though he possesses no scientific knowledge but from experience is exactly acquainted with what happens in each point; just as some people are thought to doctor themselves best though they would be wholly unable to administer relief to others. Yet it may seem to be necessary nevertheless, for one who wishes to become a real artist and well acquainted with the theory of his profession, to have recourse to general principles and ascertain all their capacities: for we have already stated that these are the object-matter of sciences.

If then it appears that we may become good through the instrumentality of laws, of course whoso wishes to make men better by a system of care and training must try to make a Legislator of himself; for to treat skilfully just any one who may be put before you is not what any ordinary person can do, but, if any one, he who has knowledge; as in the healing art, and all others which involve careful practice and skill.

Will not then our next business be to enquire from what sources, or how one may acquire this faculty of Legislation; or shall we say, that, as in similar cases, Statesmen are the people to learn from, since this faculty was thought to be a part of the Social Science? Must we not admit that the Political Science plainly does not stand on a similar footing to that of other sciences and faculties? I mean, that while in all other cases those who impart the faculties and themselves exert them are identical (physicians and painters for instance) matters of Statesmanship the Sophists profess to teach, but not one of them practises it, that being left to those actually engaged in it: and these might really very well be thought to do it by some singular knack and by mere practice rather than by any intellectual process: for they neither write nor speak on these matters (though it might be more to their credit than composing speeches for the courts or the assembly), nor again have they made Statesmen of their own sons or their friends.

One can hardly suppose but that they would have done so if they could, seeing that they could have bequeathed no more precious legacy to their communities, nor would they have preferred, for themselves or their dearest friends, the possession of any faculty rather than this.

Practice, however, seems to contribute no little to its acquisition; merely breathing the atmosphere of politics would never have made Statesmen of them, and therefore we may conclude that they who would acquire a knowledge of Statesmanship must have in addition practice.

But of the Sophists they who profess to teach it are plainly a long way off from doing so: in fact, they have no knowledge at all of its nature and objects; if they had, they would never have put it on the same footing with Rhetoric or even on a lower: neither would they have conceived it to be “an easy matter to legislate by simply collecting such laws as are famous because of course one could select the best,” as though the selection were not a matter of skill, and the judging aright a very great matter, as in Music: for they alone, who have practical knowledge of a thing, can judge the performances rightly or understand with what means and in what way they are accomplished, and what harmonises with what: the unlearned must be content with being able to discover whether the result is good or bad, as in painting.

Now laws may be called the performances or tangible results of Political Science; how then can a man acquire from these the faculty of Legislation, or choose the best? we do not see men made physicians by compilations: and yet in these treatises men endeavour to give not only the cases but also how they may be cured, and the proper treatment in each case, dividing the various bodily habits. Well, these are thought to be useful to professional men, but to the unprofessional useless. In like manner it may be that collections of laws and Constitutions would be exceedingly useful to such as are able to speculate on them, and judge what is well, and what ill, and what kind of things fit in with what others: but they who without this qualification should go through such matters cannot have right judgment, unless they have it by instinct, though they may become more intelligent in such matters.

Since then those who have preceded us have left uninvestigated the subject of Legislation, it will be better perhaps for us to investigate it ourselves, and, in fact, the whole subject of Polity, that thus what we may call Human Philosophy may be completed as far as in us lies.

First then, let us endeavour to get whatever fragments of good there may be in the statements of our predecessors, next, from the Polities we have collected, ascertain what kind of things preserve or destroy Communities, and what, particular Constitutions; and the cause why some are well and others ill managed, for after such enquiry, we shall be the better able to take a concentrated view as to what kind of Constitution is best, what kind of regulations are best for each, and what laws and customs.

NOTES

BOOK I

[1] For this term, as here employed, our language contains no equivalent expression except an inconvenient paraphrase.

There are three senses which it bears in this treatise: the first (in which it is here employed) is its strict etymological signfication “The science of Society,” and this includes everything which can bear at all upon the well-being of Man in his social capacity, “Quicquid agunt homines nostri est farrago libelli.” It is in this view that it is fairly denominated most commanding and inclusive.

The second sense (in which it occurs next, just below) is “Moral Philosophy.” Aristotle explains the term in this sense in the Rhetoric (1 2) [Greek: hae peri ta aethae pragmateia aen dikaion esti prosagoreuen politikaen]. He has principally in view in this treatise the moral training of the Individual, the branch of the Science of Society which we call Ethics Proper, bearing the same relation to the larger Science as the hewing and squaring of the stones to the building of the Temple, or the drill of the Recruit to the manoeuvres of the field. Greek Philosophy viewed men principally as constituent parts of a [Greek: polis], considering this function to be the real End of each, and this state as that in which the Individual attained his highest and most complete development.

The third sense is “The detail of Civil Government,” which Aristotle expressly states (vi. 8) was the most common acceptation of the term.

[2] Matters of which a man is to judge either belong to some definite art or science, or they do not. In the former case he is the best judge who has thorough acquaintance with that art or science, in the latter, the man whose powers have been developed and matured by education. A lame horse one would show to a farmer, not to the best and wisest man of one’s acquaintance; to the latter, one would apply in a difficult case of conduct.

Experience answers to the first, a state of self-control to the latter.

[3] In the last chapter of the third book of this treatise it is said of the fool, that his desire of pleasure is not only insatiable, but indiscriminate in its objects, παντα■θεν.

[4] ■ρ■ is a word used in this treatise in various significations. The primary one is “beginning or first cause,” and this runs through all its various uses.

“Rule,” and sometimes “Rulers,” are denoted by this term the initiative being a property of Rule.

“Principle” is a very usual signification of it, and in fact the most characteristic of the Ethics. The word Principle means “starting-point.” Every action has two beginnings, that of Resolve ο■ ■νεκα, and that of Action (■θεν ■ κιν■σις). I desire praise of men this then is the beginning of Resolve. Having considered how it is to be attained, I resolve upon some course and this Resolve is the beginning of Action.

The beginnings of Resolve, ■ρχ■ or Motives, when formally stated, are the major premisses of what Aristotle calls the συλλογ■σμοι τ■ν πρακτ■ν, i.e. the reasoning into which actions may be analysed.

Thus we say that the desire of human praise was the motive of the Pharisees, or the principle on which they acted.

Their practical syllogism then would stand thus:

Whatever gains human praise is to be done; Public praying and almsgiving gave human praise: [ergo] Public praying and almsgiving are to be done.

The major premisses may be stored up in the mind as rules of action, and this is what is commonly meant by having principles good or bad.

[5] The difficulty of this passage consists in determining the signification of the terms [Greek: gnorima aemin] and [Greek: gnorima aplos]

I have translated them without reference to their use elsewhere, as denoting respectively what _is_ and what _may_ be known. All truth is [Greek: gnorimon aplos], but that alone [Greek: aemin] which we individually realise, therefore those principles alone are [Greek: gnorima aemin] which _we have received as true_. From this appears immediately the necessity of good training as preparatory to the study of Moral Philosophy for good training in habits will either work principles into our nature, or make us capable of accepting them as soon as they are put before us; which no mere intellectual training can do. The child who has been used to obey his parents may never have heard the fifth Commandment but it is in the very texture of his nature, and the first time he hears it he will recognise it as morally true and right the principle is in his case a fact, the reason for which he is as little inclined to ask as any one would be able to prove its truth if he should ask.

But these terms are employed elsewhere (Analytica Post I cap. 11. sect. 10) to denote respectively particulars and universals The latter are so denominated, because principles or laws must be supposed to have existed before the instances of their operation. Justice must have existed before just actions, Redness before red things, but since what we meet with are the concrete instances (from which we gather the principles and laws), the particulars are said to be [Greek: gnorimotera aemin]

Adopting this signification gives greater unity to the whole passage, which will then stand thus. The question being whether we are to assume principles, or obtain them by an analysis of facts, Aristotle says, “We must begin of course with what is known but then this term denotes either particulars or universals perhaps we then must begin with particulars and hence the necessity of a previous good training in habits, etc. (which of course is beginning with particular facts), for a fact is a starting point, and if this be sufficiently clear, there will be no want of the reason for the fact in addition”

The objection to this method of translation is, that [Greek: archai] occurs immediately afterwards in the sense of “principles.”

Utere tuo judicio nihil enim impedio.

[6] Or “prove themselves good,” as in the Prior Analytics, ii 25, [Greek: apanta pisteuomen k.t l] but the other rendering is supported by a passage in Book VIII. chap. ix. [Greek: oi d’ upo ton epieikon kai eidoton oregomenoi timaes bebaiosai ten oikeian doxan ephientai peri auton chairousi de oti eisin agathoi, pisteuontes te ton legonton krisei]

[7] [Greek: thesis] meant originally some paradoxical statement by any philosopher of name enough to venture on one, but had come to mean any dialectical question. Topics, I. chap. ix.

[8] A lost work, supposed to have been so called, because containing miscellaneous questions.

[9] It is only quite at the close of the treatise that Aristotle refers to this, and allows that [Greek: theoria] constitutes the highest happiness because it is the exercise of the highest faculty in man the reason of thus deferring the statement being that till the lower, that is the moral, nature has been reduced to perfect order, [Greek: theoria] cannot have place, though, had it been held out from the first, men would have been for making the experiment at once, without the trouble of self-discipline.

[10] Or, as some think, “many theories have been founded on them.”

[11] The ■δ■α is the archetype, the ε■δος the concrete embodying the resemblance of it; hence Aristotle alludes to the theory under both names, and this is the reason for retaining the Greek terms.

[12] The list ran thus—

[Greek: to peras to apeiron | to euthu to perisson to artion | to phos to en to plethos | to tetragonon to dexion to aristeron | to aeremoun to arren to thelu | to agathon]

[13] Plato's sister's son.

[14] This is the capital defect in Aristotle's eyes, who being eminently practical, could not like a theory which not only did not necessarily lead to action, but had a tendency to discourage it by enabling unreal men to talk finely. If true, the theory is merely a way of stating facts, and leads to no action.

[15] _i.e._ the identification of Happiness with the Chief Good.

[16] _i.e._ without the capability of addition.

[17] And then Happiness would at once be shown not to be the Chief Good. It is a contradiction in terms to speak of adding to the Chief Good. See Book X. chap. 11. [Greek: delon os oud allo ouden tagathon an eiae o meta tenos ton kath' auto agathon airetoteron ginetai.]

[18] Compare Bishop Butler's account of "Human Nature as a System" in the Preface to his Sermons.

[19] _i.e._ as working or as quiescent.

[20] The mere translation of this term would convey no idea of its meaning, I have therefore retained the Greek term. It is afterwards explained to include space of time and external appliances requisite for the full development of Man's energies; here the time only is alluded to.

[21] This principle is more fully stated, with illustrations, in the Topics, I. chap. ix.

[22] Either that of the bodily senses, or that of the moral senses. "Fire burns," is an instance of the former, "Treason is odious," of the latter.

[23] I have thought it worthwhile to vary the interpretation of this word, because though "habitus" may be equivalent to all the senses of [Greek: exis], "habit" is not, at least according to our colloquial usage we commonly denote by "habit" a state formed by habituation.

[24] Another and perhaps more obvious method of rendering this passage is to apply [Greek: kalon kagathon] to things, and let them depend grammatically on [Greek: epaeboli]. It is to be remembered, however, that [Greek: kalos kagathos] bore a special and well-known meaning also the comparison is in the text more complete, and the point of the passage seems more completely brought out.

[25] "Goodness always implies the love of itself, an affection to goodness." (Bishop Butler, Sermon xiii) Aristotle describes pleasure in the Tenth Book of this Treatise as the result of any faculty of perception meeting with the corresponding object, vicious pleasure being as truly pleasure as the most refined and exalted. If Goodness then implies the love of itself, the percipient will always have its object present, and pleasure continually result.

[26] In spite of theory, we know as a matter of fact that external circumstances are necessary to complete the idea of Happiness not that Happiness is capable of addition, but that when we assert it to be identical with virtuous action we must understand that it is to have a fair field; in fact, the other side of [Greek: bios teleios].

[27] It is remarkable how Aristotle here again shelves what he considers an unpractical question. If Happiness were really a direct gift from Heaven, independently of human conduct, all motive to self-discipline and moral improvement would vanish He shows therefore that it is no depreciation of the value of Happiness to suppose it to come partly at least from ourselves, and he then goes on with other reasons why we should think with him.

[28] This term is important, what has been maimed was once perfect; he does not contemplate as possible the case of a man being born incapable of virtue, and so of happiness.

[29] [Greek] Plato. Phædon. xlvi.

[30] But why give materials and instruments, if there is no work to do?

[31] The supposed pair of ancestors.

[32] Solon says, “Call no man happy till he is dead.” He must mean either, The man when dead _is_ happy (a), or, The man when dead _may be said to have been happy_ (b). If the former, does he mean positive happiness (a)? or only freedom from unhappiness (β)? _We_ cannot allow (a), Men’s opinions disallow (β), We revert now to the consideration of (b).

[33] The difficulty was raised by the clashing of a notion commonly held, and a fact universally experienced. Most people conceive that Happiness should be abiding, every one knows that fortune is changeable. It is the notion which supports the definition, because we have therein based Happiness on the most abiding cause.

[34] I have taken το■τον α■τ■ν to refer to ■πιστημ■ν, against Magirus and the Paraphrase of Andronicus Rhodius. I would refer to Aristotle’s account of θεωρ■α in the Tenth Book, chap. vii. where he expressly says of the working of νο■ς or pure intelect, that it is “most continuous.”

[35] The term seems to be employed advisedly. The Choragus, of course, dressed his actors _for their parts;_ not according to their fancies or his own.

Hooker has (E. P. v. ixxvi. 5) a passage which seems to be an admirable paraphrase on this.

“Again, that the measure of our outward prosperity be taken by proportion with that which every man’s estate in this present life requireth. External abilities are instruments of action. It contenteth wise artificers to have their instruments proportionable to their work, rather fit for use than huge and goodly to please the eye. Seeing then the actions of a servant do not need that which may be necessary for men of calling and place in the world, neither men of inferior condition many things which greater personages can hardly want; surely they are blessed in worldly respects who have wherewith to perform what their station and place asketh, though they have no more.”

[36] Always bearing in mind that man “never continueth in one stay.”

[37] The meaning is this: personal fortunes, we have said, must be in certain weight and number to affect our own happiness, this will be true, of course, of those which are reflected on us from our friends: and these are the only ones to which the dead are supposed to be liable? add then the difference of sensibility which it is fair to presume, and there is a very small residuum of joy or sorrow.

[38] This is meant for an exhaustive division of goods, which are either so _in esse_ or _in posse_.

If _in esse_, they are either above praise, or subjects of praise. Those _in posse_, here called faculties, are good only when rightly used. Thus Rhetoric is a faculty which may be used to promote justice or abused to support villainy. Money in like way.

[39] The doubt is, whether [Greek] or [Greek] is the subject of the sentence. It is translated as above, not merely with reference to the sense of this passage, but on a comparison with a similar one in Book X. chap 8. [Greek].

[40] Eudoxus, a philosopher holding the doctrine afterwards adopted by Epicurus respecting pleasure, but (as Aristotle testifies in the Tenth Book) of irreproachable character.

[41] See the Rhetoric, Book I. chap ix.

[42] The unseen is at least as real as the seen.

[43] The terms are borrowed from the Seventh Book and are here used in their strict philosophical meaning. The [Greek: enkrates] is he who has bad or unruly appetites, but whose reason is strong enough to keep them under. The [Greek: akrates] is he whose appetites constantly prevail over his reason and previous good resolutions.

By the law of habits the former is constantly approximating to a state in which the appetites are wholly quelled. This state is called [Greek: sophrosyne], and the man in it [Greek: sophron]. By the same law the remonstrances of reason in the latter grow fainter and fainter till they are silenced for ever. This state is called [Greek: akolasia], and the man in it [Greek: akolastos].

[44] This is untranslateable. As the Greek phrase, [Greek: echein logon tinos], really denotes substituting that person’s [Greek: logos] for one’s own, so the Irrational nature in a man of self-control or perfected self-mastery substitutes the orders of Reason for

its own impulses. The other phrase means the actual possession of mathematical truths as part of the mental furniture, _i.e._ knowing them.

[45] [Greek: xin] may be taken as opposed to [Greek: energeian], and the meaning will be, to show a difference between Moral and Intellectual Excellences, that men are commended for merely having the latter, but only for exerting and using the former.

BOOK II

[1] Which we call simply virtue.

[2] For nature must of course supply the capacity.

[3] Or “as a simple result of nature.”

[4] This is done in the Sixth Book.

[5] It is, in truth, in the application of rules to particular details of practice that our moral Responsibility chiefly lies no rule can be so framed, that evasion shall be impossible. See Bishop Butler’s Sermon on the character of Balaam, and that on Self-Deceit.

[6] The words ■κ■λαστος and δειλ■ς are not used here in their strict significations to denote confirmed states of vice: the ■γκρατ■ς necessarily feels pain, because he must always be thwarting passions which are a real part of his nature; though this pain will grow less and less as he nears the point of σωφροσ■νη or perfected Self-Mastery, which being attained the pain will then and then only cease entirely. So a certain degree of fear is necessary to the _formation_ of true courage. All that is meant here is, that no habit of courage or self-mastery can be said to be matured, until pain altogether vanishes.

[7] Virtue consists in the due regulation of _all_ the parts of our nature our passions are a real part of that nature, and as such have their proper office, it is an error then to aim at their extirpation. It is true that in a perfect moral state emotion will be rare, but then this will have been gained by regular process, being the legitimate result of the law that “passive impressions weaken as active habits are strengthened, by repetition.” If musical instruments are making discord, I may silence or I may bring them into harmony in either case I get rid of discord, but in the latter I have the positive enjoyment of music. The Stoics would have the passions rooted out, Aristotle would have them cultivated to use an apt figure (whose I know not), They would pluck the blossom off at once, he would leave it to fall in due course when the fruit was formed. Of them we might truly say, _Solitudinem faciunt, pacem appellant_. See on this point Bishop Butler’s fifth Sermon, and sect. 11. of the chapter on Moral Discipline in the first part of his Analogy.

[8] I have adopted this word from our old writers, because our word _act_ is so commonly interchanged with _action_. [Greek: Praxis] (action) properly denotes the whole process from the conception to the performance. [Greek: Pragma] (fact) only the result. The latter may be right when the former is wrong if, for example, a murderer was killed by his accomplices. Again, the [Greek: praxis] may be _good_ though the [Greek: pragma] be wrong, as if a man under erroneous impressions does what would have been right if his impressions had been true (subject of course to the question how far he is guiltless of his original error), but in this case we could not call the [Greek: praxis] _right_. No repetition of [Greek: pragmata] goes to form a habit. See Bishop Butler on the Theory of Habits m the chapter on Moral Discipline, quoted above, sect. 11. “And in like manner as habits belonging to the body,” etc.

[9] Being about to give a strict logical definition of Virtue, Aristotle ascertains first what is its genus [Greek: ti estin].

[10] That is, not for _merely having_ them, because we did not make ourselves.

See Bishop Butler’s account of our nature as containing “particular propensions,” in sect. iv. of the chapter on Moral discipline, and in the Preface to the Sermons.

[11] This refers to the division of quantity ([Greek: poson]) in the Categories. Those Quantities are called by Aristotle Continuous whose parts have position relatively to one another, as a line, surface, or solid, those discrete, whose parts have no such relation, as numbers themselves, or any string of words grammatically unconnected.

[12] Numbers are in arithmetical proportion (more usually called progression), when they increase or decrease by a common difference thus, 2, 6, 10 are so, because 2 + 4 = 6, 6 + 4= 10, or _vice versa_, 10 - 4 = 6, 6 - 4 = 2.

[13] If the mina be taken at 15 oz. avoirdupois, (Dict. of G. and R. Antiquities, article _Talentum_,) we must be sadly degenerate in our gastric capacity.

[14] The two are necessary, because since the reason itself may be perverted, a man must have recourse to an external standard; we may suppose his [Greek: logos] originally to have been a sufficient guide, but when he has injured his moral perceptions in any degree, he must go out of himself for direction.

[15] This is one of the many expressions which seem to imply that this treatise is rather a collection of notes of a _vivâ voce_ lecture than a set formal treatise. “The table” of virtues and vices probably was sketched out and exhibited to the audience.

[16] Afterwards defined as “All things whose value is measured by money.”

[17] We have no term exactly equivalent; it may be illustrated by Horace’s use of the term _hiatus_:

“Quid dignum tanto feret hic promissor hiatu?” Opening the mouth wide gives a promise of something great to come, if nothing great does come, this is a case of [Greek: chaunotes] or fruitless and unmeaning _hiatus_; the transference to the present subject is easy.

[18] In like manner _we_ talk of laudable ambition, implying of course there may be that which is not laudable.

[19] An expression of Bishop Butler’s, which corresponds exactly to the definition of [Greek: nemesis] in the Rhetoric.

[20] That is, in the same genus; to be contraries, things must be generically connected: [Greek: ta pleiston allelon diestekota ton en to auto genei enantia orizontai]. Categories, iv. 15.

[21] “[Greek: Deuteros plous] is a proverb,” says the Scholiast on the Phaedo, “used of those who do anything safely and cautiously inasmuch as they who have miscarried in their first voyage, set about then: preparations for the second cautiously,” and he then alludes to this passage.

[22] That is, you must allow for the _recoil_. “Naturam expellas furca tamen usque recurret.”

P. 43, l. 2. This illustration sets in so clear a light the doctrines entertained respectively by Aristotle, Eudoxus, and the Stoics regarding pleasure, that it is worth while to go into it fully.

The reference is to Iliad iii. 154-160. The old counsellors, as Helen comes upon the city wall, acknowledge her surpassing beauty, and have no difficulty in understanding how both nations should have incurred such suffering for her sake still, fair as she is, home she must go, that she bring not ruin on themselves and their posterity.

This exactly represents Aristotle’s relation to Pleasure he does not, with Eudoxus and his followers, exalt it into the Summum Bonum (as Paris would risk all for Helen), nor does he the the Stoics call it wholly evil, as Hector might have said that the woes Helen had caused had “banished all the beauty from her cheek,” but, with the aged counsellors, admits its charms, but aware of their dangerousness resolves to deny himself, he “feels her sweetness, yet defies her thrall.”

[24] A■σθησις is here used as an analogous noun, to denote the faculty which, in respect of moral matters, discharges the same function that bodily sense does in respect of physical objects. It is worth while to notice how in our colloquial language we carry out the same analogy. We say of a transaction, that it “looks ugly,” “sounds oddly,” is a “nasty job,” “stinks in our nostrils,” is a “hard dealing.”

BOOK III

[1] A man is not responsible for being [Greek: theratos], because “particular propensions, from their very nature, must be felt, the objects of them being present, though they cannot be gratified at all, or not with the allowance of the moral principle.” But he is responsible for being [Greek: eutheratos], because, though thus formed, he “might have improved and raised himself to an higher and more secure state of virtue by the contrary behaviour, by steadily following the moral principle, supposed to be one part of his nature, and thus withstanding that unavoidable danger of defection which necessarily arose from propension, the other part of it. For by thus preserving his integrity for some time, his danger would lessen, since propensions, by being inured to submit, would do it more easily and of course and his security against this lessening danger would increase, since the moral principle would gain additional strength by exercise, both which things are implied in the notion of virtuous habits.” (From the chapter on Moral Discipline

m the Analogy, sect. iv.) The purpose of this disquisition is to refute the Necessitarians; it is resumed in the third chapter of this Book.

[2] Virtue is not only the duty, but (by the laws of the Moral Government of the World) also the interest of Man, or to express it in Bishop Butler's manner, Conscience and Reasonable self-love are the two principles in our nature which of right have supremacy over the rest, and these two lead in point of fact the same course of action. (Sermon II.)

[3] Any ignorance of particular facts affects the rightness not of the [Greek: praxis], but of the [Greek: pragma], but ignorance of _i.e._ incapacity to discern, Principles, shows the Moral Constitution to have been depraved, _i.e._ shows Conscience to be perverted, or the sight of Self-love to be impaired.

[4] [Greek: eneka] primarily denotes the relation of cause and effect all circumstances which in any way contribute to a cert result are [Greek: eneka] that result.

From the power which we have or acquire of deducing future results from present causes we are enabled to act towards, with a view to produce, these results thus [Greek: eneka] comes to mean not causation merely, but _designed_ causation and so [Greek: on eneka] is used for Motive, or final cause.

It is the primary meaning which is here intended, it would be a contradiction in terms to speak of a man's being ignorant of his own Motive of action.

When the man "drew a bow at a venture and smote the King of Israel between the joints of the harnesss" (i Kings xxii 34) he did it [Greek: eneka ton apdkteinai] the King of Israel, in the primary sense of [Greek: eneka] that is to say, the King's death was _in fact the result_, but could not have been the motive, of the shot, because the King was disguised and the shot was at a venture.

[5] Bishop Butler would agree to this: he says of settled deliberate anger, "It seems in us plainly connected with a sense of virtue and vice, of moral good and evil." See the whole Sermon on Resentment.

[6] Aristotle has, I venture to think, rather quibbled here, by using [Greek: epithumia] and its verb, equivocally as there is no following his argument without condescending to the same device, I have used our word lust in its ancient signification Ps. xxiv. 12, "What man is he that lusteth to live?"

[7] The meaning is, that the _onus probandi_ is thrown upon the person who maintains the distinction, Aristotle has a _prima facie_ case. The whole passage is one of difficulty. Card wells text gives the passage from [Greek: dokei de] as a separate argument Bekker's seems to intend al 81 ir/jd£eis as a separate argument but if so, the argument would be a mere _petitio principii_. I have adopted Cardwell's reading in part, but retain the comma at [Greek: dmpho] and have translated the last four words as applying to the whole discussion, whereas Cardwell's reading seems to restrict them to the last argument.

[8] _i.e._ on objects of Moral Choice, opinion of this kind is not the same as Moral Choice, because actions alone form habits and constitute character, opinions are in general _signs_ of character, but when they begin to be acted on they cease to be opinions, and merge in Moral Choice.

"Treason doth never prosper, what's the reason? When it doth prosper, none dare call it Treason."

[9] The introduction of the words [Greek: dia tinos] seems a mere useless repetition, as in the second chapter [Greek: en tini] added to [Greek: peri ti]. These I take for some among the many indications that the treatise is a collection of notes for lectures, and not a finished or systematic one.

[10] Suppose that three alternatives lay before a man, each of the three is of course an object of Deliberation; when he has made his choice, the alternative chosen does not cease to be in nature an object of Deliberation, but superadds the character of being chosen and so distinguished. Three men are admitted candidates for an office, the one chosen is the successful candidate, so of the three [Greek: bouleuta], the one chosen is the [Greek: bouleuton proaireton].

[11] Compare Bishop Butler's "System of Human Nature," in the Preface to the Sermons.

[12] These words, [Greek: ek tou bouleusasthai—bouleusin], contain the account of the whole mental machinery of any action. The first step is a Wish, implied in the first here mentioned, viz. Deliberation, for it has been already laid down that Deliberation has for its object-matter means to Ends supposed to be set before the mind, the next step is Deliberation, the next Decision, the last the

definite extending of the mental hand towards the object thus selected, the two last constitute [Greek: proairesis] in its full meaning. The word [Greek: orexis] means literally “a grasping at or after” now as this physically may be either vague or definite, so too may the mental act, consequently the term as transferred to the mind has two uses, and denotes either the first wish, [Greek: boulaesis], or the last definite movement, Will in its strict and proper sense. These two uses are recognised in the Rhetoric (I 10), where [Greek: orexis] is divided into [Greek: alogos] and [Greek: logistikae].

The illustration then afforded by the polities alluded to is this, as the Kings first decided and then announced their decision for acceptance and execution by their subjects, so Reason, having decided on the course to be taken, communicates its decision to the Will, which then proceeds to move [Greek: ta organika merae]. To instance in an action of the mixed kind mentioned in the first chapter, safe arrival at land is naturally desired, two means are suggested, either a certain loss of goods, or trying to save both lives and goods, the question being debated, the former is chosen, this decision is communicated to the Will, which causes the owner’s hands to throw overboard his goods: the act is denominated voluntary, because the Will is consenting, but in so denominating it, we leave out of sight how that consent was obtained. In a purely compulsory case the never gets beyond the stage of Wish, for no means are power and deliberation therefore is useless, consequently there is neither Decision nor Will, in other words, no Choice.

[13] Compare the statement in the Rhetoric, 1 10, [Greek: esti d hae men boulaeis agathou orexis (oudeis gar bouletai all ae otan oiaetho einai agathon)]

[14] A stone once set in motion cannot be recalled, because it is then placed under the operation of natural laws which cannot be controlled or altered, so too in Moral declension, there is a point at which gravitation operates irretrievably, “there is a certain bound to imprudence and misbehaviour which being transgressed, there remains no place for repentance in the natural course of things.” Bishop Butler’s Analogy, First Part, chap 11.

[15] Habits being formed by acting in a certain way under certain circumstances we can only choose how we will act not what circumstances we will have to act under.

[16] “_Moral_ Courage” is our phrase.

[17] The meaning of this passage can scarcely be conveyed except by a paraphrase.

“The object of each separate act of working is that which accords with the habit they go to form. Courage is the habit which separate acts of bravery go to form, therefore the object of these is that which accords with Courage, _i.e._ Courage itself. But Courage is honourable (which implies that the end and object of it is honour, since things are denominated according to their end and object), therefore the object of each separate act of bravery is honour.”

[18] For true Courage is required, i. Exact appreciation of danger. 2. A Proper motive for resisting fear. Each of the Spurious kinds will be found to fail in one or other, or both.

[19] This may merely mean, “who give strict orders” not to flinch, which would imply the necessity of compulsion The word is capable of the sense given above, which seems more forcible.

[20] See Book VI. chap. xiii. near the end [Greek: sokrataes aehen oun logous tas aretas oeto einai (epiotaemas gar einai pasas)]

[21] Such as the noise, the rapid movements, and apparent confusion which to an inexperienced eye and ear would be alarming. So Livy says of the Gauls, v. 37, Nata in _vanos_ tumultus gens.

[22]In Coronea in Bœotia, on the occasion of the citadel being betrayed to some Phocians. “The regulars” were Boeotian troops, the [Greek: politika] Coroneans.

[23] By the difference of tense it seems Aristotle has mixed up two things, beginning to speak of the particular instance, and then carried into the general statement again. This it is scarce worth while to imitate.

[24] The meaning of the phrase [Greek: kata sumbebaekos], as here used, in given in the Seventh Book, chap. X. [Greek: ei gar tis todi dia todi aireitai ae diokei, kath ahuto men touto diokei kai aireitai, kata sumbebaekos de to proteron].

BOOK V

[1] Each term is important to make up the character of Justice, men must have the capacity, do the acts, and do them from moral choice.

[2] But not always. [Greek: Philein], for instance, has two senses, “to love” and “to kiss,” [Greek: misein] but one. Topics, I. chap. XIII. 5.

[3] _Things_ are [Greek: homonuma] which have only their name in common, being in themselves different. The [Greek: homonumia] is _close_ therefore when the difference though real is but slight. There is no English expression for [Greek: homonumia], “equivocal” being applied to a term and not to its various significates.

[4] See Book I. chap. 1. [Greek: toiautaen de tina planaen echei kai tagatha k.t.l.]

[5] A man habitually drunk in private is viewed by our law as confining his vice to himself, and the law therefore does not attempt to touch him; a religious hermit may be viewed as one who confines his virtue to his own person.

[6] See the account of Sejanus and Livia. Tac. Annal. IV. 3.

[7] Cardwell’s text, which here gives [Greek: paranomon], yields a much easier and more natural sense. All Injustice violates law, but only the particular kinds violate equality; and therefore the unlawful : the unequal :: universal Injustice the particular _i.e._ as whole to part.

There is a reading which also alters the words within the parenthesis, but this hardly affects the gist of the passage.

[8] There are two reasons why the characters are not necessarily coincident. He is a good citizen, who does his best to carry out the [Greek: politeia] under which he lives, but this may be faulty, so therefore _pro tanto_ is he.

Again, it is sufficient, so far as the Community is concerned, that he does the _facts_ of a good man but for the perfection of his own individual character, he must do them virtuously. A man may move rightly in his social orbit, without revolving rightly on his own axis.

The question is debated in the Politics, III. 2. Compare also the distinction between the brave man, and good soldier (supra, Book III. chap. xii.), and also Bishop Butler’s first Sermon.

[9] Terms used for persons.

[10] By [Greek:——] is meant numbers themselves, 4, 20, 50, etc, by [Greek:——] these numbers exemplified, 4 horses, 20 sheep, etc.

[11] The profits of a mercantile transaction (say £1000) are to be divided between A and B, in the ratio of 2 to 3 (which is the real point to be settled); then,

A : B :: 400 : 600.

A : 400 :: B : 600 (permutando, and assuming a value for A and B, so as to make them commensurable with the respectiy sums).

A+400 : B+600 :: A : B. This represents the actual distribution; its fairness depending entirely on that of the first proportion.

[12] _i.e._ where the ratio is that of equality, thus 2 : 2 :: 40 : 40

[13] Her Majesty’s “Justices.”

[14] I have omitted the next three lines, as they seem to be out of place here, and to occur much more naturally afterwards; it not being likely that they were originally twice written, one is perhaps at liberty to give Aristotle the benefit of the doubt, and conclude that he put them where they made the best sense.

[15] This I believe to be the meaning of the passage but do not pretend to be able to get it out of the words.

[16] This is apparently contrary to what was said before, but not really so. Aristotle does not mean that the man in authority struck wrongfully, but he takes the extreme case of simple Reciprocation, and in the second case, the man who strikes one in authority commits two offences, one against the person (and so far they are equal), and another against the office.

[17] χ■ρις denotes, 1st, a kindly feeling issuing in a gratuitous act of kindness, 2ndly, the effect of this act of kindness on a generous mind; 3rdly, this effect issuing in a requital of the kindness.

[18] The Shoemaker would get a house while the Builder only had (say) one pair of shoes, or at all events not so many as he ought to have. Thus the man producing the least valuable ware would get the most valuable, and _vice versa_.

Adopting, as I have done, the reading which omits [Greek:——] at [Greek:——], we have simply a repetition of the caution, that before Reciprocation is attempted, there must be the same ratio between the wares as between the persons, _i.e._ the ratio of equality.

If we admit [Greek: ou], the meaning may be, that you must not bring into the proportion the difference mentioned above [Greek: eteron kai ouk ison], since for the purposes of commerce all men are equal.

Say that the Builder is to the Shoemaker as 10:1. Then there must be the same ratio between the wares, consequently the highest artist will carry off the most valuable wares, thus combining in himself both [Greek: uperochai]. The following are the three cases, given 100 pr. shoes = 1 house.

Builder : Shoemaker : : 1 pr. shoes : 1 house—_wrong_. —— —— 100 pr. shoes : 1 house—_right_ —— —— 10 (100 pr. shoes) : 1 house—_wrong_.

[19] [Greek] Compare a similar use of [Greek]. De Interpretatione, II. 2. [Greek].

[20] Every unjust act embodies [Greek: to adikon], which is a violation of [Greek: to ison], and so implies a greater and a less share, the former being said to fall to the doer, the latter to the sufferer, of injury.

[21] This passage certainly occurs awkwardly here. If attached to the close of the preceding Chapter it would leave that Chapter incomplete, for the question is not gone into, but only stated. As the commencement of this Chapter it is yet more out of place; I should propose to insert it at the commencement of the following Chapter, to which it forms an appropriate introduction.

[22] In a pure democracy men are absolutely, _i.e._ numerically, equal, in other forms only proportionately equal. Thus the meanest British subject is proportionately equal to the Sovereign, that is to say, is as fully secured in his rights as the Sovereign in hers.

[23] Or, according to Cardwell's reading ([Greek: kineton ou mentoi pan]) "but amongst ourselves there is Just, which is naturally variable, but certainly all Just is not such." The sense of the passage is not affected by the reading. In Bekker's text we must take [Greek: kineton] to mean the same as [Greek: kinoumenon], _i.e._ "we admit there is no Just which has not been sometimes disallowed, still," etc. With Cardwell's, [Greek: kineton] will mean "which not only _does_ but naturally _may_ vary."

[24] Murder is unjust by the law of nature, Smuggling by enactment. Therefore any act which can be referred to either of these heads is an unjust act, or, as Bishop Butler phrases it, an act _materially_ unjust. Thus much may be decided without reference to the agent. See the note on page 32, l. 16.

[25] "As distinct from pain or loss." Bishop Butler's Sermon on Resentment. See also, Rhet. 11. 2 Def. of [Greek: orgae].

[26] This method of reading the passage is taken from Zell as quoted in Cardwell's Notes, and seems to yield the best sense. The Paraphrast gives it as follows:

"But the aggressor is not ignorant that he began, and so he feels himself to be wrong [and will not acknowledge that he is the aggressor], but the other does not."

[27] As when a man is "_justified_ at the Grass Market," _i.e._ hung.

[28] Where the stock of good is limited, if any individual takes more than his share some one else must have less than his share; where it is infinite, or where there is no good at all this cannot happen.

[29] The reference is to chap. vii. where it was said that the law views the parties in a case of particular injustice as originally equal, but now unequal, the wrong doer the gainer and the sufferer the loser by the wrong, but in the case above supposed there is but _one_ party.

[30] So in the Politics, 1. 2.

Hae men gar psuchae tou somatos archei despotikaen archaen, o de nous taes orexeos politikaen kai despotikaev.

Compare also Bishop Butler's account of human nature as a system—of the different authority of certain principles, and specially the supremacy of Conscience.

BOOK VI

[1] I understand the illustration to be taken from the process of lowering a weight into its place; a block of marble or stone, for instance, in a building.

[2] Called for convenience sake Necessary and Contingent matter.

[3] One man learns Mathematics more easily than another, in common language, _he has a turn for_ Mathematics, _i e_ something in his mental conformation answers to that science The Phrenologist shows the bump denoting this aptitude.

[4] And therefore the question resolves itself into this, "What is the work of the Speculative, and what of the Practical, faculty of Reason." See the description of _apetae_ II. 5.

[5] _praxis_ is here used in its strict and proper meaning.

[6] That is to say, the Will waits upon deliberation in which Reason is the judge; when the decision is pronounced, the Will must act accordingly.

The question at issue always is, _Is this Good?_ because the Will is only moved by an impression of Good; the Decision then will be always _Aye or No_, and the mental hand is put forth to grasp in the former case, and retracted in the later.

So far as what must take place in _every_ Moral Action, right or wrong, the Machinery of the mind being supposed uninjured but to constitute a good Moral Choice, _i e._. a good Action, the Reason must have said Aye when it ought.

The cases of faulty action will be, either when the Machinery is perfect but wrongly directed, as in the case of a deliberate crime, or when the direction given by the Reason is right but the Will does not move in accordance with that direction, in other words, when the Machinery is out of order; as in the case of the [Greek: akrates]—video meliora proboque, Deteriora sequor.

[7] See the note on [Greek: Arche] on page 4, l. 30.

[8] The cobbler is at his last, why? to make shoes, which are to clothe the feet of someone and the price to be paid, _i.e._ the produce of his industry, is to enable him to support his wife and children; thus his production is subordinate to Moral Action.

[9] It may be fairly presumed that Aristotle would not thus have varied his phrase without some real difference of meaning. That difference is founded, I think, on the two senses of [Greek: orexis] before alluded to (note, p. 53, l. 33). The first impulse of the mind towards Action may be given either by a vague desire or by the suggestion of Reason. The vague desire passing through the deliberate stage would issue in Moral Choice. Reason must enlist the Will before any Action can take place.

Reason ought to be the originator in all cases, as Bishop Butler observes that Conscience should be. If this were so, every act of Moral Choice would be [Greek: orektikos nous].

But one obvious function of the feelings and passions in our composite nature is to instigate Action, when Reason and Conscience by themselves do not: so that as a matter of fact our Moral Choice is, in general, fairly described as [Greek: orexis dianoetike]. See Bishop Butler's Sermon II. and the First upon Compassion.

[10] The mind attains truth, either for the sake of truth itself ([Greek: aplos]), or for the sake of something further ([Greek: eneka tinos]). If the first then either syllogistically ([Greek: episteme]), non-syllogistically ([Greek: nous]), or by union of the two methods ([Greek: sophla]). If the second, either with a view to _act_ ([Greek: phronesis]), or with a view to _make_ ([Greek: techne]).

Otherwise. The mind contemplates Matter Necessary or Contingent. If necessary, Principles ([Greek: nous]), Deductions ([Greek: episteme]), or Mixed ([Greek: sophla]). If Contingent, Action ([Greek: phronesis]), Production ([Greek: techen]). (Giphanius quoted in Cardwell's notes.)

[11] It is the opening statement of the Post Analytics.

[12] Aristotle in his logical analysis of Induction, Prior. Analytics II. 25, defines it to be “the proving the inherence of the major term in the middle (_i.e._ proving the truth of the major premiss in fig. 1) through the minor term.” He presupposes a Syllogism in the first Figure with an universal affirmative conclusion, which reasons, of course, from an universal, which universal is to be taken as proved by Induction. His doctrine turns upon a canon which he there quotes. “If of one and the same term two others be predicated, one of which is coextensive with that one and the same, the other may be predicated of that which is thus coextensive.” The fact of this coextensiveness must be ascertained by [Greek: nous], in other words, by the Inductive Faculty. We will take Aldrich’s instance. All Magnets attract iron A B C are Magnets A B C attract iron. Presupposed Syllogism reasoning from an universal.

A B C attract iron (Matter of observation and experiment)

All Magnets are A B C (Assumed by [Greek: nous], i.e. the Inductive faculty)

All Magnets attract iron (Major premiss of the last Syllogism proved by taking the minor term of that for the middle term of this.)

Or, according to the canon quoted above: A B C are Magnets. A B C attract iron.

But [Greek: nous] tells me that the term Magnets is coextensive with the term A B C, therefore of all Magnets I may predicate that they attract iron.

Induction is said by Aristotle to be [Greek: hoia phanton], but he says in the same place that for this reason we must _conceive_ ([Greek: noehin]) the term containing the particular Instances (as A B C above) as composed of all the Individuals.

If Induction implied actual examination of all particular instances it would cease to be Reasoning at all and sink into repeated acts of Simple Apprehension it is really the bridging over of a chasm, not the steps cut in the rock on either side to enable us to walk down into and again out of it. It is a branch of probable Reasoning, and its validity depends _entirely_ upon the quality of the particular mind which performs it. Rapid Induction has always been a distinguishing mark of Genius the certainty produced by it is Subjective and not Objective. It may be useful to exhibit it Syllogistically, but the Syllogism which exhibits it is either nugatory, or contains a premiss _literally_ false. It will be found useful to compare on the subject of Induction _as the term is used by Aristotle_, Analytica Prior. II 25 26 Analytica Post. I. 1, 3, and I. Topics VI I and X.

[13] The reference is made to the Post Analyt I II and it is impossible to understand the account of [Greek: epistaemae] without a perusal of the chapter, the additions to the definition referred to relate to the nature of the premisses from which [Greek: epistaemae] draws its conclusions they are to be “true, first principles incapable of any syllogistic proof, better known than the conclusion, prior to it, and causes of it.” (See the appendix to this Book.)

[14] This is the test of correct logical division, that the _membra dividentia_ shall be opposed, _i.e._ not included the one by the other.

[15] The meaning of the [Greek: hepehi] appears to be this: the appeal is made in the first instance to popular language, just as it the case of [Greek: epistaemae], and will be in those of [Greek: phronaesis] and [Greek: sophia]. We commonly call Architecture an Art, and it is so and so, therefore the name Art and this so and so are somehow connected to prove that connection to be “coextensiveness,” we predicate one of the other and then simply convert the proposition, which is the proper test of any logical definition, or of any specific property. See the Topics, 1. vi.

[16] See the parable of the unjust Steward, in which the popular sense of [Greek: phronaesis] is strongly brought out; [Greek: ephaenesen ho kurios ton oikonomon taes adikias oti phronimos epoiaesen hoti ohi viohi tou aionos toutou phronimoteroi, k.t.l.]—Luke xvi. 8.

[17] Compare the [Greek: aplos] and [Greek: kath’ ekasta pepaideumenos] of Book I. chap. 1.

[18] The two aspects under which Virtue may be considered as claiming the allegiance of moral agents are, that of being right, and that of being truly expedient, because Conscience and Reasonable Self-Love are the two Principles of our moral constitution naturally supreme and “Conscience and Self-Love, _if we understand our true happiness_, always lead us the same way.” Bishop Butler, end of Sermon III.

And again:

“If by _a sense of interest_ is meant a practical regard to what is upon the whole our Happiness this is not only coincident with the principle of Virtue or Moral Rectitude, but is a part of the idea itself. And it is evident this Reasonable Self-Love wants to be improved as really as any principle in our nature. So little cause is there for Moralists to disclaim this principle.” From the note on sect. iv. of the chapter on Moral Discipline, Analogy, part I chap. v.

[19] See the note on [Greek: Arche] on page 4, l. 30.

The student will find it worth while to compare this passage with the following—Chap. xiii. of this book beginning [Greek: e d’ exis to ommati touto k. t. l]—vii. 4. [Greek: eti kai ode physikos. k.t.l.] vii. 9.—[Greek: ae gar arethae kai ae mochthaeria. k.t.l.]—iii. 7 _ad finem_. [Greek: ei de tis legoi. k.t.l.]

[20] This is not quite fair. Used in its strict sense, Art does not admit of degrees of excellence any more than Practical Wisdom. In popular language we use the term “wiser man,” as readily as “better artist” really denoting in each case different degrees of approximation to Practical Wisdom and Art respectively, [Greek: dia to ginesthai tous epainous di anaphoras]. I. 12.

[21] He would be a _better Chymist_ who should poison intentionally, than he on whose mind the prevailing impression was that “Epsom Salts mean Oxalic Acid, and Syrup of Senna Laudanum.”

[22]The term Wisdom is used in our English Translation of the Old Testament in the sense first given to [Greek:——] here. “Then wrought Bezaleel and Ahohab, and every _wise-hearted man, in whom the Lord put wisdom and understanding_ to know how to work all manner of work for the service of the Sanctuary” Exodus xxxvi. i.

[23] [Greek:——] and [Greek:——], (in the strict sense, for it is used in many different senses in this book) are different parts of the whole function [Greek:——], [Greek:——] takes in conclusions, drawn by strict reasoning from Principles of a certain kind which [Greek: ——] supplies. It is conceivable that a man might go on gaining these principles by Intuition and never reasoning from them, and so [Greek: ——] might exist independent of [Greek:——], but not this without that. Put the two together, the head to the trunk, and you form the living being [Greek:——]. There are three branches of [Greek:——] according to Greek Philosophy, [Greek:——], [Greek:——], [Greek:——]. Science is perhaps the nearest English term, but we have none really equivalent.

[24][Greek:——] is here used in its most extensive sense, [Greek:——] would be its chief Instrument.

[25] The faculty concerned with which is [Greek:——].

[26] In every branch of Moral Action in which Practical Wisdom is employed there will be general principles, and the application of them, but in some branches there are distinct names appropriated to the operations of Practical Wisdom, in others there are not.

Thus Practical Wisdom, when employed on the general principles of Civil Government, is called Legislation, as administering its particular functions it is called simply Government. In Domestic Management, there are of course general Rules, and also the particular application of them; but here the faculty is called only by one name. So too when Self-Interest is the object of Practical Wisdom.

[27] [Greek:——], “our mere Operatives in Public business.” (Chalmers.)

[28] Practical Wisdom may be employed either respecting Self, (which is [Greek:——] proper) or not-Self, _i.e._ either one’s family=[Greek:——], or one’s community=[Greek:——], but here the supreme and subordinate are distinguished, the former is [Greek:——], the latter [Greek:——] proper, whose functions are deliberation and the administration of justice.

[29] But where can this be done, if there be no community? see Horace’s account of the way in which his father made him reap instruction from the examples in the society around him. 1. Sat. iv. 105, etc. See also Bishop Butler, Analogy, part I. chap. v. sect. iii.

The whole question of the Selfish Morality is treated in Bishop Butler’s first three and the eleventh Sermons, in which he shows the coincidence in _fact_ of enlightened Self-Love and Benevolence _i.e._ love of others. Compare also what is said in the first Book of this treatise, chap. v., about [Greek: autarkeia].

[30] More truly “implied,” namely, that Practical Wisdom results from experience.

[31] This observation seems to be introduced, simply because suggested by the last, and not because at all relevant to the matter in hand.

[32] An instance of Principles gained [Greek: aisthesei]. (Book 1. chap. viii.)

[33] Particulars are called [Greek: eschata] because they are last arrived at in the deliberative process, but a little further on we have the term applied to first principles, because they stand at one extremity, and facts at the other, of the line of action.

[34] I prefer the reading [Greek: e phronesis], which gives this sense, “Well, as I have said, Practical Wisdom is this kind of sense, and the other we mentioned is different in kind.” In a passage so utterly unimportant, and thrown in almost colloquially, it is not worth while to take much trouble about such a point.

[35] The definition of it in the Organon (Post Analyt. 1. xxiv.), “a happy conjecture of the middle term without time to consider of it.”

The quaestio states the phenomena, and the middle term the causation the rapid ascertaining of which constitutes [Greek: anchinoia]. All that receives light from the sun is bright on the side next to the sun. The moon receives light from the sun, The moon is bright on the side next the sun. The [Greek: anchinoia] consists in rapidly and correctly accounting for the observed fact, that the moon is bright on the side next to the sun.

[36] Opinion is a complete, deliberation an incomplete, mental act.

[37] The End does not sanctify the Means.

[38] The meaning is, there is one End including all others; and in this sense [Greek: phronesis] is concerned with means, not Ends but there are also many subordinate Ends which are in fact Means to the Great End of all. Good counsel has reference not merely to the grand End, but to the subordinate Ends which [Greek: phronesis] selects as being right means to the Grand End of all.

[39] The relative [Greek: on] might be referred to [Greek: sumpheron], but that [Greek: eubonlia] has been already divided into two kinds, and this construction would restrict the name to one of them, namely that [Greek: pros ti telos] as opposed to that [Greek: pros to telos aplos].

[40] We have no term which at all approximates to the meaning of this word, much less will our language admit of the play upon it which connects it with [Greek: suggnomae].

[41] Meaning, of course, all those which relate to Moral Action. [Greek: psronaesis] is equivalent to [Greek: euboulia, ounesis, gnomae, and nous] (in the new sense here given to it).

The faculty which guides us truly in all matters of Moral Action is [Greek: phronaesis], i.e. Reason directed by Goodness or Goodness informed by Reason. But just as every faculty of body and soul is not actually in operation at the same time, though the Man is acting, so proper names are given to the various Functions of Practical Wisdom.

Is the [Greek: phronimos] forming plans to attain some particular End? he is then [Greek: euboulos]—is he passing under review the suggestions of others? he is [Greek: sunetos]—is he judging of the acts of others? he admits [Greek: gnomae] to temper the strictness of justness—is he applying general Rules to particular cases? he is exercising [Greek: nous praktikos] or [Greek: agsthaesis]—while in each and all he is [Greek: phronimos]?

[42] See note, on p. 140.

[43] There are cases where we must simply accept or reject without proof: either when Principles are propounded which are prior to all reasoning, or when particular facts are brought before us which are simply matters of [Greek: agsthaesis]. Aristotle here brings both these cases within the province of [Greek: nous], _i.e._ he calls by this name the Faculty which attains Truth in each.

[44] _i.e._ of the [Greek: syllogisimai ton prakton].

[45] See the note on [Greek: Archae] on p. 4,1 30. As a matter of fact and mental experience the Major Premiss of the Practica Syllogism is wrought into the mind by repeatedly acting upon the Minor Premiss (_i.e._ by [Greek: ethismos]).

All that is pleasant is to be done, This is pleasant, This is to be done

By habitually acting on the Minor Premiss, _i.e._ on the suggestions of [Greek: epithymia], a man comes really to hold the Major Premiss. Aristotle says of the man destitute of all self-control that he is firmly persuaded that it is his proper line to pursue the gratification of his bodily appetites, [Greek: dia to toioytos einai oios diokein aytas]. And his analysis of [Greek: akrasia] (the state of

progress towards this utter abandonment to passion) shows that each case of previous good resolution succumbing to temptation is attributable to [Greek: epithymia] suggesting its own Minor Premiss in place of the right one. Book VII. 8 and 5.

[46] The _consequentia_ is this:

There are cases both of principles and facts which cannot admit of reasoning, and must be authoritatively determined by [Greek: nous]. What makes [Greek: nous] to be a true guide? only practice, i.e. Experience, and _therefore_, etc.

[47] This is a note to explain [Greek: hygieina] and [Greek: euektika], he gives these three uses of the term [Greek: hygieinon] in the Topics, I. xiii. 10,

{ [Greek: to men hygieias poiætikon], [Greek: hygieinon legetai] { [Greek: to de phylaktikon], { [Greek: to de sæmantikon].

Of course the same will apply to [Greek: euektikon].

[48] Healthiness is the formal cause of health. Medicine is the efficient cause of health.

See Book X. chap. iv. [Greek: hosper oud hæ hygieia kai ho iatros homoios aitia esti tou ugiainein].

[49] [Greek: phronæsis] is here used in a partial sense to signify the Intellectual, as distinct from the Moral, element of Practical Wisdom.

[50] This is another case of an observation being thrown in _obiter_, not relevant to, but suggested by, the matter in hand.

[51] See Book II. chap. iii. and V. xiii.

[52]The article is supplied at [Greek: panourgous], because the abstract word has just been used expressly in a bad sense. “Up to anything” is the nearest equivalent to [Greek: panourgos], but too nearly approaches to a colloquial vulgarism.

[53] See the note on [Greek: Archæ] on page 4, l. 30.

P. 147, l. 14. And for the Minor, of course,

“This particular action is———.”

We may paraphrase [Greek: to telos] by [Greek: ti dei prattein—ti gar dei prattein hæ mæ, to telos autæs estin] i.e. [Greek: tæs phronæseos].—(Chap. xi. of this Book.)

[55] “Look asquint on the face of truth.” Sir T. Browne, Religio Medici.

[56] The term [Greek: sophronikoi] must be understood as governing the signification of the other two terms, there being no single Greek term to denote in either case mere dispositions towards these Virtues.

[57] Compare the passage at the commencement of Book X. [Greek: nun de phainontai] [Greek: katokochimon ek tæs aretæs].

[58] It must be remembered, that [Greek: phronæsis] is used throughout this chapter in two senses, its proper and complete sense of Practical Wisdom, and its incomplete one of merely the Intellectual Element of it.

BOOK VII

[1] The account of Virtue and Vice hitherto given represents rather what men _may be_ than what they _are_. In this book we take a practical view of Virtue and Vice, in their ordinary, every day development.

[2] This illustrates the expression, “_Deceits_ of the Flesh.”

[3] Another reading omits the [Greek:——]; the meaning of the whole passage would be exactly the same—it would then run, “if he had been convinced of the rightness of what he does, _i.e._ if he were now acting on conviction, he might stop in his course on a change of conviction.”

[4] Major and minor Premises of the [Greek:——] [Greek——]

[5]Some necessarily implying knowledge of the particular, others not.

[6] As a modern parallel, take old Trumbull in Scott's "Red Gauntlet."

[7] That is, as I understand it, either the major or the minor premise, it is true, that "all that is sweet is pleasant," it is true also, that "this is sweet," what is contrary to Right Reason is the bringing in this minor to the major _i.e._ the universal maxim, forbidding to taste. Thus, a man goes to a convivial meeting with the maxim in his mind "All excess is to be avoided," at a certain time his [Greek:——] tells him "This glass is excess." As a matter of mere reasoning, he cannot help receiving the conclusion "This glass is to be avoided," and supposing him to be morally sound he would accordingly abstain. But [Greek:——], being a simple tendency towards indulgence suggests, in place of the minor premise "This is excess," its own premise "This is sweet," this again suggests the self-indulgent maxim or principle ('[Greek:——]), "All that is sweet is to be tasted," and so, by strict logical sequence, proves "This glass is to be tasted."

The solution then of the phænomenon of [Greek:——] is this that [Greek:——], by its direct action on the animal nature, swamps the suggestions of Right Reason.

On the high ground of Universals, [Greek:——] i.e. [Greek:——] easily defeats [Greek:——]. The [Greek:——], an hour before he is in temptation, would never deliberately prefer the maxim "All that is sweet is to be tasted" to "All excess is to be avoided." The [Greek:——] would.

Horace has a good comment upon this (II Sat 2):

Quæ virtus et quanta, bom, sit vivere parvo Discite, _non inter lances mensasque nitentes_ Verum hic _impransi_ mecum disquirite

Compare also Proverbs XXIII. 31. "Look not thou upon the wine when it is red," etc.

[8] As we commonly speak, Metaphysicians. Physiology of course includes Metaphysics.

[9] [Greek: oron]. Aristotle's own account of this word (Prior Analyt ii. 1) is [Greek: eis on dialuetai hae protasis], but both in the account of [Greek: nous] and here it seems that the proposition itself is really indicated by it.

[10] The Greek would give "avoids excessive pain," but this is not true, for the excess of pain would be ground for excuse the warrant for translating as in the text, is the passage occurring just below [Greek: diokei tas uperbolas kai pheugei metrias lupas].

[11] Compare Bishop Butler on Particular Propensions, Analogy, Part I chap v sect. iv.

[12] That is, they are to the right states as Vice to Virtue.

[14] Consult in connection with this Chapter the Chapter on [Greek: orgae] in the Rhetoric, II. 2, and Bishop Butler's Sermon on Resentment.

[15] The reasoning here being somewhat obscure from the concisement of expression, the following exposition of it is subjoined.

Actions of Lust are wrong actions done with pleasure, Wrong actions done with pleasure are more justly objects of wrath,[*] Such as are more justly objects of wrath are more unjust, Actions of Lust are more unjust

[*] [Greek: hubpis] is introduced as the single instance from which this premiss is proved inductively. See the account of it in the Chapter of the Rhetoric referred to in the preceding note.

[16][Greek: ton dae lechthenton]. Considerable difference of opinion exists as to the proper meaning of these words. The emendation which substitutes [Greek: akrataes] for [Greek: akolastos] removes all difficulty, as the clause would then naturally refer to [Greek: ton mae proairoumenon] but Zell adheres to the reading in the text of Bekker, because the authority of MSS and old editions is all on this side.

I understand [Greek: mallon] as meant to modify the word [Greek: malakias], which properly denotes that phase of [Greek: akrasia] (not [Greek: akolasia]) which is caused by pain.

The [Greek: akolastos] _deliberately_ pursues pleasure and declines pain if there is to be a distinct name for the latter phase, it comes under [Greek: malakia] more nearly than any other term, though perhaps not quite properly.

Or the words may be understood as referring to the class of wrong acts caused by avoidance of pain, whether deliberate or otherwise, and then of course the names of [Greek: malakia] and [Greek: akolasia] may be fitly given respectively.

[17] “If we went into a hospital where all were sick or dying, we should think those least ill who were insensible to pain; a physician who knew the whole, would behold them with despair. And there is a mortification of the soul as well as of the body, in which the first symptoms of returning hope are pain and anguish” Sewell, Sermons to Young Men (Sermon xii.)

[18] Before the time of trial comes the man deliberately makes his Moral Choice to act rightly, but, at the moment of acting, the powerful strain of desire makes him contravene this choice his Will does not act in accordance with the affirmation or negation of his Reason. His actions are therefore of the mixed kind. See Book III. chap. i, and note on page 128.

[19] Let a man be punctual _on principle_ to any one engagement in the day, and he must, as a matter of course, keep all his others in their due places relatively to this one; and so will often wear an appearance of being needlessly punctilious in trifles.

[20] Because he is destitute of these minor springs of action, which are intended to supply the defects of the higher principle.

See Bishop Butler’s first Sermon on Compassion, and the conclusion of note on p. 129.

BOOK VIII

[1] “Owe no man anything, but to _love_ one another for he that loveth another _hath fulfilled the Law_.” Romans XIII. 8.

[2] [Greek: kerameis]. The Proverb in full is a line from Hesiod, [Greek: kahi keramehus keramei koteei kai tektoni tekton].

[3] In this sense, therefore, is it sung of Mrs. Gilpin that she

“two stone bottles found, To hold the liquor that she _loved_, And keep it safe and sound.”

[4] Cardwell’s reading, [Greek: tautae gar omoioi, kai ta loipa] is here adopted, as yielding a better sense than Bekker’s.

[5]The Great man will have a right to look for more Friendship than he bestows, but the Good man _can_ feel Friendship only for, and in proportion to, the goodness of the other.

[6] See note on page 68, 1. 8.

[7] See I. Topics, Chap. v. on the various senses of [Greek: tauton].

[8] “For the mutual society, help, and comfort that the one ought to have of the other, both in prosperity and adversity.”

[9] Which one would be assuming he was, if one declined to recognise the obligation to requite the favour or kindness.

BOOK IX

[1] “Neither the Son of man, that He should _repent_.” Numbers xxiii. 19.

“In a few instances the Second Intention, or Philosophical employment of a Term, is more extensive than the First Intention, or popular use.” Whately, Logic, iii. 10.

[2] “I have sometimes considered in what troublesome case is that Chamberlain in an Inn who being but one is to give attendance to many guests. For suppose them all in one chamber, yet, if one shall command him to come to the window, and the other to the table, and another to the bed, and another to the chimney, and another to come upstairs, and another to go downstairs, and all in the same instant, how would he be distracted to please them all? And yet such is the sad condition of nay soul by nature, not only a servant but a slave unto sin. Pride calls me to the window, gluttony to the table, wantonness to the bed, laziness to the chimney, ambition commands me to go upstairs, and covetousness to come down. Vices, I see, are as well contrary to themselves as to Virtue.” (Fuller’s Good Thoughts in Bad Times. Mix’t Contemplations, viii.)

BOOK X

[1] See note, p. 43.

[2] See Book II. chap. ix.

[3] See Book I. chap. v. ad finem.

[4] The notion alluded to is that of the [greek: idea]: that there is no real substantial good except the [greek: auto agathon], and therefore whatever is so called is so named in right of its participation in that.

[5] See note on page 136, 1. 15.

P. 238, 1. 24. Movement is, according to Aristotle, of six kinds: From not being to being . . . . Generation From being to not being . . . . Destruction From being to being more . . . . Increase From being to being less . . . . Diminution From being here to being there . . Change of Place From being in this way to being in that Alteration

[7] _A_ may go to sleep quicker than _B_, but cannot _do more sleep_ in a given time.

[8] Compare Book III. chap. vi. [Greek: osper kai epi ton somaton, k. t. l.]

[9] Which is of course a [Greek: genesis].

[10] That is, subordinate Movements are complete before the whole Movement is.

[11] Pleasure is so instantaneous a sensation, that it cannot be conceived divisible or incomplete; the longest continued Pleasure is only a succession of single sparks, so rapid as to give the appearance of a stream, of light.

[12] A man is as effectually hindered from taking a walk by the [Greek: allotria haedouae] of reading a novel, as by the [Greek: oikeia lupae] of gout in the feet.

[13] I have thus rendered [Greek: spoudae (ouk agnoon to hamartanomenon)]; but, though the English term does not represent the depth of the Greek one, it is some approximation to the truth to connect an earnest serious purpose with Happiness.

[14] Bishop Butler, _contra_ (Sermon XV.).

“Knowledge is not our proper Happiness. Whoever will in the least attend to the thing will see that it is the gaining, not the having, of it, which is the entertainment of the mind.” The two statements may however be reconciled. Aristotle may be well understood only to mean, that the pursuit of knowledge will be the pleasanter, the freer it is from the minor hindrances which attend on _learning_.

[15] The clause immediately following indicates that Aristotle felt this statement to be at first sight startling, Happiness having been all the way through connected with [Greek: energeia], but the statement illustrates and confirms what was said in note on page 6, 1. 15.

[16] That is to say, he aims at producing not merely a happy aggregate, but an aggregate of happy individuals. Compare what is said of Legislators in the last chapter of Book I and the first of Book II.

[17] See note, page 146, 1. 17.

INTRODUCTION

ARISTOTLE'S ETHICS BOOK I BOOK II BOOK III BOOK IV BOOK V BOOK VI BOOK VII BOOK VIII BOOK IX BOOK X NOTES

INTRODUCTION

The _Ethics_ of Aristotle is one half of a single treatise of which his _Politics_ is the other half. Both deal with one and the same subject. This subject is what Aristotle calls in one place the "philosophy of human affairs;" but more frequently Political or Social Science. In the two works taken together we have their author's whole theory of human conduct or practical activity, that is, of all human activity which is not directed merely to knowledge or truth. The two parts of this treatise are mutually complementary, but in a literary sense each is independent and self-contained. The proem to the _Ethics_ is an introduction to the whole subject, not merely to the first part; the last chapter of the _Ethics_ points forward to the _Politics_, and sketches for that part of the treatise the order of enquiry to be pursued (an order which in the actual treatise is not adhered to).

The principle of distribution of the subject-matter between the two works is far from obvious, and has been much debated. Not much can be gathered from their titles, which in any case were not given to them by their author. Nor do these titles suggest any very compact unity in the works to which they are applied: the plural forms, which survive so oddly in English (Ethic_s_, Politic_s_), were intended to indicate the treatment within a single work of a _group_ of connected questions. The unity of the first group arises from their centring round the topic of character, that of the second from their connection with the existence and life of the city or state. We have thus to regard the _Ethics_ as dealing with one group of problems and the _Politics_ with a second, both falling within the wide compass of Political Science. Each of these groups falls into sub-groups which roughly correspond to the several books in each work. The tendency to take up one by one the various problems which had suggested themselves in the wide field obscures both the unity of the subject-matter and its proper articulation. But it is to be remembered that what is offered us is avowedly rather an enquiry than an exposition of hard and fast doctrine.

Nevertheless each work aims at a relative completeness, and it is important to observe the relation of each to the other. The distinction is not that the one treats of Moral and the other of Political Philosophy, nor again that the one deals with the moral activity of the individual and the other with that of the State, nor once more that the one gives us the theory of human conduct, while the other discusses its application in practice, though not all of these misinterpretations are equally erroneous. The clue to the right interpretation is given by Aristotle himself, where in the last chapter of the _Ethics_ he is paving the way for the _Politics_. In the _Ethics_ he has not confined himself to the abstract or isolated individual, but has always thought of him, or we might say, in his social and political context, with a given nature due to race and heredity and in certain surroundings. So viewing him he has studied the nature and formation of his character—all that he can make himself or be made by others to be. Especially he has investigated the various admirable forms of human character and the mode of their production. But all this, though it brings more clearly before us what goodness or virtue is, and how it is to be reached, remains mere theory or talk. By itself it does not enable us to become, or to help others to become, good. For this it is necessary to bring into play the great force of the Political Community or State, of which the main instrument is Law. Hence arises the demand for the necessary complement to the _Ethics, i.e._, a treatise devoted to the questions which centre round the enquiry; by what organisation of social or political forces, by what laws or institutions can we best secure the greatest amount of good character?

We must, however, remember that the production of good character is not the end of either individual or state action: that is the aim of the one and the other because good character is the indispensable condition and chief determinant of happiness, itself the goal of all human doing. The end of all action, individual or collective, is the greatest happiness of the greatest number. There is, Aristotle insists, no difference of kind between the good of one and the good of many or all. The sole difference is one of amount or scale. This does not mean simply that the State exists to secure in larger measure the objects of degree which the isolated individual attempts, but is too feeble, to secure without it. On the contrary, it rather insists that whatever goods society alone enables a man to secure have always had to the individual—whether he realised it or not—the value which, when so secured, he recognises them to possess. The best and happiest life for the individual is that which the State renders possible, and this it does mainly by revealing to him the value of new objects of desire and educating him to appreciate them. To Aristotle or to Plato the State is, above all, a large and powerful educative agency which gives the individual increased opportunities of self-development and greater capacities for the enjoyment of life.

Looking forward, then, to the life of the State as that which aids support, and combines the efforts of the individual to obtain happiness, Aristotle draws no hard and fast distinction between the spheres of action of Man as individual and Man as citizen. Nor does the division of his discussion into the _Ethics_ and the _Politics_ rest upon any such distinction. The distinction implied is rather between two stages in the life of the civilised man—the stage of preparation for the full life of the adult citizen, and the stage of the actual exercise or enjoyment of citizenship. Hence the _Ethics_, where his attention is directed upon the formation of character, is largely and centrally a treatise on Moral Education. It discusses especially those admirable human qualities which fit a man for life in an organised civic community, which makes him “a good citizen,” and considers how they can be fostered or created and their opposites prevented.

This is the kernel of the _Ethics_, and all the rest is subordinate to this main interest and purpose. Yet “the rest” is not irrelevant; the whole situation in which character grows and operates is concretely conceived. There is a basis of what we should call Psychology, sketched in firm outlines, the deeper presuppositions and the wider issues of human character and conduct are not ignored, and there is no little of what we should call Metaphysics. But neither the Psychology nor the Metaphysics is elaborated, and only so much is brought forward as appears necessary to put the main facts in their proper perspective and setting. It is this combination of width of outlook with close observation of the concrete facts of conduct which gives its abiding value to the work, and justifies the view of it as containing Aristotle’s Moral Philosophy. Nor is it important merely as summing up the moral judgments and speculations of an age now long past. It seizes and dwells upon those elements and features in human practice which are most essential and permanent, and it is small wonder that so much in it survives in our own ways of regarding conduct and speaking of it. Thus it still remains one of the classics of Moral Philosophy, nor is its value likely soon to be exhausted.

As was pointed out above, the proem (Book I., cc. i-iii.) is a prelude to the treatment of the whole subject covered by the _Ethics_ and the _Politics_ together. It sets forth the purpose of the enquiry, describes the spirit in which it is to be undertaken and what ought to be the expectation of the reader, and lastly states the necessary conditions of studying it with profit. The aim of it is the acquisition and propagation of a certain kind of knowledge (science), but this knowledge and the thinking which brings it about are subsidiary to a practical end. The knowledge aimed at is of what is best for man and of the conditions of its realisation. Such knowledge is that which in its consumate form we find in great statesmen, enabling them to organise and administer their states and regulate by law the life of the citizens to their advantage and happiness, but it is the same kind of knowledge which on a smaller scale secures success in the management of the family or of private life.

It is characteristic of such knowledge that it should be deficient in “exactness,” in precision of statement, and closeness of logical concatenation. We must not look for a mathematics of conduct. The subject-matter of Human Conduct is not governed by necessary and uniform laws. But this does not mean that it is subject to no laws. There are general principles at work in it, and these can be formulated in “rules,” which rules can be systematised or unified. It is all-important to remember that practical or moral rules are only general and always admit of exceptions, and that they arise not from the mere complexity of the facts, but from the liability of the facts to a certain unpredictable variation. At their very best, practical rules state probabilities, not certainties; a relative constancy of connection is all that exists, but it is enough to serve as a guide in life. Aristotle here holds the balance between a misleading hope of reducing the subject-matter of conduct to a few simple rigorous abstract principles, with conclusions necessarily issuing from them, and the view that it is the field of operation of inscrutable forces acting without predictable regularity. He does not pretend to find in it absolute uniformities, or to deduce the details from his principles. Hence, too, he insists on the necessity of experience as the source or test of all that he has to say. Moral experience—the actual possession and exercise of good character—is necessary truly to understand moral principles and profitably to apply them. The mere intellectual apprehension of

them is not possible, or if possible, profitless.

The _Ethics_ is addressed to students who are presumed both to have enough general education to appreciate these points, and also to have a solid foundation of good habits. More than that is not required for the profitable study of it.

If the discussion of the nature and formation of character be regarded as the central topic of the _Ethics_, the contents of Book I., cc. iv.-xii. may be considered as still belonging to the introduction and setting, but these chapters contain matter of profound importance and have exercised an enormous influence upon subsequent thought. They lay down a principle which governs all Greek thought about human life, viz. that it is only intelligible when viewed as directed towards some end or good. This is the Greek way of expressing that all human life involves an ideal element—something which it is not yet and which under certain conditions it is to be. In that sense Greek Moral Philosophy is essentially idealistic. Further it is always assumed that all human practical activity is directed or "oriented" to a _single_ end, and that that end is knowable or definable in advance of its realisation. To know it is not merely a matter of speculative interest, it is of the highest practical moment for only in the light of it can life be duly guided, and particularly only so can the state be properly organised and administered. This explains the stress laid throughout by Greek Moral Philosophy upon the necessity of knowledge as a condition of the best life. This knowledge is not, though it includes knowledge of the nature of man and his circumstances, it is knowledge of what is best—of man's supreme end or good.

But this end is not conceived as presented to him by a superior power nor even as something which _ought_ to be. The presentation of the Moral Ideal as Duty is almost absent. From the outset it is identified with the object of desire, of what we not merely judge desirable but actually do desire, or that which would, if realised, satisfy human desire. In fact it is what we all, wise and simple, agree in naming "Happiness" (Welfare or Well-being)

In what then does happiness consist? Aristotle summarily sets aside the more or less popular identifications of it with abundance of physical pleasures, with political power and honour, with the mere possession of such superior gifts or attainments as normally entitle men to these, with wealth. None of these can constitute the end or good of man as such. On the other hand, he rejects his master Plato's conception of a good which is the end of the whole universe, or at least dismisses it as irrelevant to his present enquiry. The good towards which all human desires and practical activities are directed must be one conformable to man's special nature and circumstances and attainable by his efforts. There is in Aristotle's theory of human conduct no trace of Plato's "other worldliness", he brings the moral ideal in Bacon's phrase down to "right earth"—and so closer to the facts and problems of actual human living. Turning from criticism of others he states his own positive view of Happiness, and, though he avowedly states it merely in outline his account is pregnant with significance. Human Happiness lies in activity or energising, and that in a way peculiar to man with his given nature and his given circumstances, it is not theoretical, but practical: it is the activity not of reason but still of a being who possesses reason and applies it, and it presupposes in that being the development, and not merely the natural possession, of certain relevant powers and capacities. The last is the prime condition of successful living and therefore of satisfaction, but Aristotle does not ignore other conditions, such as length of life, wealth and good luck, the absence or diminution of which render happiness not impossible, but difficult of attainment.

It is interesting to compare this account of Happiness with Mill's in _Utilitarianism_. Mill's is much the less consistent: at times he distinguishes and at times he identifies, happiness, pleasure, contentment, and satisfaction. He wavers between belief in its general attainability and an absence of hopefulness. He mixes up in an arbitrary way such ingredients as "not expecting more from life than it is capable of bestowing," "mental cultivation," "improved laws," etc., and in fact leaves the whole conception vague, blurred, and uncertain. Aristotle draws the outline with a firmer hand and presents a more definite ideal. He allows for the influence on happiness of conditions only partly, if at all, within the control of man, but he clearly makes the man positive determinant of man's happiness he in himself, and more particularly in what he makes directly of his own nature, and so indirectly of his circumstances. "'Tis in ourselves that we are thus or thus" But once more this does not involve an artificial or abstract isolation of the individual moral agent from his relation to other persons or things from his context in society and nature, nor ignore the relative dependence of his life upon a favourable environment.

The main factor which determines success or failure in human life is the acquisition of certain powers, for Happiness is just the exercise or putting forth of these in actual living, everything else is secondary and subordinate. These powers arise from the due development of certain natural aptitudes which belong (in various degrees) to human nature as such and therefore to all normal human beings. In their developed form they are known as virtues (the Greek means simply "goodnesses," "perfections," "excellences," or "fitnesses"), some of them are physical, but others are psychical, and among the latter some, and these distinctively or peculiarly human, are "rational," _i e_, presuppose the possession and exercise of mind or intelligence. These last

fall into two groups, which Aristotle distinguishes as Goodnesses of Intellect and Goodnesses of Character. They have in common that they all excite in us admiration and praise of their possessors, and that they are not natural endowments, but acquired characteristics But they differ in important ways. (1) the former are excellences or developed powers of the reason as such—of that in us which sees and formulates laws, rules, regularities systems, and is content in the vision of them, while the latter involve a submission or obedience to such rules of something in us which is in itself capricious and irregular, but capable of regulation, viz our instincts and feelings, (2) the former are acquired by study and instruction, the latter by discipline. The latter constitute "character," each of them as a "moral virtue" (literally "a goodness of character"), and upon them primarily depends the realisation of happiness. This is the case at least for the great majority of men, and for all men their possession is an indispensable basis of the best, _i e_, the most desirable life. They form the chief or central subject-matter of the _Ethics_.

Perhaps the truest way of conceiving Aristotle's meaning here is to regard a moral virtue as a form of obedience to a maxim or rule of conduct accepted by the agent as valid for a class of recurrent situations in human life. Such obedience requires knowledge of the rule and acceptance of it _as the rule_ of the agent's own actions, but not necessarily knowledge of its ground or of its systematic connexion with other similarly known and similarly accepted rules (It may be remarked that the Greek word usually translated "reason," means in almost all cases in the _Ethics_ such a rule, and not the faculty which apprehends, formulates, considers them).

The "moral virtues and vices" make up what we call character, and the important questions arise: (1) What is character? and (2) How is it formed? (for character in this sense is not a natural endowment; it is formed or produced). Aristotle deals with these questions in the reverse order. His answers are peculiar and distinctive—not that they are absolutely novel (for they are anticipated in Plato), but that by him they are for the first time distinctly and clearly formulated.

(1.) Character, good or bad, is produced by what Aristotle calls "habituation," that is, it is the result of the repeated doing of acts which have a similar or common quality. Such repetition acting upon natural aptitudes or propensities gradually fixes them in one or other of two opposite directions, giving them a bias towards good or evil. Hence the several acts which determine goodness or badness of character must be done in a certain way, and thus the formation of good character requires discipline and direction from without. Not that the agent himself contributes nothing to the formation of his character, but that at first he needs guidance. The point is not so much that the process cannot be safely left to Nature, but that it cannot be entrusted to merely intellectual instruction. The process is one of assimilation, largely by imitation and under direction and control. The result is a growing understanding of what is done, a choice of it for its own sake, a fixity and steadiness of purpose. Right acts and feelings become, through habit, easier and more pleasant, and the doing of them a "second nature." The agent acquires the power of doing them freely, willingly, more and more "of himself."

But what are "right" acts? In the first place, they are those that conform to a rule—to the right rule, and ultimately to reason. The Greeks never waver from the conviction that in the end moral conduct is essentially reasonable conduct. But there is a more significant way of describing their "rightness," and here for the first time Aristotle introduces his famous "Doctrine of the Mean." Reasoning from the analogy of "right" physical acts, he pronounces that rightness always means adaptation or adjustment to the special requirements of a situation. To this adjustment he gives a quantitative interpretation. To do (or to feel) what is right in a given situation is to do or to feel just the amount required—neither more nor less: to do wrong is to do or to feel too much or too little—to fall short of or over-shoot, "a mean" determined by the situation. The repetition of acts which lie in the mean is the cause of the formation of each and every "goodness of character," and for this "rules" can be given.

(2) What then is a "moral virtue," the result of such a process duly directed? It is no mere mood of feeling, no mere liability to emotion, no mere natural aptitude or endowment, it is a permanent _state_ of the agent's self, or, as we might in modern phrase put it, of his will, it consists in a steady self-imposed obedience to a rule of action in certain situations which frequently recur in human life. The rule prescribes the control and regulation within limits of the agent's natural impulses to act and feel thus and thus. The situations fall into groups which constitute the "fields" of the several "moral virtues", for each there is a rule, conformity to which secures rightness in the individual acts. Thus the moral ideal appears as a code of rules, accepted by the agent, but as yet _to him_ without rational justification and without system or unity. But the rules prescribe no mechanical uniformity: each within its limits permits variety, and the exactly right amount adopted to the requirements of the individual situation (and every actual situation is individual) must be determined by the intuition of the moment. There is no attempt to reduce the rich possibilities of right action to a single monotonous type. On the contrary, there are acknowledged to be many forms of moral virtue, and there is a long list of them, with their correlative vices enumerated.

The Doctrine of the Mean here takes a form in which it has impressed subsequent thinkers, but which has less importance than is usually ascribed to it. In the “Table of the Virtues and Vices,” each of the virtues is flanked by two opposite vices, which are respectively the excess and defect of that which in due measure constitutes the virtue. Aristotle tries to show that this is the case in regard to every virtue named and recognised as such, but his treatment is often forced and the endeavour is not very successful. Except as a convenient principle of arrangement of the various forms of praiseworthy or blameworthy characters, generally acknowledged as such by Greek opinion, this form of the doctrine is of no great significance.

Books III-V are occupied with a survey of the moral virtues and vices. These seem to have been undertaken in order to verify in detail the general account, but this aim is not kept steadily in view. Nor is there any well-considered principle of classification. What we find is a sort of portrait-gallery of the various types of moral excellence which the Greeks of the author’s age admired and strove to encourage. The discussion is full of acute, interesting and sometimes profound observations. Some of the types are those which are and will be admired at all times, but others are connected with peculiar features of Greek life which have now passed away. The most important is that of Justice or the Just Man, to which we may later return. But the discussion is preceded by an attempt to elucidate some difficult and obscure points in the general account of moral virtue and action (Book III, cc i-v). This section is concerned with the notion of Responsibility. The discussion designedly excludes what we may call the metaphysical issues of the problem, which here present themselves, it moves on the level of thought of the practical man, the statesman, and the legislator. Coercion and ignorance of relevant circumstances render acts involuntary and exempt their doer from responsibility, otherwise the act is voluntary and the agent responsible, choice or preference of what is done, and inner consent to the deed, are to be presumed. Neither passion nor ignorance of the right rule can extenuate responsibility. But there is a difference between acts done voluntarily and acts done of _set_ choice or purpose. The latter imply Deliberation. Deliberation involves thinking, thinking out means to ends: in deliberate acts the whole nature of the agent consents to and enters into the act, and in a peculiar sense they are his, they _are_ him in action, and the most significant evidence of what he is. Aristotle is unable wholly to avoid allusion to the metaphysical difficulties and what he does here say upon them is obscure and unsatisfactory. But he insists upon the importance in moral action of the agent’s inner consent, and on the reality of his individual responsibility. For his present purpose the metaphysical difficulties are irrelevant.

The treatment of Justice in Book V has always been a source of great difficulty to students of the _Ethics_. Almost more than any other part of the work it has exercised influence upon mediaeval and modern thought upon the subject. The distinctions and divisions have become part of the stock-in-trade of would be philosophic jurists. And yet, oddly enough, most of these distinctions have been misunderstood and the whole purport of the discussion misconceived. Aristotle is here dealing with justice in a restricted sense viz as that special goodness of character which is required of every adult citizen and which can be produced by early discipline or habituation. It is the temper or habitual attitude demanded of the citizen for the due exercise of his functions as taking part in the administration of the civic community—as a member of the judicature and executive. The Greek citizen was only exceptionally, and at rare intervals if ever, a law-maker while at any moment he might be called upon to act as a judge (juryman or arbitrator) or as an administrator. For the work of a legislator far more than the moral virtue of justice or fairmindedness was necessary, these were requisite to the rarer and higher “intellectual virtue” of practical wisdom. Then here, too, the discussion moves on a low level, and the raising of fundamental problems is excluded. Hence “distributive justice” is concerned not with the large question of the distribution of political power and privileges among the constituent members or classes of the state but with the smaller questions of the distribution among those of casual gains and even with the division among private claimants of a common fund or inheritance, while “corrective justice” is concerned solely with the management of legal redress. The whole treatment is confused by the unhappy attempt to give a precise mathematical form to the principles of justice in the various fields distinguished. Still it remains an interesting first endeavour to give greater exactness to some of the leading conceptions of jurisprudence.

Book VI appears to have in view two aims: (1) to describe goodness of intellect and discover its highest form or forms; (2) to show how this is related to goodness of character, and so to conduct generally. As all thinking is either theoretical or practical, goodness of intellect has _two_ supreme forms—Theoretical and Practical Wisdom. The first, which apprehends the eternal laws of the universe, has no direct relation to human conduct: the second is identical with that master science of human life of which the whole treatise, consisting of the _Ethics_ and the _Politics_, is an exposition. It is this science which supplies the right rules of conduct Taking them as they emerge in and from practical experience, it formulates them more precisely and organises them into a system where they are all seen to converge upon happiness. The mode in which such knowledge manifests itself is in the power to show that such and such rules of action follow from the very nature of the end or good for man. It presupposes and starts from a clear conception of the end and the wish for it as conceived, and it proceeds by a deduction which is dehberation writ large. In the man of

practical wisdom this process has reached its perfect result, and the code of right rules is apprehended as a system with a single principle and so as something wholly rational or reasonable He has not on each occasion to seek and find the right rule applicable to the situation, he produces it at once from within himself, and can at need justify it by exhibiting its rationale, _i.e._ , its connection with the end. This is the consummate form of reason applied to conduct, but there are minor forms of it, less independent or original, but nevertheless of great value, such as the power to think out the proper cause of policy in novel circumstances or the power to see the proper line of treatment to follow in a court of law.

The form of the thinking which enters into conduct is that which terminates in the production of a rule which declares some means to the end of life. The process presupposes _(a)_ a clear and just apprehension of the nature of that end—such as the _Ethics_ itself endeavours to supply; _(b)_ a correct perception of the conditions of action, _(a)_ at least is impossible except to a man whose character has been duly formed by discipline; it arises only in a man who has acquired moral virtue. For such action and feeling as forms bad character, blinds the eye of the soul and corrupts the moral principle, and the place of practical wisdom is taken by that parody of itself which Aristotle calls “cleverness”—the “wisdom” of the unscrupulous man of the world. Thus true practical wisdom and true goodness of character are interdependent; neither is genuinely possible or “completely” present without the other. This is Aristotle’s contribution to the discussion of the question, so central in Greek Moral Philosophy, of the relation of the intellectual and the passionate factors in conduct.

Aristotle is not an intuitionist, but he recognises the implication in conduct of a direct and immediate apprehension both of the end and of the character of his circumstances under which it is from moment to moment realised. The directness of such apprehension makes it analogous to sensation or sense-perception; but it is on his view in the end due to the existence or activity in man of that power in him which is the highest thing in his nature, and akin to or identical with the divine nature—mind, or intelligence. It is this which reveals to us what is best for us—the ideal of a happiness which is the object of our real wish and the goal of all our efforts. But beyond and above the practical ideal of what is best _for man_ begins to show itself another and still higher ideal—that of a life not distinctively human or in a narrow sense practical, yet capable of being participated in by man even under the actual circumstances of this world. For a time, however, this further and higher ideal is ignored.

The next book (Book VII.), is concerned partly with moral conditions, in which the agent seems to rise above the level of moral virtue or fall below that of moral vice, but partly and more largely with conditions in which the agent occupies a middle position between the two. Aristotle’s attention is here directed chiefly towards the phenomena of “Incontinence,” weakness of will or imperfect self-control. This condition was to the Greeks a matter of only too frequent experience, but it appeared to them peculiarly difficult to understand. How can a man know what is good or best for him, and yet chronically fail to act upon his knowledge? Socrates was driven to the paradox of denying the possibility, but the facts are too strong for him. Knowledge of the right rule may be present, nay the rightfulness of its authority may be acknowledged, and yet time after time it may be disobeyed; the will may be good and yet overmastered by the force of desire, so that the act done is contrary to the agent’s will. Nevertheless the act may be the agent’s, and the will therefore divided against itself. Aristotle is aware of the seriousness and difficulty of the problem, but in spite of the vividness with which he pictures, and the acuteness with which he analyses, the situation in which such action occurs, it cannot be said that he solves the problem. It is time that he rises above the abstract view of it as a conflict between reason and passion, recognising that passion is involved in the knowledge which in conduct prevails or is overborne, and that the force which leads to the wrong act is not blind or ignorant passion, but always has some reason in it. But he tends to lapse back into the abstraction, and his final account is perplexed and obscure. He finds the source of the phenomenon in the nature of the desire for bodily pleasures, which is not irrational but has something rational in it. Such pleasures are not necessarily or inherently bad, as has sometimes been maintained; on the contrary, they are good, but only in certain amounts or under certain conditions, so that the will is often misled, hesitates, and is lost.

Books VIII. and IX. (on Friendship) are almost an interruption of the argument. The subject-matter of them was a favourite topic of ancient writers, and the treatment is smoother and more orderly than elsewhere in the _Ethics_. The argument is clear, and may be left without comment to the readers. These books contain a necessary and attractive complement to the somewhat dry account of Greek morality in the preceding books, and there are in them profound reflections on what may be called the metaphysics of friendship or love.

At the beginning of Book X. we return to the topic of Pleasure, which is now regarded from a different point of view. In Book VII. the antagonists were those who over-emphasised the irrationality or badness of Pleasure: here it is rather those who so exaggerate its value as to confuse or identify it with the good or Happiness. But there is offered us in this section much more than criticism of the errors of others. Answers are given both to the psychological question, “What is Pleasure?” and to the ethical question, “What is its

value?" Pleasure, we are told, is the natural concomitant and index of perfect activity, distinguishable but inseparable from it—"the activity of a subject at its best acting upon an object at its best." It is therefore always and in itself a good, but its value rises and falls with that of the activity with which it is conjoined, and which it intensifies and perfects. Hence it follows that the highest and best pleasures are those which accompany the highest and best activity.

Pleasure is, therefore, a necessary element in the best life, but it is not the whole of it nor the principal ingredient. The value of a life depends upon the nature and worth of the activity which it involves; given the maximum of full free action, the maximum of pleasure necessary follows. But on what sort of life is such activity possible? This leads us back to the question, What is happiness? In what life can man find the fullest satisfaction for his desires? To this question Aristotle gives an answer which cannot but surprise us after what has preceded. True Happiness, great satisfaction, cannot be found by man in any form of "practical" life, no, not in the fullest and freest exercise possible of the "moral virtues," not in the life of the citizen or of the great soldier or statesman. To seek it there is to court failure and disappointment. It is to be found in the life of the onlooker, the disinterested spectator; or, to put it more distinctly, "in the life of the philosopher, the life of scientific and philosophic contemplation." The highest and most satisfying form of life possible to man is "the contemplative life"; it is only in a secondary sense and for those incapable of their life, that the practical or moral ideal is the best. It is time that such a life is not distinctively human, but it is the privilege of man to partake in it, and such participation, at however rare intervals and for however short a period, is the highest Happiness which human life can offer. All other activities have value only because and in so far as they render _this_ life possible.

But it must not be forgotten that Aristotle conceives of this life as one of intense activity or energising: it is just this which gives it its supremacy. In spite of the almost religious fervour with which he speaks of it ("the most orthodox of his disciples" paraphrases his meaning by describing its content as "the service and vision of God"), it is clear that he identified it with the life of the philosopher, as he understood it, a life of ceaseless intellectual activity in which at least at times all the distractions and disturbances inseparable from practical life seemed to disappear and become as nothing. This ideal was partly an inheritance from the more ardent idealism of his master Plato, but partly it was the expression of personal experience.

The nobility of this ideal cannot be questioned; the conception of the end of man or a life lived for truth—of a life blissfully absorbed in the vision of truth—is a lofty and inspiring one. But we cannot resist certain criticisms upon its presentation by Aristotle: (1) the relation of it to the lower ideal of practice is left somewhat obscure; (2) it is described in such a way as renders its realisation possible only to a gifted few, and under exceptional circumstances; (3) it seems in various ways, as regards its content, to be unnecessarily and unjustifiably limited. But it must be borne in mind that this is a first endeavour to determine its principle, and that similar failures have attended the attempts to describe the "religious" or the "spiritual" ideals of life, which have continually been suggested by the apparently inherent limitations of the "practical" or "moral" life, which is the subject of Moral Philosophy.

The Moral Ideal to those who have most deeply reflected on it leads to the thought of an Ideal beyond and above it, which alone gives it meaning, but which seems to escape from definite conception by man. The richness and variety of this Ideal ceaselessly invite, but as ceaselessly defy, our attempts to imprison it in a definite formula or portray it in detailed imagination. Yet the thought of it is and remains inexpungable from our minds.

This conception of the best life is not forgotten in the _Politics_ The end of life in the state is itself well-living and well-doing—a life which helps to produce the best life The great agency in the production of such life is the State operating through Law, which is Reason backed by Force. For its greatest efficiency there is required the development of a science of legislation. The main drift of what he says here is that the most desirable thing would be that the best reason of the community should be embodied in its laws. But so far as that is not possible, it still is true that anyone who would make himself and others better must become a miniature legislator—must study the general principles of law, morality, and education. The conception of πολιτικ■ with which he opened the _Ethics_ would serve as a guide to a father educating his children as well as to the legislator legislating for the state. Finding in his predecessors no developed doctrine on this subject, Aristotle proposes himself to undertake the construction of it, and sketches in advance the programme of the _Politics_ in the concluding sentence of the _Ethics_ His ultimate object is to answer the questions, What is the best form of Polity, how should each be constituted, and what laws and customs should it adopt and employ? Not till this answer is given will "the philosophy of human affairs" be complete.

On looking back it will be seen that the discussion of the central topic of the nature and formation of character has expanded into a Philosophy of Human Conduct, merging at its beginning and end into metaphysics The result is a Moral Philosophy set against a background of Political Theory and general Philosophy. The most characteristic features of this Moral Philosophy are due to the fact of its essentially teleological view of human life and action: (1) Every human activity, but especially every human practical

activity, is directed towards a simple End discoverable by reflection, and this End is conceived of as the object of universal human desire, as something to be enjoyed, not as something which ought to be done or enacted. Anstotle's Moral Philosophy is not hedonistic but it is eudæmomstic, the end is the enjoyment of Happiness, not the fulfilment of Duty. (2) Every human practical activity derives its value from its efficiency as a means to that end, it is good or bad, right or wrong, as it conduces or fails to conduce to Happiness Thus his Moral Philosophy is essentially utilitarian or prudential Right action presupposes Thought or Thinking, partly on the development of a clearer and distincter conception of the end of desire, partly as the deduction from that of rules which state the normally effective conditions of its realisation. The thinking involved in right conduct is calculation—calculation of means to an end fixed by nature and foreknowable Action itself is at its best just the realisation of a scheme preconceived and thought out beforehand, commending itself by its inherent attractiveness or promise of enjoyment.

This view has the great advantage of exhibiting morality as essentially reasonable, but the accompanying disadvantage of lowering it into a somewhat prosaic and unideal Prudentialism, nor is it saved from this by the tacking on to it, by a sort of after-thought, of the second and higher Ideal—an addition which ruins the coherence of the account without really transmuting its substance The source of our dissatisfaction with the whole theory lies deeper than in its tendency to identify the end with the maximum of enjoyment or satisfaction, or to regard the goodness or badness of acts and feelings as lying solely in their efficacy to produce such a result It arises from the application to morality of the distinction of means and end For this distinction, for all its plausibility and usefulness in ordinary thought and speech, cannot finally be maintained In morality—and this is vital to its character—everything is both means and end, and so neither in distinction or separation, and all thinking about it which presupposes the finality of this distinction wanders into misconception and error. The thinking which really matters in conduct is not a thinking which imaginatively forecasts ideals which promise to fulfil desire, or calculates means to their attainment—that is sometimes useful, sometimes harmful, and always subordinate, but thinking which reveals to the agent the situation in which he is to act, both, that is, the universal situation on which as man he always and everywhere stands, and the ever-varying and ever-novel situation in which he as this individual, here and now, finds himself. In such knowledge of given or historic fact lie the natural determinants of his conduct, in such knowledge alone lies the condition of his freedom and his good.

But this does not mean that Moral Philosophy has not still much to learn from Aristotle's _Ethics_. The work still remains one of the best introductions to a study of its important subject-matter, it spreads before us a view of the relevant facts, it reduces them to manageable compass and order, it raises some of the central problems, and makes acute and valuable suggestions towards their solution. Above all, it perpetually incites to renewed and independent reflection upon them.

J. A. SMITH

The following is a list of the works of Aristotle:—

First edition of works (with omission of Rhetorica, Poetica, and second book of Economica), 5 vols by Aldus Manutius, Venice, 1495 8, re impression supervised by Erasmus and with certain corrections by Grynaeus (including Rhetorica and Poetica), 1531, 1539, revised 1550, later editions were followed by that of Immanuel Bekker and Brandis (Greek and Latin), 5 vols. The 5th vol contains the Index by Bomtz, 1831-70, Didot edition (Greek and Latin), 5 vols 1848 74

ENGLISH TRANSLATIONS Edited by T Taylor, with Porphyry's Introduction, 9 vols, 1812, under editorship of J A Smith and W D Ross, II vols, 1908-31, Loeb editions Ethica, Rhetorica, Poetica, Physica, Politica, Metaphysica, 1926-33

Later editions of separate works _De Anima_ Torstrik, 1862, Trendelenburg, 2nd edition, 1877, with English translation, L Wallace, 1882, Biehl, 1884, 1896, with English, R D Hicks, 1907 _Ethica_ J S Brewer (Nicomachean), 1836, W E Jelf, 1856, J F T Rogers, 1865, A Grant, 1857 8, 1866, 1874, 1885, E Moore, 1871, 1878, 4th edition, 1890, Ramsauer (Nicomachean), 1878, Susemihl, 1878, 1880, revised by O Apelt, 1903, A Grant, 1885, I Bywater (Nicomachean), 1890, J Burnet, 1900

ARISTOTLE'S ETHICS

BOOK I

Chapter I.

Every art, and every science reduced to a teachable form, and in like manner every action and moral choice, aims, it is thought, at some good: for which reason a common and by no means a bad description of the Chief Good is, "that which all things aim at."

Now there plainly is a difference in the Ends proposed: for in some cases they are acts of working, and in others certain works or tangible results beyond and beside the acts of working: and where there are certain Ends beyond and beside the actions, the works are in their nature better than the acts of working. Again, since actions and arts and sciences are many, the Ends likewise come to

be many: of the healing art, for instance, health; of the ship-building art, a vessel; of the military art, victory; and of domestic management, wealth; are respectively the Ends.

And whatever of such actions, arts, or sciences range under some one faculty (as under that of horsemanship the art of making bridles, and all that are connected with the manufacture of horse-furniture in general; this itself again, and every action connected with war, under the military art; and in the same way others under others), in all such, the Ends of the master-arts are more choice-worthy than those ranging under them, because it is with a view to the former that the latter are pursued.

(And in this comparison it makes no difference whether the acts of working are themselves the Ends of the actions, or something further beside them, as is the case in the arts and sciences we have been just speaking of.)

Since then of all things which may be done there is some one End which we desire for its own sake, and with a view to which we desire everything else; and since we do not choose in all instances with a further End in view (for then men would go on without limit, and so the desire would be unsatisfied and fruitless), this plainly must be the Chief Good, _i.e._ the best thing of all.

Surely then, even with reference to actual life and conduct, the knowledge of it must have great weight; and like archers, with a mark in view, we shall be more likely to hit upon what is right: and if so, we ought to try to describe, in outline at least, what it is and of which of the sciences and faculties it is the End.

Now one would naturally suppose it to be the End of that which is most commanding and most inclusive: and to this description, πολιτικ■[1] plainly answers: for this it is that determines which of the sciences should be in the communities, and which kind individuals are to learn, and what degree of proficiency is to be required. Again; we see also ranging under this the most highly esteemed faculties, such as the art military, and that of domestic management, and Rhetoric. Well then, since this uses all the other practical sciences, and moreover lays down rules as to what men are to do, and from what to abstain, the End of this must include the Ends of the rest, and so must be The Good of Man. And grant that this is the same to the individual and to the community, yet surely that of the latter is plainly greater and more perfect to discover and preserve: for to do this even for a single individual were a matter for contentment; but to do it for a whole nation, and for communities generally, were more noble and godlike.

Such then are the objects proposed by our treatise, which is of the nature of πολιτικ■: and I conceive I shall have spoken on them satisfactorily, if they be made as distinctly clear as the nature of the subject-matter will admit: for exactness must not be looked for in all discussions alike, any more than in all works of handicraft. Now the notions of nobleness and justice, with the examination of which πολιτικ■ is concerned, admit of variation and error to such a degree, that they are supposed by some to exist conventionally only, and not in the nature of things: but then, again, the things which are allowed to be goods admit of a similar error, because harm comes to many from them: for before now some have perished through wealth, and others through valour.

We must be content then, in speaking of such things and from such data, to set forth the truth roughly and in outline; in other words, since we are speaking of general matter and from general data, to draw also conclusions merely general. And in the same spirit should each person receive what we say: for the man of education will seek exactness so far in each subject as the nature of the thing admits, it being plainly much the same absurdity to put up with a mathematician who tries to persuade instead of proving, and to demand strict demonstrative reasoning of a Rhetorician.

Now each man judges well what he knows, and of these things he is a good judge: on each particular matter then he is a good judge who has been instructed in _it_, and in a general way the man of general mental cultivation.[2]

Hence the young man is not a fit student of Moral Philosophy, for he has no experience in the actions of life, while all that is said presupposes and is concerned with these: and in the next place, since he is apt to follow the impulses of his passions, he will hear as though he heard not, and to no profit, the end in view being practice and not mere knowledge.

And I draw no distinction between young in years, and youthful in temper and disposition: the defect to which I allude being no direct result of the time, but of living at the beck and call of passion, and following each object as it rises.[3] For to them that are such the knowledge comes to be unprofitable, as to those of imperfect self-control: but, to those who form their desires and act in accordance with reason, to have knowledge on these points must be very profitable.

Let thus much suffice by way of preface on these three points, the student, the spirit in which our observations should be received, and the object which we propose.

Chapter II.

And now, resuming the statement with which we commenced, since all knowledge and moral choice grasps at good of some kind or another, what good is that which we say πολιτικ■ aims at? or, in other words, what is the highest of all the goods which are the objects of action?

So far as name goes, there is a pretty general agreement: for HAPPINESS both the multitude and the refined few call it, and “living well” and “doing well” they conceive to be the same with “being happy;” but about the Nature of this Happiness, men dispute, and the multitude do not in their account of it agree with the wise. For some say it is some one of those things which are palpable and apparent, as pleasure or wealth or honour; in fact, some one thing, some another; nay, oftentimes the same man gives a different account of it; for when ill, he calls it health; when poor, wealth: and conscious of their own ignorance, men admire those who talk grandly and above their comprehension. Some again held it to be something by itself, other than and beside these many good things, which is in fact to all these the cause of their being good.

Now to sift all the opinions would be perhaps rather a fruitless task; so it shall suffice to sift those which are most generally current, or are thought to have some reason in them.

And here we must not forget the difference between reasoning from principles, and reasoning to principles: for with good cause did Plato too doubt about this, and enquire whether the right road is from principles or to principles, just as in the racecourse from the judges to the further end, or _vice versâ_.

Of course, we must begin with what is known; but then this is of two kinds, what we _do_ know, and what we _may_ know:[5] perhaps then as individuals we must begin with what we _do_ know. Hence the necessity that he should have been well trained in habits, who is to study, with any tolerable chance of profit, the principles of nobleness and justice and moral philosophy generally. For a principle is a matter of fact, and if the fact is sufficiently clear to a man there will be no need in addition of the reason for the fact. And he that has been thus trained either has principles already, or can receive them easily: as for him who neither has nor can receive them, let him hear his sentence from Hesiod:

He is best of all who of himself conceiveth all things; Good again is he too who can adopt a good suggestion; But whoso neither of himself conceiveth nor hearing from another Layeth it to heart;—he is a useless man.

Chapter III.

But to return from this digression.

Now of the Chief Good (_i.e._ of Happiness) men seem to form their notions from the different modes of life, as we might naturally expect: the many and most low conceive it to be pleasure, and hence they are content with the life of sensual enjoyment. For there are three lines of life which stand out prominently to view: that just mentioned, and the life in society, and, thirdly, the life of contemplation.

Now the many are plainly quite slavish, choosing a life like that of brute animals: yet they obtain some consideration, because many of the great share the tastes of Sardanapalus. The refined and active again conceive it to be honour: for this may be said to be the end of the life in society: yet it is plainly too superficial for the object of our search, because it is thought to rest with those who pay rather than with him who receives it, whereas the Chief Good we feel instinctively must be something which is our own, and not easily to be taken from us.

And besides, men seem to pursue honour, that they may believe themselves to be good:[6] for instance, they seek to be honoured by the wise, and by those among whom they are known, and for virtue: clearly then, in the opinion at least of these men, virtue is higher than honour. In truth, one would be much more inclined to think this to be the end of the life in society; yet this itself is plainly not sufficiently final: for it is conceived possible, that a man possessed of virtue might sleep or be inactive all through his life, or, as a third case, suffer the greatest evils and misfortunes: and the man who should live thus no one would call happy, except for mere disputation’s sake.[7]

And for these let thus much suffice, for they have been treated of at sufficient length in my Encyclia.[8]

A third line of life is that of contemplation, concerning which we shall make our examination in the following pages.[9]

As for the life of money-making, it is one of constraint, and wealth manifestly is not the good we are seeking, because it is for use, that is, for the sake of something further: and hence one would rather conceive the forementioned ends to be the right ones, for

men rest content with them for their own sakes. Yet, clearly, they are not the objects of our search either, though many words have been wasted on them.[10] So much then for these.

Again, the notion of one Universal Good (the same, that is, in all things), it is better perhaps we should examine, and discuss the meaning of it, though such an enquiry is unpleasant, because they are friends of ours who have introduced these ε■δη.[11] Still perhaps it may appear better, nay to be our duty where the safety of the truth is concerned, to upset if need be even our own theories, specially as we are lovers of wisdom: for since both are dear to us, we are bound to prefer the truth. Now they who invented this doctrine of ε■δη, did not apply it to those things in which they spoke of priority and posteriority, and so they never made any ■δ■α of numbers; but good is predicated in the categories of Substance, Quality, and Relation; now that which exists of itself, i.e. Substance, is prior in the nature of things to that which is relative, because this latter is an off-shoot, as it were, and result of that which is; on their own principle then there cannot be a common ■δ■α in the case of these.

In the next place, since good is predicated in as many ways as there are modes of existence [for it is predicated in the category of Substance, as God, Intellect—and in that of Quality, as The Virtues—and in that of Quantity, as The Mean—and in that of Relation, as The Useful—and in that of Time, as Opportunity—and in that of Place, as Abode; and other such like things], it manifestly cannot be something common and universal and one in all: else it would not have been predicated in all the categories, but in one only.

Thirdly, since those things which range under one ■δ■α are also under the cognisance of one science, there would have been, on their theory, only one science taking cognisance of all goods collectively: but in fact there are many even for those which range under one category: for instance, of Opportunity or Seasonableness (which I have before mentioned as being in the category of Time), the science is, in war, generalship; in disease, medical science; and of the Mean (which I quoted before as being in the category of Quantity), in food, the medical science; and in labour or exercise, the gymnastic science. A person might fairly doubt also what in the world they mean by very-this that or the other, since, as they would themselves allow, the account of the humanity is one and the same in the very-Man, and in any individual Man: for so far as the individual and the very-Man are both Man, they will not differ at all: and if so, then very-good and any particular good will not differ, in so far as both are good. Nor will it do to say, that the eternity of the very-good makes it to be more good; for what has lasted white ever so long, is no whiter than what lasts but for a day.

No. The Pythagoreans do seem to give a more credible account of the matter, who place “One” among the goods in their double list of goods and bads:[12] which philosophers, in fact, Speusippus[13] seems to have followed.

But of these matters let us speak at some other time. Now there is plainly a loophole to object to what has been advanced, on the plea that the theory I have attacked is not by its advocates applied to all good: but those goods only are spoken of as being under one ■δ■α, which are pursued, and with which men rest content simply for their own sakes: whereas those things which have a tendency to produce or preserve them in any way, or to hinder their contraries, are called good because of these other goods, and after another fashion. It is manifest then that the goods may be so called in two senses, the one class for their own sakes, the other because of these.

Very well then, let us separate the independent goods from the instrumental, and see whether they are spoken of as under one ■δ■α. But the question next arises, what kind of goods are we to call independent? All such as are pursued even when separated from other goods, as, for instance, being wise, seeing, and certain pleasures and honours (for these, though we do pursue them with some further end in view, one would still place among the independent goods)? or does it come in fact to this, that we can call nothing independent good except the ■δ■α, and so the concrete of it will be nought?

If, on the other hand, these are independent goods, then we shall require that the account of the goodness be the same clearly in all, just as that of the whiteness is in snow and white lead. But how stands the fact? Why of honour and wisdom and pleasure the accounts are distinct and different in so far as they are good. The Chief Good then is not something common, and after one ■δ■α.

But then, how does the name come to be common (for it is not seemingly a case of fortuitous equivocation)? Are different individual things called good by virtue of being from one source, or all conducing to one end, or rather by way of analogy, for that intellect is to the soul as sight to the body, and so on? However, perhaps we ought to leave these questions now, for an accurate investigation of them is more properly the business of a different philosophy. And likewise respecting the ■δ■α: for even if there is some one good predicated in common of all things that are good, or separable and capable of existing independently, manifestly it cannot be the object of human action or attainable by Man; but we are in search now of something that is so.[14]

It may readily occur to any one, that it would be better to attain a knowledge of it with a view to such concrete goods as are attainable and practical, because, with this as a kind of model in our hands, we shall the better know what things are good for us individually, and when we know them, we shall attain them.

Some plausibility, it is true, this argument possesses, but it is contradicted by the facts of the Arts and Sciences; for all these, though aiming at some good, and seeking that which is deficient, yet pretermit the knowledge of it: now it is not exactly probable that all artisans without exception should be ignorant of so great a help as this would be, and not even look after it; neither is it easy to see wherein a weaver or a carpenter will be profited in respect of his craft by knowing the very-good, or how a man will be the more apt to effect cures or to command an army for having seen the ■δ■α itself. For manifestly it is not health after this general and abstract fashion which is the subject of the physician's investigation, but the health of Man, or rather perhaps of this or that man; for he has to heal individuals.—Thus much on these points.

Chapter IV.

And now let us revert to the Good of which we are in search: what can it be? for manifestly it is different in different actions and arts: for it is different in the healing art and in the art military, and similarly in the rest. What then is the Chief Good in each? Is it not "that for the sake of which the other things are done?" and this in the healing art is health, and in the art military victory, and in that of house-building a house, and in any other thing something else; in short, in every action and moral choice the End, because in all cases men do everything else with a view to this. So that if there is some one End of all things which are and may be done, this must be the Good proposed by doing, or if more than one, then these.

Thus our discussion after some traversing about has come to the same point which we reached before. And this we must try yet more to clear up.

Now since the ends are plainly many, and of these we choose some with a view to others (wealth, for instance, musical instruments, and, in general, all instruments), it is clear that all are not final: but the Chief Good is manifestly something final; and so, if there is some one only which is final, this must be the object of our search: but if several, then the most final of them will be it.

Now that which is an object of pursuit in itself we call more final than that which is so with a view to something else; that again which is never an object of choice with a view to something else than those which are so both in themselves and with a view to this ulterior object: and so by the term "absolutely final," we denote that which is an object of choice always in itself, and never with a view to any other.

And of this nature Happiness is mostly thought to be, for this we choose always for its own sake, and never with a view to anything further: whereas honour, pleasure, intellect, in fact every excellence we choose for their own sakes, it is true (because we would choose each of these even if no result were to follow), but we choose them also with a view to happiness, conceiving that through their instrumentality we shall be happy: but no man chooses happiness with a view to them, nor in fact with a view to any other thing whatsoever.

The same result[15] is seen to follow also from the notion of self-sufficiency, a quality thought to belong to the final good. Now by sufficient for Self, we mean not for a single individual living a solitary life, but for his parents also and children and wife, and, in general, friends and countrymen; for man is by nature adapted to a social existence. But of these, of course, some limit must be fixed: for if one extends it to parents and descendants and friends' friends, there is no end to it. This point, however, must be left for future investigation: for the present we define that to be self-sufficient "which taken alone makes life choice-worthy, and to be in want of nothing;" now of such kind we think Happiness to be: and further, to be most choice-worthy of all things; not being reckoned with any other thing,[16] for if it were so reckoned, it is plain we must then allow it, with the addition of ever so small a good, to be more choice-worthy than it was before:[17] because what is put to it becomes an addition of so much more good, and of goods the greater is ever the more choice-worthy.

So then Happiness is manifestly something final and self-sufficient, being the end of all things which are and may be done.

Chapter V.

But, it may be, to call Happiness the Chief Good is a mere truism, and what is wanted is some clearer account of its real nature. Now this object may be easily attained, when we have discovered what is the work of man; for as in the case of flute-player, statuary, or artisan of any kind, or, more generally, all who have any work or course of action, their Chief Good and Excellence is

thought to reside in their work, so it would seem to be with man, if there is any work belonging to him.

Are we then to suppose, that while carpenter and cobbler have certain works and courses of action, Man as Man has none, but is left by Nature without a work? or would not one rather hold, that as eye, hand, and foot, and generally each of his members, has manifestly some special work; so too the whole Man, as distinct from all these, has some work of his own?[18]

What then can this be? not mere life, because that plainly is shared with him even by vegetables, and we want what is peculiar to him. We must separate off then the life of mere nourishment and growth, and next will come the life of sensation: but this again manifestly is common to horses, oxen, and every animal. There remains then a kind of life of the Rational Nature apt to act: and of this Nature there are two parts denominated Rational, the one as being obedient to Reason, the other as having and exerting it. Again, as this life is also spoken of in two ways,[19] we must take that which is in the way of actual working, because this is thought to be most properly entitled to the name. If then the work of Man is a working of the soul in accordance with reason, or at least not independently of reason, and we say that the work of any given subject, and of that subject good of its kind, are the same in kind (as, for instance, of a harp-player and a good harp-player, and so on in every case, adding to the work eminence in the way of excellence; I mean, the work of a harp-player is to play the harp, and of a good harp-player to play it well); if, I say, this is so, and we assume the work of Man to be life of a certain kind, that is to say a working of the soul, and actions with reason, and of a good man to do these things well and nobly, and in fact everything is finished off well in the way of the excellence which peculiarly belongs to it: if all this is so, then the Good of Man comes to be “a working of the Soul in the way of Excellence,” or, if Excellence admits of degrees, in the way of the best and most perfect Excellence.

And we must add, ■ν β■■ τελε■■;[20] for as it is not one swallow or one fine day that makes a spring, so it is not one day or a short time that makes a man blessed and happy.

Let this then be taken for a rough sketch of the Chief Good: since it is probably the right way to give first the outline, and fill it in afterwards. And it would seem that any man may improve and connect what is good in the sketch, and that time is a good discoverer and co-operator in such matters: it is thus in fact that all improvements in the various arts have been brought about, for any man may fill up a deficiency.

You must remember also what has been already stated, and not seek for exactness in all matters alike, but in each according to the subject-matter, and so far as properly belongs to the system. The carpenter and geometrician, for instance, enquire into the right line in different fashion: the former so far as he wants it for his work, the latter enquires into its nature and properties, because he is concerned with the truth.

So then should one do in other matters, that the incidental matters may not exceed the direct ones.

And again, you must not demand the reason either in all things alike,[21] because in some it is sufficient that the fact has been well demonstrated, which is the case with first principles; and the fact is the first step, _i.e._ starting-point or principle.

And of these first principles some are obtained by induction, some by perception,[22] some by a course of habituation, others in other different ways. And we must try to trace up each in their own nature, and take pains to secure their being well defined, because they have great influence on what follows: it is thought, I mean, that the starting-point or principle is more than half the whole matter, and that many of the points of enquiry come simultaneously into view thereby.

Chapter VI.

We must now enquire concerning Happiness, not only from our conclusion and the data on which our reasoning proceeds, but likewise from what is commonly said about it: because with what is true all things which really are are in harmony, but with that which is false the true very soon jars.

Now there is a common division of goods into three classes; one being called external, the other two those of the soul and body respectively, and those belonging to the soul we call most properly and specially good. Well, in our definition we assume that the actions and workings of the soul constitute Happiness, and these of course belong to the soul. And so our account is a good one, at least according to this opinion, which is of ancient date, and accepted by those who profess philosophy. Rightly too are certain actions and workings said to be the end, for thus it is brought into the number of the goods of the soul instead of the external. Agreeing also with our definition is the common notion, that the happy man lives well and does well, for it has been stated by us to be pretty much a kind of living well and doing well.

And further, the points required in Happiness are found in combination in our account of it.

For some think it is virtue, others practical wisdom, others a kind of scientific philosophy; others that it is these, or else some one of them, in combination with pleasure, or at least not independently of it; while others again take in external prosperity.

Of these opinions, some rest on the authority of numbers or antiquity, others on that of few, and those men of note: and it is not likely that either of these classes should be wrong in all points, but be right at least in some one, or even in most.

Now with those who assert it to be Virtue (Excellence), or some kind of Virtue, our account agrees: for working in the way of Excellence surely belongs to Excellence.

And there is perhaps no unimportant difference between conceiving of the Chief Good as in possession or as in use, in other words, as a mere state or as a working. For the state or habit[23] may possibly exist in a subject without effecting any good, as, for instance, in him who is asleep, or in any other way inactive; but the working cannot so, for it will of necessity act, and act well. And as at the Olympic games it is not the finest and strongest men who are crowned, but they who enter the lists, for out of these the prize-men are selected; so too in life, of the honourable and the good, it is they who act who rightly win the prizes.[24]

Their life too is in itself pleasant: for the feeling of pleasure is a mental sensation, and that is to each pleasant of which he is said to be fond: a horse, for instance, to him who is fond of horses, and a sight to him who is fond of sights: and so in like manner just acts to him who is fond of justice, and more generally the things in accordance with virtue to him who is fond of virtue. Now in the case of the multitude of men the things which they individually esteem pleasant clash, because they are not such by nature, whereas to the lovers of nobleness those things are pleasant which are such by nature: but the actions in accordance with virtue are of this kind, so that they are pleasant both to the individuals and also in themselves.

So then their life has no need of pleasure as a kind of additional appendage, but involves pleasure in itself. For, besides what I have just mentioned, a man is not a good man at all who feels no pleasure in noble actions,[25] just as no one would call that man just who does not feel pleasure in acting justly, or liberal who does not in liberal actions, and similarly in the case of the other virtues which might be enumerated: and if this be so, then the actions in accordance with virtue must be in themselves pleasurable. Then again they are certainly good and noble, and each of these in the highest degree; if we are to take as right the judgment of the good man, for he judges as we have said.

Thus then Happiness is most excellent, most noble, and most pleasant, and these attributes are not separated as in the well-known Delian inscription—

“Most noble is that which is most just, but best is health; And naturally most pleasant is the obtaining one’s desires.”

For all these co-exist in the best acts of working: and we say that Happiness is these, or one, that is, the best of them.

Still[26] it is quite plain that it does require the addition of external goods, as we have said: because without appliances it is impossible, or at all events not easy, to do noble actions: for friends, money, and political influence are in a manner instruments whereby many things are done: some things there are again a deficiency in which mars blessedness; good birth, for instance, or fine offspring, or even personal beauty: for he is not at all capable of Happiness who is very ugly, or is ill-born, or solitary and childless; and still less perhaps supposing him to have very bad children or friends, or to have lost good ones by death. As we have said already, the addition of prosperity of this kind does seem necessary to complete the idea of Happiness; hence some rank good fortune, and others virtue, with Happiness.

Chapter VII.

And hence too a question is raised, whether it is a thing that can be learned, or acquired by habituation or discipline of some other kind, or whether it comes in the way of divine dispensation, or even in the way of chance.

Now to be sure, if anything else is a gift of the Gods to men, it is probable that Happiness is a gift of theirs too, and specially because of all human goods it is the highest. But this, it may be, is a question belonging more properly to an investigation different from ours:[27] and it is quite clear, that on the supposition of its not being sent from the Gods direct, but coming to us by reason of virtue and learning of a certain kind, or discipline, it is yet one of the most Godlike things; because the prize and End of virtue is manifestly somewhat most excellent, nay divine and blessed.

It will also on this supposition be widely participated, for it may through learning and diligence of a certain kind exist in all who have not been maimed[28] for virtue.

And if it is better we should be happy thus than as a result of chance, this is in itself an argument that the case is so; because those things which are in the way of nature, and in like manner of art, and of every cause, and specially the best cause, are by nature in the best way possible: to leave them to chance what is greatest and most noble would be very much out of harmony with all these facts.[29]

The question may be determined also by a reference to our definition of Happiness, that it is a working of the soul in the way of excellence or virtue of a certain kind: and of the other goods, some we must have to begin with, and those which are co-operative and useful are given by nature as instruments.[30]

These considerations will harmonise also with what we said at the commencement: for we assumed the End of πολιτικ■ to be most excellent: now this bestows most care on making the members of the community of a certain character; good that is and apt to do what is honourable.

With good reason then neither ox nor horse nor any other brute animal do we call happy, for none of them can partake in such working: and for this same reason a child is not happy either, because by reason of his tender age he cannot yet perform such actions: if the term is applied, it is by way of anticipation.

For to constitute Happiness, there must be, as we have said, complete virtue and a complete life: for many changes and chances of all kinds arise during a life, and he who is most prosperous may become involved in great misfortunes in his old age, as in the heroic poems the tale is told of Priam: but the man who has experienced such fortune and died in wretchedness, no man calls happy.

Chapter VIII.

Are we then to call no man happy while he lives, and, as Solon would have us, look to the end? And again, if we are to maintain this position, is a man then happy when he is dead? or is not this a complete absurdity, specially in us who say Happiness is a working of a certain kind?

If on the other hand we do not assert that the dead man is happy, and Solon does not mean this, but only that one would then be safe in pronouncing a man happy, as being thenceforward out of the reach of evils and misfortunes, this too admits of some dispute, since it is thought that the dead has somewhat both of good and evil (if, as we must allow, a man may have when alive but not aware of the circumstances), as honour and dishonour, and good and bad fortune of children and descendants generally.

Nor is this view again without its difficulties: for, after a man has lived in blessedness to old age and died accordingly, many changes may befall him in right of his descendants; some of them may be good and obtain positions in life accordant to their merits, others again quite the contrary: it is plain too that the descendants may at different intervals or grades stand in all manner of relations to the ancestors.[31] Absurd indeed would be the position that even the dead man is to change about with them and become at one time happy and at another miserable. Absurd however it is on the other hand that the affairs of the descendants should in no degree and during no time affect the ancestors.

But we must revert to the point first raised,[32] since the present question will be easily determined from that.

If then we are to look to the end and then pronounce the man blessed, not as being so but as having been so at some previous time, surely it is absurd that when he _is_ happy the truth is not to be asserted of him, because we are unwilling to pronounce the living happy by reason of their liability to changes, and because, whereas we have conceived of happiness as something stable and no way easily changeable, the fact is that good and bad fortune are constantly circling about the same people: for it is quite plain, that if we are to depend upon the fortunes of men, we shall often have to call the same man happy, and a little while after miserable, thus representing our happy man,

“Chameleon-like, and based on rottenness.”

Is not this the solution? that to make our sentence dependent on the changes of fortune, is no way right: for not in them stands the well, or the ill, but though human life needs these as accessories (which we have allowed already), the workings in the way of virtue are what determine Happiness, and the contrary the contrary.

And, by the way, the question which has been here discussed, testifies incidentally to the truth of our account of Happiness.[33] For to nothing does a stability of human results attach so much as it does to the workings in the way of virtue, since these are held to be more abiding even than the sciences: and of these last again[34] the most precious are the most abiding, because the blessed live in them most and most continuously, which seems to be the reason why they are not forgotten. So then this stability which is sought will be in the happy man, and he will be such through life, since always, or most of all, he will be doing and contemplating the things which are in the way of virtue: and the various chances of life he will bear most nobly, and at all times and in all ways harmoniously, since he is the truly good man, or in the terms of our proverb “a faultless cube.”

And whereas the incidents of chance are many, and differ in greatness and smallness, the small pieces of good or ill fortune evidently do not affect the balance of life, but the great and numerous, if happening for good, will make life more blessed (for it is their nature to contribute to ornament, and the using of them comes to be noble and excellent), but if for ill, they bruise as it were and maim the blessedness: for they bring in positive pain, and hinder many acts of working. But still, even in these, nobleness shines through when a man bears contentedly many and great mischances not from insensibility to pain but because he is noble and high-spirited.

And if, as we have said, the acts of working are what determine the character of the life, no one of the blessed can ever become wretched, because he will never do those things which are hateful and mean. For the man who is truly good and sensible bears all fortunes, we presume, becomingly, and always does what is noblest under the circumstances, just as a good general employs to the best advantage the force he has with him; or a good shoemaker makes the handsomest shoe he can out of the leather which has been given him; and all other good artisans likewise. And if this be so, wretched never can the happy man come to be: I do not mean to say he will be blessed should he fall into fortunes like those of Priam.

Nor, in truth, is he shifting and easily changeable, for on the one hand from his happiness he will not be shaken easily nor by ordinary mischances, but, if at all, by those which are great and numerous; and, on the other, after such mischances he cannot regain his happiness in a little time; but, if at all, in a long and complete period, during which he has made himself master of great and noble things.

Why then should we not call happy the man who works in the way of perfect virtue, and is furnished with external goods sufficient for acting his part in the drama of life:[35] and this during no ordinary period but such as constitutes a complete life as we have been describing it.

Or we must add, that not only is he to live so, but his death must be in keeping with such life, since the future is dark to us, and Happiness we assume to be in every way an end and complete. And, if this be so, we shall call them among the living blessed who have and will have the things specified, but blessed _as Men_.[36]

On these points then let it suffice to have denned thus much.

Chapter IX.

Now that the fortunes of their descendants, and friends generally, contribute nothing towards forming the condition of the dead, is plainly a very heartless notion, and contrary to the current opinions.

But since things which befall are many, and differ in all kinds of ways, and some touch more nearly, others less, to go into minute particular distinctions would evidently be a long and endless task: and so it may suffice to speak generally and in outline.

If then, as of the misfortunes which happen to one’s self, some have a certain weight and turn the balance of life, while others are, so to speak, lighter; so it is likewise with those which befall all our friends alike; if further, whether they whom each suffering befalls be alive or dead makes much more difference than in a tragedy the presupposing or actual perpetration of the various crimes and horrors, we must take into our account this difference also, and still more perhaps the doubt concerning the dead whether they really partake of any good or evil; it seems to result from all these considerations, that if anything does pierce the veil and reach them, be the same good or bad, it must be something trivial and small, either in itself or to them; or at least of such a magnitude or such a kind as neither to make happy them that are not so otherwise, nor to deprive of their blessedness them that are.[37]

It is plain then that the good or ill fortunes of their friends do affect the dead somewhat: but in such kind and degree as neither to make the happy unhappy nor produce any other such effect.

Chapter X.

Having determined these points, let us examine with respect to Happiness, whether it belongs to the class of things praiseworthy or things precious; for to that of faculties[38] it evidently does not.

Now it is plain that everything which is a subject of praise is praised for being of a certain kind and bearing a certain relation to something else: for instance, the just, and the valiant, and generally the good man, and virtue itself, we praise because of the actions and the results: and the strong man, and the quick runner, and so forth, we praise for being of a certain nature and bearing a certain relation to something good and excellent (and this is illustrated by attempts to praise the gods; for they are presented in a ludicrous aspect[39] by being referred to our standard, and this results from the fact, that all praise does, as we have said, imply reference to a standard). Now if it is to such objects that praise belongs, it is evident that what is applicable to the best objects is not praise, but something higher and better: which is plain matter of fact, for not only do we call the gods blessed and happy, but of men also we pronounce those blessed who most nearly resemble the gods. And in like manner in respect of goods; no man thinks of praising Happiness as he does the principle of justice, but calls it blessed, as being somewhat more godlike and more excellent.

Eudoxus[40] too is thought to have advanced a sound argument in support of the claim of pleasure to the highest prize: for the fact that, though it is one of the good things, it is not praised, he took for an indication of its superiority to those which are subjects of praise: a superiority he attributed also to a god and the Chief Good, on the ground that they form the standard to which everything besides is referred. For praise applies to virtue, because it makes men apt to do what is noble; but encomia to definite works of body or mind.[41]

However, it is perhaps more suitable to a regular treatise on encomia to pursue this topic with exactness: it is enough for our purpose that from what has been said it is evident that Happiness belongs to the class of things precious and final. And it seems to be so also because of its being a starting-point; which it is, in that with a view to it we all do everything else that is done; now the starting-point and cause of good things we assume to be something precious and divine.

Chapter XI.

Moreover, since Happiness is a kind of working of the soul in the way of perfect Excellence, we must enquire concerning Excellence: for so probably shall we have a clearer view concerning Happiness; and again, he who is really a statesman is generally thought to have spent most pains on this, for he wishes to make the citizens good and obedient to the laws. (For examples of this class we have the lawgivers of the Cretans and Lacedæmonians and whatever other such there have been.) But if this investigation belongs properly to πολιτικ■, then clearly the enquiry will be in accordance with our original design.

Well, we are to enquire concerning Excellence, _i.e._ Human Excellence of course, because it was the Chief Good of Man and the Happiness of Man that we were enquiring of just now.

And by Human Excellence we mean not that of man's body but that of his soul; for we call Happiness a working of the Soul.

And if this is so, it is plain that some knowledge of the nature of the Soul is necessary for the statesman, just as for the oculist a knowledge of the whole body, and the more so in proportion as πολιτικ■ is more precious and higher than the healing art: and in fact physicians of the higher class do busy themselves much with the knowledge of the body.

So then the statesman is to consider the nature of the Soul: but he must do so with these objects in view, and so far only as may suffice for the objects of his special enquiry: for to carry his speculations to a greater exactness is perhaps a task more laborious than falls within his province.

In fact, the few statements made on the subject in my popular treatises are quite enough, and accordingly we will adopt them here: as, that the Soul consists of two parts, the Irrational and the Rational (as to whether these are actually divided, as are the parts of the body, and everything that is capable of division; or are only metaphysically speaking two, being by nature inseparable, as are convex and concave circumferences, matters not in respect of our present purpose). And of the Irrational, the one part seems common to other objects, and in fact vegetative; I mean the cause of nourishment and growth (for such a faculty of the Soul one would assume to exist in all things that receive nourishment, even in embryos, and this the same as in the perfect creatures; for this is more likely than that it should be a different one).

Now the Excellence of this manifestly is not peculiar to the human species but common to others: for this part and this faculty is thought to work most in time of sleep, and the good and bad man are least distinguishable while asleep; whence it is a common saying that during one half of life there is no difference between the happy and the wretched; and this accords with our

anticipations, for sleep is an inactivity of the soul, in so far as it is denominated good or bad, except that in some wise some of its movements find their way through the veil and so the good come to have better dreams than ordinary men. But enough of this: we must forego any further mention of the nutritive part, since it is not naturally capable of the Excellence which is peculiarly human.

And there seems to be another Irrational Nature of the Soul, which yet in a way partakes of Reason. For in the man who controls his appetites, and in him who resolves to do so and fails, we praise the Reason or Rational part of the Soul, because it exhorts aright and to the best course: but clearly there is in them, beside the Reason, some other natural principle which fights with and strains against the Reason. (For in plain terms, just as paralysed limbs of the body when their owners would move them to the right are borne aside in a contrary direction to the left, so is it in the case of the Soul, for the impulses of men who cannot control their appetites are to contrary points: the difference is that in the case of the body we do see what is borne aside but in the case of the soul we do not. But, it may be, not the less[42] on that account are we to suppose that there is in the Soul also somewhat besides the Reason, which is opposed to this and goes against it; as to _how_ it is different, that is irrelevant.)

But of Reason this too does evidently partake, as we have said: for instance, in the man of self-control it obeys Reason: and perhaps in the man of perfected self-mastery,[43] or the brave man, it is yet more obedient; in them it agrees entirely with the Reason.

So then the Irrational is plainly twofold: the one part, the merely vegetative, has no share of Reason, but that of desire, or appetition generally, does partake of it in a sense, in so far as it is obedient to it and capable of submitting to its rule. (So too in common phrase we say we have λ■γος of our father or friends, and this in a different sense from that in which we say we have λ■γος of mathematics.)[44]

Now that the Irrational is in some way persuaded by the Reason, admonition, and every act of rebuke and exhortation indicate. If then we are to say that this also has Reason, then the Rational, as well as the Irrational, will be twofold, the one supremely and in itself, the other paying it a kind of filial regard.

The Excellence of Man then is divided in accordance with this difference: we make two classes, calling the one Intellectual, and the other Moral; pure science, intelligence, and practical wisdom—Intellectual: liberality, and perfected self-mastery—Moral: in speaking of a man's Moral character, we do not say he is a scientific or intelligent but a meek man, or one of perfected self-mastery: and we praise the man of science in right of his mental state;[45] and of these such as are praiseworthy we call Excellences.

BOOK II

Chapter I.

Well: human Excellence is of two kinds, Intellectual and Moral:[1] now the Intellectual springs originally, and is increased subsequently, from teaching (for the most part that is[2]), and needs therefore experience and time; whereas the Moral comes from custom, and so the Greek term denoting it is but a slight deflection from the term denoting custom in that language.

From this fact it is plain that not one of the Moral Virtues comes to be in us merely by nature: because of such things as exist by nature, none can be changed by custom: a stone, for instance, by nature gravitating downwards, could never by custom be brought to ascend, not even if one were to try and accustom it by throwing it up ten thousand times; nor could file again be brought to descend, nor in fact could anything whose nature is in one way be brought by custom to be in another. The Virtues then come to be in us neither by nature, nor in despite of nature,[3] but we are furnished by nature with a capacity for receiving themu and are perfected in them through custom.

Again, in whatever cases we get things by nature, we get the faculties first and perform the acts of working afterwards; an illustration of which is afforded by the case of our bodily senses, for it was not from having often seen or heard that we got these senses, but just the reverse: we had them and so exercised them, but did not have them because we had exercised them. But the Virtues we get by first performing single acts of working, which, again, is the case of other things, as the arts for instance; for what we have to make when we have learned how, these we learn how to make by making: men come to be builders, for instance, by building; harp-players, by playing on the harp: exactly so, by doing just actions we come to be just; by doing the actions of self-mastery we come to be perfected in self-mastery; and by doing brave actions brave.

And to the truth of this testimony is borne by what takes place in communities: because the law-givers make the individual members good men by habituation, and this is the intention certainly of every law-giver, and all who do not effect it well fail of their intent; and herein consists the difference between a good Constitution and a bad.

Again, every Virtue is either produced or destroyed from and by the very same circumstances: art too in like manner; I mean it is by playing the harp that both the good and the bad harp-players are formed: and similarly builders and all the rest; by building well men will become good builders; by doing it badly bad ones: in fact, if this had not been so, there would have been no need of instructors, but all men would have been at once good or bad in their several arts without them.

So too then is it with the Virtues: for by acting in the various relations in which we are thrown with our fellow men, we come to be, some just, some unjust: and by acting in dangerous positions and being habituated to feel fear or confidence, we come to be, some brave, others cowards.

Similarly is it also with respect to the occasions of lust and anger: for some men come to be perfected in self-mastery and mild, others destitute of all self-control and passionate; the one class by behaving in one way under them, the other by behaving in another. Or, in one word, the habits are produced from the acts of working like to them: and so what we have to do is to give a certain character to these particular acts, because the habits formed correspond to the differences of these.

So then, whether we are accustomed this way or that straight from childhood, makes not a small but an important difference, or rather I would say it makes all the difference.

Chapter II.

Since then the object of the present treatise is not mere speculation, as it is of some others (for we are enquiring not merely that we may know what virtue is but that we may become virtuous, else it would have been useless), we must consider as to the particular actions how we are to do them, because, as we have just said, the quality of the habits that shall be formed depends on these.

Now, that we are to act in accordance with Right Reason is a general maxim, and may for the present be taken for granted: we will speak of it hereafter, and say both what Right Reason is, and what are its relations to the other virtues.[4]

But let this point be first thoroughly understood between us, that all which can be said on moral action must be said in outline, as it were, and not exactly: for as we remarked at the commencement, such reasoning only must be required as the nature of the subject-matter admits of, and matters of moral action and expediency have no fixedness any more than matters of health. And if the subject in its general maxims is such, still less in its application to particular cases is exactness attainable:[5] because these fall not under any art or system of rules, but it must be left in each instance to the individual agents to look to the exigencies of the particular case, as it is in the art of healing, or that of navigating a ship. Still, though the present subject is confessedly such, we must try and do what we can for it.

First then this must be noted, that it is the nature of such things to be spoiled by defect and excess; as we see in the case of health and strength (since for the illustration of things which cannot be seen we must use those that can), for excessive training impairs the strength as well as deficient: meat and drink, in like manner, in too great or too small quantities, impair the health: while in due proportion they cause, increase, and preserve it.

Thus it is therefore with the habits of perfected Self-Mastery and Courage and the rest of the Virtues: for the man who flies from and fears all things, and never stands up against anything, comes to be a coward; and he who fears nothing, but goes at everything, comes to be rash. In like manner too, he that tastes of every pleasure and abstains from none comes to lose all self-control; while he who avoids all, as do the dull and clownish, comes as it were to lose his faculties of perception: that is to say, the habits of perfected Self-Mastery and Courage are spoiled by the excess and defect, but by the mean state are preserved.

Furthermore, not only do the origination, growth, and marring of the habits come from and by the same circumstances, but also the acts of working after the habits are formed will be exercised on the same: for so it is also with those other things which are more directly matters of sight, strength for instance: for this comes by taking plenty of food and doing plenty of work, and the man who has attained strength is best able to do these: and so it is with the Virtues, for not only do we by abstaining from pleasures come to be perfected in Self-Mastery, but when we have come to be so we can best abstain from them: similarly too with Courage: for it is by accustoming ourselves to despise objects of fear and stand up against them that we come to be brave; and after we have come to be so we shall be best able to stand up against such objects.

And for a test of the formation of the habits we must take the pleasure or pain which succeeds the acts; for he is perfected in Self-Mastery who not only abstains from the bodily pleasures but is glad to do so; whereas he who abstains but is sorry to do it has not Self-Mastery: he again is brave who stands up against danger, either with positive pleasure or at least without any pain; whereas he who does it with pain is not brave.[6]

For Moral Virtue has for its object-matter pleasures and pains, because by reason of pleasure we do what is bad, and by reason of pain decline doing what is right (for which cause, as Plato observes, men should have been trained straight from their childhood to receive pleasure and pain from proper objects, for this is the right education). Again: since Virtues have to do with actions and feelings, and on every feeling and every action pleasure and pain follow, here again is another proof that Virtue has for its object-matter pleasure and pain. The same is shown also by the fact that punishments are effected through the instrumentality of these; because they are of the nature of remedies, and it is the nature of remedies to be the contraries of the ills they cure. Again, to quote what we said before: every habit of the Soul by its very nature has relation to, and exerts itself upon, things of the same kind as those by which it is naturally deteriorated or improved: now such habits do come to be vicious by reason of pleasures and pains, that is, by men pursuing or avoiding respectively, either such as they ought not, or at wrong times, or in wrong manner, and so forth (for which reason, by the way, some people define the Virtues as certain states of impassibility and utter quietude,[7] but they are wrong because they speak without modification, instead of adding “as they ought,” “as they ought not,” and “when,” and so on). Virtue then is assumed to be that habit which is such, in relation to pleasures and pains, as to effect the best results, and Vice the contrary.

The following considerations may also serve to set this in a clear light. There are principally three things moving us to choice and three to avoidance, the honourable, the expedient, the pleasant; and their three contraries, the dishonourable, the hurtful, and the painful: now the good man is apt to go right, and the bad man wrong, with respect to all these of course, but most specially with respect to pleasure: because not only is this common to him with all animals but also it is a concomitant of all those things which move to choice, since both the honourable and the expedient give an impression of pleasure.

Again, it grows up with us all from infancy, and so it is a hard matter to remove from ourselves this feeling, engrained as it is into our very life.

Again, we adopt pleasure and pain (some of us more, and some less) as the measure even of actions: for this cause then our whole business must be with them, since to receive right or wrong impressions of pleasure and pain is a thing of no little importance in respect of the actions. Once more; it is harder, as Heraclitus says, to fight against pleasure than against anger: now it is about that which is more than commonly difficult that art comes into being, and virtue too, because in that which is difficult the good is of a higher order: and so for this reason too both virtue and moral philosophy generally must wholly busy themselves respecting pleasures and pains, because he that uses these well will be good, he that does so ill will be bad.

Let us then be understood to have stated, that Virtue has for its object-matter pleasures and pains, and that it is either increased or marred by the same circumstances (differently used) by which it is originally generated, and that it exerts itself on the same circumstances out of which it was generated.

Chapter III.

Now I can conceive a person perplexed as to the meaning of our statement, that men must do just actions to become just, and those of self-mastery to acquire the habit of self-mastery; “for,” he would say, “if men are doing the actions they have the respective virtues already, just as men are grammarians or musicians when they do the actions of either art.” May we not reply by saying that it is not so even in the case of the arts referred to: because a man may produce something grammatical either by chance or the suggestion of another; but then only will he be a grammarian when he not only produces something grammatical but does so grammarian-wise, _i.e._ in virtue of the grammatical knowledge he himself possesses.

Again, the cases of the arts and the virtues are not parallel: because those things which are produced by the arts have their excellence in themselves, and it is sufficient therefore that these when produced should be in a certain state: but those which are produced in the way of the virtues, are, strictly speaking, actions of a certain kind (say of Justice or perfected Self-Mastery), not merely if in themselves they are in a certain state but if also he who does them does them being himself in a certain state, first if knowing what he is doing, next if with deliberate preference, and with such preference for the things’ own sake; and thirdly if being himself stable and unapt to change. Now to constitute possession of the arts these requisites are not reckoned in, excepting the one point of knowledge: whereas for possession of the virtues knowledge avails little or nothing, but the other requisites avail not a

little, but, in fact, are all in all, and these requisites as a matter of fact do come from oftentimes doing the actions of Justice and perfected Self-Mastery.

The facts,[8] it is true, are called by the names of these habits when they are such as the just or perfectly self-mastering man would do; but he is not in possession of the virtues who merely does these facts, but he who also so does them as the just and self-mastering do them.

We are right then in saying, that these virtues are formed in a man by his doing the actions; but no one, if he should leave them undone, would be even in the way to become a good man. Yet people in general do not perform these actions, but taking refuge in talk they flatter themselves they are philosophising, and that they will so be good men: acting in truth very like those sick people who listen to the doctor with great attention but do nothing that he tells them: just as these then cannot be well bodily under such a course of treatment, so neither can those be mentally by such philosophising.

Chapter IV.

Next, we must examine what Virtue is.[9] Well, since the things which come to be in the mind are, in all, of three kinds, Feelings, Capacities, States, Virtue of course must belong to one of the three classes.

By Feelings, I mean such as lust, anger, fear, confidence, envy, joy, friendship, hatred, longing, emulation, compassion, in short all such as are followed by pleasure or pain: by Capacities, those in right of which we are said to be capable of these feelings; as by virtue of which we are able to have been made angry, or grieved, or to have compassionated; by States, those in right of which we are in a certain relation good or bad to the aforementioned feelings; to having been made angry, for instance, we are in a wrong relation if in our anger we were too violent or too slack, but if we were in the happy medium we are in a right relation to the feeling. And so on of the rest.

Now Feelings neither the virtues nor vices are, because in right of the Feelings we are not denominated either good or bad, but in right of the virtues and vices we are.

Again, in right of the Feelings we are neither praised nor blamed,[10] (for a man is not commended for being afraid or being angry, nor blamed for being angry merely but for being so in a particular way), but in right of the virtues and vices we are.

Again, both anger and fear we feel without moral choice, whereas the virtues are acts of moral choice, or at least certainly not independent of it.

Moreover, in right of the Feelings we are said to be moved, but in right of the virtues and vices not to be moved, but disposed, in a certain way.

And for these same reasons they are not Capacities, for we are not called good or bad merely because we are able to feel, nor are we praised or blamed.

And again, Capacities we have by nature, but we do not come to be good or bad by nature, as we have said before.

Since then the virtues are neither Feelings nor Capacities, it remains that they must be States.

Chapter V.

Now what the genus of Virtue is has been said; but we must not merely speak of it thus, that it is a state but say also what kind of a state it is.

We must observe then that all excellence makes that whereof it is the excellence both to be itself in a good state and to perform its work well. The excellence of the eye, for instance, makes both the eye good and its work also: for by the excellence of the eye we see well. So too the excellence of the horse makes a horse good, and good in speed, and in carrying his rider, and standing up against the enemy. If then this is universally the case, the excellence of Man, i.e. Virtue, must be a state whereby Man comes to be good and whereby he will perform well his proper work. Now how this shall be it is true we have said already, but still perhaps it may throw light on the subject to see what is its characteristic nature.

In all quantity then, whether continuous or discrete,[11] one may take the greater part, the less, or the exactly equal, and these either with reference to the thing itself, or relatively to us: and the exactly equal is a mean between excess and defect. Now by the mean of the thing, _i.e._ absolute mean, I denote that which is equidistant from either extreme (which of course is one and the

same to all), and by the mean relatively to ourselves, that which is neither too much nor too little for the particular individual. This of course is not one nor the same to all: for instance, suppose ten is too much and two too little, people take six for the absolute mean; because it exceeds the smaller sum by exactly as much as it is itself exceeded by the larger, and this mean is according to arithmetical proportion.[12]

But the mean relatively to ourselves must not be so found ; for it does not follow, supposing ten minæ[13] is too large a quantity to eat and two too small, that the trainer will order his man six; because for the person who is to take it this also may be too much or too little: for Milo it would be too little, but for a man just commencing his athletic exercises too much: similarly too of the exercises themselves, as running or wrestling.

So then it seems every one possessed of skill avoids excess and defect, but seeks for and chooses the mean, not the absolute but the relative.

Now if all skill thus accomplishes well its work by keeping an eye on the mean, and bringing the works to this point (whence it is common enough to say of such works as are in a good state, “one cannot add to or take ought from them,” under the notion of excess or defect destroying goodness but the mean state preserving it), and good artisans, as we say, work with their eye on this, and excellence, like nature, is more exact and better than any art in the world, it must have an aptitude to aim at the mean.

It is moral excellence, _i.e._ Virtue, of course which I mean, because this it is which is concerned with feelings and actions, and in these there can be excess and defect and the mean: it is possible, for instance, to feel the emotions of fear, confidence, lust, anger, compassion, and pleasure and pain generally, too much or too little, and in either case wrongly; but to feel them when we ought, on what occasions, towards whom, why, and as, we should do, is the mean, or in other words the best state, and this is the property of Virtue.

In like manner too with respect to the actions, there may be excess and defect and the mean. Now Virtue is concerned with feelings and actions, in which the excess is wrong and the defect is blamed but the mean is praised and goes right; and both these circumstances belong to Virtue. Virtue then is in a sense a mean state, since it certainly has an aptitude for aiming at the mean.

Again, one may go wrong in many different ways (because, as the Pythagoreans expressed it, evil is of the class of the infinite, good of the finite), but right only in one; and so the former is easy, the latter difficult; easy to miss the mark, but hard to hit it: and for these reasons, therefore, both the excess and defect belong to Vice, and the mean state to Virtue; for, as the poet has it,

“Men may be bad in many ways, But good in one alone.”

Chapter VI.

Virtue then is “a state apt to exercise deliberate choice, being in the relative mean, determined by reason, and[14] as the man of practical wisdom would determine.”

It is a middle state between too faulty ones, in the way of excess on one side and of defect on the other: and it is so moreover, because the faulty states on one side fall short of, and those on the other exceed, what is right, both in the case of the feelings and the actions; but Virtue finds, and when found adopts, the mean.

And so, viewing it in respect of its essence and definition, Virtue is a mean state; but in reference to the chief good and to excellence it is the highest state possible.

But it must not be supposed that every action or every feeling is capable of subsisting in this mean state, because some there are which are so named as immediately to convey the notion of badness, as malevolence, shamelessness, envy; or, to instance in actions, adultery, theft, homicide; for all these and suchlike are blamed because they are in themselves bad, not the having too much or too little of them.

In these then you never can go right, but must always be wrong: nor in such does the right or wrong depend on the selection of a proper person, time, or manner (take adultery for instance), but simply doing any one soever of those things is being wrong.

You might as well require that there should be determined a mean state, an excess and a defect in respect of acting unjustly, being cowardly, or giving up all control of the passions: for at this rate there will be of excess and defect a mean state; of excess, excess; and of defect, defect.

But just as of perfected self-mastery and courage there is no excess and defect, because the mean is in one point of view the highest possible state, so neither of those faulty states can you have a mean state, excess, or defect, but howsoever done they are wrong: you cannot, in short, have of excess and defect a mean state, nor of a mean state excess and defect.

Chapter VII.

It is not enough, however, to state this in general terms, we must also apply it to particular instances, because in treatises on moral conduct general statements have an air of vagueness, but those which go into detail one of greater reality: for the actions after all must be in detail, and the general statements, to be worth anything, must hold good here.

We must take these details then from the well-known scheme.[15]

I. In respect of fears and confidence or boldness:

The Mean state is Courage: men may exceed, of course, either in absence of fear or in positive confidence: the former has no name (which is a common case), the latter is called rash: again, the man who has too much fear and too little confidence is called a coward.

II. In respect of pleasures and pains (but not all, and perhaps fewer pains than pleasures):

The Mean state here is perfected Self-Mastery, the defect total absence of Self-control. As for defect in respect of pleasure, there are really no people who are chargeable with it, so, of course, there is really no name for such characters, but, as they are conceivable, we will give them one and call them insensible.

III. In respect of giving and taking wealth[16] (_a_):

The mean state is Liberality, the excess Prodigality, the defect Stinginess: here each of the extremes involves really an excess and defect contrary to each other: I mean, the prodigal gives out too much and takes in too little, while the stingy man takes in too much and gives out too little. (It must be understood that we are now giving merely an outline and summary, intentionally: and we will, in a later part of the treatise, draw out the distinctions with greater exactness.)

IV. In respect of wealth (b):

There are other dispositions besides these just mentioned; a mean state called Munificence (for the munificent man differs from the liberal, the former having necessarily to do with great wealth, the latter with but small); the excess called by the names either of Want of taste or Vulgar Profusion, and the defect Paltriness (these also differ from the extremes connected with liberality, and the manner of their difference shall also be spoken of later).

V. In respect of honour and dishonour (a):

The mean state Greatness of Soul, the excess which may be called χαυν■τηϛ,[17] and the defect Littleness of Soul.

VI. In respect of honour and dishonour (b):

Now there is a state bearing the same relation to Greatness of Soul as we said just now Liberality does to Munificence, with the difference that is of being about a small amount of the same thing: this state having reference to small honour, as Greatness of Soul to great honour; a man may, of course, grasp at honour either more than he should or less; now he that exceeds in his grasping at it is called ambitious, he that falls short unambitious, he that is just as he should be has no proper name: nor in fact have the states, except that the disposition of the ambitious man is called ambition. For this reason those who are in either extreme lay claim to the mean as a debateable land, and we call the virtuous character sometimes by the name ambitious,[18] sometimes by that of unambitious, and we commend sometimes the one and sometimes the other. Why we do it shall be said in the subsequent part of the treatise; but now we will go on with the rest of the virtues after the plan we have laid down.

VII. In respect of anger:

Here too there is excess, defect, and a mean state; but since they may be said to have really no proper names, as we call the virtuous character Meek, we will call the mean state Meekness, and of the extremes, let the man who is excessive be denominated Passionate, and the faulty state Passionateness, and him who is deficient Angerless, and the defect Angerlessness.

There are also three other mean states, having some mutual resemblance, but still with differences; they are alike in that they all have for their object-matter intercourse of words and deeds, and they differ in that one has respect to truth herein, the other two to what is pleasant; and this in two ways, the one in relaxation and amusement, the other in all things which occur in daily life. We must say a word or two about these also, that we may the better see that in all matters the mean is praiseworthy, while the extremes are neither right nor worthy of praise but of blame.

Now of these, it is true, the majority have really no proper names, but still we must try, as in the other cases, to coin some for them for the sake of clearness and intelligibleness.

I. In respect of truth:

The man who is in the mean state we will call Truthful, and his state Truthfulness, and as to the disguise of truth, if it be on the side of exaggeration, Braggadocia, and him that has it a Braggadocio; if on that of diminution, Reserve and Reserved shall be the terms.

II. In respect of what is pleasant in the way of relaxation or amusement.

The mean state shall be called Easy-pleasantry, and the character accordingly a man of Easy-pleasantry; the excess Buffoonery, and the man a Buffoon; the man deficient herein a Clown, and his state Clownishness.

III. In respect of what is pleasant in daily life.

He that is as he should be may be called Friendly, and his mean state Friendliness: he that exceeds, if it be without any interested motive, somewhat too Complaisant, if with such motive, a Flatterer: he that is deficient and in all instances unpleasant, Quarrelsome and Cross.

There are mean states likewise in feelings and matters concerning them. Shamefacedness, for instance, is no virtue, still a man is praised for being shamefaced: for in these too the one is denominated the man in the mean state, the other in the excess; the Dumbfoundered, for instance, who is overwhelmed with shame on all and any occasions: the man who is in the defect, _i.e._ who has no shame at all in his composition, is called Shameless: but the right character Shamefaced.

Indignation against successful vice,[19] again, is a state in the mean between Envy and Malevolence: they all three have respect to pleasure and pain produced by what happens to one's neighbour: for the man who has this right feeling is annoyed at undeserved success of others, while the envious man goes beyond him and is annoyed at all success of others, and the malevolent falls so far short of feeling annoyance that he even rejoices [at misfortune of others].

But for the discussion of these also there will be another opportunity, as of Justice too, because the term is used in more senses than one. So after this we will go accurately into each and say how they are mean states: and in like manner also with respect to the Intellectual Excellences.

Chapter VIII.

Now as there are three states in each case, two faulty either in the way of excess or defect, and one right, which is the mean state, of course all are in a way opposed to one another; the extremes, for instance, not only to the mean but also to one another, and the mean to the extremes: for just as the half is greater if compared with the less portion, and less if compared with the greater, so the mean states, compared with the defects, exceed, whether in feelings or actions, and _vice versa_. The brave man, for instance, shows as rash when compared with the coward, and cowardly when compared with the rash; similarly too the man of perfected self-mastery, viewed in comparison with the man destitute of all perception, shows like a man of no self-control, but in comparison with the man who really has no self-control, he looks like one destitute of all perception: and the liberal man compared with the stingy seems prodigal, and by the side of the prodigal, stingy.

And so the extreme characters push away, so to speak, towards each other the man in the mean state; the brave man is called a rash man by the coward, and a coward by the rash man, and in the other cases accordingly. And there being this mutual opposition, the contrariety between the extremes is greater than between either and the mean, because they are further from one another than from the mean, just as the greater or less portion differ more from each other than either from the exact half.

Again, in some cases an extreme will bear a resemblance to the mean; rashness, for instance, to courage, and prodigality to liberality; but between the extremes there is the greatest dissimilarity. Now things which are furthest from one another[20] are defined to be contrary, and so the further off the more contrary will they be.

Further: of the extremes in some cases the excess, and in others the defect, is most opposed to the mean: to courage, for instance, not rashness which is the excess, but cowardice which is the defect; whereas to perfected self-mastery not insensibility which is the defect but absence of all self-control which is the excess.

And for this there are two reasons to be given; one from the nature of the thing itself, because from the one extreme being nearer and more like the mean, we do not put this against it, but the other; as, for instance, since rashness is thought to be nearer to courage than cowardice is, and to resemble it more, we put cowardice against courage rather than rashness, because those things which are further from the mean are thought to be more contrary to it. This then is one reason arising from the thing itself; there is another arising from our own constitution and make: for in each man's own case those things give the impression of being more contrary to the mean to which we individually have a natural bias. Thus we have a natural bias towards pleasures, for which reason we are much more inclined to the rejection of all self-control, than to self-discipline.

These things then to which the bias is, we call more contrary, and so total want of self-control (the excess) is more contrary than the defect is to perfected self-mastery.

Chapter IX.

Now that Moral Virtue is a mean state, and how it is so, and that it lies between two faulty states, one in the way of excess and another in the way of defect, and that it is so because it has an aptitude to aim at the mean both in feelings and actions, all this has been set forth fully and sufficiently.

And so it is hard to be good: for surely hard it is in each instance to find the mean, just as to find the mean point or centre of a circle is not what any man can do, but only he who knows how: just so to be angry, to give money, and be expensive, is what any man can do, and easy: but to do these to the right person, in due proportion, at the right time, with a right object, and in the right manner, this is not as before what any man can do, nor is it easy; and for this cause goodness is rare, and praiseworthy, and noble.

Therefore he who aims at the mean should make it his first care to keep away from that extreme which is more contrary than the other to the mean; just as Calypso in Homer advises Ulysses,

"Clear of this smoke and surge thy barque direct;"

because of the two extremes the one is always more, and the other less, erroneous; and, therefore, since to hit exactly on the mean is difficult, one must take the least of the evils as the safest plan;[21] and this a man will be doing, if he follows this method.

We ought also to take into consideration our own natural bias; which varies in each man's case, and will be ascertained from the pleasure and pain arising in us. Furthermore, we should force ourselves off in the contrary direction, because we shall find ourselves in the mean after we have removed ourselves far from the wrong side, exactly as men do in straightening bent timber.[22]

But in all cases we must guard most carefully against what is pleasant, and pleasure itself, because we are not impartial judges of it.

We ought to feel in fact towards pleasure as did the old counsellors towards Helen, and in all cases pronounce a similar sentence; for so by sending it away from us, we shall err the less.[23]

Well, to speak very briefly, these are the precautions by adopting which we shall be best able to attain the mean.

Still, perhaps, after all it is a matter of difficulty, and specially in the particular instances: it is not easy, for instance, to determine exactly in what manner, with what persons, for what causes, and for what length of time, one ought to feel anger: for we ourselves sometimes praise those who are defective in this feeling, and we call them meek; at another, we term the hot-tempered manly and spirited.

Then, again, he who makes a small deflection from what is right, be it on the side of too much or too little, is not blamed, only he who makes a considerable one; for he cannot escape observation. But to what point or degree a man must err in order to incur blame, it is not easy to determine exactly in words: nor in fact any of those points which are matter of perception by the Moral Sense: such questions are matters of detail, and the decision of them rests with the Moral Sense.[24]

At all events thus much is plain, that the mean state is in all things praiseworthy, and that practically we must deflect sometimes towards excess sometimes towards defect, because this will be the easiest method of hitting on the mean, that is, on what is right.

BOOK III

Chapter I.

Now since Virtue is concerned with the regulation of feelings and actions, and praise and blame arise upon such as are voluntary, while for the involuntary allowance is made, and sometimes compassion is excited, it is perhaps a necessary task for those who are investigating the nature of Virtue to draw out the distinction between what is voluntary and what involuntary; and it is certainly useful for legislators, with respect to the assigning of honours and punishments.

Involuntary actions then are thought to be of two kinds, being done either on compulsion, or by reason of ignorance. An action is, properly speaking, compulsory, when the origination is external to the agent, being such that in it the agent (perhaps we may more properly say the patient) contributes nothing; as if a wind were to convey you anywhere, or men having power over your person.

But when actions are done, either from fear of greater evils, or from some honourable motive, as, for instance, if you were ordered to commit some base act by a despot who had your parents or children in his power, and they were to be saved upon your compliance or die upon your refusal, in such cases there is room for a question whether the actions are voluntary or involuntary.

A similar question arises with respect to cases of throwing goods overboard in a storm: abstractedly no man throws away his property willingly, but with a view to his own and his shipmates' safety any one would who had any sense.

The truth is, such actions are of a mixed kind, but are most like voluntary actions; for they are choice-worthy at the time when they are being done, and the end or object of the action must be taken with reference to the actual occasion. Further, we must denominate an action voluntary or involuntary at the time of doing it: now in the given case the man acts voluntarily, because the originating of the motion of his limbs in such actions rests with himself; and where the origination is in himself it rests with himself to do or not to do.

Such actions then are voluntary, though in the abstract perhaps involuntary because no one would choose any of such things in and by itself.

But for such actions men sometimes are even praised, as when they endure any disgrace or pain to secure great and honourable equivalents; if _vice versâ_, then they are blamed, because it shows a base mind to endure things very disgraceful for no honourable object, or for a trifling one.

For some again no praise is given, but allowance is made; as where a man does what he should not by reason of such things as overstrain the powers of human nature, or pass the limits of human endurance.

Some acts perhaps there are for which compulsion cannot be pleaded, but a man should rather suffer the worst and die; how absurd, for instance, are the pleas of compulsion with which Alcmaeon in Euripides' play excuses his matricide!

But it is difficult sometimes to decide what kind of thing should be chosen instead of what, or what endured in preference to what, and much moreso to abide by one's decisions: for in general the alternatives are painful, and the actions required are base, and so praise or blame is awarded according as persons have been compelled or no.

What kind of actions then are to be called compulsory? may we say, simply and abstractedly whenever the cause is external and the agent contributes nothing; and that where the acts are in themselves such as one would not wish but choice-worthy at the present time and in preference to such and such things, and where the origination rests with the agent, the actions are in themselves involuntary but at the given time and in preference to such and such things voluntary; and they are more like voluntary than involuntary, because the actions consist of little details, and these are voluntary.

But what kind of things one ought to choose instead of what, it is not easy to settle, for there are many differences in particular instances.

But suppose a person should say, things pleasant and honourable exert a compulsive force (for that they are external and do compel); at that rate every action is on compulsion, because these are universal motives of action.

Again, they who act on compulsion and against their will do so with pain; but they who act by reason of what is pleasant or honourable act with pleasure.

It is truly absurd for a man to attribute his actions to external things instead of to his own capacity for being easily caught by them;[1] or, again, to ascribe the honourable to himself, and the base ones to pleasure.

So then that seems to be compulsory “whose origination is from without, the party compelled contributing nothing.”

Chapter II.

Now every action of which ignorance is the cause is not-voluntary, but that only is involuntary which is attended with pain and remorse; for clearly the man who has done anything by reason of ignorance, but is not annoyed at his own action, cannot be said to have done it _with_ his will because he did not know he was doing it, nor again _against_ his will because he is not sorry for it.

So then of the class “acting by reason of ignorance,” he who feels regret afterwards is thought to be an involuntary agent, and him that has no such feeling, since he certainly is different from the other, we will call a not-voluntary agent; for as there is a real difference it is better to have a proper name.

Again, there seems to be a difference between acting _because of_ ignorance and acting _with_ ignorance: for instance, we do not usually assign ignorance as the cause of the actions of the drunken or angry man, but either the drunkenness or the anger, yet they act not knowingly but with ignorance.

Again, every bad man is ignorant what he ought to do and what to leave undone, and by reason of such error men become unjust and wholly evil.

Again, we do not usually apply the term involuntary when a man is ignorant of his own true interest;[2] because ignorance which affects moral choice[3] constitutes depravity but not involuntariness: nor does any ignorance of principle (because for this men are blamed) but ignorance in particular details, wherein consists the action and wherewith it is concerned, for in these there is both compassion and allowance, because he who acts in ignorance of any of them acts in a proper sense involuntarily.

It may be as well, therefore, to define these particular details; what they are, and how many; viz. who acts, what he is doing, with respect to what or in what, sometimes with what, as with what instrument, and with what result;[4] as that of preservation, for instance, and how, as whether softly or violently.

All these particulars, in one and the same case, no man in his senses could be ignorant of; plainly not of the agent, being himself. But what he is doing a man may be ignorant, as men in speaking say a thing escaped them unawares; or as Aeschylus did with respect to the Mysteries, that he was not aware that it was unlawful to speak of them; or as in the case of that catapult accident the other day the man said he discharged it merely to display its operation. Or a person might suppose a son to be an enemy, as Merope did; or that the spear really pointed was rounded off; or that the stone was a pumice; or in striking with a view to save might kill; or might strike when merely wishing to show another, as people do in sham-fighting.

Now since ignorance is possible in respect to all these details in which the action consists, he that acted in ignorance of any of them is thought to have acted involuntarily, and he most so who was in ignorance as regards the most important, which are thought to be those in which the action consists, and the result.

Further, not only must the ignorance be of this kind, to constitute an action involuntary, but it must be also understood that the action is followed by pain and regret.

Chapter III.

Now since all involuntary action is either upon compulsion or by reason of ignorance, Voluntary Action would seem to be “that whose origination is in the agent, he being aware of the particular details in which the action consists.”

For, it may be, men are not justified by calling those actions involuntary, which are done by reason of Anger or Lust.

Because, in the first place, if this be so no other animal but man, and not even children, can be said to act voluntarily. Next, is it meant that we never act voluntarily when we act from Lust or Anger, or that we act voluntarily in doing what is right and involuntarily in doing what is discreditable? The latter supposition is absurd, since the cause is one and the same. Then as to the former, it is a strange thing to maintain actions to be involuntary which we are bound to grasp at: now there are occasions on which anger is a

duty,[5] and there are things which we are bound to lust after,[6] health, for instance, and learning.

Again, whereas actions strictly involuntary are thought to be attended with pain, those which are done to gratify lust are thought to be pleasant.

Again: how does the involuntariness make any difference[7] between wrong actions done from deliberate calculation, and those done by reason of anger? for both ought to be avoided, and the irrational feelings are thought to be just as natural to man as reason, and so of course must be such actions of the individual as are done from Anger and Lust. It is absurd then to class these actions among the involuntary.

Chapter IV.

Having thus drawn out the distinction between voluntary and involuntary action our next step is to examine into the nature of Moral Choice, because this seems most intimately connected with Virtue and to be a more decisive test of moral character than a man's acts are.

Now Moral Choice is plainly voluntary, but the two are not co-extensive, voluntary being the more comprehensive term; for first, children and all other animals share in voluntary action but not in Moral Choice; and next, sudden actions we call voluntary but do not ascribe them to Moral Choice.

Nor do they appear to be right who say it is lust or anger, or wish, or opinion of a certain kind; because, in the first place, Moral Choice is not shared by the irrational animals while Lust and Anger are. Next; the man who fails of self-control acts from Lust but not from Moral Choice; the man of self-control, on the contrary, from Moral Choice, not from Lust. Again: whereas Lust is frequently opposed to Moral Choice, Lust is not to Lust.

Lastly: the object-matter of Lust is the pleasant and the painful, but of Moral Choice neither the one nor the other. Still less can it be Anger, because actions done from Anger are thought generally to be least of all consequent on Moral Choice.

Nor is it Wish either, though appearing closely connected with it; because, in the first place, Moral Choice has not for its objects impossibilities, and if a man were to say he chose them he would be thought to be a fool; but Wish may have impossible things for its objects, immortality for instance.

Wish again may be exercised on things in the accomplishment of which one's self could have nothing to do, as the success of any particular actor or athlete; but no man chooses things of this nature, only such as he believes he may himself be instrumental in procuring.

Further: Wish has for its object the End rather, but Moral Choice the means to the End; for instance, we wish to be healthy but we choose the means which will make us so; or happiness again we wish for, and commonly say so, but to say we choose is not an appropriate term, because, in short, the province of Moral Choice seems to be those things which are in our own power.

Neither can it be Opinion; for Opinion is thought to be unlimited in its range of objects, and to be exercised as well upon things eternal and impossible as on those which are in our own power: again, Opinion is logically divided into true and false, not into good and bad as Moral Choice is.

However, nobody perhaps maintains its identity with Opinion simply; but it is not the same with opinion of any kind,[8] because by choosing good and bad things we are constituted of a certain character, but by having opinions on them we are not.

Again, we choose to take or avoid, and so on, but we opine what a thing is, or for what it is serviceable, or how; but we do not opine to take or avoid.

Further, Moral Choice is commended rather for having a right object than for being judicious, but Opinion for being formed in accordance with truth.

Again, we choose such things as we pretty well know to be good, but we form opinions respecting such as we do not know at all.

And it is not thought that choosing and opining best always go together, but that some opine the better course and yet by reason of viciousness choose not the things which they should.

It may be urged, that Opinion always precedes or accompanies Moral Choice; be it so, this makes no difference, for this is not the point in question, but whether Moral Choice is the same as Opinion of a certain kind.

Since then it is none of the aforementioned things, what is it, or how is it characterised? Voluntary it plainly is, but not all voluntary action is an object of Moral Choice. May we not say then, it is “that voluntary which has passed through a stage of previous deliberation?” because Moral Choice is attended with reasoning and intellectual process. The etymology of its Greek name seems to give a hint of it, being when analysed “chosen in preference to somewhat else.”

Chapter V.

Well then; do men deliberate about everything, and is anything soever the object of Deliberation, or are there some matters with respect to which there is none? (It may be as well perhaps to say, that by “object of Deliberation” is meant such matter as a sensible man would deliberate upon, not what any fool or madman might.)

Well: about eternal things no one deliberates; as, for instance, the universe, or the incommensurability of the diameter and side of a square.

Nor again about things which are in motion but which always happen in the same way either necessarily, or naturally, or from some other cause, as the solstices or the sunrise.

Nor about those which are variable, as drought and rains; nor fortuitous matters, as finding of treasure.

Nor in fact even about all human affairs; no Lacedæmonian, for instance, deliberates as to the best course for the Scythian government to adopt; because in such cases we have no power over the result.

But we do deliberate respecting such practical matters as are in our own power (which are what are left after all our exclusions).

I have adopted this division because causes seem to be divisible into nature, necessity, chance, and moreover intellect, and all human powers.

And as man in general deliberates about what man in general can effect, so individuals do about such practical things as can be effected through their own instrumentality.

Again, we do not deliberate respecting such arts or sciences as are exact and independent: as, for instance, about written characters, because we have no doubt how they should be formed; but we do deliberate on all buch things as are usually done through our own instrumentality, but not invariably in the same way; as, for instance, about matters connected with the healing art, or with money-making; and, again, more about piloting ships than gymnastic exercises, because the former has been less exactly determined, and so forth; and more about arts than sciences, because we more frequently doubt respecting the former.

So then Deliberation takes place in such matters as are under general laws, but still uncertain how in any given case they will issue, _i.e._ in which there is some indefiniteness; and for great matters we associate coadjutors in counsel, distrusting our ability to settle them alone.

Further, we deliberate not about Ends, but Means to Ends. No physician, for instance, deliberates whether he will cure, nor orator whether he will persuade, nor statesman whether he will produce a good constitution, nor in fact any man in any other function about his particular End; but having set before them a certain End they look how and through what means it may be accomplished: if there is a choice of means, they examine further which are easiest and most creditable; or, if there is but one means of accomplishing the object, then how it may be through this, this again through what, till they come to the first cause; and this will be the last found; for a man engaged in a process of deliberation seems to seek and analyse, as a man, to solve a problem, analyses the figure given him. And plainly not every search is Deliberation, those in mathematics to wit, but every Deliberation is a search, and the last step in the analysis is the first in the constructive process. And if in the course of their search men come upon an impossibility, they give it up; if money, for instance, be necessary, but cannot be got: but if the thing appears possible they then attempt to do it.

And by possible I mean what may be done through our own instrumentality (of course what may be done through our friends is through our own instrumentality in a certain sense, because the origination in such cases rests with us). And the object of search is sometimes the necessary instruments, sometimes the method of using them; and similarly in the rest sometimes through what, and sometimes how or through what.[9]

So it seems, as has been said, that Man is the originator of his actions; and Deliberation has for its object whatever may be done through one's own instrumentality, and the actions are with a view to other things; and so it is, not the End, but the Means to Ends on which Deliberation is employed.

Nor, again, is it employed on matters of detail, as whether the substance before me is bread, or has been properly cooked; for these come under the province of sense, and if a man is to be always deliberating, he may go on _ad infinitum_.

Further, exactly the same matter is the object both of Deliberation and Moral Choice; but that which is the object of Moral Choice is thenceforward separated off and definite,[10] because by object of Moral Choice is denoted that which after Deliberation has been preferred to something else: for each man leaves off searching how he shall do a thing when he has brought the origination up to himself, _i.e_. to the governing principle in himself,[11] because it is this which makes the choice. A good illustration of this is furnished by the old regal constitutions which Homer drew from, in which the Kings would announce to the commonalty what they had determined before.

Now since that which is the object of Moral Choice is something in our own power, which is the object of deliberation and the grasping of the Will, Moral Choice must be "a grasping after something in our own power consequent upon Deliberation:" because after having deliberated we decide, and then grasp by our Will in accordance with the result of our deliberation.[12]

Let this be accepted as a sketch of the nature and object of Moral Choice, that object being "Means to Ends."

Chapter VI.

That Wish has for its object-matter the End, has been already stated; but there are two opinions respecting it; some thinking that its object is real good, others whatever impresses the mind with a notion of good.

Now those who maintain that the object of Wish is real good are beset by this difficulty, that what is wished for by him who chooses wrongly is not really an object of Wish (because, on their theory, if it is an object of wish, it must be good, but it is, in the case supposed, evil). Those who maintain, on the contrary, that that which impresses the mind with a notion of good is properly the object of Wish, have to meet this difficulty, that there is nothing naturally an object of Wish but to each individual whatever seems good to him; now different people have different notions, and it may chance contrary ones.

But, if these opinions do not satisfy us, may we not say that, abstractedly and as a matter of objective truth, the really good is the object of Wish, but to each individual whatever impresses his mind with the notion of good.[13] And so to the good man that is an object of Wish which is really and truly so, but to the bad man anything may be; just as physically those things are wholesome to the healthy which are really so, but other things to the sick. And so too of bitter and sweet, and hot and heavy, and so on. For the good man judges in every instance correctly, and in every instance the notion conveyed to his mind is the true one.

For there are fair and pleasant things peculiar to, and so varying with, each state; and perhaps the most distinguishing characteristic of the good man is his seeing the truth in every instance, he being, in fact, the rule and measure of these matters.

The multitude of men seem to be deceived by reason of pleasure, because though it is not really a good it impresses their minds with the notion of goodness, so they choose what is pleasant as good and avoid pain as an evil.

Chapter VII.

Now since the End is the object of Wish, and the means to the End of Deliberation and Moral Choice, the actions regarding these matters must be in the way of Moral Choice, _i.e._ voluntary: but the acts of working out the virtues are such actions, and therefore Virtue is in our power.

And so too is Vice: because wherever it is in our power to do it is also in our power to forbear doing, and _vice versâ_: therefore if the doing (being in a given case creditable) is in our power, so too is the forbearing (which is in the same case discreditable), and _vice versâ_.

But if it is in our power to do and to forbear doing what is creditable or the contrary, and these respectively constitute the being good or bad, then the being good or vicious characters is in our power.

As for the well-known saying, "No man voluntarily is wicked or involuntarily happy," it is partly true, partly false; for no man is happy against his will, of course, but wickedness is voluntary. Or must we dispute the statements lately made, and not say that Man is the

originator or generator of his actions as much as of his children?

But if this is matter of plain manifest fact, and we cannot refer our actions to any other originations beside those in our own power, those things must be in our own power, and so voluntary, the originations of which are in ourselves.

Moreover, testimony seems to be borne to these positions both privately by individuals, and by law-givers too, in that they chastise and punish those who do wrong (unless they do so on compulsion, or by reason of ignorance which is not self-caused), while they honour those who act rightly, under the notion of being likely to encourage the latter and restrain the former. But such things as are not in our own power, _i.e._ not voluntary, no one thinks of encouraging us to do, knowing it to be of no avail for one to have been persuaded not to be hot (for instance), or feel pain, or be hungry, and so forth, because we shall have those sensations all the same.

And what makes the case stronger is this: that they chastise for the very fact of ignorance, when it is thought to be self-caused; to the drunken, for instance, penalties are double, because the origination in such case lies in a man's own self: for he might have helped getting drunk, and this is the cause of his ignorance.

Again, those also who are ignorant of legal regulations which they are bound to know, and which are not hard to know, they chastise; and similarly in all other cases where neglect is thought to be the cause of the ignorance, under the notion that it was in their power to prevent their ignorance, because they might have paid attention.

But perhaps a man is of such a character that he cannot attend to such things: still men are themselves the causes of having become such characters by living carelessly, and also of being unjust or destitute of self-control, the former by doing evil actions, the latter by spending their time in drinking and such-like; because the particular acts of working form corresponding characters, as is shown by those who are practising for any contest or particular course of action, for such men persevere in the acts of working.

As for the plea, that a man did not know that habits are produced from separate acts of working, we reply, such ignorance is a mark of excessive stupidity.

Furthermore, it is wholly irrelevant to say that the man who acts unjustly or dissolutely does not _wish_ to attain the habits of these vices: for if a man wittingly does those things whereby he must become unjust he is to all intents and purposes unjust voluntarily; but he cannot with a wish cease to be unjust and become just. For, to take the analogous case, the sick man cannot with a wish be well again, yet in a supposable case he is voluntarily ill because he has produced his sickness by living intemperately and disregarding his physicians. There was a time then when he might have helped being ill, but now he has let himself go he cannot any longer; just as he who has let a stone out of his hand cannot recall it,[14] and yet it rested with him to aim and throw it, because the origination was in his power. Just so the unjust man, and he who has lost all self-control, might originally have helped being what they are, and so they are voluntarily what they are; but now that they are become so they no longer have the power of being otherwise.

And not only are mental diseases voluntary, but the bodily are so in some men, whom we accordingly blame: for such as are naturally deformed no one blames, only such as are so by reason of want of exercise, and neglect: and so too of weakness and maiming: no one would think of upbraiding, but would rather compassionate, a man who is blind by nature, or from disease, or from an accident; but every one would blame him who was so from excess of wine, or any other kind of intemperance. It seems, then, that in respect of bodily diseases, those which depend on ourselves are censured, those which do not are not censured; and if so, then in the case of the mental disorders, those which are censured must depend upon ourselves.

But suppose a man to say, "that (by our own admission) all men aim at that which conveys to their minds an impression of good, and that men have no control over this impression, but that the End impresses each with a notion correspondent to his own individual character; that to be sure if each man is in a way the cause of his own moral state, so he will be also of the kind of impression he receives: whereas, if this is not so, no one is the cause to himself of doing evil actions, but he does them by reason of ignorance of the true End, supposing that through their means he will secure the chief good. Further, that this aiming at the End is no matter of one's own choice, but one must be born with a power of mental vision, so to speak, whereby to judge fairly and choose that which is really good; and he is blessed by nature who has this naturally well: because it is the most important thing and the fairest, and what a man cannot get or learn from another but will have such as nature has given it; and for this to be so given well and fairly would be excellence of nature in the highest and truest sense."

If all this be true, how will Virtue be a whit more voluntary than Vice? Alike to the good man and the bad, the End gives its impression and is fixed by nature or howsoever you like to say, and they act so and so, referring everything else to this End.

Whether then we suppose that the End impresses each man's mind with certain notions not merely by nature, but that there is somewhat also dependent on himself; or that the End is given by nature, and yet Virtue is voluntary because the good man does all the rest voluntarily, Vice must be equally so; because his own agency equally attaches to the bad man in the actions, even if not in the selection of the End.

If then, as is commonly said, the Virtues are voluntary (because we at least cooperate[15] in producing our moral states, and we assume the End to be of a certain kind according as we are ourselves of certain characters), the Vices must be voluntary also, because the cases are exactly similar.

Chapter VIII.

Well now, we have stated generally respecting the Moral Virtues, the genus (in outline), that they are mean states, and that they are habits, and how they are formed, and that they are of themselves calculated to act upon the circumstances out of which they were formed, and that they are in our own power and voluntary, and are to be done so as right Reason may direct.

But the particular actions and the habits are not voluntary in the same sense; for of the actions we are masters from beginning to end (supposing of course a knowledge of the particular details), but only of the origination of the habits, the addition by small particular accessions not being cognisiable (as is the case with sicknesses): still they are voluntary because it rested with us to use our circumstances this way or that.

Chapter IX.

Here we will resume the particular discussion of the Moral Virtues, and say what they are, what is their object-matter, and how they stand respectively related to it: of course their number will be thereby shown.

First, then, of Courage. Now that it is a mean state, in respect of fear and boldness, has been already said: further, the objects of our fears are obviously things fearful or, in a general way of statement, evils; which accounts for the common definition of fear, viz. "expectation of evil."

Of course we fear evils of all kinds: disgrace, for instance, poverty, disease, desolateness, death; but not all these seem to be the object-matter of the Brave man, because there are things which to fear is right and noble, and not to fear is base; disgrace, for example, since he who fears this is a good man and has a sense of honour, and he who does not fear it is shameless (though there are those who call him Brave by analogy, because he somewhat resembles the Brave man who agrees with him in being free from fear); but poverty, perhaps, or disease, and in fact whatever does not proceed from viciousness, nor is attributable to his own fault, a man ought not to fear: still, being fearless in respect of these would not constitute a man Brave in the proper sense of the term.

Yet we do apply the term[16] in right of the similarity of the cases; for there are men who, though timid in the dangers of war, are liberal men and are stout enough to face loss of wealth.

And, again, a man is not a coward for fearing insult to his wife or children, or envy, or any such thing; nor is he a Brave man for being bold when going to be scourged.

What kind of fearful things then do constitute the object-matter of the Brave man? first of all, must they not be the greatest, since no man is more apt to withstand what is dreadful. Now the object of the greatest dread is death, because it is the end of all things, and the dead man is thought to be capable neither of good nor evil. Still it would seem that the Brave man has not for his object-matter even death in every circumstance; on the sea, for example, or in sickness: in what circumstances then? must it not be in the most honourable? now such is death in war, because it is death in the greatest and most honourable danger; and this is confirmed by the honours awarded in communities, and by monarchs.

He then may be most properly denominated Brave who is fearless in respect of honourable death and such sudden emergencies as threaten death; now such specially are those which arise in the course of war.

It is not meant but that the Brave man will be fearless also on the sea (and in sickness), but not in the same way as sea-faring men; for these are light-hearted and hopeful by reason of their experience, while landsmen though Brave are apt to give themselves up for lost and shudder at the notion of such a death: to which it should be added that Courage is exerted in circumstances which

admit of doing something to help one’s self, or in which death would be honourable; now neither of these requisites attach to destruction by drowning or sickness.

Chapter X.

Again, fearful is a term of relation, the same thing not being so to all, and there is according to common parlance somewhat so fearful as to be beyond human endurance: this of course would be fearful to every man of sense, but those objects which are level to the capacity of man differ in magnitude and admit of degrees, so too the objects of confidence or boldness.

Now the Brave man cannot be frighted from his propriety (but of course only so far as he is man); fear such things indeed he will, but he will stand up against them as he ought and as right reason may direct, with a view to what is honourable, because this is the end of the virtue.

Now it is possible to fear these things too much, or too little, or again to fear what is not really fearful as if it were such. So the errors come to be either that a man fears when he ought not to fear at all, or that he fears in an improper way, or at a wrong time, and so forth; and so too in respect of things inspiring confidence. He is Brave then who withstands, and fears, and is bold, in respect of right objects, from a right motive, in right manner, and at right times: since the Brave man suffers or acts as he ought and as right reason may direct.

Now the end of every separate act of working is that which accords with the habit, and so to the Brave man Courage; which is honourable; therefore such is also the End, since the character of each is determined by the End.[17]

So honour is the motive from which the Brave man withstands things fearful and performs the acts which accord with Courage.

Of the characters on the side of Excess, he who exceeds in utter absence of fear has no appropriate name (I observed before that many states have none), but he would be a madman or inaccessible to pain if he feared nothing, neither earthquake, nor the billows, as they tell of the Celts.

He again who exceeds in confidence in respect of things fearful is rash. He is thought moreover to be a braggart, and to advance unfounded claims to the character of Brave: the relation which the Brave man really bears to objects of fear this man wishes to appear to bear, and so imitates him in whatever points he can; for this reason most of them exhibit a curious mixture of rashness and cowardice; because, affecting rashness in these circumstances, they do not withstand what is truly fearful.

The man moreover who exceeds in feeling fear is a coward, since there attach to him the circumstances of fearing wrong objects, in wrong ways, and so forth. He is deficient also in feeling confidence, but he is most clearly seen as exceeding in the case of pains; he is a fainthearted kind of man, for he fears all things: the Brave man is just the contrary, for boldness is the property of the light-hearted and hopeful.

So the coward, the rash, and the Brave man have exactly the same object-matter, but stand differently related to it: the two first-mentioned respectively exceed and are deficient, the last is in a mean state and as he ought to be. The rash again are precipitate, and, being eager before danger, when actually in it fall away, while the Brave are quick and sharp in action, but before are quiet and composed.

Well then, as has been said, Courage is a mean state in respect of objects inspiring boldness or fear, in the circumstances which have been stated, and the Brave man chooses his line and withstands danger either because to do so is honourable, or because not to do so is base. But dying to escape from poverty, or the pangs of love, or anything that is simply painful, is the act not of a Brave man but of a coward; because it is mere softness to fly from what is toilsome, and the suicide braves the terrors of death not because it is honourable but to get out of the reach of evil.

Chapter XI.

Courage proper is somewhat of the kind I have described, but there are dispositions, differing in five ways,[18] which also bear in common parlance the name of Courage.

We will take first that which bears most resemblance to the true, the Courage of Citizenship, so named because the motives which are thought to actuate the members of a community in braving danger are the penalties and disgrace held out by the laws to cowardice, and the dignities conferred on the Brave; which is thought to be the reason why those are the bravest people among whom cowards are visited with disgrace and the Brave held in honour.

Such is the kind of Courage Homer exhibits in his characters; Diomed and Hector for example. The latter says,

“Polydamas will be the first to fix Disgrace upon me.”

Diomed again,

“For Hector surely will hereafter say, Speaking in Troy, Tydides by my hand”—

This I say most nearly resembles the Courage before spoken of, because it arises from virtue, from a feeling of shame, and a desire of what is noble (that is, of honour), and avoidance of disgrace which is base.

In the same rank one would be inclined to place those also who act under compulsion from their commanders; yet are they really lower, because not a sense of honour but fear is the motive from which they act, and what they seek to avoid is not that which is base but that which is simply painful: commanders do in fact compel their men sometimes, as Hector says (to quote Homer again),

“But whomsoever I shall find cowering afar from the fight, The teeth of dogs he shall by no means escape.”

Those commanders who station staunch troops by doubtful ones,[19] or who beat their men if they flinch, or who draw their troops up in line with the trenches, or other similar obstacles, in their rear, do in effect the same as Hector, for they all use compulsion.

But a man is to be Brave, not on compulsion, but from a sense of honour.

In the next place, Experience and Skill in the various particulars is thought to be a species of Courage: whence Socrates also thought that Courage was knowledge.[20]

This quality is exhibited of course by different men under different circumstances, but in warlike matters, with which we are now concerned, it is exhibited by the soldiers (“the regulars”): for there are, it would seem, many things in war of no real importance[21] which these have been constantly used to see; so they have a show of Courage because other people are not aware of the real nature of these things. Then again by reason of their skill they are better able than any others to inflict without suffering themselves, because they are able to use their arms and have such as are most serviceable both with a view to offence and defence: so that their case is parallel to that of armed men fighting with unarmed or trained athletes with amateurs, since in contests of this kind those are the best fighters, not who are the bravest men, but who are the strongest and are in the best condition.

In fact, the regular troops come to be cowards whenever the danger is greater than their means of meeting it; supposing, for example, that they are inferior in numbers and resources: then they are the first to fly, but the mere militia stand and fall on the ground (which as you know really happened at the Hermæum),[22] for in the eyes of these flight was disgraceful and death preferable to safety bought at such a price: while “the regulars” originally went into the danger under a notion of their own superiority, but on discovering their error they took to flight,[23] having greater fear of death than of disgrace; but this is not the feeling of the Brave man.

Thirdly, mere Animal Spirit is sometimes brought under the term Courage: they are thought to be Brave who are carried on by mere Animal Spirit, as are wild beasts against those who have wounded them, because in fact the really Brave have much Spirit, there being nothing like it for going at danger of any kind; whence those frequent expressions in Homer, “infused strength into his spirit,” “roused his strength and spirit,” or again, “and keen strength in his nostrils,” “his blood boiled:” for all these seem to denote the arousing and impetuosity of the Animal Spirit.

Now they that are truly Brave act from a sense of honour, and this Animal Spirit co-operates with them; but wild beasts from pain, that is because they have been wounded, or are frightened; since if they are quietly in their own haunts, forest or marsh, they do not attack men. Surely they are not Brave because they rush into danger when goaded on by pain and mere Spirit, without any view of the danger: else would asses be Brave when they are hungry, for though beaten they will not then leave their pasture: profligate men besides do many bold actions by reason of their lust. We may conclude then that they are not Brave who are goaded on to meet danger by pain and mere Spirit; but still this temper which arises from Animal Spirit appears to be most natural, and would be Courage of the true kind if it could have added to it moral choice and the proper motive.

So men also are pained by a feeling of anger, and take pleasure in revenge; but they who fight from these causes may be good fighters, but they are not truly Brave (in that they do not act from a sense of honour, nor as reason directs, but merely from the present feeling), still they bear some resemblance to that character.

Nor, again, are the Sanguine and Hopeful therefore Brave: since their boldness in dangers arises from their frequent victories over numerous foes. The two characters are alike, however, in that both are confident; but then the Brave are so from the afore-mentioned causes, whereas these are so from a settled conviction of their being superior and not likely to suffer anything in return (they who are intoxicated do much the same, for they become hopeful when in that state); but when the event disappoints their expectations they run away: now it was said to be the character of a Brave man to withstand things which are fearful to man or produce that impression, because it is honourable so to do and the contrary is dishonourable.

For this reason it is thought to be a greater proof of Courage to be fearless and undisturbed under the pressure of sudden fear than under that which may be anticipated, because Courage then comes rather from a fixed habit, or less from preparation: since as to foreseen dangers a man might take his line even from calculation and reasoning, but in those which are sudden he will do so according to his fixed habit of mind.

Fifthly and lastly, those who are acting under Ignorance have a show of Courage and are not very far from the Hopeful; but still they are inferior inasmuch as they have no opinion of themselves; which the others have, and therefore stay and contest a field for some little time; but they who have been deceived fly the moment they know things to be otherwise than they supposed, which the Argives experienced when they fell on the Lacedæmonians, taking them for the men of Sicyon.

Chapter XII.

We have described then what kind of men the Brave are, and what they who are thought to be, but are not really, Brave.

It must be remarked, however, that though Courage has for its object-matter boldness and fear it has not both equally so, but objects of fear much more than the former; for he that under pressure of these is undisturbed and stands related to them as he ought is better entitled to the name of Brave than he who is properly affected towards objects of confidence. So then men are termed Brave for withstanding painful things.

It follows that Courage involves pain and is justly praised, since it is a harder matter to withstand things that are painful than to abstain from such as are pleasant.

It must not be thought but that the End and object of Courage is pleasant, but it is obscured by the surrounding circumstances: which happens also in the gymnastic games; to the boxers the End is pleasant with a view to which they act, I mean the crown and the honours; but the receiving the blows they do is painful and annoying to flesh and blood, and so is all the labour they have to undergo; and, as these drawbacks are many, the object in view being small appears to have no pleasantness in it.

If then we may say the same of Courage, of course death and wounds must be painful to the Brave man and against his will: still he endures these because it is honourable so to do or because it is dishonourable not to do so. And the more complete his virtue and his happiness so much the more will he be pained at the notion of death: since to such a man as he is it is best worth while to live, and he with full consciousness is deprived of the greatest goods by death, and this is a painful idea. But he is not the less Brave for feeling it to be so, nay rather it may be he is shown to be more so because he chooses the honour that may be reaped in war in preference to retaining safe possession of these other goods. The fact is that to act with pleasure does not belong to all the virtues, except so far as a man realises the End of his actions.

But there is perhaps no reason why not such men should make the best soldiers, but those who are less truly Brave but have no other good to care for: these being ready to meet danger and bartering their lives against small gain.

Let thus much be accepted as sufficient on the subject of Courage; the true nature of which it is not difficult to gather, in outline at least, from what has been said.

Chapter XIII.

Next let us speak of Perfected Self-Mastery, which seems to claim the next place to Courage, since these two are the Excellences of the Irrational part of the Soul.

That it is a mean state, having for its object-matter Pleasures, we have already said (Pains being in fact its object-matter in a less degree and dissimilar manner), the state of utter absence of self-control has plainly the same object-matter; the next thing then is to determine what kind of Pleasures.

Let Pleasures then be understood to be divided into mental and bodily: instances of the former being love of honour or of learning: it being plain that each man takes pleasure in that of these two objects which he has a tendency to like, his body being no way affected but rather his intellect. Now men are not called perfectly self-mastering or wholly destitute of self-control in respect of pleasures of this class: nor in fact in respect of any which are not bodily; those for example who love to tell long stories, and are prosy, and spend their days about mere chance matters, we call gossips but not wholly destitute of self-control, nor again those who are pained at the loss of money or friends.

It is bodily Pleasures then which are the object-matter of Perfected Self-Mastery, but not even all these indifferently: I mean, that they who take pleasure in objects perceived by the Sight, as colours, and forms, and painting, are not denominated men of Perfected Self-Mastery, or wholly destitute of self-control; and yet it would seem that one may take pleasure even in such objects, as one ought to do, or excessively, or too little.

So too of objects perceived by the sense of Hearing; no one applies the terms before quoted respectively to those who are excessively pleased with musical tunes or acting, or to those who take such pleasure as they ought.

Nor again to those persons whose pleasure arises from the sense of Smell, except incidentally:[24] I mean, we do not say men have no self-control because they take pleasure in the scent of fruit, or flowers, or incense, but rather when they do so in the smells of unguents and sauces: since men destitute of self-control take pleasure herein, because hereby the objects of their lusts are recalled to their imagination (you may also see other men take pleasure in the smell of food when they are hungry): but to take pleasure in such is a mark of the character before named since these are objects of desire to him.

Now not even brutes receive pleasure in right of these senses, except incidentally. I mean, it is not the scent of hares' flesh but the eating it which dogs take pleasure in, perception of which pleasure is caused by the sense of Smell. Or again, it is not the lowing of the ox but eating him which the lion likes; but of the fact of his nearness the lion is made sensible by the lowing, and so he appears to take pleasure in this. In like manner, he has no pleasure in merely seeing or finding a stag or wild goat, but in the prospect of a meal.

The habits of Perfect Self-Mastery and entire absence of self-control have then for their object-matter such pleasures as brutes also share in, for which reason they are plainly servile and brutish: they are Touch and Taste.

But even Taste men seem to make little or no use of; for to the sense of Taste belongs the distinguishing of flavours; what men do, in fact, who are testing the quality of wines or seasoning "made dishes."

But men scarcely take pleasure at all in these things, at least those whom we call destitute of self-control do not, but only in the actual enjoyment which arises entirely from the sense of Touch, whether in eating or in drinking, or in grosser lusts. This accounts for the wish said to have been expressed once by a great glutton, "that his throat had been formed longer than a crane's neck," implying that his pleasure was derived from the Touch.

The sense then with which is connected the habit of absence of self-control is the most common of all the senses, and this habit would seem to be justly a matter of reproach, since it attaches to us not in so far as we are men but in so far as we are animals. Indeed it is brutish to take pleasure in such things and to like them best of all; for the most respectable of the pleasures arising from the touch have been set aside; those, for instance, which occur in the course of gymnastic training from the rubbing and the warm bath: because the touch of the man destitute of self-control is not indifferently of _any_ part of the body but only of particular parts.

Now of lusts or desires some are thought to be universal, others peculiar and acquired; thus desire for food is natural since every one who really needs desires also food, whether solid or liquid, or both (and, as Homer says, the man in the prime of youth needs and desires intercourse with the other sex); but when we come to this or that particular kind, then neither is the desire universal nor in all men is it directed to the same objects. And therefore the conceiving of such desires plainly attaches to us as individuals. It must be admitted, however, that there is something natural in it: because different things are pleasant to different men and a preference of some particular objects to chance ones is universal. Well then, in the case of the desires which are strictly and properly natural few men go wrong and all in one direction, that is, on the side of too much: I mean, to eat and drink of such food as happens to be on the table till one is overfilled is exceeding in quantity the natural limit, since the natural desire is simply a supply of a real deficiency.

For this reason these men are called belly-mad, as filling it beyond what they ought, and it is the slavish who become of this character.

But in respect of the peculiar pleasures many men go wrong and in many different ways; for whereas the term “fond of so and so” implies either taking pleasure in wrong objects, or taking pleasure excessively, or as the mass of men do, or in a wrong way, they who are destitute of all self-control exceed in all these ways; that is to say, they take pleasure in some things in which they ought not to do so (because they are properly objects of detestation), and in such as it is right to take pleasure in they do so more than they ought and as the mass of men do.

Well then, that excess with respect to pleasures is absence of self-control, and blameworthy, is plain. But viewing these habits on the side of pains, we find that a man is not said to have the virtue for withstanding them (as in the case of Courage), nor the vice for not withstanding them; but the man destitute of self-control is such, because he is pained more than he ought to be at not obtaining things which are pleasant (and thus his pleasure produces pain to him), and the man of Perfected Self-Mastery is such in virtue of not being pained by their absence, that is, by having to abstain from what is pleasant.

Now the man destitute of self-control desires either all pleasant things indiscriminately or those which are specially pleasant, and he is impelled by his desire to choose these things in preference to all others; and this involves pain, not only when he misses the attainment of his objects but, in the very desiring them, since all desire is accompanied by pain. Surely it is a strange case this, being pained by reason of pleasure.

As for men who are defective on the side of pleasure, who take less pleasure in things than they ought, they are almost imaginary characters, because such absence of sensual perception is not natural to man: for even the other animals distinguish between different kinds of food, and like some kinds and dislike others. In fact, could a man be found who takes no pleasure in anything and to whom all things are alike, he would be far from being human at all: there is no name for such a character because it is simply imaginary.

But the man of Perfected Self-Mastery is in the mean with respect to these objects: that is to say, he neither takes pleasure in the things which delight the vicious man, and in fact rather dislikes them, nor at all in improper objects; nor to any great degree in any object of the class; nor is he pained at their absence; nor does he desire them; or, if he does, only in moderation, and neither more than he ought, nor at improper times, and so forth; but such things as are conducive to health and good condition of body, being also pleasant, these he will grasp at in moderation and as he ought to do, and also such other pleasant things as do not hinder these objects, and are not unseemly or disproportionate to his means; because he that should grasp at such would be liking such pleasures more than is proper; but the man of Perfected Self-Mastery is not of this character, but regulates his desires by the dictates of right reason.

Chapter XIV.

Now the vice of being destitute of all Self-Control seems to be more truly voluntary than Cowardice, because pleasure is the cause of the former and pain of the latter, and pleasure is an object of choice, pain of avoidance. And again, pain deranges and spoils the natural disposition of its victim, whereas pleasure has no such effect and is more voluntary and therefore more justly open to reproach.

It is so also for the following reason; that it is easier to be inured by habit to resist the objects of pleasure, there being many things of this kind in life and the process of habituation being unaccompanied by danger; whereas the case is the reverse as regards the objects of fear.

Again, Cowardice as a confirmed habit would seem to be voluntary in a different way from the particular instances which form the habit; because it is painless, but these derange the man by reason of pain so that he throws away his arms and otherwise behaves himself unseemly, for which reason they are even thought by some to exercise a power of compulsion.

But to the man destitute of Self-Control the particular instances are on the contrary quite voluntary, being done with desire and direct exertion of the will, but the general result is less voluntary: since no man desires to form the habit.

The name of this vice (which signifies etymologically unchastened-ness) we apply also to the faults of children, there being a certain resemblance between the cases: to which the name is primarily applied, and to which secondarily or derivatively, is not relevant to the present subject, but it is evident that the later in point of time must get the name from the earlier. And the metaphor seems to be a very good one; for whatever grasps after base things, and is liable to great increase, ought to be chastened; and to this description desire and the child answer most truly, in that children also live under the direction of desire and the grasping after what is pleasant is most prominently seen in these.

Unless then the appetite be obedient and subjected to the governing principle it will become very great: for in the fool the grasping after what is pleasant is insatiable and undiscriminating; and every acting out of the desire increases the kindred habit, and if the desires are great and violent in degree they even expel Reason entirely; therefore they ought to be moderate and few, and in no respect to be opposed to Reason. Now when the appetite is in such a state we denominate it obedient and chastened.

In short, as the child ought to live with constant regard to the orders of its educator, so should the appetitive principle with regard to those of Reason.

So then in the man of Perfected Self-Mastery, the appetitive principle must be accordant with Reason: for what is right is the mark at which both principles aim: that is to say, the man of perfected self-mastery desires what he ought in right manner and at right times, which is exactly what Reason directs. Let this be taken for our account of Perfected Self-Mastery.

BOOK IV

Chapter I.

We will next speak of Liberality. Now this is thought to be the mean state, having for its object-matter Wealth: I mean, the Liberal man is praised not in the circumstances of war, nor in those which constitute the character of perfected self-mastery, nor again in judicial decisions, but in respect of giving and receiving Wealth, chiefly the former. By the term Wealth I mean “all those things whose worth is measured by money.”

Now the states of excess and defect in regard of Wealth are respectively Prodigality and Stinginess: the latter of these terms we attach invariably to those who are over careful about Wealth, but the former we apply sometimes with a complex notion; that is to say, we give the name to those who fail of self-control and spend money on the unrestrained gratification of their passions; and this is why they are thought to be most base, because they have many vices at once.

It must be noted, however, that this is not a strict and proper use of the term, since its natural etymological meaning is to denote him who has one particular evil, viz. the wasting his substance: he is unsaved (as the term literally denotes) who is wasting away by his own fault; and this he really may be said to be; the destruction of his substance is thought to be a kind of wasting of himself, since these things are the means of living. Well, this is our acceptation of the term Prodigality.

Again. Whatever things are for use may be used well or ill, and Wealth belongs to this class. He uses each particular thing best who has the virtue to whose province it belongs: so that he will use Wealth best who has the virtue respecting Wealth, that is to say, the Liberal man.

Expenditure and giving are thought to be the using of money, but receiving and keeping one would rather call the possessing of it. And so the giving to proper persons is more characteristic of the Liberal man, than the receiving from proper quarters and forbearing to receive from the contrary. In fact generally, doing well by others is more characteristic of virtue than being done well by, and doing things positively honourable than forbearing to do things dishonourable; and any one may see that the doing well by others and doing things positively honourable attaches to the act of giving, but to that of receiving only the being done well by or forbearing to do what is dishonourable.

Besides, thanks are given to him who gives, not to him who merely forbears to receive, and praise even more. Again, forbearing to receive is easier than giving, the case of being too little freehanded with one’s own being commoner than taking that which is not one’s own.

And again, it is they who give that are denominated Liberal, while they who forbear to receive are commended, not on the score of Liberality but of just dealing, while for receiving men are not, in fact, praised at all.

And the Liberal are liked almost best of all virtuous characters, because they are profitable to others, and this their profitableness consists in their giving.

Furthermore: all the actions done in accordance with virtue are honourable, and done from the motive of honour: and the Liberal man, therefore, will give from a motive of honour, and will give rightly; I mean, to proper persons, in right proportion, at right times, and whatever is included in the term “right giving:” and this too with positive pleasure, or at least without pain, since whatever is done in accordance with virtue is pleasant or at least not unpleasant, most certainly not attended with positive pain.

But the man who gives to improper people, or not from a motive of honour but from some other cause, shall be called not Liberal but something else. Neither shall he be so denominated who does it with pain: this being a sign that he would prefer his wealth to the honourable action, and this is no part of the Liberal man's character; neither will such an one receive from improper sources, because the so receiving is not characteristic of one who values not wealth: nor again will he be apt to ask, because one who does kindnesses to others does not usually receive them willingly; but from proper sources (his own property, for instance) he will receive, doing this not as honourable but as necessary, that he may have somewhat to give: neither will he be careless of his own, since it is his wish through these to help others in need: nor will he give to chance people, that he may have wherewith to give to those to whom he ought, at right times, and on occasions when it is honourable so to do.

Again, it is a trait in the Liberal man's character even to exceed very much in giving so as to leave too little for himself, it being characteristic of such an one not to have a thought of self.

Now Liberality is a term of relation to a man's means, for the Liberal-ness depends not on the amount of what is given but on the moral state of the giver which gives in proportion to his means. There is then no reason why he should not be the more Liberal man who gives the less amount, if he has less to give out of.

Again, they are thought to be more Liberal who have inherited, not acquired for themselves, their means; because, in the first place, they have never experienced want, and next, all people love most their own works, just as parents do and poets.

It is not easy for the Liberal man to be rich, since he is neither apt to receive nor to keep but to lavish, and values not wealth for its own sake but with a view to giving it away. Hence it is commonly charged upon fortune that they who most deserve to be rich are least so. Yet this happens reasonably enough; it is impossible he should have wealth who does not take any care to have it, just as in any similar case.

Yet he will not give to improper people, nor at wrong times, and so on: because he would not then be acting in accordance with Liberality, and if he spent upon such objects, would have nothing to spend on those on which he ought: for, as I have said before, he is Liberal who spends in proportion to his means, and on proper objects, while he who does so in excess is prodigal (this is the reason why we never call despots prodigal, because it does not seem to be easy for them by their gifts and expenditure to go beyond their immense possessions).

To sum up then. Since Liberality is a mean state in respect of the giving and receiving of wealth, the Liberal man will give and spend on proper objects, and in proper proportion, in great things and in small alike, and all this with pleasure to himself; also he will receive from right sources, and in right proportion: because, as the virtue is a mean state in respect of both, he will do both as he ought, and, in fact, upon proper giving follows the correspondent receiving, while that which is not such is contrary to it. (Now those which follow one another come to co-exist in the same person, those which are contraries plainly do not.)

Again, should it happen to him to spend money beyond what is needful, or otherwise than is well, he will be vexed, but only moderately and as he ought; for feeling pleasure and pain at right objects, and in right manner, is a property of Virtue.

The Liberal man is also a good man to have for a partner in respect of wealth: for he can easily be wronged, since he values not wealth, and is more vexed at not spending where he ought to have done so than at spending where he ought not, and he relishes not the maxim of Simonides.

Chapter II.

But the Prodigal man goes wrong also in these points, for he is neither pleased nor pained at proper objects or in proper manner, which will become more plain as we proceed.

We have said already that Prodigality and Stinginess are respectively states of excess and defect, and this in two things, giving and receiving (expenditure of course we class under giving). Well now, Prodigality exceeds in giving and forbearing to receive and is deficient in receiving, while Stinginess is deficient in giving and exceeds in receiving, but it is in small things.

The two parts of Prodigality, to be sure, do not commonly go together; it is not easy, I mean, to give to all if you receive from none, because private individuals thus giving will soon find their means run short, and such are in fact thought to be prodigal. He that should combine both would seem to be no little superior to the Stingy man: for he may be easily cured, both by advancing in years, and also by the want of means, and he may come thus to the mean: he has, you see, already the _facts_ of the Liberal man, he gives and forbears to receive, only he does neither in right manner or well. So if he could be wrought upon by habituation in this

respect, or change in any other way, he would be a real Liberal man, for he will give to those to whom he should, and will forbear to receive whence he ought not. This is the reason too why he is thought not to be low in moral character, because to exceed in giving and in forbearing to receive is no sign of badness or meanness, but only of folly.

Well then, he who is Prodigal in this fashion is thought far superior to the Stingy man for the aforementioned reasons, and also because he does good to many, but the Stingy man to no one, not even to himself. But most Prodigals, as has been said, combine with their other faults that of receiving from improper sources, and on this point are Stingy: and they become grasping, because they wish to spend and cannot do this easily, since their means soon run short and they are necessitated to get from some other quarter; and then again, because they care not for what is honourable, they receive recklessly, and from all sources indifferently, because they desire to give but care not how or whence.

And for this reason their givings are not Liberal, inasmuch as they are not honourable, nor purely disinterested, nor done in right fashion; but they oftentimes make those rich who should be poor, and to those who are quiet respectable kind of people they will give nothing, but to flatterers, or those who subserve their pleasures in any way, they will give much. And therefore most of them are utterly devoid of self-restraint; for as they are open-handed they are liberal in expenditure upon the unrestrained gratification of their passions, and turn off to their pleasures because they do not live with reference to what is honourable.

Thus then the Prodigal, if unguided, slides into these faults; but if he could get care bestowed on him he might come to the mean and to what is right.

Stinginess, on the contrary, is incurable: old age, for instance, and incapacity of any kind, is thought to make people Stingy; and it is more congenial to human nature than Prodigality, the mass of men being fond of money rather than apt to give: moreover it extends far and has many phases, the modes of stinginess being thought to be many. For as it consists of two things, defect of giving and excess of receiving, everybody does not have it entire, but it is sometimes divided, and one class of persons exceed in receiving, the other are deficient in giving. I mean those who are designated by such appellations as sparing, close-fisted, niggards, are all deficient in giving; but other men's property they neither desire nor are willing to receive, in some instances from a real moderation and shrinking from what is base.

There are some people whose motive, either supposed or alleged, for keeping their property is this, that they may never be driven to do anything dishonourable: to this class belongs the skinflint, and every one of similar character, so named from the excess of not-giving. Others again decline to receive their neighbour's goods from a motive of fear; their notion being that it is not easy to take other people's things yourself without their taking yours: so they are content neither to receive nor give.

The other class again who are Stingy in respect of receiving exceed in that they receive anything from any source; such as they who work at illiberal employments, brothel keepers, and such-like, and usurers who lend small sums at large interest: for all these receive from improper sources, and improper amounts. Their common characteristic is base-gaining, since they all submit to disgrace for the sake of gain and that small; because those who receive great things neither whence they ought, nor what they ought (as for instance despots who sack cities and plunder temples), we denominate wicked, impious, and unjust, but not Stingy.

Now the dicer and bath-plunderer and the robber belong to the class of the Stingy, for they are given to base gain: both busy themselves and submit to disgrace for the sake of gain, and the one class incur the greatest dangers for the sake of their booty, while the others make gain of their friends to whom they ought to be giving.

So both classes, as wishing to make gain from improper sources, are given to base gain, and all such receivings are Stingy. And with good reason is Stinginess called the contrary of Liberality: both because it is a greater evil than Prodigality, and because men err rather in this direction than in that of the Prodigality which we have spoken of as properly and completely such.

Let this be considered as what we have to say respecting Liberality and the contrary vices.

Chapter III.

Next in order would seem to come a dissertation on Magnificence, this being thought to be, like liberality, a virtue having for its object-matter Wealth; but it does not, like that, extend to all transactions in respect of Wealth, but only applies to such as are expensive, and in these circumstances it exceeds liberality in respect of magnitude, because it is (what the very name in Greek hints at) fitting expense on a large scale: this term is of course relative: I mean, the expenditure of equipping and commanding a trireme is not the same as that of giving a public spectacle: "fitting" of course also is relative to the individual, and the matter

wherein and upon which he has to spend. And a man is not denominated Magnificent for spending as he should do in small or ordinary things, as, for instance,

“Oft to the wandering beggar did I give,”

but for doing so in great matters: that is to say, the Magnificent man is liberal, but the liberal is not thereby Magnificent. The falling short of such a state is called Meanness, the exceeding it Vulgar Profusion, Want of Taste, and so on; which are faulty, not because they are on an excessive scale in respect of right objects but, because they show off in improper objects, and in improper manner: of these we will speak presently. The Magnificent man is like a man of skill, because he can see what is fitting, and can spend largely in good taste; for, as we said at the commencement, the confirmed habit is determined by the separate acts of working, and by its object-matter.

Well, the expenses of the Magnificent man are great and fitting: such also are his works (because this secures the expenditure being not great merely, but befitting the work). So then the work is to be proportionate to the expense, and this again to the work, or even above it: and the Magnificent man will incur such expenses from the motive of honour, this being common to all the virtues, and besides he will do it with pleasure and lavishly; excessive accuracy in calculation being Mean. He will consider also how a thing may be done most beautifully and fittingly, rather, than for how much it may be done, and how at the least expense.

So the Magnificent man must be also a liberal man, because the liberal man will also spend what he ought, and in right manner: but it is the Great, that is to say tke large scale, which is distinctive of the Magnificent man, the object-matter of liberality being the same, and without spending more money than another man he will make the work more magnificent. I mean, the excellence of a possession and of a work is not the same: as a piece of property that thing is most valuable which is worth most, gold for instance; but as a work that which is great and beautiful, because the contemplation of such an object is admirable, and so is that which is Magnificent. So the excellence of a work is Magnificence on a large scale. There are cases of expenditure which we call honourable, such as are dedicatory offerings to the gods, and the furnishing their temples, and sacrifices, and in like manner everything that has reference to the Deity, and all such public matters as are objects of honourable ambition, as when men think in any case that it is their duty to furnish a chorus for the stage splendidly, or fit out and maintain a trireme, or give a general public feast.

Now in all these, as has been already stated, respect is had also to the rank and the means of the man who is doing them: because they should be proportionate to these, and befit not the work only but also the doer of the work. For this reason a poor man cannot be a Magnificent man, since he has not means wherewith to spend largely and yet becomingly; and if he attempts it he is a fool, inasmuch as it is out of proportion and contrary to propriety, whereas to be in accordance with virtue a thing must be done rightly.

Such expenditure is fitting moreover for those to whom such things previously belong, either through themselves or through their ancestors or people with whom they are connected, and to the high-born or people of high repute, and so on: because all these things imply greatness and reputation.

So then the Magnificent man is pretty much as I have described him, and Magnificence consists in such expenditures: because they are the greatest and most honourable: and of private ones such as come but once for all, marriage to wit, and things of that kind; and any occasion which engages the interest of the community in general, or of those who are in power; and what concerns receiving and despatching strangers; and gifts, and repaying gifts: because the Magnificent man is not apt to spend upon himself but on the public good, and gifts are pretty much in the same case as dedicatory offerings.

It is characteristic also of the Magnificent man to furnish his house suitably to his wealth, for this also in a way reflects credit; and again, to spend rather upon such works as are of long duration, these being most honourable. And again, propriety in each case, because the same things are not suitable to gods and men, nor in a temple and a tomb. And again, in the case of expenditures, each must be great of its kind, and great expense on a great object is most magnificent, that is in any case what is great in these particular things.

There is a difference too between greatness of a work and greatness of expenditure: for instance, a very beautiful ball or cup is magnificent as a present to a child, while the price of it is small and almost mean. Therefore it is characteristic of the Magnificent man to do magnificently whatever he is about: for whatever is of this kind cannot be easily surpassed, and bears a proper proportion to the expenditure.

Such then is the Magnificent man.

The man who is in the state of excess, called one of Vulgar Profusion, is in excess because he spends improperly, as has been said. I mean in cases requiring small expenditure he lavishes much and shows off out of taste; giving his club a feast fit for a wedding-party, or if he has to furnish a chorus for a comedy, giving the actors purple to wear in the first scene, as did the Megarians. And all such things he will do, not with a view to that which is really honourable, but to display his wealth, and because he thinks he shall be admired for these things; and he will spend little where he ought to spend much, and much where he should spend little.

The Mean man will be deficient in every case, and even where he has spent the most he will spoil the whole effect for want of some trifle; he is procrastinating in all he does, and contrives how he may spend the least, and does even that with lamentations about the expense, and thinking that he does all things on a greater scale than he ought.

Of course, both these states are faulty, but they do not involve disgrace because they are neither hurtful to others nor very unseemly.

Chapter IV.

The very name of Great-mindedness implies, that great things are its object-matter; and we will first settle what kind of things. It makes no difference, of course, whether we regard the moral state in the abstract or as exemplified in an individual.

Well then, he is thought to be Great-minded who values himself highly and at the same time justly, because he that does so without grounds is foolish, and no virtuous character is foolish or senseless. Well, the character I have described is Great-minded. The man who estimates himself lowly, and at the same time justly, is modest; but not Great-minded, since this latter quality implies greatness, just as beauty implies a large bodily conformation while small people are neat and well made but not beautiful.

Again, he who values himself highly without just grounds is a Vain man: though the name must not be applied to every case of unduly high self-estimation. He that values himself below his real worth is Small-minded, and whether that worth is great, moderate, or small, his own estimate falls below it. And he is the strongest case of this error who is really a man of great worth, for what would he have done had his worth been less?

The Great-minded man is then, as far as greatness is concerned, at the summit, but in respect of propriety he is in the mean, because he estimates himself at his real value (the other characters respectively are in excess and defect). Since then he justly estimates himself at a high, or rather at the highest possible rate, his character will have respect specially to one thing: this term “rate” has reference of course to external goods: and of these we should assume that to be the greatest which we attribute to the gods, and which is the special object of desire to those who are in power, and which is the prize proposed to the most honourable actions: now honour answers to these descriptions, being the greatest of external goods. So the Great-minded man bears himself as he ought in respect of honour and dishonour. In fact, without need of words, the Great-minded plainly have honour for their object-matter: since honour is what the great consider themselves specially worthy of, and according to a certain rate.

The Small-minded man is deficient, both as regards himself, and also as regards the estimation of the Great-minded: while the Vain man is in excess as regards himself, but does not get beyond the Great-minded man. Now the Great-minded man, being by the hypothesis worthy of the greatest things, must be of the highest excellence, since the better a man is the more is he worth, and he who is best is worth the most: it follows then, that to be truly Great-minded a man must be good, and whatever is great in each virtue would seem to belong to the Great-minded. It would no way correspond with the character of the Great-minded to flee spreading his hands all abroad; nor to injure any one; for with what object in view will he do what is base, in whose eyes nothing is great? in short, if one were to go into particulars, the Great-minded man would show quite ludicrously unless he were a good man: he would not be in fact deserving of honour if he were a bad man, honour being the prize of virtue and given to the good.

This virtue, then, of Great-mindedness seems to be a kind of ornament of all the other virtues, in that it makes them better and cannot be without them; and for this reason it is a hard matter to be really and truly Great-minded; for it cannot be without thorough goodness and nobleness of character.

Honour then and dishonour are specially the object-matter of the Great-minded man: and at such as is great, and given by good men, he will be pleased moderately as getting his own, or perhaps somewhat less for no honour can be quite adequate to perfect virtue: but still he will accept this because they have nothing higher to give him. But such as is given by ordinary people and on trifling grounds he will entirely despise, because these do not come up to his deserts: and dishonour likewise, because in his case there cannot be just ground for it.

Now though, as I have said, honour is specially the object-matter of the Great-minded man, I do not mean but that likewise in respect of wealth and power, and good or bad fortune of every kind, he will bear himself with moderation, fall out how they may, and neither in prosperity will he be overjoyed nor in adversity will he be unduly pained. For not even in respect of honour does he so bear himself; and yet it is the greatest of all such objects, since it is the cause of power and wealth being choice-worthy, for certainly they who have them desire to receive honour through them. So to whom honour even is a small thing to him will all other things also be so; and this is why such men are thought to be supercilious.

It seems too that pieces of good fortune contribute to form this character of Great-mindedness: I mean, the nobly born, or men of influence, or the wealthy, are considered to be entitled to honour, for they are in a position of eminence and whatever is eminent by good is more entitled to honour: and this is why such circumstances dispose men rather to Great-mindedness, because they receive honour at the hands of some men.

Now really and truly the good man alone is entitled to honour; only if a man unites in himself goodness with these external advantages he is thought to be more entitled to honour: but they who have them without also having virtue are not justified in their high estimate of themselves, nor are they rightly denominated Great-minded; since perfect virtue is one of the indispensable conditions to such & character.

Further, such men become supercilious and insolent, it not being easy to bear prosperity well without goodness; and not being able to bear it, and possessed with an idea of their own superiority to others, they despise them, and do just whatever their fancy prompts; for they mimic the Great-minded man, though they are not like him, and they do this in such points as they can, so without doing the actions which can only flow from real goodness they despise others. Whereas the Great-minded man despises on good grounds (for he forms his opinions truly), but the mass of men do it at random.

Moreover, he is not a man to incur little risks, nor does he court danger, because there are but few things he has a value for; but he will incur great dangers, and when he does venture he is prodigal of his life as knowing that there are terms on which it is not worth his while to live. He is the sort of man to do kindnesses, but he is ashamed to receive them; the former putting a man in the position of superiority, the latter in that of inferiority; accordingly he will greatly overpay any kindness done to him, because the original actor will thus be laid under obligation and be in the position of the party benefited. Such men seem likewise to remember those they have done kindnesses to, but not those from whom they have received them: because he who has received is inferior to him who has done the kindness and our friend wishes to be superior; accordingly he is pleased to hear of his own kind acts but not of those done to himself (and this is why, in Homer, Thetis does not mention to Jupiter the kindnesses she had done him, nor did the Lacedæmonians to the Athenians but only the benefits they had received).

Further, it is characteristic of the Great-minded man to ask favours not at all, or very reluctantly, but to do a service very readily; and to bear himself loftily towards the great or fortunate, but towards people of middle station affably; because to be above the former is difficult and so a grand thing, but to be above the latter is easy; and to be high and mighty towards the former is not ignoble, but to do it towards those of humble station would be low and vulgar; it would be like parading strength against the weak.

And again, not to put himself in the way of honour, nor to go where others are the chief men; and to be remiss and dilatory, except in the case of some great honour or work; and to be concerned in few things, and those great and famous. It is a property of him also to be open, both in his dislikes and his likings, because concealment is a consequent of fear. Likewise to be careful for reality rather than appearance, and talk and act openly (for his contempt for others makes him a bold man, for which same reason he is apt to speak the truth, except where the principle of reserve comes in), but to be reserved towards the generality of men.

And to be unable to live with reference to any other but a friend; because doing so is servile, as may be seen in that all flatterers are low and men in low estate are flatterers. Neither is his admiration easily excited, because nothing is great in his eyes; nor does he bear malice, since remembering anything, and specially wrongs, is no part of Great-mindedness, but rather overlooking them; nor does he talk of other men; in fact, he will not speak either of himself or of any other; he neither cares to be praised himself nor to have others blamed; nor again does he praise freely, and for this reason he is not apt to speak ill even of his enemies except to show contempt and insolence.

And he is by no means apt to make laments about things which cannot be helped, or requests about those which are trivial; because to be thus disposed with respect to these things is consequent only upon real anxiety about them. Again, he is the kind of man to acquire what is beautiful and unproductive rather than what is productive and profitable: this being rather the part of an independent man.

Also slow motion, deep-toned voice, and deliberate style of speech, are thought to be characteristic of the Great-minded man: for he who is earnest about few things is not likely to be in a hurry, nor he who esteems nothing great to be very intent: and sharp tones and quickness are the result of these.

Chapter V.

This then is my idea of the Great-minded man; and he who is in the defect is a Small-minded man, he who is in the excess a Vain man. However, as we observed in respect of the last character we discussed, these extremes are not thought to be vicious exactly, but only mistaken, for they do no harm.

The Small-minded man, for instance, being really worthy of good deprives himself of his deserts, and seems to have somewhat faulty from not having a sufficiently high estimate of his own desert, in fact from self-ignorance: because, but for this, he would have grasped after what he really is entitled to, and that is good. Still such characters are not thought to be foolish, but rather laggards. But the having such an opinion of themselves seems to have a deteriorating effect on the character: because in all cases men's aims are regulated by their supposed desert, and thus these men, under a notion of their own want of desert, stand aloof from honourable actions and courses, and similarly from external goods.

But the Vain are foolish and self-ignorant, and that palpably: because they attempt honourable things, as though they were worthy, and then they are detected. They also set themselves off, by dress, and carriage, and such-like things, and desire that their good circumstances may be seen, and they talk of them under the notion of receiving honour thereby. Small-mindedness rather than Vanity is opposed to Great-mindedness, because it is more commonly met with and is worse.

Chapter VI.

Well, the virtue of Great-mindedness has for its object great Honour, as we have said: and there seems to be a virtue having Honour also for its object (as we stated in the former book), which may seem to bear to Great-mindedness the same relation that Liberality does to Magnificence: that is, both these virtues stand aloof from what is great but dispose us as we ought to be disposed towards moderate and small matters. Further: as in giving and receiving of wealth there is a mean state, an excess, and a defect, so likewise in grasping after Honour there is the more or less than is right, and also the doing so from right sources and in right manner.

For we blame the lover of Honour as aiming at Honour more than he ought, and from wrong sources; and him who is destitute of a love of Honour as not choosing to be honoured even for what is noble. Sometimes again we praise the lover of Honour as manly and having a love for what is noble, and him who has no love for it as being moderate and modest (as we noticed also in the former discussion of these virtues).

It is clear then that since "Lover of so and so" is a term capable of several meanings, we do not always denote the same quality by the term "Lover of Honour;" but when we use it as a term of commendation we denote more than the mass of men are; when for blame more than a man should be.

And the mean state having no proper name the extremes seem to dispute for it as unoccupied ground: but of course where there is excess and defect there must be also the mean. And in point of fact, men do grasp at Honour more than they should, and less, and sometimes just as they ought; for instance, this state is praised, being a mean state in regard of Honour, but without any appropriate name. Compared with what is called Ambition it shows like a want of love for Honour, and compared with this it shows like Ambition, or compared with both, like both faults: nor is this a singular case among the virtues. Here the extreme characters appear to be opposed, because the mean has no name appropriated to it.

Chapter VII.

Meekness is a mean state, having for its object-matter Anger: and as the character in the mean has no name, and we may almost say the same of the extremes, we give the name of Meekness (leaning rather to the defect, which has no name either) to the character in the mean.

The excess may be called an over-aptness to Anger: for the passion is Anger, and the producing causes many and various. Now he who is angry at what and with whom he ought, and further, in right manner and time, and for proper length of time, is praised, so this Man will be Meek since Meekness is praised. For the notion represented by the term Meek man is the being imperturbable, and not being led away by passion, but being angry in that manner, and at those things, and for that length of time, which Reason may

direct. This character however is thought to err rather on the side of defect, inasmuch as he is not apt to take revenge but rather to make allowances and forgive. And the defect, call it Angerlessness or what you will, is blamed: I mean, they who are not angry at things at which they ought to be angry are thought to be foolish, and they who are angry not in right manner, nor in right time, nor with those with whom they ought; for a man who labours under this defect is thought to have no perception, nor to be pained, and to have no tendency to avenge himself, inasmuch as he feels no anger: now to bear with scurrility in one's own person, and patiently see one's own friends suffer it, is a slavish thing.

As for the excess, it occurs in all forms; men are angry with those with whom, and at things with which, they ought not to be, and more than they ought, and too hastily, and for too great a length of time. I do not mean, however, that these are combined in any one person: that would in fact be impossible, because the evil destroys itself, and if it is developed in its full force it becomes unbearable.

Now those whom we term the Passionate are soon angry, and with people with whom and at things at which they ought not, and in an excessive degree, but they soon cool again, which is the best point about them. And this results from their not repressing their anger, but repaying their enemies (in that they show their feeings by reason of their vehemence), and then they have done with it.

The Choleric again are excessively vehement, and are angry at everything, and on every occasion; whence comes their Greek name signifying that their choler lies high.

The Bitter-tempered are hard to reconcile and keep their anger for a long while, because they repress the feeling: but when they have revenged themselves then comes a lull; for the vengeance destroys their anger by producing pleasure in lieu of pain. But if this does not happen they keep the weight on their minds: because, as it does not show itself, no one attempts to reason it away, and digesting anger within one's self takes time. Such men are very great nuisances to themselves and to their best friends.

Again, we call those Cross-grained who are angry at wrong objects, and in excessive degree, and for too long a time, and who are not appeased without vengeance or at least punishing the offender.

To Meekness we oppose the excess rather than the defect, because it is of more common occurrence: for human nature is more disposed to take than to forgo revenge. And the Cross-grained are worse to live with [than they who are too phlegmatic].

Now, from what has been here said, that is also plain which was said before. I mean, it is no easy matter to define how, and with what persons, and at what kind of things, and how long one ought to be angry, and up to what point a person is right or is wrong. For he that transgresses the strict rule only a little, whether on the side of too much or too little, is not blamed: sometimes we praise those who are deficient in the feeling and call them Meek, sometimes we call the irritable Spirited as being well qualified for government. So it is not easy to lay down, in so many words, for what degree or kind of transgression a man is blameable: because the decision is in particulars, and rests therefore with the Moral Sense. Thus much, however, is plain, that the mean state is praiseworthy, in virtue of which we are angry with those with whom, and at those things with which, we ought to be angry, and in right manner, and so on; while the excesses and defects are blameable, slightly so if only slight, more so if greater, and when considerable very blameable.

It is clear, therefore, that the mean state is what we are to hold to.

This then is to be taken as our account of the various moral states which have Anger for their object-matter.

Chapter VIII.

Next, as regards social intercourse and interchange of words and acts, some men are thought to be Over-Complaisant who, with a view solely to giving pleasure, agree to everything and never oppose, but think their line is to give no pain to those they are thrown amongst: they, on the other hand, are called Cross and Contentious who take exactly the contrary line to these, and oppose in everything, and have no care at all whether they give pain or not.

Now it is quite clear of course, that the states I have named are blameable, and that the mean between them is praiseworthy, in virtue of which a man will let pass what he ought as he ought, and also will object in like manner. However, this state has no name appropriated, but it is most like Friendship; since the man who exhibits it is just the kind of man whom we would call the amiable friend, with the addition of strong earnest affection; but then this is the very point in which it differs from Friendship, that it is quite independent of any feeling or strong affection for those among whom the man mixes: I mean, that he takes everything as he ought, not from any feeling of love or hatred, but simply because his natural disposition leads him to do so; he will do it alike to those

whom he does know and those whom he does not, and those with whom he is intimate and those with whom he is not; only in each case as propriety requires, because it is not fitting to care alike for intimates and strangers, nor again to pain them alike.

It has been stated in a general way that his social intercourse will be regulated by propriety, and his aim will be to avoid giving pain and to contribute to pleasure, but with a constant reference to what is noble and expedient.

His proper object-matter seems to be the pleasures and pains which arise out of social intercourse, but whenever it is not honourable or even hurtful to him to contribute to pleasure, in these instances he will run counter and prefer to give pain.

Or if the things in question involve unseemliness to the doer, and this not inconsiderable, or any harm, whereas his opposition will cause some little pain, here he will not agree but will run counter.

Again, he will regulate differently his intercourse with great men and with ordinary men, and with all people according to the knowledge he has of them; and in like manner, taking in any other differences which may exist, giving to each his due, and in itself preferring to give pleasure and cautious not to give pain, but still guided by the results, I mean by what is noble and expedient according as they preponderate.

Again, he will inflict trifling pain with a view to consequent pleasure.

Well, the man bearing the mean character is pretty well such as I have described him, but he has no name appropriated to him: of those who try to give pleasure, the man who simply and disinterestedly tries to be agreeable is called Over-Complaisant, he who does it with a view to secure some profit in the way of wealth, or those things which wealth may procure, is a Flatterer: I have said before, that the man who is “always non-content” is Cross and Contentious. Here the extremes have the appearance of being opposed to one another, because the mean has no appropriate name.

Chapter IX.

The mean state which steers clear of Exaggeration has pretty much the same object-matter as the last we described, and likewise has no name appropriated to it. Still it may be as well to go over these states: because, in the first place, by a particular discussion of each we shall be better acquainted with the general subject of moral character, and next we shall be the more convinced that the virtues are mean states by seeing that this is universally the case.

In respect then of living in society, those who carry on this intercourse with a view to pleasure and pain have been already spoken of; we will now go on to speak of those who are True or False, alike in their words and deeds and in the claims which they advance.

Now the Exaggerator is thought to have a tendency to lay claim to things reflecting credit on him, both when they do not belong to him at all and also in greater degree than that in which they really do: whereas the Reserved man, on the contrary, denies those which really belong to him or else depreciates them, while the mean character being a Plain-matter-of-fact person is Truthful in life and word, admitting the existence of what does really belong to him and making it neither greater nor less than the truth.

It is possible of course to take any of these lines either with or without some further view: but in general men speak, and act, and live, each according to his particular character and disposition, unless indeed a man is acting from any special motive.

Now since falsehood is in itself low and blameable, while truth is noble and praiseworthy, it follows that the Truthful man (who is also in the mean) is praiseworthy, and the two who depart from strict truth are both blameable, but especially the Exaggerator.

We will now speak of each, and first of the Truthful man: I call him Truthful, because we are not now meaning the man who is true in his agreements nor in such matters as amount to justice or injustice (this would come within the province of a different virtue), but, in such as do not involve any such serious difference as this, the man we are describing is true in life and word simply because he is in a certain moral state.

And he that is such must be judged to be a good man: for he that has a love for Truth as such, and is guided by it in matters indifferent, will be so likewise even more in such as are not indifferent; for surely he will have a dread of falsehood as base, since he shunned it even in itself: and he that is of such a character is praiseworthy, yet he leans rather to that which is below the truth, this having an appearance of being in better taste because exaggerations are so hateful.

As for the man who lays claim to things above what really belongs to him _without_ any special motive, he is like a base man because he would not otherwise have taken pleasure in falsehood, but he shows as a fool rather than as a knave. But if a man

does this _with_ a special motive, suppose for honour or glory, as the Braggart does, then he is not so very blameworthy, but if, directly or indirectly, for pecuniary considerations, he is more unseemly.

Now the Braggart is such not by his power but by his purpose, that is to say, in virtue of his moral state, and because he is a man of a certain kind; just as there are liars who take pleasure in falsehood for its own sake while others lie from a desire of glory or gain. They who exaggerate with a view to glory pretend to such qualities as are followed by praise or highest congratulation; they who do it with a view to gain assume those which their neighbours can avail themselves of, and the absence of which can be concealed, as a man's being a skilful soothsayer or physician; and accordingly most men pretend to such things and exaggerate in this direction, because the faults I have mentioned are in them.

The Reserved, who depreciate their own qualities, have the appearance of being more refined in their characters, because they are not thought to speak with a view to gain but to avoid grandeur: one very common trait in such characters is their denying common current opinions, as Socrates used to do. There are people who lay claim falsely to small things and things the falsity of their pretensions to which is obvious; these are called Factotums and are very despicable.

This very Reserve sometimes shows like Exaggeration; take, for instance, the excessive plainness of dress affected by the Lacedæmonians: in fact, both excess and the extreme of deficiency partake of the nature of Exaggeration. But they who practise Reserve in moderation, and in cases in which the truth is not very obvious and plain, give an impression of refinement. Here it is the Exaggerator (as being the worst character) who appears to be opposed to the Truthful Man.

Chapter X.

Next, as life has its pauses and in them admits of pastime combined with Jocularity, it is thought that in this respect also there is a kind of fitting intercourse, and that rules may be prescribed as to the kind of things one should say and the manner of saying them; and in respect of hearing likewise (and there will be a difference between the saying and hearing such and such things). It is plain that in regard to these things also there will be an excess and defect and a mean.

Now they who exceed in the ridiculous are judged to be Buffoons and Vulgar, catching at it in any and every way and at any cost, and aiming rather at raising laughter than at saying what is seemly and at avoiding to pain the object of their wit. They, on the other hand, who would not for the world make a joke themselves and are displeased with such as do are thought to be Clownish and Stern. But they who are Jocular in good taste are denominated by a Greek term expressing properly ease of movement, because such are thought to be, as one may say, motions of the moral character; and as bodies are judged of by their motions so too are moral characters.

Now as the ridiculous lies on the surface, and the majority of men take more pleasure than they ought in Jocularity and Jesting, the Buffoons too get this name of Easy Pleasantry, as if refined and gentlemanlike; but that they differ from these, and considerably too, is plain from what has been said.

One quality which belongs to the mean state is Tact: it is characteristic of a man of Tact to say and listen to such things as are fit for a good man and a gentleman to say and listen to: for there are things which are becoming for such a one to say and listen to in the way of Jocularity, and there is a difference between the Jocularity of the Gentleman and that of the Vulgarian; and again, between that of the educated and uneducated man. This you may see from a comparison of the Old and New Comedy: in the former obscene talk made the fun; in the latter it is rather innuendo: and this is no slight difference _as regards decency_.

Well then, are we to characterise him who jests well by his saying what is becoming a gentleman, or by his avoiding to pain the object of his wit, or even by his giving him pleasure? or will not such a definition be vague, since different things are hateful and pleasant to different men?

Be this as it may, whatever he says such things will he also listen to, since it is commonly held that a man will do what he will bear to hear: this must, however, be limited; a man will not do quite all that he will hear: because jesting is a species of scurrility and there are some points of scurrility forbidden by law; it may be certain points of jesting should have been also so forbidden. So then the refined and gentlemanlike man will bear himself thus as being a law to himself. Such is the mean character, whether denominated the man of Tact or of Easy Pleasantry.

But the Buffoon cannot resist the ridiculous, sparing neither himself nor any one else so that he can but raise his laugh, saying things of such kind as no man of refinement would say and some which he would not even tolerate if said by others in his hearing.

The Clownish man is for such intercourse wholly useless: inasmuch as contributing nothing jocose of his own he is savage with all who do.

Yet some pause and amusement in life are generally judged to be indispensable.

The three mean states which have been described do occur in life, and the object-matter of all is interchange of words and deeds. They differ, in that one of them is concerned with truth, and the other two with the pleasurable: and of these two again, the one is conversant with the jocosities of life, the other with all other points of social intercourse.

Chapter XI.

To speak of Shame as a Virtue is incorrect, because it is much more like a feeling than a moral state. It is defined, we know, to be "a kind of fear of disgrace," and its effects are similar to those of the fear of danger, for they who feel Shame grow red and they who fear death turn pale. So both are evidently in a way physical, which is thought to be a mark of a feeling rather than a moral state.

Moreover, it is a feeling not suitable to every age, but only to youth: we do think that the young should be Shamefaced, because since they live at the beck and call of passion they do much that is wrong and Shame acts on them as a check. In fact, we praise such young men as are Shamefaced, but no one would ever praise an old man for being given to it, inasmuch as we hold that he ought not to do things which cause Shame; for Shame, since it arises at low bad actions, does not at all belong to the good man, because such ought not to be done at all: nor does it make any difference to allege that some things are disgraceful really, others only because they are thought so; for neither should be done, so that a man ought not to be in the position of feeling Shame. In truth, to be such a man as to do anything disgraceful is the part of a faulty character. And for a man to be such that he would feel Shame if he should do anything disgraceful, and to think that this constitutes him a good man, is absurd: because Shame is felt at voluntary actions only, and a good man will never voluntarily do what is base.

True it is, that Shame may be good on a certain supposition, as "if a man should do such things, he would feel Shame:" but then the Virtues are good in themselves, and not merely in supposed cases. And, granted that impudence and the not being ashamed to do what is disgraceful is base, it does not the more follow that it is good for a man to do such things and feel Shame.

Nor is Self-Control properly a Virtue, but a kind of mixed state: however, all about this shall be set forth in a future Book.

BOOK V

Chapter I.

Now the points for our enquiry in respect of Justice and Injustice are, what kind of actions are their object-matter, and what kind of a mean state Justice is, and between what points the abstract principle of it, i.e. the Just, is a mean. And our enquiry shall be, if you please, conducted in the same method as we have observed in the foregoing parts of this Treatise.

We see then that all men mean by the term Justice a moral state such that in consequence of it men have the capacity of doing what is just, and actually do it, and wish it:[1] similarly also with respect to Injustice, a moral state such that in consequence of it men do unjustly and wish what is unjust: let us also be content then with these as a ground-work sketched out.

I mention the two, because the same does not hold with regard to States whether of mind or body as with regard to Sciences or Faculties: I mean that whereas it is thought that the same Faculty or Science embraces contraries, a State will not: from health, for instance, not the contrary acts are done but the healthy ones only; we say a man walks healthily when he walks as the healthy man would.

However, of the two contrary states the one may be frequently known from the other, and oftentimes the states from their subject-matter: if it be seen clearly what a good state of body is, then is it also seen what a bad state is, and from the things which belong to a good state of body the good state itself is seen, and _vice versâ_. If, for instance, the good state is firmness of flesh it follows that the bad state is flabbiness of flesh; and whatever causes firmness of flesh is connected with the good state.

It follows moreover in general,[2] that if of two contrary terms the one is used in many senses so also will the other be; as, for instance, if "the Just," then also "the Unjust." Now Justice and Injustice do seem to be used respectively in many senses, but, because the line of demarcation between these is very fine and minute,[3] it commonly escapes notice that they are thus used, and it is not plain and manifest as where the various significations of terms are widely different for in these last the visible difference is

great, for instance, the word κλε■ς is used equivocally to denote the bone which is under the neck of animals and the instrument with which people close doors.

Let it be ascertained then in how many senses the term “Unjust man” is used. Well, he who violates the law, and he who is a grasping man, and the unequal man, are all thought to be Unjust and so manifestly the Just man will be, the man who acts according to law, and the equal man “The Just” then will be the lawful and the equal, and “the Unjust” the unlawful and the unequal.

Well, since the Unjust man is also a grasping man, he will be so, of course, with respect to good things, but not of every kind, only those which are the subject-matter of good and bad fortune and which are in themselves always good but not always to the individual.[4] Yet men pray for and pursue these things: this they should not do but pray that things which are in the abstract good may be so also to them, and choose what is good for themselves.

But the Unjust man does not always choose actually the greater part, but even sometimes the less; as in the case of things which are simply evil: still, since the less evil is thought to be in a manner a good and the grasping is after good, therefore even in this case he is thought to be a grasping man, _i.e._ one who strives for more good than fairly falls to his share: of course he is also an unequal man, this being an inclusive and common term.

Chapter II.

We said that the violator of Law is Unjust, and the keeper of the Law Just: further, it is plain that all Lawful things are in a manner Just, because by Lawful we understand what have been defined by the legislative power and each of these we say is Just. The Laws too give directions on all points, aiming either at the common good of all, or that of the best, or that of those in power (taking for the standard real goodness or adopting some other estimate); in one way we mean by Just, those things which are apt to produce and preserve happiness and its ingredients for the social community.

Further, the Law commands the doing the deeds not only of the brave man (as not leaving the ranks, nor flying, nor throwing away one’s arms), but those also of the perfectly self-mastering man, as abstinence from adultery and wantonness; and those of the meek man, as refraining from striking others or using abusive language: and in like manner in respect of the other virtues and vices commanding some things and forbidding others, rightly if it is a good law, in a way somewhat inferior if it is one extemporised.

Now this Justice is in fact perfect Virtue, yet not simply so but as exercised towards one’s neighbour: and for this reason Justice is thought oftentimes to be the best of the Virtues, and

“neither Hesper nor the Morning-star So worthy of our admiration:”

and in a proverbial saying we express the same;

“All virtue is in Justice comprehended.”

And it is in a special sense perfect Virtue because it is the practice of perfect Virtue. And perfect it is because he that has it is able to practise his virtue towards his neighbour and not merely on himself; I mean, there are many who can practise virtue in the regulation of their own personal conduct who are wholly unable to do it in transactions with their neighbour. And for this reason that saying of Bias is thought to be a good one,

“Rule will show what a man is;”

for he who bears Rule is necessarily in contact with others, i.e. in a community. And for this same reason Justice alone of all the Virtues is thought to be a good to others, because it has immediate relation to some other person, inasmuch as the Just man does what is advantageous to another, either to his ruler or fellow-subject. Now he is the basest of men who practises vice not only in his own person,[5] but towards his friends also; but he the best who practises virtue not merely in his own person but towards his neighbour, for this is a matter of some difficulty.

However, Justice in this sense is not a part of Virtue but is co-extensive with Virtue; nor is the Injustice which answers to it a part of Vice but co-extensive with Vice. Now wherein Justice in this sense differs from Virtue appears from what has been said: it is the same really, but the point of view is not the same: in so far as it has respect to one’s neighbour it is Justice, in so far as it is such and such a moral state it is simply Virtue.

Chapter III.

But the object of our enquiry is Justice, in the sense in which it is a part of Virtue (for there is such a thing, as we commonly say), and likewise with respect to particular Injustice. And of the existence of this last the following consideration is a proof: there are many vices by practising which a man acts unjustly, of course, but does not grasp at more than his share of good; if, for instance, by reason of cowardice he throws away his shield, or by reason of ill-temper he uses abusive language, or by reason of stinginess does not give a friend pecuniary assistance; but whenever he does a grasping action, it is often in the way of none of these vices, certainly not in all of them, still in the way of some vice or other (for we blame him), and in the way of Injustice. There is then some kind of Injustice distinct from that co-extensive with Vice and related to it as a part to a whole, and some “Unjust” related to that which is co-extensive with violation of the law as a part to a whole.

Again, suppose one man seduces a man’s wife with a view to gain and actually gets some advantage by it,[6] and another does the same from impulse of lust, at an expense of money and damage; this latter will be thought to be rather destitute of self-mastery than a grasping man, and the former Unjust but not destitute of self-mastery: now why? plainly because of his gaining.

Again, all other acts of Injustice we refer to some particular depravity, as, if a man commits adultery, to abandonment to his passions; if he deserts his comrade, to cowardice; if he strikes another, to anger: but if he gains by the act to no other vice than to Injustice.

Thus it is clear that there is a kind of Injustice different from and besides that which includes all Vice, having the same name because the definition is in the same genus; for both have their force in dealings with others, but the one acts upon honour, or wealth, or safety, or by whatever one name we can include all these things, and is actuated by pleasure attendant on gain, while the other acts upon all things which constitute the sphere of the good man’s action.

Chapter IV.

Now that there is more than one kind of Justice, and that there is one which is distinct from and besides that which is co-extensive with, Virtue, is plain: we must next ascertain what it is, and what are its characteristics.

Well, the Unjust has been divided into the unlawful and the unequal, and the Just accordingly into the lawful and the equal: the aforementioned Injustice is in the way of the unlawful. And as the unequal and the more[7] are not the same, but differing as part to whole (because all more is unequal, but not all unequal more), so the Unjust and the Injustice we are now in search of are not the same with, but other than, those before mentioned, the one being the parts, the other the wholes; for this particular Injustice is a part of the Injustice co-extensive with Vice, and likewise this Justice of the Justice co-extensive with Virtue. So that what we have now to speak of is the particular Justice and Injustice, and likewise the particular Just and Unjust.

Here then let us dismiss any further consideration of the Justice ranking as co-extensive with Virtue (being the practice of Virtue in all its bearings towards others), and of the co-relative Injustice (being similarly the practice of Vice). It is clear too, that we must separate off the Just and the Unjust involved in these: because one may pretty well say that most lawful things are those which naturally result in action from Virtue in its fullest sense, because the law enjoins the living in accordance with each Virtue and forbids living in accordance with each Vice. And the producing causes of Virtue in all its bearings are those enactments which have been made respecting education for society.

By the way, as to individual education, in respect of which a man is simply good without reference to others, whether it is the province of πολιτικ■ or some other science we must determine at a future time: for it may be it is not the same thing to be a good man and a good citizen in every case.[8]

Chapter V.

Now of the Particular Justice, and the Just involved in it, one species is that which is concerned in the distributions of honour, or wealth, or such other things as are to be shared among the members of the social community (because in these one man as compared with another may have either an equal or an unequal share), and the other is that which is Corrective in the various transactions between man and man.

And of this latter there are two parts: because of transactions some are voluntary and some involuntary; voluntary, such as follow; selling, buying, use, bail, borrowing, deposit, hiring: and this class is called voluntary because the origination of these transactions is voluntary.

The involuntary again are either such as effect secrecy; as theft, adultery, poisoning, pimping, kidnapping of slaves, assassination, false witness; or accompanied with open violence; as insult, bonds, death, plundering, maiming, foul language, slanderous abuse.

Chapter VI.

Well, the unjust man we have said is unequal, and the abstract “Unjust” unequal: further, it is plain that there is some mean of the unequal, that is to say, the equal or exact half (because in whatever action there is the greater and the less there is also the equal, i.e. the exact half). If then the Unjust is unequal the Just is equal, which all must allow without further proof: and as the equal is a mean the Just must be also a mean. Now the equal implies two terms at least: it follows then that the Just is both a mean and equal, and these to certain persons; and, in so far as it is a mean, between certain things (that is, the greater and the less), and, so far as it is equal, between two, and in so far as it is just it is so to certain persons. The Just then must imply four terms at least, for those[9] to which it is just are two, and the terms representing the things are two.

And there will be the same equality between the terms representing the persons, as between those representing the things: because as the latter are to one another so are the former: for if the persons are not equal they must not have equal shares; in fact this is the very source of all the quarrelling and wrangling in the world, when either they who are equal have and get awarded to them things not equal, or being not equal those things which are equal. Again, the necessity of this equality of ratios is shown by the common phrase “according to rate,” for all agree that the Just in distributions ought to be according to some rate: but what that rate is to be, all do not agree; the democrats are for freedom, oligarchs for wealth, others for nobleness of birth, and the aristocratic party for virtue.

The Just, then, is a certain proportionable thing. For proportion does not apply merely to number in the abstract,[10] but to number generally, since it is equality of ratios, and implies four terms at least (that this is the case in what may be called discrete proportion is plain and obvious, but it is true also in continual proportion, for this uses the one term as two, and mentions it twice; thus A:B:C may be expressed A:B::B:C. In the first, B is named twice; and so, if, as in the second, B is actually written twice, the proportionals will be four): and the Just likewise implies four terms at the least, and the ratio between the two pair of terms is the same, because the persons and the things are divided similarly. It will stand then thus, A:B::C:D, and then permutando A:C::B:D, and then (supposing C and D to represent the things) A+C:B+D::A:B. The distribution in fact consisting in putting together these terms thus: and if they are put together so as to preserve this same ratio, the distribution puts them together justly.[11] So then the joining together of the first and third and second and fourth proportionals is the Just in the distribution, and this Just is the mean relatively to that which violates the proportionate, for the proportionate is a mean and the Just is proportionate. Now mathematicians call this kind of proportion geometrical: for in geometrical proportion the whole is to the whole as each part to each part. Furthermore this proportion is not continual, because the person and thing do not make up one term.

The Just then is this proportionate, and the Unjust that which violates the proportionate; and so there comes to be the greater and the less: which in fact is the case in actual transactions, because he who acts unjustly has the greater share and he who is treated unjustly has the less of what is good: but in the case of what is bad this is reversed: for the less evil compared with the greater comes to be reckoned for good, because the less evil is more choice-worthy than the greater, and what is choice-worthy is good, and the more so the greater good.

This then is the one species of the Just.

Chapter VII.

And the remaining one is the Corrective, which arises in voluntary as well as involuntary transactions. Now this just has a different form from the aforementioned; for that which is concerned in distribution of common property is always according to the aforementioned proportion: I mean that, if the division is made out of common property, the shares will bear the same proportion to one another as the original contributions did: and the Unjust which is opposite to this Just is that which violates the proportionate.

But the Just which arises in transactions between men is an equal in a certain sense, and the Unjust an unequal, only not in the way of that proportion but of arithmetical.[12] Because it makes no difference whether a robbery, for instance, is committed by a good man on a bad or by a bad man on a good, nor whether a good or a bad man has committed adultery: the law looks only to the difference created by the injury and treats the men as previously equal, where the one does and the other suffers injury, or the one has done and the other suffered harm. And so this Unjust, being unequal, the judge endeavours to reduce to equality again, because really when the one party has been wounded and the other has struck him, or the one kills and the other dies, the suffering

and the doing are divided into unequal shares; well, the judge tries to restore equality by penalty, thereby taking from the gain.

For these terms gain and loss are applied to these cases, though perhaps the term in some particular instance may not be strictly proper, as gain, for instance, to the man who has given a blow, and loss to him who has received it: still, when the suffering has been estimated, the one is called loss and the other gain.

And so the equal is a mean between the more and the less, which represent gain and loss in contrary ways (I mean, that the more of good and the less of evil is gain, the less of good and the more of evil is loss): between which the equal was stated to be a mean, which equal we say is Just: and so the Corrective Just must be the mean between loss and gain. And this is the reason why, upon a dispute arising, men have recourse to the judge: going to the judge is in fact going to the Just, for the judge is meant to be the personification of the Just.[13] And men seek a judge as one in the mean, which is expressed in a name given by some to judges (μεσ■διοι, or middle-men) under the notion that if they can hit on the mean they shall hit on the Just. The Just is then surely a mean since the judge is also.

So it is the office of a judge to make things equal, and the line, as it were, having been unequally divided, he takes from the greater part that by which it exceeds the half, and adds this on to the less. And when the whole is divided into two exactly equal portions then men say they have their own, when they have gotten the equal; and the equal is a mean between the greater and the less according to arithmetical equality.

This, by the way, accounts for the etymology of the term by which we in Greek express the ideas of Just and Judge; (δ■καιον quasi δ■χαιον, that is in two parts, and δικ■στης quasi διχ■στης, he who divides into two parts). For when from one of two equal magnitudes somewhat has been taken and added to the other, this latter exceeds the former by twice that portion: if it had been merely taken from the former and not added to the latter, then the latter would have exceeded the former only by that one portion; but in the other case, the greater exceeds the mean by one, and the mean exceeds also by one that magnitude from which the portion was taken. By this illustration, then, we obtain a rule to determine what one ought to take from him who has the greater, and what to add to him who has the less. The excess of the mean over the less must be added to the less, and the excess of the greater over the mean be taken from the greater.

Thus let there be three straight lines equal to one another. From one of them cut off a portion, and add as much to another of them. The whole line thus made will exceed the remainder of the first-named line, by twice the portion added, and will exceed the untouched line by that portion.[14] And these terms loss and gain are derived from voluntary exchange: that is to say, the having more than what was one's own is called gaining, and the having less than one's original stock is called losing; for instance, in buying or selling, or any other transactions which are guaranteed by law: but when the result is neither more nor less, but exactly the same as there was originally,[15] people say they have their own, and neither lose nor gain.

So then the Just we have been speaking of is a mean between loss and gain arising in involuntary transactions; that is, it is the having the same after the transaction as one had before it took place.

Chapter VIII.

There are people who have a notion that Reciprocation is simply just, as the Pythagoreans said: for they defined the Just simply and without qualification as "That which reciprocates with another." But this simple Reciprocation will not fit on either to the Distributive Just, or the Corrective (and yet this is the interpretation they put on the Rhadamanthian rule of Just,

If a man should suffer what he hath done, then there would be straightforward justice;")

for in many cases differences arise: as, for instance, suppose one in authority has struck a man, he is not to be struck in turn; or if a man has struck one in authority, he must not only be struck but punished also.[16] And again, the voluntariness or involuntariness of actions makes a great difference.

But in dealings of exchange such a principle of Justice as this Reciprocation forms the bond of union, but then it must be Reciprocation according to proportion and not exact equality, because by proportionate reciprocity of action the social community is held together, For either Reciprocation of evil is meant, and if this be not allowed it is thought to be a servile condition of things: or else Reciprocation of good, and if this be not effected then there is no admission to participation which is the very bond of their union.

And this is the moral of placing the Temple of the Graces (χ■ριτες) in the public streets; to impress the notion that there may be requital, this being peculiar to χ■ρις[17] because a man ought to requite with a good turn the man who has done him a favour and then to become himself the originator of another χ■ρις, by doing him a favour.

Now the acts of mutual giving in due proportion may be represented by the diameters of a parallelogram, at the four angles of which the parties and their wares are so placed that the side connecting the parties be opposite to that connecting the wares, and each party be connected by one side with his own ware, as in the accompanying diagram.

[Illustration]

The builder is to receive from the shoemaker of his ware, and to give him of his own: if then there be first proportionate equality, and _then_ the Reciprocation takes place, there will be the just result which we are speaking of: if not, there is not the equal, nor will the connection stand: for there is no reason why the ware of the one may not be better than that of the other, and therefore before the exchange is made they must have been equalised. And this is so also in the other arts: for they would have been destroyed entirely if there were not a correspondence in point of quantity and quality between the producer and the consumer. For, we must remember, no dealing arises between two of the same kind, two physicians, for instance; but say between a physician and agriculturist, or, to state it generally, between those who are different and not equal, but these of course must have been equalised before the exchange can take place.

It is therefore indispensable that all things which can be exchanged should be capable of comparison, and for this purpose money has come in, and comes to be a kind of medium, for it measures all things and so likewise the excess and defect; for instance, how many shoes are equal to a house or a given quantity of food. As then the builder to the shoemaker, so many shoes must be to the house (or food, if instead of a builder an agriculturist be the exchanging party); for unless there is this proportion there cannot be exchange or dealing, and this proportion cannot be unless the terms are in some way equal; hence the need, as was stated above, of some one measure of all things. Now this is really and truly the Demand for them, which is the common bond of all such dealings. For if the parties were not in want at all or not similarly of one another's wares, there would either not be any exchange, or at least not the same.

And money has come to be, by general agreement, a representative of Demand: and the account of its Greek name νομισμα is this, that it is what it is not naturally but by custom or law (ν■μος), and it rests with us to change its value, or make it wholly useless.

Very well then, there will be Reciprocation when the terms have been equalised so as to stand in this proportion; Agriculturist : Shoemaker : : wares of Shoemaker : wares of Agriculturist; but you must bring them to this form of proportion when they exchange, otherwise the one extreme will combine both exceedings of the mean:[18] but when they have exactly their own then they are equal and have dealings, because the same equality can come to be in their case. Let A represent an agriculturist, C food, B a shoemaker, D his wares equalised with A's. Then the proportion will be correct, A:B::C:D; _now_ Reciprocation will be practicable, if it were not, there would have been no dealing.

Now that what connects men in such transactions is Demand, as being some one thing, is shown by the fact that, when either one does not want the other or neither want one another, they do not exchange at all: whereas they do[19] when one wants what the other man has, wine for instance, giving in return corn for exportation.

And further, money is a kind of security to us in respect of exchange at some future time (supposing that one wants nothing now that we shall have it when we do): the theory of money being that whenever one brings it one can receive commodities in exchange: of course this too is liable to depreciation, for its purchasing power is not always the same, but still it is of a more permanent nature than the commodities it represents. And this is the reason why all things should have a price set upon them, because thus there may be exchange at any time, and if exchange then dealing. So money, like a measure, making all things commensurable equalises them: for if there was not exchange there would not have been dealing, nor exchange if there were not equality, nor equality if there were not the capacity of being commensurate: it is impossible that things so greatly different should be really commensurate, but we can approximate sufficiently for all practical purposes in reference to Demand. The common measure must be some one thing, and also from agreement (for which reason it is called ν■μισμα), for this makes all things commensurable: in fact, all things are measured by money. Let B represent ten minæ, A a house worth five minæ, or in other words half B, C a bed worth 1/10th of B: it is clear then how many beds are equal to one house, namely, five.

It is obvious also that exchange was thus conducted before the existence of money: for it makes no difference whether you give for a house five beds or the price of five beds.

Chapter IX.

We have now said then what the abstract Just and Unjust are, and these having been defined it is plain that just acting is a mean between acting unjustly and being acted unjustly towards: the former being equivalent to having more, and the latter to having less.

But Justice, it must be observed, is a mean state not after the same manner as the forementioned virtues, but because it aims at producing the mean, while Injustice occupies _both_ the extremes.

And Justice is the moral state in virtue of which the just man is said to have the aptitude for practising the Just in the way of moral choice, and for making division between, himself and another, or between two other men, not so as to give to himself the greater and to his neighbour the less share of what is choice-worthy and contrariwise of what is hurtful, but what is proportionably equal, and in like manner when adjudging the rights of two other men.

Injustice is all this with respect to the Unjust: and since the Unjust is excess or defect of what is good or hurtful respectively, in violation of the proportionate, therefore Injustice is both excess and defect because it aims at producing excess and defect; excess, that is, in a man's own case of what is simply advantageous, and defect of what is hurtful: and in the case of other men in like manner generally speaking, only that the proportionate is violated not always in one direction as before but whichever way it happens in the given case. And of the Unjust act the less is being acted unjustly towards, and the greater the acting unjustly towards others.[20]

Let this way of describing the nature of Justice and Injustice, and likewise the Just and the Unjust generally, be accepted as sufficient.

Chapter X.

[Again, since a man may do unjust acts and not yet have formed a character of injustice, the question arises whether a man is unjust in each particular form of injustice, say a thief, or adulterer, or robber, by doing acts of a given character.

We may say, I think, that this will not of itself make any difference; a man may, for instance, have had connection with another's wife, knowing well with whom he was sinning, but he may have done it not of deliberate choice but from the impulse of passion: of course he acts unjustly, but he has not necessarily formed an unjust character: that is, he may have stolen yet not be a thief; or committed an act of adultery but still not be an adulterer, and so on in other cases which might be enumerated.][21]

Of the relation which Reciprocation bears to the Just we have already spoken: and here it should be noticed that the Just which we are investigating is both the Just in the abstract and also as exhibited in Social Relations, which latter arises in the case of those who live in communion with a view to independence and who are free and equal either proportionately or numerically.[22]

It follows then that those who are not in this position have not among themselves the Social Just, but still Just of some kind and resembling that other. For Just implies mutually acknowledged law, and law the possibility of injustice, for adjudication is the act of distinguishing between the Just and the Unjust.

And among whomsoever there is the possibility of injustice among these there is that of acting unjustly; but it does not hold conversely that injustice attaches to all among whom there is the possibility of acting unjustly, since by the former we mean giving one's self the larger share of what is abstractedly good and the less of what is abstractedly evil.

This, by the way, is the reason why we do not allow a man to govern, but Principle, because a man governs for himself and comes to be a despot: but the office of a ruler is to be guardian of the Just and therefore of the Equal. Well then, since he seems to have no peculiar personal advantage, supposing him a Just man, for in this case he does not allot to himself the larger share of what is abstractedly good unless it falls to his share proportionately (for which reason he really governs for others, and so Justice, men say, is a good not to one's self so much as to others, as was mentioned before), therefore some compensation must be given him, as there actually is in the shape of honour and privilege; and wherever these are not adequate there rulers turn into despots.

But the Just which arises in the relations of Master and Father, is not identical with, but similar to, these; because there is no possibility of injustice towards those things which are absolutely one's own; and a slave or child (so long as this last is of a certain age and not separated into an independent being), is, as it were, part of a man's self, and no man chooses to hurt himself, for which

reason there cannot be injustice towards one's own self: therefore neither is there the social Unjust or Just, which was stated to be in accordance with law and to exist between those among whom law naturally exists, and these were said to be they to whom belongs equality of ruling and being ruled.

Hence also there is Just rather between a man and his wife than between a man and his children or slaves; this is in fact the Just arising in domestic relations: and this too is different from the Social Just.

Further, this last-mentioned Just is of two kinds, natural and conventional; the former being that which has everywhere the same force and does not depend upon being received or not; the latter being that which originally may be this way or that indifferently but not after enactment: for instance, the price of ransom being fixed at a mina, or the sacrificing a goat instead of two sheep; and again, all cases of special enactment, as the sacrificing to Brasidas as a hero; in short, all matters of special decree.

But there are some men who think that all the Justs are of this latter kind, and on this ground: whatever exists by nature, they say, is unchangeable and has everywhere the same force; fire, for instance, burns not here only but in Persia as well, but the Justs they see changed in various places.

Now this is not really so, and yet it is in a way (though among the gods perhaps by no means): still even amongst ourselves there is somewhat existing by nature: allowing that everything is subject to change, still there is that which does exist by nature, and that which does not.[23]

Nay, we may go further, and say that it is practically plain what among things which can be otherwise does exist by nature, and what does not but is dependent upon enactment and conventional, even granting that both are alike subject to be changed: and the same distinctive illustration will apply to this and other cases; the right hand is naturally the stronger, still some men may become equally strong in both.

A parallel may be drawn between the Justs which depend upon convention and expedience, and measures; for wine and corn measures are not equal in all places, but where men buy they are large, and where these same sell again they are smaller: well, in like manner the Justs which are not natural, but of human invention, are not everywhere the same, for not even the forms of government are, and yet there is one only which by nature would be best in all places.

Chapter XI.

Now of Justs and Lawfuls each bears to the acts which embody and exemplify it the relation of an universal to a particular; the acts being many, but each of the principles only singular because each is an universal. And so there is a difference between an unjust act and the abstract Unjust, and the just act and the abstract Just: I mean, a thing is unjust in itself, by nature or by ordinance; well, when this has been embodied in act, there is an unjust act, but not till then, only some unjust thing.[24] And similarly of a just act. (Perhaps δικαιοπρ■γημα is more correctly the common or generic term for just act, the word δικα■ωμα, which I have here used, meaning generally and properly the act corrective of the unjust act.) Now as to each of them, what kinds there are, and how many, and what is their object-matter, we must examine afterwards.

For the present we proceed to say that, the Justs and the Unjusts being what have been mentioned, a man is said to act unjustly or justly when he embodies these abstracts in voluntary actions, but when in involuntary, then he neither acts unjustly or justly except accidentally; I mean that the being just or unjust is really only accidental to the agents in such cases.

So both unjust and just actions are limited by the being voluntary or the contrary: for when an embodying of the Unjust is voluntary, then it is blamed and is at the same time also an unjust action: but, if voluntariness does not attach, there will be a thing which is in itself unjust but not yet an unjust action.

By voluntary, I mean, as we stated before, whatsoever of things in his own power a man does with knowledge, and the absence of ignorance as to the person to whom, or the instrument with which, or the result with which he does; as, for instance, whom he strikes, what he strikes him with, and with what probable result; and each of these points again, not accidentally nor by compulsion; as supposing another man were to seize his hand and strike a third person with it, here, of course, the owner of the hand acts not voluntarily, because it did not rest with him to do or leave undone: or again, it is conceivable that the person struck may be his father, and he may know that it is a man, or even one of the present company, whom he is striking, but not know that it is his father. And let these same distinctions be supposed to be carried into the case of the result and in fact the whole of any given action. In fine then, that is involuntary which is done through ignorance, or which, not resulting from ignorance, is not in the agent's control or

is done on compulsion.

I mention these cases, because there are many natural things which we do and suffer knowingly but still no one of which is either voluntary or involuntary, growing old, or dying, for instance.

Again, accidentality may attach to the unjust in like manner as to the just acts. For instance, a man may have restored what was deposited with him, but against his will and from fear of the consequences of a refusal: we must not say that he either does what is just, or does justly, except accidentally: and in like manner the man who through compulsion and against his will fails to restore a deposit, must be said to do unjustly, or to do what is unjust, accidentally only.

Again, voluntary actions we do either from deliberate choice or without it; from it, when we act from previous deliberation; without it, when without any previous deliberation. Since then hurts which may be done in transactions between man and man are threefold, those mistakes which are attended with ignorance are, when a man either does a thing not to the man to whom he meant to do it, or not the thing he meant to do, or not with the instrument, or not with the result which he intended: either he did not think he should hit him at all, or not with this, or this is not the man he thought he should hit, or he did not think this would be the result of the blow but a result has followed which he did not anticipate; as, for instance, he did it not to wound but merely to prick him; or it is not the man whom, or the way in which, he meant.

Now when the hurt has come about contrary to all reasonable expectation, it is a Misadventure; when though not contrary to expectation yet without any viciousness, it is a Mistake; for a man makes a mistake when the origination of the cause rests with himself, he has a misadventure when it is external to himself. When again he acts with knowledge, but not from previous deliberation, it is an unjust action; for instance, whatever happens to men from anger or other passions which are necessary or natural: for when doing these hurts or making these mistakes they act unjustly of course and their actions are unjust, still they are not yet confirmed unjust or wicked persons by reason of these, because the hurt did not arise from depravity in the doer of it: but when it does arise from deliberate choice, then the doer is a confirmed unjust and depraved man.

And on this principle acts done from anger are fairly judged not to be from malice prepense, because it is not the man who acts in wrath who is the originator really but he who caused his wrath. And again, the question at issue in such cases is not respecting the fact but respecting the justice of the case, the occasion of anger being a notion of injury.[25] I mean, that the parties do not dispute about the fact, as in questions of contract (where one of the two must be a rogue, unless real forgetfulness can be pleaded), but, admitting the fact, they dispute on which side the justice of the case lies (the one who plotted against the other, _i.e._ the real aggressor, of course, cannot be ignorant),[26] so that the one thinks there is injustice committed while the other does not.

Well then, a man acts unjustly if he has hurt another of deliberate purpose, and he who commits such acts of injustice is _ipso facto_ an unjust character when they are in violation of the proportionate or the equal; and in like manner also a man is a just character when he acts justly of deliberate purpose, and he does act justly if he acts voluntarily.

Then as for involuntary acts of harm, they are either such as are excusable or such as are not: under the former head come all errors done not merely in ignorance but from ignorance; under the latter all that are done not from ignorance but in ignorance caused by some passion which is neither natural nor fairly attributable to human infirmity.

Chapter XII.

Now a question may be raised whether we have spoken with sufficient distinctness as to being unjustly dealt with, and dealing unjustly towards others.

First, whether the case is possible which Euripides has put, saying somewhat strangely,

“My mother he hath slain; the tale is short, Either he willingly did slay her willing, Or else with her will but against his own.”

I mean then, is it really possible for a person to be unjustly dealt with with his own consent, or must every case of being unjustly dealt with be against the will of the sufferer as every act of unjust dealing is voluntary?

And next, are cases of being unjustly dealt with to be ruled all one way as every act of unjust dealing is voluntary? or may we say that some cases are voluntary and some involuntary?

Similarly also as regards being justly dealt with: all just acting is voluntary, so that it is fair to suppose that the being dealt with unjustly or justly must be similarly opposed, as to being either voluntary or involuntary.

Now as for being justly dealt with, the position that every case of this is voluntary is a strange one, for some are certainly justly dealt with without their will.[27] The fact is a man may also fairly raise this question, whether in every case he who has suffered what is unjust is therefore unjustly dealt with, or rather that the case is the same with suffering as it is with acting; namely that in both it is possible to participate in what is just, but only accidentally. Clearly the case of what is unjust is similar: for doing things in themselves unjust is not identical with acting unjustly, nor is suffering them the same as being unjustly dealt with. So too of acting justly and being justly dealt with, since it is impossible to be unjustly dealt with unless some one else acts unjustly or to be justly dealt with unless some one else acts justly.

Now if acting unjustly is simply “hurting another voluntarily” (by which I mean, knowing whom you are hurting, and wherewith, and how you are hurting him), and the man who fails of self-control voluntarily hurts himself, then this will be a case of being voluntarily dealt unjustly with, and it will be possible for a man to deal unjustly with himself. (This by the way is one of the questions raised, whether it is possible for a man to deal unjustly with himself.) Or again, a man may, by reason of failing of self-control, receive hurt from another man acting voluntarily, and so here will be another case of being unjustly dealt with voluntarily.

The solution, I take it, is this: the definition of being unjustly dealt with is not correct, but we must add, to the hurting with the knowledge of the person hurt and the instrument and the manner of hurting him, the fact of its being against the wish of the man who is hurt.

So then a man may be hurt and suffer what is in itself unjust voluntarily, but unjustly dealt with voluntarily no man can be: since no man wishes to be hurt, not even he who fails of self-control, who really acts contrary to his wish: for no man wishes for that which he does not _think_ to be good, and the man who fails of self-control does not what he thinks he ought to do.

And again, he that gives away his own property (as Homer says Glaucus gave to Diomed, “armour of gold for brass, armour worth a hundred oxen for that which was worth but nine”) is not unjustly dealt with, because the giving rests entirely with himself; but being unjustly dealt with does not, there must be some other person who is dealing unjustly towards him.

With respect to being unjustly dealt with then, it is clear that it is not voluntary.

Chapter XIII.

There remain yet two points on which we purposed to speak: first, is he chargeable with an unjust act who in distribution has _given_ the larger share to one party contrary to the proper rate, or he that _has_ the larger share? next, can a man deal unjustly by himself?

In the first question, if the first-named alternative is possible and it is the distributor who acts unjustly and not he who has the larger share, then supposing that a person knowingly and willingly gives more to another than to himself here is a case of a man dealing unjustly by himself; which, in fact, moderate men are thought to do, for it is a characteristic of the equitable man to take less than his due.

Is not this the answer? that the case is not quite fairly stated, because of some other good, such as credit or the abstract honourable, in the supposed case the man did get the larger share. And again, the difficulty is solved by reference to the definition of unjust dealing: for the man suffers nothing contrary to his own wish, so that, on this score at least, he is not unjustly dealt with, but, if anything, he is hurt only.

It is evident also that it is the distributor who acts unjustly and not the man who has the greater share: because the mere fact of the abstract Unjust attaching to what a man does, does not constitute unjust action, but the doing this voluntarily: and voluntariness attaches to that quarter whence is the origination of the action, which clearly is in the distributor not in the receiver. And again the term doing is used in several senses; in one sense inanimate objects kill, or the hand, or the slave by his master’s bidding; so the man in question does not act unjustly but does things which are in themselves unjust.

Again, suppose that a man has made a wrongful award in ignorance; in the eye of the law he does not act unjustly nor is his awarding unjust, but yet he is in a certain sense: for the Just according to law and primary or natural Just are not coincident: but, if he knowingly decided unjustly, then he himself as well as the receiver got the larger share, that is, either of favour from the receiver or private revenge against the other party: and so the man who decided unjustly from these motives gets a larger share, in exactly

the same sense as a man would who received part of the actual matter of the unjust action: because in this case the man who wrongly adjudged, say a field, did not actually get land but money by his unjust decision.

Chapter XIV.

Now men suppose that acting Unjustly rests entirely with themselves, and conclude that acting Justly is therefore also easy. But this is not really so; to have connection with a neighbour's wife, or strike one's neighbour, or give the money with one's hand, is of course easy and rests with one's self: but the doing these acts with certain inward dispositions neither is easy nor rests entirely with one's self. And in like way, the knowing what is Just and what Unjust men think no great instance of wisdom because it is not hard to comprehend those things of which the laws speak. They forget that these are not Just actions, except accidentally: to be Just they must be done and distributed in a certain manner: and this is a more difficult task than knowing what things are wholesome; for in this branch of knowledge it is an easy matter to know honey, wine, hellebore, cautery, or the use of the knife, but the knowing how one should administer these with a view to health, and to whom and at what time, amounts in fact to being a physician.

From this very same mistake they suppose also, that acting Unjustly is equally in the power of the Just man, for the Just man no less, nay even more, than the Unjust, may be able to do the particular acts; he may be able to have intercourse with a woman or strike a man; or the brave man to throw away his shield and turn his back and run this way or that. True: but then it is not the mere doing these things which constitutes acts of cowardice or injustice (except accidentally), but the doing them with certain inward dispositions: just as it is not the mere using or not using the knife, administering or not administering certain drugs, which constitutes medical treatment or curing, but doing these things in a certain particular way.

Again the abstract principles of Justice have their province among those who partake of what is abstractedly good, and can have too much or too little of these.[28] Now there are beings who cannot have too much of them, as perhaps the gods; there are others, again, to whom no particle of them is of use, those who are incurably wicked to whom all things are hurtful; others to whom they are useful to a certain degree: for this reason then the province of Justice is among _Men_.

Chapter XV.

We have next to speak of Equity and the Equitable, that is to say, of the relations of Equity to Justice and the Equitable to the Just; for when we look into the matter the two do not appear identical nor yet different in kind; and we sometimes commend the Equitable and the man who embodies it in his actions, so that by way of praise we commonly transfer the term also to other acts instead of the term good, thus showing that the more Equitable a thing is the better it is: at other times following a certain train of reasoning we arrive at a difficulty, in that the Equitable though distinct from the Just is yet praiseworthy; it seems to follow either that the Just is not good or the Equitable not Just, since they are by hypothesis different; or if both are good then they are identical.

This is a tolerably fair statement of the difficulty which on these grounds arises in respect of the Equitable; but, in fact, all these may be reconciled and really involve no contradiction: for the Equitable is Just, being also better than one form of Just, but is not better than the Just as though it were different from it in kind: Just and Equitable then are identical, and, both being good, the Equitable is the better of the two.

What causes the difficulty is this; the Equitable is Just, but not the Just which is in accordance with written law, being in fact a correction of that kind of Just. And the account of this is, that every law is necessarily universal while there are some things which it is not possible to speak of rightly in any universal or general statement. Where then there is a necessity for general statement, while a general statement cannot apply rightly to all cases, the law takes the generality of cases, being fully aware of the error thus involved; and rightly too notwithstanding, because the fault is not in the law, or in the framer of the law, but is inherent in the nature of the thing, because the matter of all action is necessarily such.

When then the law has spoken in general terms, and there arises a case of exception to the general rule, it is proper, in so far as the lawgiver omits the case and by reason of his universality of statement is wrong, to set right the omission by ruling it as the lawgiver himself would rule were he there present, and would have provided by law had he foreseen the case would arise. And so the Equitable is Just but better than one form of Just; I do not mean the abstract Just but the error which arises out of the universality of statement: and this is the nature of the Equitable, "a correction of Law, where Law is defective by reason of its universality."

This is the reason why not all things are according to law, because there are things about which it is simply impossible to lay down a law, and so we want special enactments for particular cases. For to speak generally, the rule of the undefined must be itself

undefined also, just as the rule to measure Lesbian building is made of lead: for this rule shifts according to the form of each stone and the special enactment according to the facts of the case in question.

It is clear then what the Equitable is; namely that it is Just but better than one form of Just: and hence it appears too who the Equitable man is: he is one who has a tendency to choose and carry out these principles, and who is not apt to press the letter of the law on the worse side but content to waive his strict claims though backed by the law: and this moral state is Equity, being a species of Justice, not a different moral state from Justice.

Chapter XVI.

The answer to the second of the two questions indicated above, “whether it is possible for a man to deal unjustly by himself,” is obvious from what has been already stated.

In the first place, one class of Justs is those which are enforced by law in accordance with Virtue in the most extensive sense of the term: for instance, the law does not bid a man kill himself; and whatever it does not bid it forbids: well, whenever a man does hurt contrary to the law (unless by way of requital of hurt), voluntarily, i.e. knowing to whom he does it and wherewith, he acts Unjustly. Now he that from rage kills himself, voluntarily, does this in contravention of Right Reason, which the law does not permit. He therefore acts Unjustly: but towards whom? towards the Community, not towards himself (because he suffers with his own consent, and no man can be Unjustly dealt with with his own consent), and on this principle the Community punishes him; that is a certain infamy is attached to the suicide as to one who acts Unjustly towards the Community.

Next, a man cannot deal Unjustly by himself in the sense in which a man is Unjust who only does Unjust acts without being entirely bad (for the two things are different, because the Unjust man is in a way bad, as the coward is, not as though he were chargeable with badness in the full extent of the term, and so he does not act Unjustly in this sense), because if it were so then it would be possible for the same thing to have been taken away from and added to the same person:[29] but this is really not possible, the Just and the Unjust always implying a plurality of persons.

Again, an Unjust action must be voluntary, done of deliberate purpose, and aggressive (for the man who hurts because he has first suffered and is merely requiting the same is not thought to act Unjustly), but here the man does to himself and suffers the same things at the same time.

Again, it would imply the possibility of being Unjustly dealt with with one’s own consent.

And, besides all this, a man cannot act Unjustly without his act falling under some particular crime; now a man cannot seduce his own wife, commit a burglary on his own premises, or steal his own property.

After all, the general answer to the question is to allege what was settled respecting being Unjustly dealt with with one’s own consent.

Chapter XVII.

It is obvious, moreover, that being Unjustly dealt by and dealing Unjustly by others are both wrong; because the one is having less, the other having more, than the mean, and the case is parallel to that of the healthy in the healing art, and that of good condition in the art of training: but still the dealing Unjustly by others is the worst of the two, because this involves wickedness and is blameworthy; wickedness, I mean, either wholly, or nearly so (for not all voluntary wrong implies injustice), but the being Unjustly dealt by does not involve wickedness or injustice.

In itself then, the being Unjustly dealt by is the least bad, but accidentally it may be the greater evil of the two. However, scientific statement cannot take in such considerations; a pleurisy, for instance, is called a greater physical evil than a bruise: and yet this last may be the greater accidentally; it may chance that a bruise received in a fall may cause one to be captured by the enemy and slain.

Further: Just, in the way of metaphor and similitude, there may be I do not say between a man and himself exactly but between certain parts of his nature; but not Just of every kind, only such as belongs to the relation of master and slave, or to that of the head of a family. For all through this treatise the rational part of the Soul has been viewed as distinct from the irrational.

Now, taking these into consideration, there is thought to be a possibility of injustice towards one’s self, because herein it is possible for men to suffer somewhat in contradiction of impulses really their own; and so it is thought that there is Just of a certain kind

between these parts mutually, as between ruler and ruled.

Let this then be accepted as an account of the distinctions which we recognise respecting Justice and the rest of the moral virtues.[30]

BOOK VI

Chapter I.

Having stated in a former part of this treatise that men should choose the mean instead of either the excess or defect, and that the mean is according to the dictates of Right Reason; we will now proceed to explain this term.

For in all the habits which we have expressly mentioned, as likewise in all the others, there is, so to speak, a mark with his eye fixed on which the man who has Reason tightens or slacks his rope;[1] and there is a certain limit of those mean states which we say are in accordance with Right Reason, and lie between excess on the one hand and defect on the other.

Now to speak thus is true enough but conveys no very definite meaning: as, in fact, in all other pursuits requiring attention and diligence on which skill and science are brought to bear; it is quite true of course to say that men are neither to labour nor relax too much or too little, but in moderation, and as Right Reason directs; yet if this were all a man had he would not be greatly the wiser; as, for instance, if in answer to the question, what are proper applications to the body, he were to be told, “Oh! of course, whatever the science of medicine, and in such manner as the physician, directs.”

And so in respect of the mental states it is requisite not merely that this should be true which has been already stated, but further that it should be expressly laid down what Right Reason is, and what is the definition of it.

Chapter II.

Now in our division of the Excellences of the Soul, we said there were two classes, the Moral and the Intellectual: the former we have already gone through; and we will now proceed to speak of the others, premising a few words respecting the Soul itself. It was stated before, you will remember, that the Soul consists of two parts, the Rational, and Irrational: we must now make a similar division of the Rational.

Let it be understood then that there are two parts of the Soul possessed of Reason; one whereby we realise those existences whose causes cannot be otherwise than they are, and one whereby we realise those which can be otherwise than they are,[2] (for there must be, answering to things generically different, generically different parts of the soul naturally adapted to each, since these parts of the soul possess their knowledge in virtue of a certain resemblance and appropriateness in themselves to the objects of which they are percipients);[3] and let us name the former, “that which is apt to know,” the latter, “that which is apt to calculate” (because deliberating and calculating are the same, and no one ever deliberates about things which cannot be otherwise than they are: and so the Calculative will be one part of the Rational faculty of the soul).

We must discover, then, which is the best state of each of these, because that will be the Excellence of each; and this again is relative to the work each has to do.[4]

There are in the Soul three functions on which depend moral action and truth; Sense, Intellect, Appetition, whether vague Desire or definite Will. Now of these Sense is the originating cause of no moral action, as is seen from the fact that brutes have Sense but are in no way partakers of moral action.[5]

[Intellect and Will are thus connected,] what in the Intellectual operation is Affirmation and Negation that in the Will is Pursuit and Avoidance, And so, since Moral Virtue is a State apt to exercise Moral Choice and Moral Choice is Will consequent on deliberation, the Reason must be true and the Will right, to constitute good Moral Choice, and what the Reason affirms the Will must pursue.[6]

Now this Intellectual operation and this Truth is what bears upon Moral Action; of course truth and falsehood must be the good and the bad of that Intellectual Operation which is purely Speculative, and concerned neither with action nor production, because this is manifestly the work of every Intellectual faculty, while of the faculty which is of a mixed Practical and Intellectual nature, the work is that Truth which, as I have described above, corresponds to the right movement of the Will.

Now the starting-point of moral action is Moral Choice, (I mean, what actually sets it in motion, not the final cause,)[7] and of Moral Choice, Appetition, and Reason directed to a certain result: and thus Moral Choice is neither independent of intellect, i. e. intellectual operation, nor of a certain moral state: for right or wrong action cannot be, independently of operation of the Intellect, and moral character.

But operation of the Intellect by itself moves nothing, only when directed to a certain result, i. e. exercised in Moral Action: (I say nothing of its being exercised in production, because this function is originated by the former: for every one who makes makes with a view to somewhat further; and that which is or may be made, is not an End in itself, but only relatively to somewhat else, and belonging to some one:[8] whereas that which is or may be done is an End in itself, because acting well is an End in itself, and this is the object of the Will,) and so Moral Choice is either[9] Intellect put in a position of Will-ing, or Appetition subjected to an Intellectual Process. And such a Cause is Man.

But nothing which is done and past can be the object of Moral Choice; for instance, no man chooses to have sacked Troy; because, in fact, no one ever deliberates about what is past, but only about that which is future, and which may therefore be influenced, whereas what has been cannot not have been: and so Agathon is right in saying

“Of this alone is Deity bereft, To make undone whatever hath been done.”

Thus then Truth is the work of both the Intellectual Parts of the Soul; those states therefore are the Excellences of each in which each will best attain truth.

Chapter III.

Commencing then from the point stated above we will now speak of these Excellences again. Let those faculties whereby the Soul attains truth in Affirmation or Negation, be assumed to be in number five:[10] viz. Art, Knowledge, Practical Wisdom, Science, Intuition: (Supposition and Opinion I do not include, because by these one may go wrong.)

What Knowledge is, is plain from the following of considerations, if one is to speak accurately, instead of being led away by resemblances. For we all conceive that what we strictly speaking know, cannot be otherwise than it is, because as to those things which can be otherwise than they are, we are uncertain whether they are or are not, the moment they cease to be within the sphere of our actual observation.

So then, whatever comes within the range of Knowledge is by necessity, and therefore eternal, (because all things are so which exist necessarily,) and all eternal things are without beginning, and indestructible.

Again, all Knowledge is thought to be capable of being taught, and what comes within its range capable of being learned. And all teaching is based upon previous knowledge; (a statement you will find in the Analytics also,)[11] for there are two ways of teaching, by Syllogism and by Induction. In fact. Induction is the source of universal propositions, and Syllogism reasons from these universals.[12] Syllogism then may reason from principles which cannot be themselves proved Syllogistically: and therefore must by Induction.

So Knowledge is “a state or mental faculty apt to demonstrate syllogistically,” &c. as in the Analytics:[13] because a man, strictly and properly speaking, _knows_, when he establishes his conclusion in a certain way, and the principles are known to him: for if they are not better known to him than the conclusion, such knowledge as he has will be merely accidental.

Let thus much be accepted as a definition of Knowledge.

Chapter IV.

Matter which may exist otherwise than it actually does in any given case (commonly called Contingent) is of two kinds, that which is the object of Making, and that which is the object of Doing; now Making and Doing are two different things (as we show in the exoteric treatise), and so that state of mind, conjoined with Reason, which is apt to Do, is distinct from that also conjoined with Reason, which is apt to Make: and for this reason they are not included one by the other, that is, Doing is not Making, nor Making Doing.[14] Now[15] as Architecture is an Art, and is the same as “a certain state of mind, conjoined with Reason, which is apt to Make,” and as there is no Art which is not such a state, nor any such state which is not an Art, Art, in its strict and proper sense, must be “a state of mind, conjoined with true Reason, apt to Make.”

Now all Art has to do with production, and contrivance, and seeing how any of those things may be produced which may either be or not be, and the origination of which rests with the maker and not with the thing made.

And, so neither things which exist or come into being necessarily, nor things in the way of nature, come under the province of Art, because these are self-originating. And since Making and Doing are distinct, Art must be concerned with the former and not the latter. And in a certain sense Art and Fortune are concerned with the same things, as, Agathon says by the way,

“Art Fortune loves, and is of her beloved.”

So Art, as has been stated, is “a certain state of mind, apt to Make, conjoined with true Reason;” its absence, on the contrary, is the same state conjoined with false Reason, and both are employed upon Contingent matter.

Chapter V.

As for Practical Wisdom, we shall ascertain its nature by examining to what kind of persons we in common language ascribe it.[16]

It is thought then to be the property of the Practically Wise man to be able to deliberate well respecting what is good and expedient for himself, not in any definite line,[17] as what is conducive to health or strength, but what to living well. A proof of this is that we call men Wise in this or that, when they calculate well with a view to some good end in a case where there is no definite rule. And so, in a general way of speaking, the man who is good at deliberation will be Practically Wise. Now no man deliberates respecting things which cannot be otherwise than they are, nor such as lie not within the range of his own action: and so, since Knowledge requires strict demonstrative reasoning, of which Contingent matter does not admit (I say Contingent matter, because all matters of deliberation must be Contingent and deliberation cannot take place with respect to things which are Necessarily), Practical Wisdom cannot be Knowledge nor Art; nor the former, because what falls under the province of Doing must be Contingent; not the latter, because Doing and Making are different in kind.

It remains then that it must be “a state of mind true, conjoined with Reason, and apt to Do, having for its object those things which are good or bad for Man:” because of Making something beyond itself is always the object, but cannot be of Doing because the very well-doing is in itself an End.

For this reason we think Pericles and men of that stamp to be Practically Wise, because they can see what is good for themselves and for men in general, and we also think those to be such who are skilled in domestic management or civil government. In fact, this is the reason why we call the habit of perfected self-mastery by the name which in Greek it bears, etymologically signifying “that which preserves the Practical Wisdom:” for what it does preserve is the Notion I have mentioned, _i.e._ of one’s own true interest.[18]

For it is not every kind of Notion which the pleasant and the painful corrupt and pervert, as, for instance, that “the three angles of every rectilineal triangle are equal to two right angles,” but only those bearing on moral action.

For the Principles of the matters of moral action are the final cause of them:[19] now to the man who has been corrupted by reason of pleasure or pain the Principle immediately becomes obscured, nor does he see that it is his duty to choose and act in each instance with a view to this final cause and by reason of it: for viciousness has a tendency to destroy the moral Principle: and so Practical Wisdom must be “a state conjoined with reason, true, having human good for its object, and apt to do.”

Then again Art admits of degrees of excellence, but Practical Wisdom does not:[20] and in Art he who goes wrong purposely is preferable to him who does so unwittingly,[21] but not so in respect of Practical Wisdom or the other Virtues. It plainly is then an Excellence of a certain kind, and not an Art.

Now as there are two parts of the Soul which have Reason, it must be the Excellence of the Opinionative [which we called before calculative or deliberative], because both Opinion and Practical Wisdom are exercised upon Contingent matter. And further, it is not simply a state conjoined with Reason, as is proved by the fact that such a state may be forgotten and so lost while Practical Wisdom cannot.

Chapter VI.

Now Knowledge is a conception concerning universals and Necessary matter, and there are of course certain First Principles in all trains of demonstrative reasoning (that is of all Knowledge because this is connected with reasoning): that faculty, then, which

takes in the first principles of that which comes under the range of Knowledge, cannot be either Knowledge, or Art, or Practical Wisdom: not Knowledge, because what is the object of Knowledge must be derived from demonstrative reasoning; not either of the other two, because they are exercised upon Contingent matter only. Nor can it be Science which takes in these, because the Scientific Man must in some cases depend on demonstrative Reasoning.

It comes then to this: since the faculties whereby we always attain truth and are never deceived when dealing with matter Necessary or even Contingent are Knowledge, Practical Wisdom, Science, and Intuition, and the faculty which takes in First Principles cannot be any of the three first; the last, namely Intuition, must be it which performs this function.

Chapter VII.

Science is a term we use principally in two meanings: in the first place, in the Arts we ascribe it to those who carry their arts to the highest accuracy;[22] Phidias, for instance, we call a Scientific or cunning sculptor; Polycleitus a Scientific or cunning statuary; meaning, in this instance, nothing else by Science than an excellence of art: in the other sense, we think some to be Scientific in a general way, not in any particular line or in any particular thing, just as Homer says of a man in his Margites; “Him the Gods made neither a digger of the ground, nor ploughman, nor in any other way Scientific.”

So it is plain that Science must mean the most accurate of all Knowledge; but if so, then the Scientific man must not merely know the deductions from the First Principles but be in possession of truth respecting the First Principles. So that Science must be equivalent to Intuition and Knowledge; it is, so to speak, Knowledge of the most precious objects, _with a head on_.[23]

I say of the most precious things, because it is absurd to suppose πολιτικ■,[24] or Practical Wisdom, to be the highest, unless it can be shown that Man is the most excellent of all that exists in the Universe. Now if “healthy” and “good” are relative terms, differing when applied to men or to fish, but “white” and “straight” are the same always, men must allow that the Scientific is the same always, but the Practically Wise varies: for whatever provides all things well for itself, to this they would apply the term Practically Wise, and commit these matters to it; which is the reason, by the way, that they call some brutes Practically Wise, such that is as plainly have a faculty of forethought respecting their own subsistence.

And it is quite plain that Science and πολιτικ■ cannot be identical: because if men give the name of Science to that faculty which is employed upon what is expedient for themselves, there will be many instead of one, because there is not one and the same faculty employed on the good of all animals collectively, unless in the same sense as you may say there is one art of healing with respect to all living beings.

If it is urged that man is superior to all other animals, that makes no difference: for there are many other things more Godlike in their nature than Man, as, most obviously, the elements of which the Universe is composed.[25]

It is plain then that Science is the union of Knowledge and Intuition, and has for its objects those things which are most precious in their nature. Accordingly, Anexagoras, Thales, and men of that stamp, people call Scientific, but not Practically Wise because they see them ignorant of what concerns themselves; and they say that what they know is quite out of the common run certainly, and wonderful, and hard, and very fine no doubt, but still useless because they do not seek after what is good for them as men.

Chapter VIII.

But Practical Wisdom is employed upon human matters, and such as are objects of deliberation (for we say, that to deliberate well is most peculiarly the work of the man who possesses this Wisdom), and no man deliberates about things which cannot be otherwise than they are, nor about any save those that have some definite End and this End good resulting from Moral Action; and the man to whom we should give the name of Good in Counsel, simply and without modification, is he who in the way of calculation has a capacity for attaining that of practical goods which is the best for Man.

Nor again does Practical Wisdom consist in a knowledge of general principles only, but it is necessary that one should know also the particular details, because it is apt to act, and action is concerned with details: for which reason sometimes men who have not much knowledge are more practical than others who have; among others, they who derive all they know from actual experience: suppose a man to know, for instance, that light meats are easy of digestion and wholesome, but not what kinds of meat are light, he will not produce a healthy state; that man will have a much better chance of doing so, who knows that the flesh of birds is light and wholesome. Since then Practical Wisdom is apt to act, one ought to have both kinds of knowledge, or, if only one, the knowledge of details rather than of Principles. So there will be in respect of Practical Wisdom the distinction of supreme and subordinate.[26]

Further: πολιτικ■ and Practical Wisdom are the same mental state, but the point of view is not the same.

Of Practical Wisdom exerted upon a community that which I would call the Supreme is the faculty of Legislation; the subordinate, which is concerned with the details, generally has the common name πολιτικ■, and its functions are Action and Deliberation (for the particular enactment is a matter of action, being the ultimate issue of this branch of Practical Wisdom, and therefore people commonly say, that these men alone are really engaged in government, because they alone act, filling the same place relatively to legislators, that workmen do to a master).[27]

Again, that is thought to be Practical Wisdom in the most proper sense which has for its object the interest of the Individual: and this usually appropriates the common name: the others are called respectively Domestic Management, Legislation, Executive Government divided into two branches, Deliberative and Judicial.[28] Now of course, knowledge for one's self is one kind of knowledge, but it admits of many shades of difference: and it is a common notion that the man who knows and busies himself about his own concerns merely is the man of Practical Wisdom, while they who extend their solicitude to society at large are considered meddlesome.

Euripides has thus embodied this sentiment; "How," says one of his Characters, "How foolish am I, who whereas I might have shared equally, idly numbered among the multitude of the army *** for them that are busy and meddlesome [Jove hates]," because the generality of mankind seek their own good and hold that this is their proper business. It is then from this opinion that the notion has arisen that such men are the Practically-Wise. And yet it is just possible that the good of the individual cannot be secured independently of connection with a family or a community. And again, how a man should manage his own affairs is sometimes not quite plain, and must be made a matter of enquiry.[29]

A corroboration of what I have said is[30] the fact, that the young come to be geometricians, and mathematicians, and Scientific in such matters, but it is not thought that a young man can come to be possessed of Practical Wisdom: now the reason is, that this Wisdom has for its object particular facts, which come to be known from experience, which a young man has not because it is produced only by length of time.

By the way, a person might also enquire,[31] why a boy may be made a mathematician but not Scientific or a natural philosopher. Is not this the reason? that mathematics are taken in by the process of abstraction, but the principles of Science[32] and natural philosophy must be gained by experiment; and the latter young men talk of but do not realise, while the nature of the former is plain and clear.

Again, in matter of practice, error attaches either to the general rule, in the process of deliberation, or to the particular fact: for instance, this would be a general rule, "All water of a certain gravity is bad;" the particular fact, "this water is of that gravity."

And that Practical Wisdom is not Knowledge is plain, for it has to do with the ultimate issue,[33] as has been said, because every object of action is of this nature.

To Intuition it is opposed, for this takes in those principles which cannot be proved by reasoning, while Practical Wisdom is concerned with the ultimate particular fact which cannot be realised by Knowledge but by Sense; I do not mean one of the five senses, but the same by which we take in the mathematical fact, that no rectilineal figure can be contained by less than three lines, i.e. that a triangle is the ultimate figure, because here also is a stopping point.

This however is Sense rather than Practical Wisdom, which is of another kind.[34]

Chapter IX.

Now the acts of enquiring and deliberating differ, though deliberating is a kind of enquiring. We ought to ascertain about Good Counsel likewise what it is, whether a kind of Knowledge, or Opinion, or Happy Conjecture, or some other kind of faculty. Knowledge it obviously is not, because men do not enquire about what they know, and Good Counsel is a kind of deliberation, and the man who is deliberating is enquiring and calculating.

Neither is it Happy Conjecture; because this is independent of reasoning, and a rapid operation; but men deliberate a long time, and it is a common saying that one should execute speedily what has been resolved upon in deliberation, but deliberate slowly.

Quick perception of causes[35] again is a different faculty from good counsel, for it is a species of Happy Conjecture. Nor is Good Counsel Opinion of any kind.

Well then, since he who deliberates ill goes wrong, and he who deliberates well does so rightly, it is clear that Good Counsel is rightness of some kind, but not of Knowledge nor of Opinion: for Knowledge cannot be called right because it cannot be wrong, and Rightness of Opinion is Truth: and again, all which is the object of opinion is definitely marked out.[36]

Still, however, Good Counsel is not independent of Reason, Does it remain then that it is a rightness of Intellectual Operation simply, because this does not amount to an assertion; and the objection to Opinion was that it is not a process of enquiry but already a definite assertion; whereas whosoever deliberates, whether well or ill, is engaged in enquiry and calculation.

Well, Good Counsel is a Rightness of deliberation, and so the first question must regard the nature and objects of deliberation. Now remember Rightness is an equivocal term; we plainly do not mean Rightness of any kind whatever; the ■κρατ■ς, for instance, or the bad man, will obtain by his calculation what he sets before him as an object, and so he may be said to have deliberated _rightly_ in one sense, but will have attained a great evil. Whereas to have deliberated well is thought to be a good, because Good Counsel is Rightness of deliberation of such a nature as is apt to attain good.

But even this again you may get by false reasoning, and hit upon the right effect though not through right means,[37] your middle term being fallacious: and so neither will this be yet Good Counsel in consequence of which you get what you ought but not through proper means.

Again, one man may hit on a thing after long deliberation, another quickly. And so that before described will not be yet Good Counsel, but the Rightness must be with reference to what is expedient; and you must have a proper end in view, pursue it in a right manner and right time.

Once more. One may deliberate well either generally or towards some particular End.[38] Good counsel in the general then is that which goes right towards that which is the End in a general way of consideration; in particular, that which does so towards some particular End.

Since then deliberating well is a quality of men possessed of Practical Wisdom, Good Counsel must be “Rightness in respect of what conduces to a given End, of which[39] Practical Wisdom is the true conception.”

Chapter X.

There is too the faculty of Judiciousness, and also its absence, in virtue of which we call men Judicious or the contrary.

Now Judiciousness is neither entirely identical with Knowledge or Opinion (for then all would have been Judicious), nor is it any one specific science, as medical science whose object matter is things wholesome; or geometry whose object matter is magnitude: for it has not for its object things which always exist and are immutable, nor of those things which come into being just any which may chance; but those in respect of which a man might doubt and deliberate.

And so it has the same object matter as Practical Wisdom; yet the two faculties are not identical, because Practical Wisdom has the capacity for commanding and taking the initiative, for its End is “what one should do or not do:” but Judiciousness is only apt to decide upon suggestions (though we do in Greek put “well” on to the faculty and its concrete noun, these really mean exactly the same as the plain words), and Judiciousness is neither the having Practical Wisdom, nor attaining it: but just as learning is termed συνι■ναι when a man uses his knowledge, so judiciousness consists in employing the Opinionative faculty in judging concerning those things which come within the province of Practical Wisdom, when another enunciates them; and not judging merely, but judging well (for ε■ and καλ■ς mean exactly the same thing). And the Greek name of this faculty is derived from the use of the term συνι■ναι in learning: μανθ■νειν and συνι■ναι being often used as synonymous.

The faculty called γν■μη,[40] in right of which we call men ε■γν■μονες, or say they have γν■μη, is “the right judgment of the equitable man.” A proof of which is that we most commonly say that the equitable man has a tendency to make allowance, and the making allowance in certain cases is equitable. And συγγν■μη (the word denoting allowance) is right γν■μη having a capacity of making equitable decisions, By “right” I mean that of the Truthful man.

Chapter XI.

Now all these mental states[41] tend to the same object, as indeed common language leads us to expect: I mean, we speak of γν■μη, Judiciousness, Practical Wisdom, and Practical Intuition, attributing the possession of γν■μη and Practical Intuition to the same Individuals whom we denominate Practically-Wise and Judicious: because all these faculties are employed upon the

extremes,[42] i.e. on particular details; and in right of his aptitude for deciding on the matters which come within the province of the Practically-Wise, a man is Judicious and possessed of good γν■μη; i.e. he is disposed to make allowance, for considerations of equity are entertained by all good men alike in transactions with their fellows.

And all matters of Moral Action belong to the class of particulars, otherwise called extremes: for the man of Practical Wisdom must know them, and Judiciousness and γν■μη are concerned with matters of Moral Actions, which are extremes.

Intuition, moreover, takes in the extremes at both ends:[43] I mean, the first and last terms must be taken in not by reasoning but by Intuition [so that Intuition comes to be of two kinds], and that which belongs to strict demonstrative reasonings takes in immutable, i.e. Necessary, first terms; while that which is employed in practical matters takes in the extreme, the Contingent, and the minor Premiss:[44] for the minor Premisses are the source of the Final Cause, Universals being made up out of Particulars.[45] To take in these, of course, we must have Sense, i.e. in other words Practical Intuition.

And for this reason these are thought to be simply gifts of nature; and whereas no man is thought to be Scientific by nature, men are thought to have γν■μη, and Judiciousness, and Practical Intuition: a proof of which is that we think these faculties are a consequence even of particular ages, and this given age has Practical Intuition and γν■μη, we say, as if under the notion that nature is the cause. And thus Intuition is both the beginning and end, because the proofs are based upon the one kind of extremes and concern the other.

And so[46] one should attend to the undemonstrable dicta and opinions of the skilful, the old and the Practically-Wise, no less than to those which are based on strict reasoning, because they see aright, having gained their power of moral vision from experience.

Chapter XII.

Well, we have now stated the nature and objects of Practical Wisdom and Science respectively, and that they belong each to a different part of the Soul. But I can conceive a person questioning their utility. “Science,” he would say, “concerns itself with none of the causes of human happiness (for it has nothing to do with producing anything): Practical Wisdom has this recommendation, I grant, but where is the need of it, since its province is those things which are just and honourable, and good for man, and these are the things which the good man as such does; but we are not a bit the more apt to do them because we know them, since the Moral Virtues are Habits; just as we are not more apt to be healthy or in good condition from mere knowledge of what relates to these (I mean,[47] of course, things so called not from their producing health, etc., but from their evidencing it in a particular subject), for we are not more apt to be healthy and in good condition merely from knowing the art of medicine or training.

“If it be urged that _knowing what is_ good does not by itself make a Practically-Wise man but _becoming_ good; still this Wisdom will be no use either to those that are good, and so have it already, or to those who have it not; because it will make no difference to them whether they have it themselves or put themselves under the guidance of others who have; and we might be contented to be in respect of this as in respect of health: for though we wish to be healthy still we do not set about learning the art of healing.

“Furthermore, it would seem to be strange that, though lower in the scale than Science, it is to be its master; which it is, because whatever produces results takes the rule and directs in each matter.”

This then is what we are to talk about, for these are the only points now raised.

Now first we say that being respectively Excellences of different parts of the Soul they must be choice-worthy, even on the supposition that they neither of them produce results.

In the next place we say that they _do_ produce results; that Science makes Happiness, not as the medical art but as healthiness makes health:[48] because, being a part of Virtue in its most extensive sense, it makes a man happy by being possessed and by working.

Next, Man’s work _as Man_ is accomplished by virtue of Practical Wisdom and Moral Virtue, the latter giving the right aim and direction, the former the right means to its attainment;[49] but of the fourth part of the Soul, the mere nutritive principle, there is no such Excellence, because nothing is in its power to do or leave undone.[50]

As to our not being more apt to do what is noble and just by reason of possessing Practical Wisdom, we must begin a little higher up,[51] taking this for our starting-point. As we say that men may do things in themselves just and yet not be just men; for instance, when men do what the laws require of them, either against their will, or by reason of ignorance or something else, at all events not

for the sake of the things themselves; and yet they do what they ought and all that the good man should do; so it seems that to be a good man one must do each act in a particular frame of mind, I mean from Moral Choice and for the sake of the things themselves which are done. Now it is Virtue which makes the Moral Choice right, but whatever is naturally required to carry out that Choice comes under the province not of Virtue but of a different faculty. We must halt, as it were, awhile, and speak more clearly on these points.

There is then a certain faculty, commonly named Cleverness, of such a nature as to be able to do and attain whatever conduces to _any_ given purpose: now if that purpose be a good one the faculty is praiseworthy; if otherwise, it goes by a name which, denoting strictly the ability, implies the willingness to do _anything_; we accordingly call the Practically-Wise Clever, and also those who can and will do anything.[52]

Now Practical Wisdom is not identical with Cleverness, nor is it without this power of adapting means to ends: but this Eye of the Soul (as we may call it) does not attain its proper state without goodness, as we have said before and as is quite plain, because the syllogisms into which Moral Action may be analysed have for their Major Premiss,[53] “since —— is the End and the Chief Good”[54] (fill up the blank with just anything you please, for we merely want to exhibit the Form, so that anything will do), but _how_ this blank should be filled is seen only by the good man: because Vice distorts the moral vision and causes men to be deceived in respect of practical principles.[55]

It is clear, therefore, that a man cannot be a Practically-Wise, without being a good, man.

We must enquire again also about Virtue: for it may be divided into Natural Virtue and Matured, which two bear to each other a relation similar to that which Practical Wisdom bears to Cleverness, one not of identity but resemblance. I speak of Natural Virtue, because men hold that each of the moral dispositions attach to us all somehow by nature: we have dispositions[56] towards justice, self-mastery and courage, for instance, immediately from our birth: but still we seek Goodness in its highest sense as something distinct from these, and that these dispositions should attach to us in a somewhat different fashion.[57] Children and brutes have these natural states, but then they are plainly hurtful unless combined with an intellectual element: at least thus much is matter of actual experience and observation, that as a strong body destitute of sight must, if set in motion, fall violently because it has not sight, so it is also in the case we are considering: but if it can get the intellectual element it then excels in acting. Just so the Natural State of Virtue, being like this strong body, will then be Virtue in the highest sense when it too is combined with the intellectual element.

So that, as in the case of the Opinionative faculty, there are two forms, Cleverness and Practical Wisdom; so also in the case of the Moral there are two, Natural Virtue and Matured; and of these the latter cannot be formed without Practical Wisdom.[58]

This leads some to say that all the Virtues are merely intellectual Practical Wisdom, and Socrates was partly right in his enquiry and partly wrong: wrong in that he thought all the Virtues were merely intellectual Practical Wisdom, right in saying they were not independent of that faculty.

A proof of which is that now all, in defining Virtue, add on the “state” [mentioning also to what standard it has reference, namely that] “which is accordant with Right Reason:” now “right” means in accordance with Practical Wisdom. So then all seem to have an instinctive notion that that state which is in accordance with Practical Wisdom is Virtue; however, we must make a slight change in their statement, because that state is Virtue, not merely which is in accordance with but which implies the possession of Right Reason; which, upon such matters, is Practical Wisdom. The difference between us and Socrates is this: he thought the Virtues were reasoning processes (_i.e._ that they were all instances of Knowledge in its strict sense), but we say they imply the possession of Reason.

From what has been said then it is clear that one cannot be, strictly speaking, good without Practical Wisdom nor Practically-Wise without moral goodness.

And by the distinction between Natural and Matured Virtue one can meet the reasoning by which it might be argued “that the Virtues are separable because the same man is not by nature most inclined to all at once so that he will have acquired this one before he has that other:” we would reply that this is possible with respect to the Natural Virtues but not with respect to those in right of which a man is denominated simply good: because they will all belong to him together with the one faculty of Practical Wisdom.

It is plain too that even had it not been apt to act we should have needed it, because it is the Excellence of a part of the Soul; and that the moral choice cannot be right independently of Practical Wisdom and Moral Goodness; because this gives the right End,

that causes the doing these things which conduce to the End.

Then again, it is not Master of Science (i.e. of the superior part of the Soul), just as neither is the healing art Master of health; for it does not make use of it, but looks how it may come to be: so it commands for the sake of it but does not command it.

The objection is, in fact, about as valid as if a man should say πολιτικ■ governs the gods because it gives orders about all things in the communty.

APPENDIX

On ■πισπ■μη, from I. Post. Analyt. chap. i. and ii.

(Such parts only are translated as throw light on the Ethics.)

All teaching, and all intellectual learning, proceeds on the basis of previous knowledge, as will appear on an examination of all. The Mathematical Sciences, and every other system, draw their conclusions in this method. So too of reasonings, whether by syllogism, or induction: for both teach through what is previously known, the former assuming the premisses as from wise men, the latter proving universals from the evidentness of the particulars. In like manner too rhetoricians persuade, either through examples (which amounts to induction), or through enthymemes (which amounts to syllogism).

CHAP. II

Well, we suppose that we _know_ things (in the strict and proper sense of the word) when we suppose ourselves to know the cause by reason of which the thing is to be the cause of it; and that this cannot be otherwise. It is plain that the idea intended to be conveyed by the term _knowing_ is something of this kind; because they who do not really know suppose themselves thus related to the matter in hand and they who do know really are so that of whatsoever there is properly speaking Knowledge this cannot be otherwise than it is Whether or no there is another way of knowing we will say afterwards, but we do say that we know through demonstration, by which I mean a syllogism apt to produce Knowledge, i.e. in right of which through having it, we know.

If Knowledge then is such as we have described it, the Knowledge produced by demonstrative reasoning must be drawn from premisses _true_ and _first_, and _incapable of syllogistic proof_, and _better known_, and _prior in order of time_, and _causes of the conclusion_, for so the principles will be akin to the conclusion demonstrated.

(Syllogism, of course there may be without such premisses, but it will not be demonstration because it will not produce knowledge).

True, they must be, because it is impossible to know that which is not.

First, that is indemonstrable, because, if demonstrable, he cannot be said to _know_ them who has no demonstration of them for knowing such things as are demonstrable is the same as having demonstration of them.

Causes they must be, and _better known_, and _prior_ in time, _causes_, because we then know when we are acquainted with the cause, and _prior_, if causes, and _known beforehand_, not merely comprehended in idea but known to exist (The terms prior, and better known, bear two senses for _prior by nature_ and _prior relatively to ourselves_ are not the same, nor _better known by nature_, and _better known to us_ I mean, by _prior_ and _better known relatively to ourselves_, such things as are nearer to sensation, but abstractedly so such as are further Those are furthest which are most universal those nearest which are particulars, and these are mutually opposed.)

And by _first_, I mean _principles akin to the conclusion_, for principle means the same as first And the principle or first step in demonstration is a proposition incapable of syllogistic proof, _i.e._ one to which there is none prior. Now of such syllogistic principles I call that a θ■σις which you cannot demonstrate, and which is unnecessary with a view to learning something else. That which is necessary in order to learn something else is an Axiom.

Further, since one is to believe and know the thing by having a syllogism of the kind called demonstration, and what constitutes it to be such is the nature of the premisses, it is necessary not merely to _know before_, but to _know better than the conclusion_, either all or at least some of, the principles, because that which is the cause of a quality inhering in something else always inheres itself more as the cause of our loving is itself more lovable. So, since the principles are the cause of our knowing and behoving we know and believe them more, because by reason of them we know also the conclusion following.

Further: the man who is to have the Knowledge which comes through demonstration must not merely know and believe his principles better than he does his conclusion, but he must believe nothing more firmly than the contradictories of those principles out of which the contrary fallacy may be constructed: since he who _knows_, is to be simply and absolutely infallible.

BOOK VII

Chapter I.

Next we must take a different point to start from,[1] and observe that of what is to be avoided in respect of moral character there are three forms; Vice, Imperfect Self-Control, and Brutishness. Of the two former it is plain what the contraries are, for we call the one Virtue, the other Self-Control; and as answering to Brutishness it will be most suitable to assign Superhuman, i.e. heroical and godlike Virtue, as, in Homer, Priam says of Hector “that he was very excellent, nor was he like the offspring of mortal man, but of a god.” and so, if, as is commonly said, men are raised to the position of gods by reason of very high excellence in Virtue, the state opposed to the Brutish will plainly be of this nature: because as brutes are not virtuous or vicious so neither are gods; but the state of these is something more precious than Virtue, of the former something different in kind from Vice.

And as, on the one hand, it is a rare thing for a man to be godlike (a term the Lacedæmonians are accustomed to use when they admire a man exceedingly; σε■ος ■ν■ρ they call him), so the brutish man is rare; the character is found most among barbarians, and some cases of it are caused by disease or maiming; also such men as exceed in vice all ordinary measures we therefore designate by this opprobrious term. Well, we must in a subsequent place make some mention of this disposition, and Vice has been spoken of before: for the present we must speak of Imperfect Self-Control and its kindred faults of Softness and Luxury, on the one hand, and of Self-Control and Endurance on the other; since we are to conceive of them, not as being the same states exactly as Virtue and Vice respectively, nor again as differing in kind.

And we should adopt the same course as before, i.e. state the phenomena, and, after raising and discussing difficulties which suggest themselves, then exhibit, if possible, all the opinions afloat respecting these affections of the moral character; or, if not all, the greater part and the most important: for we may consider we have illustrated the matter sufficiently when the difficulties have been solved, and such theories as are most approved are left as a residuum.

The chief points may be thus enumerated. It is thought,

I. That Self-Control and Endurance belong to the class of things good and praiseworthy, while Imperfect Self-Control and Softness belong to that of things low and blameworthy.

II. That the man of Self-Control is identical with the man who is apt to abide by his resolution, and the man of Imperfect Self-Control with him who is apt to depart from his resolution.

III. That the man of Imperfect Self-Control does things at the instigation of his passions, knowing them to be wrong, while the man of Self-Control, knowing his lusts to be wrong, refuses, by the influence of reason, to follow their suggestions.

IV. That the man of Perfected Self-Mastery unites the qualities of Self-Control and Endurance, and some say that every one who unites these is a man of Perfect Self-Mastery, others do not.

V. Some confound the two characters of the man who has _no_ Self-Control, and the man of _Imperfect Self-Control_, while others distinguish between them.

VI. It is sometimes said that the man of Practical Wisdom cannot be a man of Imperfect Self-Control, sometimes that men who are Practically Wise and Clever are of Imperfect Self-Control.

VII. Again, men are said to be of Imperfect Self-Control, not simply but with the addition of the thing wherein, as in respect of anger, of honour, and gain.

These then are pretty well the common statements.

Chapter II.

Now a man may raise a question as to the nature of the right conception in violation of which a man fails of Self-Control.

That he can so fail when _knowing_ in the strict sense what is right some say is impossible: for it is a strange thing, as Socrates thought, that while Knowledge is present in his mind something else should master him and drag him about like a slave. Socrates in fact contended generally against the theory, maintaining there is no such state as that of Imperfect Self-Control, for that no one acts contrary to what is best conceiving it to be best but by reason of ignorance what is best.

With all due respect to Socrates, his account of the matter is at variance with plain facts, and we must enquire with respect to the affection, if it be caused by ignorance what is the nature of the ignorance: for that the man so failing does not suppose his acts to be right before he is under the influence of passion is quite plain.[2]

There are people who partly agree with Socrates and partly not: that nothing can be stronger than Knowledge they agree, but that no man acts in contravention of his conviction of what is better they do not agree; and so they say that it is not Knowledge, but only Opinion, which the man in question has and yet yields to the instigation of his pleasures.

But then, if it is Opinion and not Knowledge, that is it the opposing conception be not strong but only mild (as in the case of real doubt), the not abiding by it in the face of strong lusts would be excusable: but wickedness is not excusable, nor is anything which deserves blame.

Well then, is it Practical Wisdom which in this case offers opposition: for that is the strongest principle? The supposition is absurd, for we shall have the same man uniting Practical Wisdom and Imperfect Self-Control, and surely no single person would maintain that it is consistent with the character of Practical Wisdom to do voluntarily what is very wrong; and besides we have shown before that the very mark of a man of this character is aptitude to act, as distinguished from mere knowledge of what is right; because he is a man conversant with particular details, and possessed of all the other virtues.

Again, if the having strong and bad lusts is necessary to the idea of the man of Self-Control, this character cannot be identical with the man of Perfected Self-Mastery, because the having strong desires or bad ones does not enter into the idea of this latter character: and yet the man of Self-Control must have such: for suppose them good; then the moral state which should hinder a man from following their suggestions must be bad, and so Self-Control would not be in all cases good: suppose them on the other hand to be weak and not wrong, it would be nothing grand; nor anything great, supposing them to be wrong and weak.

Again, if Self-Control makes a man apt to abide by all opinions without exception, it may be bad, as suppose the case of a false opinion: and if Imperfect Self-Control makes a man apt to depart from all without exception, we shall have cases where it will be good; take that of Neoptolemus in the Philoctetes of Sophocles, for instance: he is to be praised for not abiding by what he was persuaded to by Ulysses, because he was pained at being guilty of falsehood.

Or again, false sophistical reasoning presents a difficulty: for because men wish to prove paradoxes that they may be counted clever when they succeed, the reasoning that has been used becomes a difficulty: for the intellect is fettered; a man being unwilling to abide by the conclusion because it does not please his judgment, but unable to advance because he cannot disentangle the web of sophistical reasoning.

Or again, it is conceivable on this supposition that folly joined with Imperfect Self-Control may turn out, in a given case, goodness: for by reason of his imperfection of self-control a man acts in a way which contradicts his notions; now his notion is that what is really good is bad and ought not to be done; and so he will eventually do what is good and not what is bad.

Again, on the same supposition, the man who acting on conviction pursues and chooses things because they are pleasant must be thought a better man than he who does so not by reason of a quasi-rational conviction but of Imperfect Self-Control: because he is more open to cure by reason of the possibility of his receiving a contrary conviction. But to the man of Imperfect Self-Control would apply the proverb, “when water chokes, what should a man drink then?” for had he never been convinced at all in respect of what he does,[3] then by a conviction in a contrary direction he might have stopped in his course; but now though he has had convictions he notwithstanding acts against them.

Again, if any and every thing is the object-matter of Imperfect and Perfect Self-Control, who is the man of Imperfect Self-Control simply? because no one unites all cases of it, and we commonly say that some men are so simply, not adding any particular thing in which they are so.

Well, the difficulties raised are pretty near such as I have described them, and of these theories we must remove some and leave others as established; because the solving of a difficulty is a positive act of establishing something as true.

Chapter III.

Now we must examine first whether men of Imperfect Self-Control act with a knowledge of what is right or not: next, if with such knowledge, in what sense; and next what are we to assume is the object-matter of the man of Imperfect Self-Control, and of the man of Self-Control; I mean, whether pleasure and pain of all kinds or certain definite ones; and as to Self-Control and Endurance, whether these are designations of the same character or different. And in like manner we must go into all questions which are connected with the present.

But the real starting point of the enquiry is, whether the two characters of Self-Control and Imperfect Self-Control are distinguished by their object-matter, or their respective relations to it. I mean, whether the man of Imperfect Self-Control is such simply by virtue of having such and such object-matter; or not, but by virtue of his being related to it in such and such a way, or by virtue of both: next, whether Self-Control and Imperfect Self-Control are unlimited in their object-matter: because he who is designated without any addition a man of Imperfect Self-Control is not unlimited in his object-matter, but has exactly the same as the man who has lost all Self-Control: nor is he so designated because of his relation to this object-matter merely (for then his character would be identical with that just mentioned, loss of all Self-Control), but because of his relation to it being such and such. For the man who has lost all Self-Control is led on with deliberate moral choice, holding that it is his line to pursue pleasure as it rises: while the man of Imperfect Self-Control does not think that he ought to pursue it, but does pursue it all the same.

Now as to the notion that it is True Opinion and not Knowledge in contravention of which men fail in Self-Control, it makes no difference to the point in question, because some of those who hold Opinions have no doubt about them but suppose themselves to have accurate Knowledge; if then it is urged that men holding Opinions will be more likely than men who have Knowledge to act in contravention of their conceptions, as having but a moderate belief in them; we reply, Knowledge will not differ in this respect from Opinion: because some men believe their own Opinions no less firmly than others do their positive Knowledge: Heraclitus is a case in point.

Rather the following is the account of it: the term _knowing_ has two senses; both the man who does not use his Knowledge, and he who does, are said to _know_: there will be a difference between a man's acting wrongly, who though possessed of Knowledge does not call it into operation, and his doing so who has it and actually exercises it: the latter is a strange case, but the mere having, if not exercising, presents no anomaly.

Again, as there are two kinds of propositions affecting action,[4] universal and particular, there is no reason why a man may not act against his Knowledge, having both propositions in his mind, using the universal but not the particular, for the particulars are the objects of moral action.

There is a difference also in universal propositions;[5] a universal proposition may relate partly to a man's self and partly to the thing in question: take the following for instance; "dry food is good for every man," this may have the two minor premisses, "this is a man," and "so and so is dry food;" but whether a given substance is so and so a man either has not the Knowledge or does not exert it. According to these different senses there will be an immense difference, so that for a man to _know_ in the one sense, and yet act wrongly, would be nothing strange, but in any of the other senses it would be a matter for wonder.

Again, men may have Knowledge in a way different from any of those which have been now stated: for we constantly see a man's state so differing by having and not using Knowledge, that he has it in a sense and also has not; when a man is asleep, for instance, or mad, or drunk: well, men under the actual operation of passion are in exactly similar conditions; for anger, lust, and some other such-like things, manifestly make changes even in the body, and in some they even cause madness; it is plain then that we must say the men of Imperfect Self-Control are in a state similar to these.

And their saying what embodies Knowledge is no proof of their actually then exercising it, because they who are under the operation of these passions repeat demonstrations; or verses of Empedocles,[6] just as children, when first learning, string words together, but as yet know nothing of their meaning, because they must grow into it, and this is a process requiring time: so that we must suppose these men who fail in Self-Control to say these moral sayings just as actors do.

Furthermore, a man may look at the account of the phænomenon in the following way, from an examination of the actual working of the mind: All action may be analysed into a syllogism, in which the one premiss is an universal maxim and the other concerns particulars of which Sense [moral or physical, as the case may be] is cognisant: now when one results from these two, it follows necessarily that, as far as theory goes the mind must assert the conclusion, and in practical propositions the man must act

accordingly.

For instance, let the universal be, “All that is sweet should be tasted,” the particular, “This is sweet;” it follows necessarily that he who is able and is not hindered should not only draw, but put in practice, the conclusion “This is to be tasted.” When then there is in the mind one universal proposition forbidding to taste, and the other “All that is sweet is pleasant” with its minor “This is sweet” (which is the one that really works), and desire happens to be in the man, the first universal bids him avoid this but the desire leads him on to taste; for it has the power of moving the various organs: and so it results that he fails in Self-Control, in a certain sense under the influence of Reason and Opinion not contrary in itself to Reason but only accidentally so; because it is the desire that is contrary to Right Reason, but not the Opinion:[7] and so for this reason brutes are not accounted of Imperfect Self-Control, because they have no power of conceiving universals but only of receiving and retaining particular impressions.

As to the manner in which the ignorance is removed and the man of Imperfect Self-Control recovers his Knowledge, the account is the same as with respect to him who is drunk or asleep, and is not peculiar to this affection, so physiologists[8] are the right people to apply to. But whereas the minor premiss of every practical syllogism is an opinion on matter cognisable by Sense and determines the actions; he who is under the influence of passion either has not this, or so has it that his having does not amount to _knowing_ but merely saying, as a man when drunk might repeat Empedocles’ verses; and because the minor term[9] is neither universal, nor is thought to have the power of producing Knowledge in like manner as the universal term: and so the result which Socrates was seeking comes out, that is to say, the affection does not take place in the presence of that which is thought to be specially and properly Knowledge, nor is this dragged about by reason of the affection, but in the presence of that Knowledge which is conveyed by Sense.

Let this account then be accepted of the question respecting the failure in Self-Control, whether it is with Knowledge, and the manner in which such failure is possible or not, though a man possesses Knowledge.

Chapter IV.

The next question to be discussed is whether there is a character to be designated by the term “of Imperfect Self-Control” simply, or whether all who are so are to be accounted such, in respect of some particular thing; and, if there is such a character, what is his object-matter.

Now that pleasures and pains are the object-matter of men of Self-Control and of Endurance, and also of men of Imperfect Self-Control and Softness, is plain.

Further, things which produce pleasure are either necessary, or objects of choice in themselves but yet admitting of excess. All bodily things which produce pleasure are necessary; and I call such those which relate to food and other grosser appetities, in short such bodily things as we assumed were the Object-matter of absence of Self-Control and of Perfected Self-Mastery.

The other class of objects are not necessary, but objects of choice in themselves: I mean, for instance, victory, honour, wealth, and such-like good or pleasant things. And those who are excessive in their liking for such things contrary to the principle of Right Reason which is in their own breasts we do not designate men of Imperfect Self-Control simply, but with the addition of the thing wherein, as in respect of money, or gain, or honour, or anger, and not simply; because we consider them as different characters and only having that title in right of a kind of resemblance (as when we add to a man’s name “conqueror in the Olympic games” the account of him as Man differs but little from the account of him as the Man who conquered in the Olympic games, but still it is different). And a proof of the real difference between these so designated with an addition and those simply so called is this, that Imperfect Self-Control is blamed, not as an error merely but also as being a vice, either wholly or partially; but none of these other cases is so blamed.

But of those who have for their object-matter the bodily enjoyments, which we say are also the object-matter of the man of Perfected Self-Mastery and the man who has lost all Self-Control, he that pursues excessive pleasures and too much avoids[10] things which are painful (as hunger and thirst, heat and cold, and everything connected with touch and taste), not from moral choice but in spite of his moral choice and intellectual conviction, is termed “a man of Imperfect Self-Control,” not with the addition of any particular object-matter as we do in respect of want of control of anger but simply.

And a proof that the term is thus applied is that the kindred term “Soft” is used in respect of these enjoyments but not in respect of any of those others. And for this reason we put into the same rank the man of Imperfect Self-Control, the man who has lost it entirely, the man who has it, and the man of Perfected Self-Mastery; but not any of those other characters, because the former

have for their object-matter the same pleasures and pains: but though they have the same object-matter, they are not related to it in the same way, but two of them act upon moral choice, two without it. And so we should say that man is more entirely given up to his passions who pursues excessive pleasures, and avoids moderate pains, being either not at all, or at least but little, urged by desire, than the man who does so because his desire is very strong: because we think what would the former be likely to do if he had the additional stimulus of youthful lust and violent pain consequent on the want of those pleasures which we have denominated necessary?

Well then, since of desires and pleasures there are some which are in kind honourable and good (because things pleasant are divisible, as we said before, into such as are naturally objects of choice, such as are naturally objects of avoidance, and such as are in themselves indifferent, money, gain, honour, victory, for instance); in respect of all such and those that are indifferent, men are blamed not merely[11] for being affected by or desiring or liking them, but for exceeding in any way in these feelings.

And so they are blamed, whosoever in spite of Reason are mastered by, that is pursue, any object, though in its nature noble and good; they, for instance, who are more earnest than they should be respecting honour, or their children or parents; not but what these are good objects and men are praised for being earnest about them: but still they admit of excess; for instance, if any one, as Niobe did, should fight even against the gods, or feel towards his father as Satyrus, who got therefrom the nickname of φιλοπ■τωρ, because he was thought to be very foolish.

Now depravity there is none in regard of these things, for the reason assigned above, that each of them in itself is a thing naturally choice-worthy, yet the excesses in respect of them are wrong and matter for blame: and similarly there is no Imperfect Self-Control in respect of these things; that being not merely a thing that should be avoided but blameworthy.

But because of the resemblance of the affection to the Imperfection of Self-Control the term is used with the addition in each case of the particular object-matter, just as men call a man a bad physician, or bad actor, whom they would not think of calling simply bad. As then in these cases we do not apply the term simply because each of the states is not a vice, but only like a vice in the way of analogy,[12] so it is plain that in respect of Imperfect Self-Control and Self-Control we must limit the names to those states which have the same object-matter as Perfected Self-Mastery and utter loss of Self-Control, and that we do apply it to the case of anger only in the way of resemblance: for which reason, with an addition, we designate a man of Imperfect Self-Control in respect of anger, as of honour or of gain.

Chapter V.

As there are some things naturally pleasant, and of these two kinds; those, namely, which are pleasant generally, and those which are so relatively to particular kinds of animals and men; so there are others which are not naturally pleasant but which come to be so in consequence either of maimings, or custom, or depraved natural tastes: and one may observe moral states similar to those we have been speaking of, having respectively these classes of things for their object-matter.

I mean the Brutish, as in the case of the female who, they say, would rip up women with child and eat the foetus; or the tastes which are found among the savage tribes bordering on the Pontus, some liking raw flesh, and some being cannibals, and some lending one another their children to make feasts of; or what is said of Phalaris. These are instances of Brutish states, caused in some by disease or madness; take, for instance, the man who sacrificed and ate his mother, or him who devoured the liver of his fellow-servant. Instances again of those caused by disease or by custom, would be, plucking out of hair, or eating one's nails, or eating coals and earth.[13] Now wherever nature is really the cause no one would think of calling men of Imperfect Self-Control, ... nor, in like manner, such as are in a diseased state through custom.

The having any of these inclinations is something foreign to what is denominated Vice, just as Brutishness is: and when a man has them his mastering them is not properly Self-Control, nor his being mastered by them Imperfection of Self-Control in the proper sense, but only in the way of resemblance; just as we may say a man of ungovernable wrath fails of Self-Control in respect of anger but not simply fails of Self-Control. For all excessive folly, cowardice, absence of Self-Control, or irritability, are either Brutish or morbid. The man, for instance, who is naturally afraid of all things, even if a mouse should stir, is cowardly after a Brutish sort; there was a man again who, by reason of disease, was afraid of a cat: and of the fools, they who are naturally destitute of Reason and live only by Sense are Brutish, as are some tribes of the far-off barbarians, while others who are so by reason of diseases, epileptic or frantic, are in morbid states.

So then, of these inclinations, a man may sometimes merely have one without yielding to it: I mean, suppose that Phalaris had restrained his unnatural desire to eat a child: or he may both have and yield to it. As then Vice when such as belongs to human nature is called Vice simply, while the other is so called with the addition of “brutish” or “morbid,” but not simply Vice, so manifestly there is Brutish and Morbid Imperfection of Self-Control, but that alone is entitled to the name without any qualification which is of the nature of utter absence of Self-Control, as it is found in Man.

Chapter VI.

It is plain then that the object-matter of Imperfect Self-Control and Self-Control is restricted to the same as that of utter absence of Self-Control and that of Perfected Self-Mastery, and that the rest is the object-matter of a different species so named metaphorically and not simply: we will now examine the position, “that Imperfect Self-Control in respect of Anger is less disgraceful than that in respect of Lusts.”

In the first place, it seems that Anger does in a way listen to Reason but mishears it; as quick servants who run out before they have heard the whole of what is said and then mistake the order; dogs, again, bark at the slightest stir, before they have seen whether it be friend or foe; just so Anger, by reason of its natural heat and quickness, listening to Reason, but without having heard the command of Reason, rushes to its revenge. That is to say, Reason or some impression on the mind shows there is insolence or contempt[14] in the offender, and then Anger, reasoning as it were that one ought to fight against what is such, fires up immediately: whereas Lust, if Reason or Sense, as the case may be, merely says a thing is sweet, rushes to the enjoyment of it: and so Anger follows Reason in a manner, but Lust does not and is therefore more disgraceful: because he that cannot control his anger yields in a manner to Reason, but the other to his Lust and not to Reason at all.

Again, a man is more excusable for following such desires as are natural, just as he is for following such Lusts as are common to all and to that degree in which they are common. Now Anger and irritability are more natural than Lusts when in excess and for objects not necessary. (This was the ground of the defence the man made who beat his father, “My father,” he said, “used to beat his, and his father his again, and this little fellow here,” pointing to his child, “will beat me when he is grown a man: it runs in the family.” And the father, as he was being dragged along, bid his son leave off beating him at the door, because he had himself been used to drag his father so far and no farther.)

Again, characters are less unjust in proportion as they involve less insidiousness. Now the Angry man is not insidious, nor is Anger, but quite open: but Lust is: as they say of Venus,

“Cyprus-born Goddess, _weaver of deceits_”

Or Homer of the girdle called the Cestus,

“Persuasiveness _cheating_ e’en the subtlest mind.”

And so since this kind of Imperfect Self-Control is more unjust, it is also more disgraceful than that in respect of Anger, and is simply Imperfect Self-Control, and Vice in a certain sense.

Again, no man feels pain in being insolent, but every one who acts through Anger does act with pain; and he who acts insolently does it with pleasure. If then those things are most unjust with which we have most right to be angry, then Imperfect Self-Control, arising from Lust, is more so than that arising from Anger: because in Anger there is no insolence.[15]

Well then, it is clear that Imperfect Self-Control in respect of Lusts is more disgraceful than that in respect of Anger, and that the object-matter of Self-Control, and the Imperfection of it, are bodily Lusts and pleasures; but of these last we must take into account the differences; for, as was said at the commencement, some are proper to the human race and natural both in kind and degree, others Brutish, and others caused by maimings and diseases.

Now the first of these only are the object-matter of Perfected Self-Mastery and utter absence of Self-Control; and therefore we never attribute either of these states to Brutes (except metaphorically, and whenever any one kind of animal differs entirely from another in insolence, mischievousness, or voracity), because they have not moral choice or process of deliberation, but are quite different from that kind of creature just as are madmen from other men.

Brutishness is not so low in the scale as Vice, yet it is to be regarded with more fear: because it is not that the highest principle has been corrupted, as in the human creature, but the subject has it not at all.

It is much the same, therefore, as if one should compare an inanimate with an animate being, which were the worse: for the badness of that which has no principle of origination is always less harmful; now Intellect is a principle of origination. A similar case would be the comparing injustice and an unjust man together: for in different ways each is the worst: a bad man would produce ten thousand times as much harm as a bad brute.

Chapter VII.

Now with respect to the pleasures and pains which come to a man through Touch and Taste, and the desiring or avoiding such (which we determined before to constitute the object-matter of the states of utter absence of Self-Control and Perfected Self-Mastery), one may be so disposed as to yield to temptations to which most men would be superior, or to be superior to those to which most men would yield: in respect of pleasures, these characters will be respectively the man of Imperfect Self-Control, and the man of Self-Control; and, in respect of pains, the man of Softness and the man of Endurance: but the moral state of most men is something between the two, even though they lean somewhat to the worse characters.

Again, since of the pleasures indicated some are necessary and some are not, others are so to a certain degree but not the excess or defect of them, and similarly also of Lusts and pains, the man who pursues the excess of pleasant things, or such as are in themselves excess, or from moral choice, for their own sake, and not for anything else which is to result from them, is a man utterly void of Self-Control: for he must be incapable of remorse, and so incurable, because he that has not remorse is incurable. (He that has too little love of pleasure is the opposite character, and the man of Perfected Self-Mastery the mean character.) He is of a similar character who avoids the bodily pains, not because he _cannot_, but because he _chooses not to_, withstand them.

But of the characters who go wrong without _choosing_ so to do, the one is led on by reason of pleasure, the other because he avoids the pain it would cost him to deny his lust; and so they are different the one from the other. Now every one would pronounce a man worse for doing something base without any impulse of desire, or with a very slight one, than for doing the same from the impulse of a very strong desire; for striking a man when not angry than if he did so in wrath: because one naturally says, “What would he have done had he been under the influence of passion?” (and on this ground, by the bye, the man utterly void of Self-Control is worse than he who has it imperfectly). However, of the two characters which have been mentioned,[16] [as included in that of utter absence of Self-Control], the one is rather Softness, the other properly the man of no Self-Control.

Furthermore, to the character of Imperfect Self-Control is opposed that of Self-Control, and to that of Softness that of Endurance: because Endurance consists in continued resistance but Self-Control in actual mastery, and continued resistance and actual mastery are as different as not being conquered is from conquering; and so Self-Control is more choice-worthy than Endurance.

Again, he who fails when exposed to those temptations against which the common run of men hold out, and are well able to do so, is Soft and Luxurious (Luxury being a kind of Softness): the kind of man, I mean, to let his robe drag in the dirt to avoid the trouble of lifting it, and who, aping the sick man, does not however suppose himself wretched though he is like a wretched man. So it is too with respect to Self-Control and the Imperfection of it: if a man yields to pleasures or pains which are violent and excessive it is no matter for wonder, but rather for allowance if he made what resistance he could (instances are, Philoctetes in Theodectes’ drama when wounded by the viper; or Cercyon in the Alope of Carcinus, or men who in trying to suppress laughter burst into a loud continuous fit of it, as happened, you remember, to Xenophantus), but it is a matter for wonder when a man yields to and cannot contend against those pleasures or pains which the common herd are able to resist; always supposing his failure not to be owing to natural constitution or disease, I mean, as the Scythian kings are constitutionally Soft, or the natural difference between the sexes.

Again, the man who is a slave to amusement is commonly thought to be destitute of Self-Control, but he really is Soft; because amusement is an act of relaxing, being an act of resting, and the character in question is one of those who exceed due bounds in respect of this.

Moreover of Imperfect Self-Control there are two forms, Precipitancy and Weakness: those who have it in the latter form though they have made resolutions do not abide by them by reason of passion; the others are led by passion because they have never formed any resolutions at all: while there are some who, like those who by tickling themselves beforehand get rid of ticklishness, having felt and seen beforehand the approach of temptation, and roused up themselves and their resolution, yield not to passion; whether the temptation be somewhat pleasant or somewhat painful. The Precipitate form of Imperfect Self-Control they are most liable to who are constitutionally of a sharp or melancholy temperament: because the one by reason of the swiftness, the other by reason of the violence, of their passions, do not wait for Reason, because they are disposed to follow whatever notion is impressed upon their minds.

Again, the man utterly destitute of Self-Control, as was observed before, is not given to remorse: for it is part of his character that he abides by his moral choice: but the man of Imperfect Self-Control is almost made up of remorse: and so the case is not as we determined it before, but the former is incurable and the latter may be cured: for depravity is like chronic diseases, dropsy and consumption for instance, but Imperfect Self-Control is like acute disorders: the former being a continuous evil, the latter not so. And, in fact, Imperfect Self-Control and Confirmed Vice are different in kind: the latter being imperceptible to its victim, the former not so.[17]

But, of the different forms of Imperfect Self-Control, those are better who are carried off their feet by a sudden access of temptation than they who have Reason but do not abide by it; these last being overcome by passion less in degree, and not wholly without premeditation as are the others: for the man of Imperfect Self-Control is like those who are soon intoxicated and by little wine and less than the common run of men.

Well then, that Imperfection of Self-Control is not Confirmed Viciousness is plain: and yet perhaps it is such in a way, because in one sense it is contrary to moral choice and in another the result of it:[18] at all events, in respect of the actions, the case is much like what Demodocus said of the Miletians. “The people of Miletus are not fools, but they do just the kind of things that fools do;” and so they of Imperfect Self-Control are not unjust, but they do unjust acts.

But to resume. Since the man of Imperfect Self-Control is of such a character as to follow bodily pleasures in excess and in defiance of Right Reason, without acting on any deliberate conviction, whereas the man utterly destitute of Self-Control does act upon a conviction which rests on his natural inclination to follow after these pleasures; the former may be easily persuaded to a different course, but the latter not: for Virtue and Vice respectively preserve and corrupt the moral principle; now the motive is the principle or starting point in moral actions, just as axioms and postulates are in mathematics: and neither in morals nor mathematics is it Reason which is apt to teach the principle; but Excellence, either natural or acquired by custom, in holding right notions with respect to the principle. He who does this in morals is the man of Perfected Self-Mastery, and the contrary character is the man utterly destitute of Self-Control.

Again, there is a character liable to be taken off his feet in defiance of Right Reason because of passion; whom passion so far masters as to prevent his acting in accordance with Right Reason, but not so far as to make him be convinced that it is his proper line to follow after such pleasures without limit: this character is the man of Imperfect Self- Control, better than he who is utterly destitute of it, and not a bad man simply and without qualification: because in him the highest and best part, i.e. principle, is preserved: and there is another character opposed to him who is apt to abide by his resolutions, and not to depart from them; at all events, not at the instigation of passion.

It is evident then from all this, that Self-Control is a good state and the Imperfection of it a bad one.

Chapter VIII.

Next comes the question, whether a man is a man of Self-Control for abiding by his conclusions and moral choice be they of what kind they may, or only by the right one; or again, a man of Imperfect Self-Control for not abiding by his conclusions and moral choice be they of whatever kind; or, to put the case we did before, is he such for not abiding by false conclusions and wrong moral choice?

Is not this the truth, that _incidentally_ it is by conclusions and moral choice of any kind that the one character abides and the other does not, but _per se_ true conclusions and right moral choice:[19] to explain what is meant by incidentally, and _per se_; suppose a man chooses or pursues this thing for the sake of that, he is said to pursue and choose that _per se_, but this only incidentally. For the term _per se_ we use commonly the word “simply,” and so, in a way, it is opinion of any kind soever by which the two characters respectively abide or not, but he is “simply” entitled to the designations who abides or not by the true opinion.

There are also people, who have a trick of abiding by their, own opinions, who are commonly called Positive, as they who are hard to be persuaded, and whose convictions are not easily changed: now these people bear some resemblance to the character of Self-Control, just as the prodigal to the liberal or the rash man to the brave, but they are different in many points. The man of Self-Control does not change by reason of passion and lust, yet when occasion so requires he will be easy of persuasion: but the Positive man changes not at the call of Reason, though many of this class take up certain desires and are led by their pleasures. Among the class of Positive are the Opinionated, the Ignorant, and the Bearish: the first, from the motives of pleasure and pain: I mean, they have the pleasurable feeling of a kind of victory in not having their convictions changed, and they are pained when their

decrees, so to speak, are reversed: so that, in fact, they rather resemble the man of Imperfect Self-Control than the man of Self-Control.

Again, there are some who depart from their resolutions not by reason of any Imperfection of Self-Control; take, for instance, Neoptolemus in the Philoctetes of Sophocles. Here certainly pleasure was the motive of his departure from his resolution, but then it was one of a noble sort: for to be truthful was noble in his eyes and he had been persuaded by Ulysses to lie.

So it is not every one who acts from the motive of pleasure who is utterly destitute of Self-Control or base or of Imperfect Self-Control, only he who acts from the impulse of a base pleasure.

Chapter IX.

Moreover as there is a character who takes less pleasure than he ought in bodily enjoyments, and he also fails to abide by the conclusion of his Reason,[20] the man of Self-Control is the mean between him and the man of Imperfect Self-Control: that is to say, the latter fails to abide by them because of somewhat too much, the former because of somewhat too little; while the man of Self-Control abides by them, and never changes by reason of anything else than such conclusions.

Now of course since Self-Control is good both the contrary States must be bad, as indeed they plainly are: but because the one of them is seen in few persons, and but rarely in them, Self-Control comes to be viewed as if opposed only to the Imperfection of it, just as Perfected Self-Mastery is thought to be opposed only to utter want of Self-Control.

Again, as many terms are used in the way of similitude, so people have come to talk of the Self-Control of the man of Perfected Self-Mastery in the way of similitude: for the man of Self-Control and the man of Perfected Self-Mastery have this in common, that they do nothing against Right Reason on the impulse of bodily pleasures, but then the former has bad desires, the latter not; and the latter is so constituted as not even to feel pleasure contrary to his Reason, the former feels but does not yield to it.

Like again are the man of Imperfect Self-Control and he who is utterly destitute of it, though in reality distinct: both follow bodily pleasures, but the latter under a notion that it is the proper line for him to take, his former without any such notion.

And it is not possible for the same man to be at once a man of Practical Wisdom and of Imperfect Self-Control: because the character of Practical Wisdom includes, as we showed before, goodness of moral character. And again, it is not knowledge merely, but aptitude for action, which constitutes Practical Wisdom: and of this aptitude the man of Imperfect Self-Control is destitute. But there is no reason why the Clever man should not be of Imperfect Self-Control: and the reason why some men are occasionally thought to be men of Practical Wisdom, and yet of Imperfect Self-Control, is this, that Cleverness differs from Practical Wisdom in the way I stated in a former book, and is very near it so far as the intellectual element is concerned but differs in respect of the moral choice.

Nor is the man of Imperfect Self-Control like the man who both has and calls into exercise his knowledge, but like the man who, having it, is overpowered by sleep or wine. Again, he acts voluntarily (because he knows, in a certain sense, what he does and the result of it), but he is not a confirmed bad man, for his moral choice is good, so he is at all events only half bad. Nor is he unjust, because he does not act with deliberate intent: for of the two chief forms of the character, the one is not apt to abide by his deliberate resolutions, and the other, the man of constitutional strength of passion, is not apt to deliberate at all.

So in fact the man of Imperfect Self-Control is like a community which makes all proper enactments, and has admirable laws, only does not act on them, verifying the scoff of Anaxandrides,

“That State did will it, which cares nought for laws;”

whereas the bad man is like one which acts upon its laws, but then unfortunately they are bad ones.

Imperfection of Self-Control and Self-Control, after all, are above the average state of men; because he of the latter character is more true to his Reason, and the former less so, than is in the power of most men.

Again, of the two forms of Imperfect Self-Control that is more easily cured which they have who are constitutionally of strong passions, than that of those who form resolutions and break them; and they that are so through habituation than they that are so naturally; since of course custom is easier to change than nature, because the very resemblance of custom to nature is what constitutes the difficulty of changing it; as Evenus says,

“Practice, I say, my friend, doth long endure, And at the last is even very nature.”

We have now said then what Self-Control is, what Imperfection of Self-Control, what Endurance, and what Softness, and how these states are mutually related.

APPENDIX. Book VII. Chapters 12 to 15. (Bekker.)

To consider the subject of Pleasure and Pain falls within the province of the Social-Science Philosopher, since he it is who has to fix the Master-End which is to guide us in dominating any object absolutely evil or good.

But we may say more: an enquiry into their nature is absolutely necessary. First, because we maintained that Moral Virtue and Moral Vice are both concerned with Pains and Pleasures: next, because the greater part of mankind assert that Happiness must include Pleasure (which by the way accounts for the word they use, μακ■ριος; χα■ρειν being the root of that word).

Now some hold that no one Pleasure is good, either in itself or as a matter of result, because Good and Pleasure are not identical. Others that some Pleasures are good but the greater number bad. There is yet a third view; granting that every Pleasure is good, still the Chief Good cannot possibly be Pleasure.

In support of the first opinion (that Pleasure is utterly not-good) it is urged that:

1. Every Pleasure is a sensible process towards a complete state; but no such process is akin to the end to be attained: _e.g._ no process of building to the completed house.

2. The man of Perfected Self-Mastery avoids Pleasures.

3. The man of Practical Wisdom aims at avoiding Pain, not at attaining Pleasure.

4. Pleasures are an impediment to thought, and the more so the more keenly they are felt. An obvious instance will readily occur.

5. Pleasure cannot be referred to any Art: and yet every good is the result of some Art.

6. Children and brutes pursue Pleasures.

In support of the second (that not all Pleasures are good), That there are some base and matter of reproach, and some even hurtful: because some things that are pleasant produce disease.

In support of the third (that Pleasure is not the Chief Good), That it is not an End but a process towards creating an End.

This is, I think, a fair account of current views on the matter.

But that the reasons alleged do not prove it either to be not-good or the Chief Good is plain from the following considerations.

First. Good being either absolute or relative, of course the natures and states embodying it will be so too; therefore also the movements and the processes of creation. So, of those which are thought to be bad some will be bad absolutely, but relatively not bad, perhaps even choice-worthy; some not even choice-worthy relatively to any particular person, only at certain times or for a short time but not in themselves choice-worthy.

Others again are not even Pleasures at all though they produce that impression on the mind: all such I mean as imply pain and whose purpose is cure; those of sick people, for instance.

Next, since Good may be either an active working or a state, those [κιν■σεις or γεν■σεις] which tend to place us in our natural state are pleasant incidentally because of that tendency: but the active working is really in the desires excited in the remaining (sound) part of our state or nature: for there are Pleasures which have no connection with pain or desire: the acts of contemplative intellect, for instance, in which case there is no deficiency in the nature or state of him who performs the acts.

A proof of this is that the same pleasant thing does not produce the sensation of Pleasure when the natural state is being filled up or completed as when it is already in its normal condition: in this latter case what give the sensation are things pleasant _per se_, in the former even those things which are contrary. I mean, you find people taking pleasure in sharp or bitter things of which no one is naturally or in itself pleasant; of course not therefore the Pleasures arising from them, because it is obvious that as is the classification of pleasant things such must be that of the Pleasures arising from them.

Next, it does not follow that there must be something else better than any given pleasure because (as some say) the End must be better than the process which creates it. For it is not true that all Pleasures are processes or even attended by any process, but (some are) active workings or even Ends: in fact they result not from our coming to be something but from our using our powers. Again, it is not true that the End is, in every case, distinct from the process: it is true only in the case of such processes as conduce to the perfecting of the natural state.

For which reason it is wrong to say that Pleasure is “a sensible process of production.” For “process etc.” should be substituted “active working of the natural state,” for “sensible” “unimpeded.” The reason of its being thought to be a “process etc.” is that it is good in the highest sense: people confusing “active working” and “process,” whereas they really are distinct.

Next, as to the argument that there are bad Pleasures because some things which are pleasant are also hurtful to health, it is the same as saying that some healthful things are bad for “business.” In this sense, of course, both may be said to be bad, but then this does not make them out to be bad _simpliciter_: the exercise of the pure Intellect sometimes hurts a man’s health: but what hinders Practical Wisdom or any state whatever is, not the Pleasure peculiar to, but some Pleasure foreign to it: the Pleasures arising from the exercise of the pure Intellect or from learning only promote each.

Next. “No Pleasure is the work of any Art.” What else would you expect? No active working is the work of any Art, only the faculty of so working. Still the perfumer’s Art or the cook’s are thought to belong to Pleasure.

Next. “The man of Perfected Self-Mastery avoids Pleasures.” “The man of Practical Wisdom aims at escaping Pain rather than at attaining Pleasure.”

“Children and brutes pursue Pleasures.”

One answer will do for all.

We have already said in what sense all Pleasures are good _per se_ and in what sense not all are good: it is the latter class that brutes and children pursue, such as are accompanied by desire and pain, that is the bodily Pleasures (which answer to this description) and the excesses of them: in short, those in respect of which the man utterly destitute of Self-Control is thus utterly destitute. And it is the absence of the pain arising from these Pleasures that the man of Practical Wisdom aims at. It follows that these Pleasures are what the man of Perfected Self-Mastery avoids: for obviously he has Pleasures peculiarly his own.

Then again, it is allowed that Pain is an evil and a thing to be avoided partly as bad _per se_, partly as being a hindrance in some particular way. Now the contrary of that which is to be avoided, _quâ_ it is to be avoided, _i.e._ evil, is good. Pleasure then must be _a_ good.

The attempted answer of Speusippus, “that Pleasure may be opposed and yet not contrary to Pain, just as the greater portion of any magnitude is contrary to the less but only opposed to the exact half,” will not hold: for he cannot say that Pleasure is identical with evil of any kind.

Again. Granting that some Pleasures are low, there is no reason why some particular Pleasure may not be very good, just as some particular Science may be although there are some which are low.

Perhaps it even follows, since each state may have active working unimpeded, whether the active workings of all be Happiness or that of some one of them, that this active working, if it be unimpeded, must be choice-worthy: now Pleasure is exactly this. So that the Chief Good may be Pleasure of some kind, though most Pleasures be (let us assume) low _per se_.

And for this reason all men think the happy life is pleasant, and interweave Pleasure with Happiness. Reasonably enough: because Happiness is perfect, but no impeded active working is perfect; and therefore the happy man needs as an addition the goods of the body and the goods external and fortune that in these points he may not be fettered. As for those who say that he who is being tortured on the wheel, or falls into great misfortunes is happy provided only he be good, they talk nonsense, whether they mean to do so or not. On the other hand, because fortune is needed as an addition, some hold good fortune to be identical with Happiness: which it is not, for even this in excess is a hindrance, and perhaps then has no right to be called good fortune since it is good only in so far as it contributes to Happiness.

The fact that all animals, brute and human alike, pursue Pleasure, is some presumption of its being in a sense the Chief Good;

("There must be something in what most folks say,") only as one and the same nature or state neither is nor is thought to be the best, so neither do all pursue the same Pleasure, Pleasure nevertheless all do. Nay further, what they pursue is, perhaps, not what they think nor what they would say they pursue, but really one and the same: for in all there is some instinct above themselves. But the bodily Pleasures have received the name exclusively, because theirs is the most frequent form and that which is universally partaken of; and so, because to many these alone are known they believe them to be the only ones which exist.

It is plain too that, unless Pleasure and its active working be good, it will not be true that the happy man's life embodies Pleasure: for why will he want it on the supposition that it is not good and that he can live even with Pain? because, assuming that Pleasure is not good, then Pain is neither evil nor good, and so why should he avoid it?

Besides, the life of the good man is not more pleasurable than any other unless it be granted that his active workings are so too.

Some enquiry into the bodily Pleasures is also necessary for those who say that some Pleasures, to be sure, are highly choice-worthy (the good ones to wit), but not the bodily Pleasures; that is, those which are the object-matter of the man utterly destitute of Self-Control.

If so, we ask, why are the contrary Pains bad? they cannot be (on their assumption) because the contrary of bad is good.

May we not say that the necessary bodily Pleasures are good in the sense in which that which is not-bad is good? or that they are good only up to a certain point? because such states or movements as cannot have too much of the better cannot have too much of Pleasure, but those which can of the former can also of the latter. Now the bodily Pleasures do admit of excess: in fact the low bad man is such because he pursues the excess of them instead of those which are necessary (meat, drink, and the objects of other animal appetites do give pleasure to all, but not in right manner or degree to all). But his relation to Pain is exactly the contrary: it is not excessive Pain, but Pain at all, that he avoids [which makes him to be in this way too a bad low man], because only in the case of him who pursues excessive Pleasure is Pain contrary to excessive Pleasure.

It is not enough however merely to state the truth, we should also show how the false view arises; because this strengthens conviction. I mean, when we have given a probable reason why that impresses people as true which really is not true, it gives them a stronger conviction of the truth. And so we must now explain why the bodily Pleasures appear to people to be more choice-worthy than any others.

The first obvious reason is, that bodily Pleasure drives out Pain; and because Pain is felt in excess men pursue Pleasure in excess, _i.e._ generally bodily Pleasure, under the notion of its being a remedy for that Pain. These remedies, moreover, come to be violent ones; which is the very reason they are pursued, since the impression they produce on the mind is owing to their being looked at side by side with their contrary.

And, as has been said before, there are the two following reasons why bodily Pleasure is thought to be not-good.

1. Some Pleasures of this class are actings of a low nature, whether congenital as in brutes, or acquired by custom as in low bad men.

2. Others are in the nature of cures, cures that is of some deficiency; now of course it is better to have [the healthy state] originally than that it should accrue afterwards.

(But some Pleasures result when natural states are being perfected: these therefore are good as a matter of result.)

Again, the very fact of their being violent causes them to be pursued by such as can relish no others: such men in fact create violent thirsts for themselves (if harmless ones then we find no fault, if harmful then it is bad and low) because they have no other things to take pleasure in, and the neutral state is distasteful to some people constitutionally; for toil of some kind is inseparable from life, as physiologists testify, telling us that the acts of seeing or hearing are painful, only that we are used to the pain and do not find it out.

Similarly in youth the constant growth produces a state much like that of vinous intoxication, and youth is pleasant. Again, men of the melancholic temperament constantly need some remedial process (because the body, from its temperament, is constantly being worried), and they are in a chronic state of violent desire. But Pleasure drives out Pain; not only such Pleasure as is directly contrary to Pain but even any Pleasure provided it be strong: and this is how men come to be utterly destitute of Self-Mastery, _i.e._ low and bad.

But those Pleasures which are unconnected with Pains do not admit of excess: _i.e._ such as belong to objects which are naturally pleasant and not merely as a matter of result: by the latter class I mean such as are remedial, and the reason why these are thought to be pleasant is that the cure results from the action in some way of that part of the constitution which remains sound. By “pleasant naturally” I mean such as put into action a nature which is pleasant.

The reason why no one and the same thing is invariably pleasant is that our nature is, not simple, but complex, involving something different from itself (so far as we are corruptible beings). Suppose then that one part of this nature be doing something, this something is, to the other part, unnatural: but, if there be an equilibrium of the two natures, then whatever is being done is indifferent. It is obvious that if there be any whose nature is simple and not complex, to such a being the same course of acting will always be the most pleasurable.

For this reason it is that the Divinity feels Pleasure which is always one, _i.e._ simple: not motion merely but also motionlessness acts, and Pleasure resides rather in the absence than in the presence of motion.

The reason why the Poet’s dictum “change is of all things most pleasant” is true, is “a baseness in our blood;” for as the bad man is easily changeable, bad must be also the nature that craves change, _i.e._ it is neither simple nor good.

We have now said our say about Self-Control and its opposite; and about Pleasure and Pain. What each is, and how the one set is good the other bad. We have yet to speak of Friendship.

BOOK VIII

Chapter I.

Next would seem properly to follow a dissertation on Friendship: because, in the first place, it is either itself a virtue or connected with virtue; and next it is a thing most necessary for life, since no one would choose to live without friends though he should have all the other good things in the world: and, in fact, men who are rich or possessed of authority and influence are thought to have special need of friends: for where is the use of such prosperity if there be taken away the doing of kindnesses of which friends are the most usual and most commendable objects? Or how can it be kept or preserved without friends? because the greater it is so much the more slippery and hazardous: in poverty moreover and all other adversities men think friends to be their only refuge.

Furthermore, Friendship helps the young to keep from error: the old, in respect of attention and such deficiencies in action as their weakness makes them liable to; and those who are in their prime, in respect of noble deeds (“They _two_ together going,” Homer says, you may remember), because they are thus more able to devise plans and carry them out.

Again, it seems to be implanted in us by Nature: as, for instance, in the parent towards the offspring and the offspring towards the parent (not merely in the human species, but likewise in birds and most animals), and in those of the same tribe towards one another, and specially in men of the same nation; for which reason we commend those men who love their fellows: and one may see in the course of travel how close of kin and how friendly man is to man.

Furthermore, Friendship seems to be the bond of Social Communities, and legislators seem to be more anxious to secure it than Justice even. I mean, Unanimity is somewhat like to Friendship, and this they certainly aim at and specially drive out faction as being inimical.

Again, where people are in Friendship Justice is not required;[1] but, on the other hand, though they are just they need Friendship in addition, and that principle which is most truly just is thought to partake of the nature of Friendship.

Lastly, not only is it a thing necessary but honourable likewise: since we praise those who are fond of friends, and the having numerous friends is thought a matter of credit to a man; some go so far as to hold, that “good man” and “friend” are terms synonymous.

Chapter II.

Yet the disputed points respecting it are not few: some men lay down that it is a kind of resemblance, and that men who are like one another are friends: whence come the common sayings, “Like will to like,” “Birds of a feather,” and so on. Others, on the contrary, say, that all such come under the maxim, “Two of a trade never agree.”[2]

Again, some men push their enquiries on these points higher and reason physically: as Euripides, who says,

“The earth by drought consumed doth love the rain, And the great heaven, overcharged with rain, Doth love to fall in showers upon the earth.”

Heraclitus, again, maintains, that “contrariety is expedient, and that the best agreement arises from things differing, and that all things come into being in the way of the principle of antagonism.”

Empedocles, among others, in direct opposition to these, affirms, that “like aims at like.”

These physical questions we will take leave to omit, inasmuch as they are foreign to the present enquiry; and we will examine such as are proper to man and concern moral characters and feelings: as, for instance, “Does Friendship arise among all without distinction, or is it impossible for bad men to be friends?” and, “Is there but one species of Friendship, or several?” for they who ground the opinion that there is but one on the fact that Friendship admits of degrees hold that upon insufficient proof; because things which are different in species admit likewise of degrees (on this point we have spoken before).

Chapter III.

Our view will soon be cleared on these points when we have ascertained what is properly the object-matter of Friendship: for it is thought that not everything indiscriminately, but some peculiar matter alone, is the object of this affection; that is to say, what is good, or pleasurable, or useful. Now it would seem that that is useful through which accrues any good or pleasure, and so the objects of Friendship, as absolute Ends, are the good and the pleasurable.

A question here arises; whether it is good absolutely or that which is good to the individuals, for which men feel Friendship (these two being sometimes distinct): and similarly in respect of the pleasurable. It seems then that each individual feels it towards that which is good to himself, and that abstractedly it is the real good which is the object of Friendship, and to each individual that which is good to each. It comes then to this; that each individual feels Friendship not for what _is_ but for that which _conveys to his mind the impression of being_ good to himself. But this will make no real difference, because that which is truly the object of Friendship will also convey this impression to the mind.

There are then three causes from which men feel Friendship: but the term is not applied to the case of fondness for things inanimate because there is no requital of the affection nor desire for the good of those objects: it certainly savours of the ridiculous to say that a man fond of wine wishes well to it: the only sense in which it is true being that he wishes it to be kept safe and sound for his own use and benefit.[3] But to the friend they say one should wish all good for his sake. And when men do thus wish good to another (he not reciprocating the feeling), people call them Kindly; because Friendship they describe as being “Kindliness between persons who reciprocate it.” But must they not add that the feeling must be mutually known? for many men are kindly disposed towards those whom they have never seen but whom they conceive to be amiable or useful: and this notion amounts to the same thing as a real feeling between them.

Well, these are plainly Kindly-disposed towards one another: but how can one call them friends while their mutual feelings are unknown to one another? to complete the idea of Friendship, then, it is requisite that they have kindly feelings towards one another, and wish one another good from one of the aforementioned causes, and that these kindly feelings should be mutually known.

Chapter IV.

As the motives to Friendship differ in kind so do the respective feelings and Friendships. The species then of Friendship are three, in number equal to the objects of it, since in the line of each there may be “mutual affection mutually known.”

Now they who have Friendship for one another desire one another’s good according to the motive of their Friendship; accordingly they whose motive is utility have no Friendship for one another really, but only in so far as some good arises to them from one another.

And they whose motive is pleasure are in like case: I mean, they have Friendship for men of easy pleasantry, not because they are of a given character but because they are pleasant to themselves. So then they whose motive to Friendship is utility love their friends for what is good to themselves; they whose motive is pleasure do so for what is pleasurable to themselves; that is to say, not in so far as the friend beloved _is_ but in so far as he is useful or pleasurable. These Friendships then are a matter of result: since the object is not beloved in that he is the man he is but in that he furnishes advantage or pleasure as the case may be.

Such Friendships are of course very liable to dissolution if the parties do not continue alike: I mean, that the others cease to have any Friendship for them when they are no longer pleasurable or useful. Now it is the nature of utility not to be permanent but constantly varying: so, of course, when the motive which made them friends is vanished, the Friendship likewise dissolves; since it existed only relatively to those circumstances.

Friendship of this kind is thought to exist principally among the old (because men at that time of life pursue not what is pleasurable but what is profitable); and in such, of men in their prime and of the young, as are given to the pursuit of profit. They that are such have no intimate intercourse with one another; for sometimes they are not even pleasurable to one another; nor, in fact, do they desire such intercourse unless their friends are profitable to them, because they are pleasurable only in so far as they have hopes of advantage. With these Friendships is commonly ranked that of hospitality.

But the Friendship of the young is thought to be based on the motive of pleasure: because they live at the beck and call of passion and generally pursue what is pleasurable to themselves and the object of the present moment: and as their age changes so likewise do their pleasures.

This is the reason why they form and dissolve Friendships rapidly: since the Friendship changes with the pleasurable object and such pleasure changes quickly.

The young are also much given up to Love; this passion being, in great measure, a matter of impulse and based on pleasure: for which cause they conceive Friendships and quickly drop them, changing often in the same day: but these wish for society and intimate intercourse with their friends, since they thus attain the object of their Friendship.

Chapter V.

That then is perfect Friendship which subsists between those who are good and whose similarity consists in their goodness: for these men wish one another's good in similar ways; in so far as they are good (and good they are in themselves); and those are specially friends who wish good to their friends for their sakes, because they feel thus towards them on their own account and not as a mere matter of result; so the Friendship between these men continues to subsist so long as they are good; and goodness, we know, has in it a principle of permanence.

Moreover, each party is good abstractedly and also relatively to his friend, for all good men are not only abstractedly good but also useful to one another. Such friends are also mutually pleasurable because all good men are so abstractedly, and also relatively to one another, inasmuch as to each individual those actions are pleasurable which correspond to his nature, and all such as are like them. Now when men are good these will be always the same, or at least similar.

Friendship then under these circumstances is permanent, as we should reasonably expect, since it combines in itself all the requisite qualifications of friends. I mean, that Friendship of whatever kind is based upon good or pleasure (either abstractedly or relatively to the person entertaining the sentiment of Friendship), and results from a similarity of some sort; and to this kind belong all the aforementioned requisites in the parties themselves, because in this the parties are similar, and so on:[4] moreover, in it there is the abstractedly good and the abstractedly pleasant, and as these are specially the object-matter of Friendship so the feeling and the state of Friendship is found most intense and most excellent in men thus qualified.

Rare it is probable Friendships of this kind will be, because men of this kind are rare. Besides, all requisite qualifications being presupposed, there is further required time and intimacy: for, as the proverb says, men cannot know one another "till they have eaten the requisite quantity of salt together;" nor can they in fact admit one another to intimacy, much less be friends, till each has appeared to the other and been proved to be a fit object of Friendship. They who speedily commence an interchange of friendly actions may be said to wish to be friends, but they are not so unless they are also proper objects of Friendship and mutually known to be such: that is to say, a desire for Friendship may arise quickly but not Friendship itself.

Well, this Friendship is perfect both in respect of the time and in all other points; and exactly the same and similar results accrue to each party from the other; which ought to be the case between friends.

The friendship based upon the pleasurable is, so to say, a copy of this, since the good are sources of pleasure to one another: and that based on utility likewise, the good being also useful to one another. Between men thus connected Friendships are most permanent when the same result accrues to both from one another, pleasure, for instance; and not merely so but from the same source, as in the case of two men of easy pleasantry; and not as it is in that of a lover and the object of his affection, these not

deriving their pleasure from the same causes, but the former from seeing the latter and the latter from receiving the attentions of the former: and when the bloom of youth fades the Friendship sometimes ceases also, because then the lover derives no pleasure from seeing and the object of his affection ceases to receive the attentions which were paid before: in many cases, however, people so connected continue friends, if being of similar tempers they have come from custom to like one another's disposition.

Where people do not interchange pleasure but profit in matters of Love, the Friendship is both less intense in degree and also less permanent: in fact, they who are friends because of advantage commonly part when the advantage ceases; for, in reality, they never were friends of one another but of the advantage.

So then it appears that from motives of pleasure or profit bad men may be friends to one another, or good men to bad men or men of neutral character to one of any character whatever: but disinterestedly, for the sake of one another, plainly the good alone can be friends; because bad men have no pleasure even in themselves unless in so far as some advantage arises.

And further, the Friendship of the good is alone superior to calumny; it not being easy for men to believe a third person respecting one whom they have long tried and proved: there is between good men mutual confidence, and the feeling that one's friend would never have done one wrong, and all other such things as are expected in Friendship really worthy the name; but in the other kinds there is nothing to prevent all such suspicions.

I call them Friendships, because since men commonly give the name of friends to those who are connected from motives of profit (which is justified by political language, for alliances between states are thought to be contracted with a view to advantage), and to those who are attached to one another by the motive of pleasure (as children are), we may perhaps also be allowed to call such persons friends, and say there are several species of Friendship; primarily and specially that of the good, in that they are good, and the rest only in the way of resemblance: I mean, people connected otherwise are friends in that way in which there arises to them somewhat good and some mutual resemblance (because, we must remember the pleasurable is good to those who are fond of it).

These secondary Friendships, however, do not combine very well; that is to say, the same persons do not become friends by reason of advantage and by reason of the pleasurable, for these matters of result are not often combined. And Friendship having been divided into these kinds, bad men will be friends by reason of pleasure or profit, this being their point of resemblance; while the good are friends for one another's sake, that is, in so far as they are good.

These last may be termed abstractedly and simply friends, the former as a matter of result and termed friends from their resemblance to these last.

Chapter VI.

Further; just as in respect of the different virtues some men are termed good in respect of a certain inward state, others in respect of acts of working, so is it in respect of Friendship: I mean, they who live together take pleasure in, and impart good to, one another: but they who are asleep or are locally separated do not perform acts, but only are in such a state as to act in a friendly way if they acted at all: distance has in itself no direct effect upon Friendship, but only prevents the acting it out: yet, if the absence be protracted, it is thought to cause a forgetfulness even of the Friendship: and hence it has been said, "many and many a Friendship doth want of intercourse destroy."

Accordingly, neither the old nor the morose appear to be calculated for Friendship, because the pleasurableness in them is small, and no one can spend his days in company with that which is positively painful or even not pleasurable; since to avoid the painful and aim at the pleasurable is one of the most obvious tendencies of human nature. They who get on with one another very fairly, but are not in habits of intimacy, are rather like people having kindly feelings towards one another than friends; nothing being so characteristic of friends as the living with one another, because the necessitous desire assistance, and the happy companionship, they being the last persons in the world for solitary existence: but people cannot spend their time together unless they are mutually pleasurable and take pleasure in the same objects, a quality which is thought to appertain to the Friendship of companionship.

Chapter VII.

The connection then subsisting between the good is Friendship _par excellence_, as has already been frequently said: since that which is abstractedly good or pleasant is thought to be an object of Friendship and choice-worthy, and to each individual whatever is such to him; and the good man to the good man for both these reasons.

(Now the entertaining the sentiment is like a feeling, but Friendship itself like a state: because the former may have for its object even things inanimate, but requital of Friendship is attended with moral choice which proceeds from a moral state: and again, men wish good to the objects of their Friendship for their sakes, not in the way of a mere feeling but of moral state.)

And the good, in loving their friend, love their own good (inasmuch as the good man, when brought into that relation, becomes a good to him with whom he is so connected), so that either party loves his own good, and repays his friend equally both in wishing well and in the pleasurable: for equality is said to be a tie of Friendship. Well, these points belong most to the Friendship between good men.

But between morose or elderly men Friendship is less apt to arise, because they are somewhat awkward-tempered, and take less pleasure in intercourse and society; these being thought to be specially friendly and productive of Friendship: and so young men become friends quickly, old men not so (because people do not become friends with any, unless they take pleasure in them); and in like manner neither do the morose. Yet men of these classes entertain kindly feelings towards one another: they wish good to one another and render mutual assistance in respect of their needs, but they are not quite friends, because they neither spend their time together nor take pleasure in one another, which circumstances are thought specially to belong to Friendship.

To be a friend to many people, in the way of the perfect Friendship, is not possible; just as you cannot be in love with many at once: it is, so to speak, a state of excess which naturally has but one object; and besides, it is not an easy thing for one man to be very much pleased with many people at the same time, nor perhaps to find many really good. Again, a man needs experience, and to be in habits of close intimacy, which is very difficult.

But it _is_ possible to please many on the score of advantage and pleasure: because there are many men of the kind, and the services may be rendered in a very short time.

Of the two imperfect kinds that which most resembles the perfect is the Friendship based upon pleasure, in which the same results accrue from both and they take pleasure in one another or in the same objects; such as are the Friendships of the young, because a generous spirit is most found in these. The Friendship because of advantage is the connecting link of shopkeepers.

Then again, the very happy have no need of persons who are profitable, but of pleasant ones they have because they wish to have people to live intimately with; and what is painful they bear for a short time indeed, but continuously no one could support it, nay, not even the Chief Good itself, if it were painful to him individually: and so they look out for pleasant friends: perhaps they ought to require such to be good also; and good moreover to themselves individually, because then they will have all the proper requisites of Friendship.

Men in power are often seen to make use of several distinct friends: for some are useful to them and others pleasurable, but the two are not often united: because they do not, in fact, seek such as shall combine pleasantness and goodness, nor such as shall be useful for honourable purposes: but with a view to attain what is pleasant they look out for men of easy-pleasantry; and again, for men who are clever at executing any business put into their hands: and these qualifications are not commonly found united in the same man.

It has been already stated that the good man unites the qualities of pleasantness and usefulness: but then such a one will not be a friend to a superior unless he be also his superior in goodness: for if this be not the case, he cannot, being surpassed in one point, make things equal by a proportionate degree of Friendship.[5] And characters who unite superiority of station and goodness are not common.

Chapter VIII.

Now all the kinds of Friendship which have been already mentioned exist in a state of equality, inasmuch as either the same results accrue to both and they wish the same things to one another, or else they barter one thing against another; pleasure, for instance, against profit: it has been said already that Friendships of this latter kind are less intense in degree and less permanent.

And it is their resemblance or dissimilarity to the same thing which makes them to be thought to be and not to be Friendships: they show like Friendships in right of their likeness to that which is based on virtue (the one kind having the pleasurable, the other the profitable, both of which belong also to the other); and again, they do not show like Friendships by reason of their unlikeness to that true kind; which unlikeness consists herein, that while that is above calumny and so permanent these quickly change and differ in many other points.

But there is another form of Friendship, that, namely, in which the one party is superior to the other; as between father and son, elder and younger, husband and wife, ruler and ruled. These also differ one from another: I mean, the Friendship between parents and children is not the same as between ruler and the ruled, nor has the father the same towards the son as the son towards the father, nor the husband towards the wife as she towards him; because the work, and therefore the excellence, of each of these is different, and different therefore are the causes of their feeling Friendship; distinct and different therefore are their feelings and states of Friendship.

And the same results do not accrue to each from the other, nor in fact ought they to be looked for: but, when children render to their parents what they ought to the authors of their being, and parents to their sons what they ought to their offspring, the Friendship between such parties will be permanent and equitable.

Further; the feeling of Friendship should be in a due proportion in all Friendships which are between superior and inferior; I mean, the better man, or the more profitable, and so forth, should be the object of a stronger feeling than he himself entertains, because when the feeling of Friendship comes to be after a certain rate then equality in a certain sense is produced, which is thought to be a requisite in Friendship.

(It must be remembered, however, that the equal is not in the same case as regards Justice and Friendship: for in strict Justice the exactly proportioned equal ranks first, and the actual numerically equal ranks second, while in Friendship this is exactly reversed.)

And that equality is thus requisite is plainly shown by the occurrence of a great difference of goodness or badness, or prosperity, or something else: for in this case, people are not any longer friends, nay they do not even feel that they ought to be. The clearest illustration is perhaps the case of the gods, because they are most superior in all good things. It is obvious too, in the case of kings, for they who are greatly their inferiors do not feel entitled to be friends to them; nor do people very insignificant to be friends to those of very high excellence or wisdom. Of course, in such cases it is out of the question to attempt to define up to what point they may continue friends: for you may remove many points of agreement and the Friendship last nevertheless; but when one of the parties is very far separated (as a god from men), it cannot continue any longer.

This has given room for a doubt, whether friends do really wish to their friends the very highest goods, as that they may be gods: because, in case the wish were accomplished, they would no longer have them for friends, nor in fact would they have the good things they had, because friends are good things. If then it has been rightly said that a friend wishes to his friend good things for that friend’s sake, it must be understood that he is to remain such as he now is: that is to say, he will wish the greatest good to him of which as man he is capable: yet perhaps not all, because each man desires good for himself most of all.

It is thought that desire for honour makes the mass of men wish rather to be the objects of the feeling of Friendship than to entertain it themselves (and for this reason they are fond of flatterers, a flatterer being a friend inferior or at least pretending to be such and rather to entertain towards another the feeling of Friendship than to be himself the object of it), since the former is thought to be nearly the same as being honoured, which the mass of men desire. And yet men seem to choose honour, not for its own sake, but incidentally:[6] I mean, the common run of men delight to be honoured by those in power because of the hope it raises; that is they think they shall get from them anything they may happen to be in want of, so they delight in honour as an earnest of future benefit. They again who grasp at honour at the hands of the good and those who are really acquainted with their merits desire to confirm their own opinion about themselves: so they take pleasure in the conviction that they are good, which is based on the sentence of those who assert it. But in being the objects of Friendship men delight for its own sake, and so this may be judged to be higher than being honoured and Friendship to be in itself choice-worthy. Friendship, moreover, is thought to consist in feeling, rather than being the object of, the sentiment of Friendship, which is proved by the delight mothers have in the feeling: some there are who give their children to be adopted and brought up by others, and knowing them bear this feeling towards them never seeking to have it returned, if both are not possible; but seeming to be content with seeing them well off and bearing this feeling themselves towards them, even though they, by reason of ignorance, never render to them any filial regard or love.

Since then Friendship stands rather in the entertaining, than in being the object of, the sentiment, and they are praised who are fond of their friends, it seems that entertaining the sentiment is the Excellence of friends; and so, in whomsoever this exists in due proportion these are stable friends and their Friendship is permanent. And in this way may they who are unequal best be friends, because they may thus be made equal.

Equality, then, and similarity are a tie to Friendship, and specially the similarity of goodness, because good men, being stable in themselves, are also stable as regards others, and neither ask degrading services nor render them, but, so to say, rather prevent

them: for it is the part of the good neither to do wrong themselves nor to allow their friends in so doing.

The bad, on the contrary, have no principle of stability: in fact, they do not even continue like themselves: only they come to be friends for a short time from taking delight in one another's wickedness. Those connected by motives of profit, or pleasure, hold together somewhat longer: so long, that is to say, as they can give pleasure or profit mutually.

The Friendship based on motives of profit is thought to be most of all formed out of contrary elements: the poor man, for instance, is thus a friend of the rich, and the ignorant of the man of information; that is to say, a man desiring that of which he is, as it happens, in want, gives something else in exchange for it. To this same class we may refer the lover and beloved, the beautiful and the ill-favoured. For this reason lovers sometimes show in a ridiculous light by claiming to be the objects of as intense a feeling as they themselves entertain: of course if they are equally fit objects of Friendship they are perhaps entitled to claim this, but if they have nothing of the kind it is ridiculous.

Perhaps, moreover, the contrary does not aim at its contrary for its own sake but incidentally: the mean is really what is grasped at; it being good for the dry, for instance, not to become wet but to attain the mean, and so of the hot, etc.

However, let us drop these questions, because they are in fact somewhat foreign to our purpose.

Chapter IX.

It seems too, as was stated at the commencement, that Friendship and Justice have the same object-matter, and subsist between the same persons: I mean that in every Communion there is thought to be some principle of Justice and also some Friendship: men address as friends, for instance, those who are their comrades by sea, or in war, and in like manner also those who are brought into Communion with them in other ways: and the Friendship, because also the Justice, is co-extensive with the Communion, This justifies the common proverb, "the goods of friends are common," since Friendship rests upon Communion.

Now brothers and intimate companions have all in common, but other people have their property separate, and some have more in common and others less, because the Friendships likewise differ in degree. So too do the various principles of Justice involved, not being the same between parents and children as between brothers, nor between companions as between fellow-citizens merely, and so on of all the other conceivable Friendships. Different also are the principles of Injustice as regards these different grades, and the acts become intensified by being done to friends; for instance, it is worse to rob your companion than one who is merely a fellow-citizen; to refuse help to a brother than to a stranger; and to strike your father than any one else. So then the Justice naturally increases with the degree of Friendship, as being between the same parties and of equal extent.

All cases of Communion are parts, so to say, of the great Social one, since in them men associate with a view to some advantage and to procure some of those things which are needful for life; and the great Social Communion is thought originally to have been associated and to continue for the sake of some advantage: this being the point at which legislators aim, affirming that to be just which is generally expedient.

All the other cases of Communion aim at advantage in particular points; the crew of a vessel at that which is to result from the voyage which is undertaken with a view to making money, or some such object; comrades in war at that which is to result from the war, grasping either at wealth or victory, or it may be a political position; and those of the same tribe, or Demus, in like manner.

Some of them are thought to be formed for pleasure's sake, those, for instance, of bacchanals or club-fellows, which are with a view to Sacrifice or merely company. But all these seem to be ranged under the great Social one, inasmuch as the aim of this is, not merely the expediency of the moment but, for life and at all times; with a view to which the members of it institute sacrifices and their attendant assemblies, to render honour to the gods and procure for themselves respite from toil combined with pleasure. For it appears that sacrifices and religious assemblies in old times were made as a kind of first-fruits after the ingathering of the crops, because at such seasons they had most leisure.

So then it appears that all the instances of Communion are parts of the great Social one: and corresponding Friendships will follow upon such Communions.

Chapter X.

Of Political Constitutions there are three kinds; and equal in number are the deflections from them, being, so to say, corruptions of them.

The former are Kingship, Aristocracy, and that which recognises the principle of wealth, which it seems appropriate to call Timocracy (I give to it the name of a political constitution because people commonly do so). Of these the best is Monarchy, and Timocracy the worst.

From Monarchy the deflection is Despotism; both being Monarchies but widely differing from each other; for the Despot looks to his own advantage, but the King to that of his subjects: for he is in fact no King who is not thoroughly independent and superior to the rest in all good things, and he that is this has no further wants: he will not then have to look to his own advantage but to that of his subjects, for he that is not in such a position is a mere King elected by lot for the nonce.

But Despotism is on a contrary footing to this Kingship, because the Despot pursues his own good: and in the case of this its inferiority is most evident, and what is worse is contrary to what is best. The Transition to Despotism is made from Kingship, Despotism being a corrupt form of Monarchy, that is to say, the bad King comes to be a Despot.

From Aristocracy to Oligarchy the transition is made by the fault of the Rulers in distributing the public property contrary to right proportion; and giving either all that is good, or the greatest share, to themselves; and the offices to the same persons always, making wealth their idol; thus a few bear rule and they bad men in the place of the best.

From Timocracy the transition is to Democracy, they being contiguous: for it is the nature of Timocracy to be in the hands of a multitude, and all in the same grade of property are equal. Democracy is the least vicious of all, since herein the form of the constitution undergoes least change.

Well, these are generally the changes to which the various Constitutions are liable, being the least in degree and the easiest to make.

Likenesses, and, as it were, models of them, one may find even in Domestic life: for instance, the Communion between a Father and his Sons presents the figure of Kingship, because the children are the Father's care: and hence Homer names Jupiter Father because Kingship is intended to be a paternal rule. Among the Persians, however, the Father's rule is Despotic, for they treat their Sons as slaves. (The relation of Master to Slaves is of the nature of Despotism because the point regarded herein is the Master's interest): this now strikes me to be as it ought, but the Persian custom to be mistaken; because for different persons there should be different rules.

Between Husband and Wife the relation takes the form of Aristocracy, because he rules by right and in such points only as the Husband should, and gives to the Wife all that befits her to have. Where the Husband lords it in everything he changes the relation into an Oligarchy; because he does it contrary to right and not as being the better of the two. In some instances the Wives take the reins of government, being heiresses: here the rule is carried on not in right of goodness but by reason of wealth and power, as it is in Oligarchies.

Timocracy finds its type in the relation of Brothers: they being equal except as to such differences as age introduces: for which reason, if they are very different in age, the Friendship comes to be no longer a fraternal one: while Democracy is represented specially by families which have no head (all being there equal), or in which the proper head is weak and so every member does that which is right in his own eyes.

Chapter XI.

Attendant then on each form of Political Constitution there plainly is Friendship exactly co-extensive with the principle of Justice; that between a King and his Subjects being in the relation of a superiority of benefit, inasmuch as he benefits his subjects; it being assumed that he is a good king and takes care of their welfare as a shepherd tends his flock; whence Homer (to quote him again) calls Agamemnon, "shepherd of the people." And of this same kind is the Paternal Friendship, only that it exceeds the former in the greatness of the benefits done; because the father is the author of being (which is esteemed the greatest benefit) and of maintenance and education (these things are also, by the way, ascribed to ancestors generally): and by the law of nature the father has the right of rule over his sons, ancestors over their descendants, and the king over his subjects.

These friendships are also between superiors and inferiors, for which reason parents are not merely loved but also honoured. The principle of Justice also between these parties is not exactly the same but according to proportiton, because so also is the Friendship.

Now between Husband and Wife there is the same Friendship as in Aristocracy: for the relation is determined by relative excellence, and the better person has the greater good and each has what befits: so too also is the principle of Justice between them.

The Fraternal Friendship is like that of Companions, because brothers are equal and much of an age, and such persons have generally like feelings and like dispositions. Like to this also is the Friendship of a Timocracy, because the citizens are intended to be equal and equitable: rule, therefore, passes from hand to hand, and is distributed on equal terms: so too is the Friendship accordingly.

In the deflections from the constitutional forms, just as the principle of Justice is but small so is the Friendship also: and least of all in the most perverted form: in Despotism there is little or no Friendship. For generally wherever the ruler and the ruled have nothing in common there is no Friendship because there is no Justice; but the case is as between an artisan and his tool, or between soul and body, and master and slave; all these are benefited by those who use them, but towards things inanimate there is neither Friendship nor Justice: nor even towards a horse or an ox, or a slave _quâ_ slave, because there is nothing in common: a slave as such is an animate tool, a tool an inanimate slave. _Quâ_ slave, then, there is no Friendship towards him, only _quâ_ man: for it is thought that there is some principle of Justice between every man, and every other who can share in law and be a party to an agreement; and so somewhat of Friendship, in so far as he is man. So in Despotisms the Friendships and the principle of Justice are inconsiderable in extent, but in Democracies they are most considerable because they who are equal have much in common.

Chapter XII.

Now of course all Friendship is based upon Communion, as has been already stated: but one would be inclined to separate off from the rest the Friendship of Kindred, and that of Companions: whereas those of men of the same city, or tribe, or crew, and all such, are more peculiarly, it would seem, based upon Communion, inasmuch as they plainly exist in right of some agreement expressed or implied: among these one may rank also the Friendship of Hospitality,

The Friendship of Kindred is likewise of many kinds, and appears in all its varieties to depend on the Parental: parents, I mean, love their children as being a part of themselves, children love their parents as being themselves somewhat derived from them. But parents know their offspring more than these know that they are from the parents, and the source is more closely bound to that which is produced than that which is produced is to that which formed it: of course, whatever is derived from one's self is proper to that from which it is so derived (as, for instance, a tooth or a hair, or any other thing whatever to him that has it): but the source to it is in no degree proper, or in an inferior degree at least.

Then again the greater length of time comes in: the parents love their offspring from the first moment of their being, but their offspring them only after a lapse of time when they have attained intelligence or instinct. These considerations serve also to show why mothers have greater strength of affection than fathers.

Now parents love their children as themselves (since what is derived from themselves becomes a kind of other Self by the fact of separation), but children their parents as being sprung from them. And brothers love one another from being sprung from the same; that is, their sameness with the common stock creates a sameness with one another;[7] whence come the phrases, "same blood," "root," and so on. In fact they are the same, in a sense, even in the separate distinct individuals.

Then again the being brought up together, and the nearness of age, are a great help towards Friendship, for a man likes one of his own age and persons who are used to one another are companions, which accounts for the resemblance between the Friendship of Brothers and that of Companions.

And cousins and all other relatives derive their bond of union from these, that is to say, from their community of origin: and the strength of this bond varies according to their respective distances from the common ancestor.

Further: the Friendship felt by children towards parents, and by men towards the gods, is as towards something good and above them; because these have conferred the greatest possible benefits, in that they are the causes of their being and being nourished, and of their having been educated after they were brought into being.

And Friendship of this kind has also the pleasurable and the profitable more than that between persons unconnected by blood, in proportion as their life is also more shared in common. Then again in the Fraternal Friendship there is all that there is in that of Companions, and more in the good, and generally in those who are alike; in proportion as they are more closely tied and from their

very birth have a feeling of affection for one another to begin with, and as they are more like in disposition who spring from the same stock and have grown up together and been educated alike: and besides this they have the greatest opportunities in respect of time for proving one another, and can therefore depend most securely upon the trial.

Between Husband and Wife there is thought to be Friendship by a law of nature: man being by nature disposed to pair, more than to associate in Communities: in proportion as the family is prior in order of time and more absolutely necessary than the Community. And procreation is more common to him with other animals; all the other animals have Communion thus far, but human creatures cohabit not merely for the sake of procreation but also with a view to life in general::[8] because in this connection the works are immediately divided, and some belong to the man, others to the woman: thus they help one the other, putting what is peculiar to each into the common stock.

And for these reasons this Friendship is thought to combine the profitable and the pleasurable: it will be also based upon virtue if they are good people; because each has goodness and they may take delight in this quality in each other. Children too are thought to be a tie: accordingly the childless sooner separate, for the children are a good common to both and anything in common is a bond of union.

The question how a man is to live with his wife, or (more generally) one friend with another, appears to be no other than this, how it is just that they should: because plainly there is not the same principle of Justice between a friend and friend, as between strangers, or companions, or mere chance fellow-travellers.

Chapter XIII.

There are then, as was stated at the commencement of this book, three kinds of Friendship, and in each there may be friends on a footing of equality and friends in the relation of superior and inferior; we find, I mean, that people who are alike in goodness, become friends, and better with worse, and so also pleasant people; again, because of advantage people are friends, either balancing exactly their mutual profitableness or differing from one another herein. Well then, those who are equal should in right of this equality be equalised also by the degree of their Friendship and the other points, and those who are on a footing of inequality by rendering Friendship in proportion to the superiority of the other party.

Fault-finding and blame arises, either solely or most naturally, in Friendship of which utility is the motive: for they who are friends by reason of goodness, are eager to do kindnesses to one another because this is a natural result of goodness and Friendship; and when men are vying with each other for this End there can be no fault-finding nor contention: since no one is annoyed at one who entertains for him the sentiment of Friendship and does kindnesses to him, but if of a refined mind he requites him with kind actions. And suppose that one of the two exceeds the other, yet as he is attaining his object he will not find fault with his friend, for good is the object of each party.

Neither can there well be quarrels between men who are friends for pleasure’s sake: because supposing them to delight in living together then both attain their desire; or if not a man would be put in a ridiculous light who should find fault with another for not pleasing him, since it is in his power to forbear intercourse with him. But the Friendship because of advantage is very liable to fault-finding; because, as the parties use one another with a view to advantage, the requirements are continually enlarging, and they think they have less than of right belongs to them, and find fault because though justly entitled they do not get as much as they want: while they who do the kindnesses, can never come up to the requirements of those to whom they are being done.

It seems also, that as the Just is of two kinds, the unwritten and the legal, so Friendship because of advantage is of two kinds, what may be called the Moral, and the Legal: and the most fruitful source of complaints is that parties contract obligations and discharge them not in the same line of Friendship. The Legal is upon specified conditions, either purely tradesmanlike from hand to hand or somewhat more gentlemanly as regards time but still by agreement a _quid pro quo_.

In this Legal kind the obligation is clear and admits of no dispute, the friendly element is the delay in requiring its discharge: and for this reason in some countries no actions can be maintained at Law for the recovery of such debts, it being held that they who have dealt on the footing of credit must be content to abide the issue.

That which may be termed the Moral kind is not upon specified conditions, but a man gives as to his friend and so on: but still he expects to receive an equivalent, or even more, as though he had not given but lent: he also will find fault, because he does not get the obligation discharged in the same way as it was contracted.

Now this results from the fact, that all men, or the generality at least, _wish_ what is honourable, but, when tested, _choose_ what is profitable; and the doing kindnesses disinterestedly is honourable while receiving benefits is profitable. In such cases one should, if able, make a return proportionate to the good received, and do so willingly, because one ought not to make a disinterested friend[9] of a man against his inclination: one should act, I say, as having made a mistake originally in receiving kindness from one from whom one ought not to have received it, he being not a friend nor doing the act disinterestedly; one should therefore discharge one's self of the obligation as having received a kindness on specified terms: and if able a man would engage to repay the kindness, while if he were unable even the doer of it would not expect it of him: so that if he is able he ought to repay it. But one ought at the first to ascertain from whom one is receiving kindness, and on what understanding, that on that same understanding one may accept it or not.

A question admitting of dispute is whether one is to measure a kindness by the good done to the receiver of it, and make this the standard by which to requite, or by the kind intention of the doer?

For they who have received kindnesses frequently plead in depreciation that they have received from their benefactors such things as were small for them to give, or such as they themselves could have got from others: while the doers of the kindnesses affirm that they gave the best they had, and what could not have been got from others, and under danger, or in such-like straits.

May we not say, that as utility is the motive of the Friendship the advantage conferred on the receiver must be the standard? because he it is who requests the kindness and the other serves him in his need on the understanding that he is to get an equivalent: the assistance rendered is then exactly proportionate to the advantage which the receiver has obtained, and he should therefore repay as much as he gained by it, or even more, this being more creditable.

In Friendships based on goodness, the question, of course, is never raised, but herein the motive of the doer seems to be the proper standard, since virtue and moral character depend principally on motive.

Chapter XIV.

Quarrels arise also in those Friendships in which the parties are unequal because each party thinks himself entitled to the greater share, and of course, when this happens, the Friendship is broken up.

The man who is better than the other thinks that having the greater share pertains to him of right, for that more is always awarded to the good man: and similarly the man who is more profitable to another than that other to him: "one who is useless," they say, "ought not to share equally, for it comes to a tax, and not a Friendship, unless the fruits of the Friendship are reaped in proportion to the works done:" their notion being, that as in a money partnership they who contribute more receive more so should it be in Friendship likewise.

On the other hand, the needy man and the less virtuous advance the opposite claim: they urge that "it is the very business of a good friend to help those who are in need, else what is the use of having a good or powerful friend if one is not to reap the advantage at all?"

Now each seems to advance a right claim and to be entitled to get more out of the connection than the other, only _not more of the same thing_: but the superior man should receive more respect, the needy man more profit: respect being the reward of goodness and beneficence, profit being the aid of need.

This is plainly the principle acted upon in Political Communities: he receives no honour who gives no good to the common stock: for the property of the Public is given to him who does good to the Public, and honour is the property of the Public; it is not possible both to make money out of the Public and receive honour likewise; because no one will put up with the less in every respect: so to him who suffers loss as regards money they award honour, but money to him who can be paid by gifts: since, as has been stated before, the observing due proportion equalises and preserves Friendship.

Like rules then should be observed in the intercourse of friends who are unequal; and to him who advantages another in respect of money, or goodness, that other should repay honour, making requital according to his power; because Friendship requires what is possible, not what is strictly due, this being not possible in all cases, as in the honours paid to the gods and to parents: no man could ever make the due return in these cases, and so he is thought to be a good man who pays respect according to his ability.

For this reason it may be judged never to be allowable for a son to disown his father, whereas a father may his son: because he that owes is bound to pay; now a son can never, by anything he has done, fully requite the benefits first conferred on him by his

father, and so is always a debtor. But they to whom anything is owed may cast off their debtors: therefore the father may his son. But at the same time it must perhaps be admitted, that it seems no father ever _would_ sever himself utterly from a son, except in a case of exceeding depravity: because, independently of the natural Friendship, it is like human nature not to put away from one's self the assistance which a son might render. But to the son, if depraved, assisting his father is a thing to be avoided, or at least one which he will not be very anxious to do; most men being willing enough to receive kindness, but averse to doing it as unprofitable.

Let thus much suffice on these points.

BOOK IX

Chapter I.

Well, in all the Friendships the parties to which are dissimilar it is the proportionate which equalises and preserves the Friendship, as has been already stated: I mean, in the Social Friendship the cobbler, for instance, gets an equivalent for his shoes after a certain rate; and the weaver, and all others in like manner. Now in this case a common measure has been provided in money, and to this accordingly all things are referred and by this are measured: but in the Friendship of Love the complaint is sometimes from the lover that, though he loves exceedingly, his love is not requited; he having perhaps all the time nothing that can be the object of Friendship: again, oftentimes from the object of love that he who as a suitor promised any and every thing now performs nothing. These cases occur because the Friendship of the lover for the beloved object is based upon pleasure, that of the other for him upon utility, and in one of the parties the requisite quality is not found: for, as these are respectively the grounds of the Friendship, the Friendship comes to be broken up because the motives to it cease to exist: the parties loved not one another but qualities in one another which are not permanent, and so neither are the Friendships: whereas the Friendship based upon the moral character of the parties, being independent and disinterested, is permanent, as we have already stated.

Quarrels arise also when the parties realise different results and not those which they desire; for the not attaining one's special object is all one, in this case, with getting nothing at all: as in the well-known case where a man made promises to a musician, rising in proportion to the excellence of his music; but when, the next morning, the musician claimed the performance of his promises, he said that he had given him pleasure for pleasure: of course, if each party had intended this, it would have been all right: but if the one desires amusement and the other gain, and the one gets his object but the other not, the dealing cannot be fair: because a man fixes his mind upon what he happens to want, and will give so and so for that specific thing.

The question then arises, who is to fix the rate? the man who first gives, or the man who first takes? because, _primâ facie_, the man who first gives seems to leave the rate to be fixed by the other party. This, they say, was in fact the practice of Protagoras: when he taught a man anything he would bid the learner estimate the worth of the knowledge gained by his own private opinion; and then he used to take so much from him. In such cases some people adopt the rule,

"With specified reward a friend should be content."

They are certainly fairly found fault with who take the money in advance and then do nothing of what they said they would do, their promises having been so far beyond their ability; for such men do not perform what they agreed, The Sophists, however, are perhaps obliged to take this course, because no one would give a sixpence for their knowledge. These then, I say, are fairly found fault with, because they do not what they have already taken money for doing.

In cases where no stipulation as to the respective services is made they who disinterestedly do the first service will not raise the question (as we have said before), because it is the nature of Friendship, based on mutual goodness to be reference to the intention of the other, the intention being characteristic of the true friend and of goodness.

And it would seem the same rule should be laid down for those who are connected with one another as teachers and learners of philosophy; for here the value of the commodity cannot be measured by money, and, in fact, an exactly equivalent price cannot be set upon it, but perhaps it is sufficient to do what one can, as in the case of the gods or one's parents.

But where the original giving is not upon these terms but avowedly for some return, the most proper course is perhaps for the requital to be such as _both_ shall allow to be proportionate, and, where this cannot be, then for the receiver to fix the value would seem to be not only necessary but also fair: because when the first giver gets that which is equivalent to the advantage received by the other, or to what he would have given to secure the pleasure he has had, then he has the value from him: for not only is this

seen to be the course adopted in matters of buying and selling but also in some places the law does not allow of actions upon voluntary dealings; on the principle that when one man has trusted another he must be content to have the obligation discharged in the same spirit as he originally contracted it: that is to say, it is thought fairer for the trusted, than for the trusting, party, to fix the value. For, in general, those who have and those who wish to get things do not set the same value on them: what is their own, and what they give in each case, appears to them worth a great deal: but yet the return is made according to the estimate of those who have received first, it should perhaps be added that the receiver should estimate what he has received, not by the value he sets upon it now that he has it, but by that which he set upon it before he obtained it.

Chapter II.

Questions also arise upon such points as the following: Whether one's father has an unlimited claim on one's services and obedience, or whether the sick man is to obey his physician? or, in an election of a general, the warlike qualities of the candidates should be alone regarded?

In like manner whether one should do a service rather to one's friend or to a good man? whether one should rather requite a benefactor or give to one's companion, supposing that both are not within one's power?

Is not the true answer that it is no easy task to determine all such questions accurately, inasmuch as they involve numerous differences of all kinds, in respect of amount and what is honourable and what is necessary? It is obvious, of course, that no one person can unite in himself all claims. Again, the requital of benefits is, in general, a higher duty than doing unsolicited kindnesses to one's companion; in other words, the discharging of a debt is more obligatory upon one than the duty of giving to a companion. And yet this rule may admit of exceptions; for instance, which is the higher duty? for one who has been ransomed out of the hands of robbers to ransom in return his ransomer, be he who he may, or to repay him on his demand though he has not been taken by robbers, or to ransom his own father? for it would seem that a man ought to ransom his father even in preference to himself.

Well then, as has been said already, as a general rule the debt should be discharged, but if in a particular case the giving greatly preponderates as being either honourable or necessary, we must be swayed by these considerations: I mean, in some cases the requital of the obligation previously existing may not be equal; suppose, for instance, that the original benefactor has conferred a kindness on a good man, knowing him to be such, whereas this said good man has to repay it believing him to be a scoundrel.

And again, in certain cases no obligation lies on a man to lend to one who has lent to him; suppose, for instance, that a bad man lent to him, as being a good man, under the notion that he should get repaid, whereas the said good man has no hope of repayment from him being a bad man. Either then the case is really as we have supposed it and then the claim is not equal, or it is not so but supposed to be; and still in so acting people are not to be thought to act wrongly. In short, as has been oftentimes stated before, all statements regarding feelings and actions can be definite only in proportion as their object-matter is so; it is of course quite obvious that all people have not the same claim upon one, nor are the claims of one's father unlimited; just as Jupiter does not claim all kinds of sacrifice without distinction: and since the claims of parents, brothers, companions, and benefactors, are all different, we must give to each what belongs to and befits each.

And this is seen to be the course commonly pursued: to marriages men commonly invite their relatives, because these are from a common stock and therefore all the actions in any way pertaining thereto are common also: and to funerals men think that relatives ought to assemble in preference to other people, for the same reason.

And it would seem that in respect of maintenance it is our duty to assist our parents in preference to all others, as being their debtors, and because it is more honourable to succour in these respects the authors of our existence than ourselves. Honour likewise we ought to pay to our parents just as to the gods, but then, not all kinds of honour: not the same, for instance, to a father as to a mother: nor again to a father the honour due to a scientific man or to a general but that which is a father's due, and in like manner to a mother that which is a mother's.

To all our elders also the honour befitting their age, by rising up in their presence, turning out of the way for them, and all similar marks of respect: to our companions again, or brothers, frankness and free participation in all we have. And to those of the same family, or tribe, or city, with ourselves, and all similarly connected with us, we should constantly try to render their due, and to discriminate what belongs to each in respect of nearness of connection, or goodness, or intimacy: of course in the case of those of the same class the discrimination is easier; in that of those who are in different classes it is a matter of more trouble. This, however, should not be a reason for giving up the attempt, but we must observe the distinctions so far as it is practicable to do so.

Chapter III.

A question is also raised as to the propriety of dissolving or not dissolving those Friendships the parties to which do not remain what they were when the connection was formed.

Now surely in respect of those whose motive to Friendship is utility or pleasure there can be nothing wrong in breaking up the connection when they no longer have those qualities; because they were friends [not of one another, but] of those qualities: and, these having failed, it is only reasonable to expect that they should cease to entertain the sentiment.

But a man has reason to find fault if the other party, being really attached to him because of advantage or pleasure, pretended to be so because of his moral character: in fact, as we said at the commencement, the most common source of quarrels between friends is their not being friends on the same grounds as they suppose themselves to be.

Now when a man has been deceived in having supposed himself to excite the sentiment of Friendship by reason of his moral character, the other party doing nothing to indicate he has but himself to blame: but when he has been deceived by the pretence of the other he has a right to find fault with the man who has so deceived him, aye even more than with utterers of false coin, in proportion to the greater preciousness of that which is the object-matter of the villany.

But suppose a man takes up another as being a good man, who turns out, and is found by him, to be a scoundrel, is he bound still to entertain Friendship for him? or may we not say at once it is impossible? since it is not everything which is the object-matter of Friendship, but only that which is good; and so there is no obligation to be a bad man's friend, nor, in fact, ought one to be such: for one ought not to be a lover of evil, nor to be assimilated to what is base; which would be implied, because we have said before, like is friendly to like.

Are we then to break with him instantly? not in all cases; only where our friends are incurably depraved; when there is a chance of amendment we are bound to aid in repairing the moral character of our friends even more than their substance, in proportion as it is better and more closely related to Friendship. Still he who should break off the connection is not to be judged to act wrongly, for he never was a friend to such a character as the other now is, and therefore, since the man is changed and he cannot reduce him to his original state, he backs out of the connection.

To put another case: suppose that one party remains what he was when the Friendship was formed, while the other becomes morally improved and widely different from his friend in goodness; is the improved character to treat the other as a friend?

May we not say it is impossible? The case of course is clearest where there is a great difference, as in the Friendships of boys: for suppose that of two boyish friends the one still continues a boy in mind and the other becomes a man of the highest character, how can they be friends? since they neither are pleased with the same objects nor like and dislike the same things: for these points will not belong to them as regards one another, and without them it was assumed they cannot be friends because they cannot live in intimacy: and of the case of those who cannot do so we have spoken before.

Well then, is the improved party to bear himself towards his former friend in no way differently to what he would have done had the connection never existed?

Surely he ought to bear in mind the intimacy of past times, and just as we think ourselves bound to do favours for our friends in preference to strangers, so to those who have been friends and are so no longer we should allow somewhat on the score of previous Friendship, whenever the cause of severance is not excessive depravity on their part.

Chapter IV.

Now the friendly feelings which are exhibited towards our friends, and by which Friendships are characterised, seem to have sprung out of those which we entertain toward ourselves.

I mean, people define a friend to be "one who intends and does what is good (or what he believes to be good) to another for that other's sake," or "one who wishes his friend to be and to live for that friend's own sake" (which is the feeling of mothers towards their children, and of friends who have come into collision). Others again, "one who lives with another and chooses the same objects," or "one who sympathises with his friend in his sorrows and in his joys" (this too is especially the case with mothers).

Well, by some one of these marks people generally characterise Friendship: and each of these the good man has towards himself, and all others have them in so far as they suppose themselves to be good. (For, as has been said before, goodness, that is the

good man, seems to be a measure to every one else.)

For he is at unity in himself, and with every part of his soul he desires the same objects; and he wishes for himself both what is, and what he believes to be, good; and he does it (it being characteristic of the good man to work at what is good), and for the sake of himself, inasmuch as he does it for the sake of his Intellectual Principle which is generally thought to be a man's Self. Again, he wishes himself And specially this Principle whereby he is an intelligent being, to live and be preserved in life, because existence is a good to him that is a good man.

But it is to himself that each individual wishes what is good, and no man, conceiving the possibility of his becoming other than he now is, chooses that that New Self should have all things indiscriminately: a god, for instance, has at the present moment the Chief Good, but he has it in right of being whatever he actually now is: and the Intelligent Principle must be judged to be each man's Self, or at least eminently so [though other Principles help, of course, to constitute him the man he is].

Furthermore, the good man wishes to continue to live with himself; for he can do it with pleasure, in that his memories of past actions are full of delight and his anticipations of the future are good and such are pleasurable. Then, again, he has good store of matter for his Intellect to contemplate, and he most especially sympathises with his Self in its griefs and joys, because the objects which give him pain and pleasure are at all times the same, not one thing to-day and a different one to-morrow: because he is not given to repentance,[1] if one may so speak. It is then because each of these feelings are entertained by the good man towards his own Self and a friend feels towards a friend as towards himself (a friend being in fact another Self), that Friendship is thought to be some one of these things and they are accounted friends in whom they are found. Whether or no there can really be Friendship between a man and his Self is a question we will not at present entertain: there may be thought to be Friendship, in so far as there are two or more of the aforesaid requisites, and because the highest degree of Friendship, in the usual acceptation of that term, resembles the feeling entertained by a man towards himself.

But it may be urged that the aforesaid requisites are to all appearance found in the common run of men, though they are men of a low stamp.

May it not be answered, that they share in them only in so far as they please themselves, and conceive themselves to be good? for certainly, they are not either really, or even apparently, found in any one of those who are very depraved and villainous; we may almost say not even in those who are bad men at all: for they are at variance with themselves and lust after different things from those which in cool reason they wish for, just as men who fail of Self-Control: I mean, they choose things which, though hurtful, are pleasurable, in preference to those which in their own minds they believe to be good: others again, from cowardice and indolence, decline to do what still they are convinced is best for them: while they who from their depravity have actually done many dreadful actions hate and avoid life, and accordingly kill themselves: and the wicked seek others in whose company to spend their time, but fly from themselves because they have many unpleasant subjects of memory, and can only look forward to others like them when in solitude but drown their remorse in the company of others: and as they have nothing to raise the sentiment of Friendship so they never feel it towards themselves.

Neither, in fact, can they who are of this character sympathise with their Selves in their joys and sorrows, because their soul is, as it were, rent by faction, and the one principle, by reason of the depravity in them, is grieved at abstaining from certain things, while the other and better principle is pleased thereat; and the one drags them this way and the other that way, as though actually tearing them asunder.[2] And though it is impossible actually to have at the same time the sensations of pain and pleasure; yet after a little time the man is sorry for having been pleased, and he could wish that those objects had not given him pleasure; for the wicked are full of remorse.

It is plain then that the wicked man cannot be in the position of a friend even towards himself, because he has in himself nothing which can excite the sentiment of Friendship. If then to be thus is exceedingly wretched it is a man's duty to flee from wickedness with all his might and to strive to be good, because thus may he be friends with himself and may come to be a friend to another.

Chapter V.

Kindly Feeling, though resembling Friendship, is not identical with it, because it may exist in reference to those whom we do not know and without the object of it being aware of its existence, which Friendship cannot. (This, by the way, has also been said before.) And further, it is not even Affection because it does not imply intensity nor yearning, which are both consequences of Affection. Again Affection requires intimacy but Kindly Feeling may arise quite suddenly, as happens sometimes in respect of men

against whom people are matched in any way, I mean they come to be kindly disposed to them and sympathise in their wishes, but still they would not join them in any action, because, as we said, they conceive this feeling of kindness suddenly and so have but a superficial liking.

What it does seem to be is the starting point of a Friendship; just as pleasure, received through the sight, is the commencement of Love: for no one falls in love without being first pleased with the personal appearance of the beloved object, and yet he who takes pleasure in it does not therefore necessarily love, but when he wearies for the object in its absence and desires its presence. Exactly in the same way men cannot be friends without having passed through the stage of Kindly Feeling, and yet they who are in that stage do not necessarily advance to Friendship: they merely have an inert wish for the good of those toward whom they entertain the feeling, but would not join them in any action, nor put themselves out of the way for them. So that, in a metaphorical way of speaking, one might say that it is dormant Friendship, and when it has endured for a space and ripened into intimacy comes to be real Friendship; but not that whose object is advantage or pleasure, because such motives cannot produce even Kindly Feeling.

I mean, he who has received a kindness requites it by Kindly Feeling towards his benefactor, and is right in so doing: but he who wishes another to be prosperous, because he has hope of advantage through his instrumentality, does not seem to be kindly disposed to that person but rather to himself; just as neither is he his friend if he pays court to him for any interested purpose.

Kindly Feeling always arises by reason of goodness and a certain amiability, when one man gives another the notion of being a fine fellow, or brave man, etc., as we said was the case sometimes with those matched against one another.

Chapter VI.

Unity of Sentiment is also plainly connected with Friendship, and therefore is not the same as Unity of Opinion, because this might exist even between people unacquainted with one another.

Nor do men usually say people are united in sentiment merely because they agree in opinion on _any_ point, as, for instance, on points of astronomical science (Unity of Sentiment herein not having any connection with Friendship), but they say that Communities have Unity of Sentiment when they agree respecting points of expediency and take the same line and carry out what has been determined in common consultation.

Thus we see that Unity of Sentiment has for its object matters of action, and such of these as are of importance, and of mutual, or, in the case of single States, common, interest: when, for instance, all agree in the choice of magistrates, or forming alliance with the Lacedæmonians, or appointing Pittacus ruler (that is to say, supposing he himself was willing). But when each wishes himself to be in power (as the brothers in the Phœnissæ), they quarrel and form parties: for, plainly, Unity of Sentiment does not merely imply that each entertains the same idea be it what it may, but that they do so in respect of the same object, as when both the populace and the sensible men of a State desire that the best men should be in office, because then all attain their object.

Thus Unity of Sentiment is plainly a social Friendship, as it is also said to be: since it has for its object-matter things expedient and relating to life.

And this Unity exists among the good: for they have it towards themselves and towards one another, being, if I may be allowed the expression, in the same position: I mean, the wishes of such men are steady and do not ebb and flow like the Euripus, and they wish what is just and expedient and aim at these things in common.

The bad, on the contrary, can as little have Unity of Sentiment as they can be real friends, except to a very slight extent, desiring as they do unfair advantage in things profitable while they shirk labour and service for the common good: and while each man wishes for these things for himself he is jealous of and hinders his neighbour: and as they do not watch over the common good it is lost. The result is that they quarrel while they are for keeping one another to work but are not willing to perform their just share.

Chapter VII.

Benefactors are commonly held to have more Friendship for the objects of their kindness than these for them: and the fact is made a subject of discussion and enquiry, as being contrary to reasonable expectation.

The account of the matter which satisfies most persons is that the one are debtors and the others creditors: and therefore that, as in the case of actual loans the debtors wish their creditors out of the way while the creditors are anxious for the preservation of their

debtors, so those who have done kindnesses desire the continued existence of the people they have done them to, under the notion of getting a return of their good offices, while these are not particularly anxious about requital.

Epicharmus, I suspect, would very probably say that they who give this solution judge from their own baseness; yet it certainly is like human nature, for the generality of men have short memories on these points, and aim rather at receiving than conferring benefits.

But the real cause, it would seem, rests upon nature, and the case is not parallel to that of creditors; because in this there is no affection to the persons, but merely a wish for their preservation with a view to the return: whereas, in point of fact, they who have done kindnesses feel friendship and love for those to whom they have done them, even though they neither are, nor can by possibility hereafter be, in a position to serve their benefactors.

And this is the case also with artisans; every one, I mean, feels more affection for his own work than that work possibly could for him if it were animate. It is perhaps specially the case with poets: for these entertain very great affection for their poems, loving them as their own children. It is to this kind of thing I should be inclined to compare the case of benefactors: for the object of their kindness is their own work, and so they love this more than this loves its creator.

And the account of this is that existence is to all a thing choice-worthy and an object of affection; now we exist by acts of working, that is, by living and acting; he then that has created a given work exists, it may be said, by his act of working: therefore he loves his work because he loves existence. And this is natural, for the work produced displays in act what existed before potentially.

Then again, the benefactor has a sense of honour in right of his action, so that he may well take pleasure in him in whom this resides; but to him who has received the benefit there is nothing honourable in respect of his benefactor, only something advantageous which is both less pleasant and less the object of Friendship.

Again, pleasure is derived from the actual working out of a present action, from the anticipation of a future one, and from the recollection of a past one: but the highest pleasure and special object of affection is that which attends on the actual working. Now the benefactor's work abides (for the honourable is enduring), but the advantage of him who has received the kindness passes away.

Again, there is pleasure in recollecting honourable actions, but in recollecting advantageous ones there is none at all or much less (by the way though, the contrary is true of the expectation of advantage).

Further, the entertaining the feeling of Friendship is like acting on another; but being the object of the feeling is like being acted upon.

So then, entertaining the sentiment of Friendship, and all feelings connected with it, attend on those who, in the given case of a benefaction, are the superior party.

Once more: all people value most what has cost them much labour in the production; for instance, people who have themselves made their money are fonder of it than those who have inherited it: and receiving kindness is, it seems, unlaborious, but doing it is laborious. And this is the reason why the female parents are most fond of their offspring; for their part in producing them is attended with most labour, and they know more certainly that they are theirs. This feeling would seem also to belong to benefactors.

Chapter VIII.

A question is also raised as to whether it is right to love one's Self best, or some one else: because men find fault with those who love themselves best, and call them in a disparaging way lovers of Self; and the bad man is thought to do everything he does for his own sake merely, and the more so the more depraved he is; accordingly men reproach him with never doing anything unselfish: whereas the good man acts from a sense of honour (and the more so the better man he is), and for his friend's sake, and is careless of his own interest.

But with these theories facts are at variance, and not unnaturally: for it is commonly said also that a man is to love most him who is most his friend, and he is most a friend who wishes good to him to whom he wishes it for that man's sake even though no one knows. Now these conditions, and in fact all the rest by which a friend is characterised, belong specially to each individual in respect of his Self: for we have said before that all the friendly feelings are derived to others from those which have Self primarily for their object. And all the current proverbs support this view; for instance, "one soul," "the goods of friends are common," "equality

is a tie of Friendship," "the knee is nearer than the shin." For all these things exist specially with reference to a man's own Self: he is specially a friend to himself and so he is bound to love himself the most.

It is with good reason questioned which of the two parties one should follow, both having plausibility on their side. Perhaps then, in respect of theories of this kind, the proper course is to distinguish and define how far each is true, and in what way. If we could ascertain the sense in which each uses the term "Self-loving," this point might be cleared up.

Well now, they who use it disparagingly give the name to those who, in respect of wealth, and honours, and pleasures of the body, give to themselves the larger share: because the mass of mankind grasp after these and are earnest about them as being the best things; which is the reason why they are matters of contention. They who are covetous in regard to these gratify their lusts and passions in general, that is to say the irrational part of their soul: now the mass of mankind are so disposed, for which reason the appellation has taken its rise from that mass which is low and bad. Of course they are justly reproached who are Self-loving in this sense.

And that the generality of men are accustomed to apply the term to denominate those who do give such things to themselves is quite plain: suppose, for instance, that a man were anxious to do, more than other men, acts of justice, or self-mastery, or any other virtuous acts, and, in general, were to secure to himself that which is abstractedly noble and honourable, no one would call him Self-loving, nor blame him.

Yet might such an one be judged to be more truly Self-loving: certainly he gives to himself the things which are most noble and most good, and gratifies that Principle of his nature which is most rightfully authoritative, and obeys it in everything: and just as that which possesses the highest authority is thought to constitute a Community or any other system, so also in the case of Man: and so he is most truly Self-loving who loves and gratifies this Principle.

Again, men are said to have, or to fail of having, self-control, according as the Intellect controls or not, it being plainly implied thereby that this Principle constitutes each individual; and people are thought to have done of themselves, and voluntarily, those things specially which are done with Reason.

It is plain, therefore, that this Principle does, either entirely or specially constitute the individual man, and that the good man specially loves this. For this reason then he must be specially Self-loving, in a kind other than that which is reproached, and as far superior to it as living in accordance with Reason is to living at the beck and call of passion, and aiming at the truly noble to aiming at apparent advantage.

Now all approve and commend those who are eminently earnest about honourable actions, and if all would vie with one another in respect of the καλ■ν, and be intent upon doing what is most truly noble and honourable, society at large would have all that is proper while each individual in particular would have the greatest of goods, Virtue being assumed to be such.

And so the good man ought to be Self-loving: because by doing what is noble he will have advantage himself and will do good to others: but the bad man ought not to be, because he will harm himself and his neighbours by following low and evil passions. In the case of the bad man, what he ought to do and what he does are at variance, but the good man does what he ought to do, because all Intellect chooses what is best for itself and the good man puts himself under the direction of Intellect.

Of the good man it is true likewise that he does many things for the sake of his friends and his country, even to the extent of dying for them, if need be: for money and honours, and, in short, all the good things which others fight for, he will throw away while eager to secure to himself the καλ■ν: he will prefer a brief and great joy to a tame and enduring one, and to live nobly for one year rather than ordinarily for many, and one great and noble action to many trifling ones. And this is perhaps that which befals men who die for their country and friends; they choose great glory for themselves: and they will lavish their own money that their friends may receive more, for hereby the friend gets the money but the man himself the καλ■ν; so, in fact he gives to himself the greater good. It is the same with honours and offices; all these things he will give up to his friend, because this reflects honour and praise on himself: and so with good reason is he esteemed a fine character since he chooses the honourable before all things else. It is possible also to give up the opportunities of action to a friend; and to have caused a friend's doing a thing may be more noble than having done it one's self.

In short, in all praiseworthy things the good man does plainly give to himself a larger share of the honourable. In this sense it is right to be Self-loving, in the vulgar acceptation of the term it is not.

Chapter IX.

A question is raised also respecting the Happy man, whether he will want Friends, or no?

Some say that they who are blessed and independent have no need of Friends, for they already have all that is good, and so, as being independent, want nothing further: whereas the notion of a friend's office is to be as it were a second Self and procure for a man what he cannot get by himself: hence the saying,

"When Fortune gives us good, what need we Friends?"

On the other hand, it looks absurd, while we are assigning to the Happy man all other good things, not to give him Friends, which are, after all, thought to be the greatest of external goods.

Again, if it is more characteristic of a friend to confer than to receive kindnesses, and if to be beneficent belongs to the good man and to the character of virtue, and if it is more noble to confer kindnesses on friends than strangers, the good man will need objects for his benefactions. And out of this last consideration springs a question whether the need of Friends be greater in prosperity or adversity, since the unfortunate man wants people to do him kindnesses and they who are fortunate want objects for their kind acts.

Again, it is perhaps absurd to make our Happy man a solitary, because no man would choose the possession of all goods in the world on the condition of solitariness, man being a social animal and formed by nature for living with others: of course the Happy man has this qualification since he has all those things which are good by nature: and it is obvious that the society of friends and good men must be preferable to that of strangers and ordinary people, and we conclude, therefore, that the Happy man does need Friends.

But then, what do they mean whom we quoted first, and how are they right? Is it not that the mass of mankind mean by Friends those who are useful? and of course the Happy man will not need such because he has all good things already; neither will he need such as are Friends with a view to the pleasurable, or at least only to a slight extent; because his life, being already pleasurable, does not want pleasure imported from without; and so, since the Happy man does not need Friends of these kinds, he is thought not to need any at all.

But it may be, this is not true: for it was stated originally, that Happiness is a kind of Working; now Working plainly is something that must come into being, not be already there like a mere piece of property.

If then the being happy consists in living and working, and the good man's working is in itself excellent and pleasurable (as we said at the commencement of the treatise), and if what is our own reckons among things pleasurable, and if we can view our neighbours better than ourselves and their actions better than we can our own, then the actions of their Friends who are good men are pleasurable to the good; inasmuch as they have both the requisites which are naturally pleasant. So the man in the highest state of happiness will need Friends of this kind, since he desires to contemplate good actions, and actions of his own, which those of his friend, being a good man, are.

Again, common opinion requires that the Happy man live with pleasure to himself: now life is burthensome to a man in solitude, for it is not easy to work continuously by one's self, but in company with, and in regard to others, it is easier, and therefore the working, being pleasurable in itself will be more continuous (a thing which should be in respect of the Happy man); for the good man, in that he is good takes pleasure in the actions which accord with Virtue and is annoyed at those which spring from Vice, just as a musical man is pleased with beautiful music and annoyed by bad. And besides, as Theognis says, Virtue itself may be improved by practice, from living with the good.

And, upon the following considerations more purely metaphysical, it will probably appear that the good friend is naturally choice-worthy to the good man. We have said before, that whatever is naturally good is also in itself good and pleasant to the good man; now the fact of living, so far as animals are concerned, is characterised generally by the power of sentience, in man it is characterised by that of sentience, or of rationality (the faculty of course being referred to the actual operation of the faculty, certainly the main point is the actual operation of it); so that living seems mainly to consist in the act of sentience or exerting rationality: now the fact of living is in itself one of the things that are good and pleasant (for it is a definite totality, and whatever is such belongs to the nature of good), but what is naturally good is good to the good man: for which reason it seems to be pleasant to all. (Of course one must not suppose a life which is depraved and corrupted, nor one spent in pain, for that which is such is indefinite as are its inherent qualities: however, what is to be said of pain will be clearer in what is to follow.)

If then the fact of living is in itself good and pleasant (and this appears from the fact that all desire it, and specially those who are good and in high happiness; their course of life being most choice-worthy and their existence most choice-worthy likewise), then also he that sees perceives that he sees; and he that hears perceives that he hears; and he that walks perceives that he walks; and in all the other instances in like manner there is a faculty which reflects upon and perceives the fact that we are working, so that we can perceive that we perceive and intellectually know that we intellectually know: but to perceive that we perceive or that we intellectually know is to perceive that we exist, since existence was defined to be perceiving or intellectually knowing. Now to perceive that one lives is a thing pleasant in itself, life being a thing naturally good, and the perceiving of the presence in ourselves of things naturally good being pleasant.

Therefore the fact of living is choice-worthy, and to the good specially so since existence is good and pleasant to them: for they receive pleasure from the internal consciousness of that which in itself is good.

But the good man is to his friend as to himself, friend being but a name for a second Self; therefore as his own existence is choice-worthy to each so too, or similarly at least, is his friend's existence. But the ground of one's own existence being choice-worthy is the perceiving of one's self being good, any such perception being in itself pleasant. Therefore one ought to be thoroughly conscious of one's friend's existence, which will result from living with him, that is sharing in his words and thoughts: for this is the meaning of the term as applied to the human species, not mere feeding together as in the case of brutes.

If then to the man in a high state of happiness existence is in itself choice-worthy, being naturally good and pleasant, and so too a friend's existence, then the friend also must be among things choice-worthy. But whatever is choice-worthy to a man he should have or else he will be in this point deficient. The man therefore who is to come up to our notion "Happy" will need good Friends.

Chapter X.

Are we then to make our friends as numerous as possible? or, as in respect of acquaintance it is thought to have been well said "have not thou many acquaintances yet be not without;" so too in respect of Friendship may we adopt the precept, and say that a man should not be without friends, nor again have exceeding many friends?

Now as for friends who are intended for use, the maxim I have quoted will, it seems, fit in exceedingly well, because to requite the services of many is a matter of labour, and a whole life would not be long enough to do this for them. So that, if more numerous than what will suffice for one's own life, they become officious, and are hindrances in respect of living well: and so we do not want them. And again of those who are to be for pleasure a few are quite enough, just like sweetening in our food.

But of the good are we to make as many as ever we can, or is there any measure of the number of friends, as there is of the number to constitute a Political Community? I mean, you cannot make one out of ten men, and if you increase the number to one hundred thousand it is not any longer a Community. However, the number is not perhaps some one definite number but any between certain extreme limits.

Well, of friends likewise there is a limited number, which perhaps may be laid down to be the greatest number with whom it would be possible to keep up intimacy; this being thought to be one of the greatest marks of Friendship, and it being quite obvious that it is not possible to be intimate with many, in other words, to part one's self among many. And besides it must be remembered that they also are to be friends to one another if they are all to live together: but it is a matter of difficulty to find this in many men at once.

It comes likewise to be difficult to bring home to one's self the joys and sorrows of many: because in all probability one would have to sympathise at the same time with the joys of this one and the sorrows of that other.

Perhaps then it is well not to endeavour to have very many friends but so many as are enough for intimacy: because, in fact, it would seem not to be possible to be very much a friend to many at the same time: and, for the same reason, not to be in love with many objects at the same time: love being a kind of excessive Friendship which implies but one object: and all strong emotions must be limited in the number towards whom they are felt.

And if we look to facts this seems to be so: for not many at a time become friends in the way of companionship, all the famous Friendships of the kind are between _two_ persons: whereas they who have many friends, and meet everybody on the footing of intimacy, seem to be friends really to no one except in the way of general society; I mean the characters denominated as over-complaisant.

To be sure, in the way merely of society, a man may be a friend to many without being necessarily over-complaisant, but being truly good: but one cannot be a friend to many because of their virtue, and for the persons' own sake; in fact, it is a matter for contentment to find even a few such.

Chapter XI.

Again: are friends most needed in prosperity or in adversity? they are required, we know, in both states, because the unfortunate need help and the prosperous want people to live with and to do kindnesses to: for they have a desire to act kindly to some one.

To have friends is more necessary in adversity, and therefore in this case useful ones are wanted; and to have them in prosperity is more honourable, and this is why the prosperous want good men for friends, it being preferable to confer benefits on, and to live with, these. For the very presence of friends is pleasant even in adversity: since men when grieved are comforted by the sympathy of their friends.

And from this, by the way, the question might be raised, whether it is that they do in a manner take part of the weight of calamities, or only that their presence, being pleasurable, and the consciousness of their sympathy, make the pain of the sufferer less.

However, we will not further discuss whether these which have been suggested or some other causes produce the relief, at least the effect we speak of is a matter of plain fact.

But their presence has probably a mixed effect: I mean, not only is the very seeing friends pleasant, especially to one in misfortune, and actual help towards lessening the grief is afforded (the natural tendency of a friend, if he is gifted with tact, being to comfort by look and word, because he is well acquainted with the sufferer's temper and disposition and therefore knows what things give him pleasure and pain), but also the perceiving a friend to be grieved at his misfortunes causes the sufferer pain, because every one avoids being cause of pain to his friends. And for this reason they who are of a manly nature are cautious not to implicate their friends in their pain; and unless a man is exceedingly callous to the pain of others he cannot bear the pain which is thus caused to his friends: in short, he does not admit men to wail with him, not being given to wail at all: women, it is true, and men who resemble women, like to have others to groan with them, and love such as friends and sympathisers. But it is plain that it is our duty in all things to imitate the highest character.

On the other hand, the advantages of friends in our prosperity are the pleasurable intercourse and the consciousness that they are pleased at our good fortune.

It would seem, therefore, that we ought to call in friends readily on occasion of good fortune, because it is noble to be ready to do good to others: but on occasion of bad fortune, we should do so with reluctance; for we should as little as possible make others share in our ills; on which principle goes the saying, "I am unfortunate, let that suffice." The most proper occasion for calling them in is when with small trouble or annoyance to themselves they can be of very great use to the person who needs them.

But, on the contrary, it is fitting perhaps to go to one's friends in their misfortunes unasked and with alacrity (because kindness is the friend's office and specially towards those who are in need and who do not demand it as a right, this being more creditable and more pleasant to both); and on occasion of their good fortune to go readily, if we can forward it in any way (because men need their friends for this likewise), but to be backward in sharing it, any great eagerness to receive advantage not being creditable.

One should perhaps be cautious not to present the appearance of sullenness in declining the sympathy or help of friends, for this happens occasionally.

It appears then that the presence of friends is, under all circumstances, choice-worthy.

Chapter XII.

May we not say then that, as seeing the beloved object is most prized by lovers and they choose this sense rather than any of the others because Love

"Is engendered in the eyes, With gazing fed,"

in like manner intimacy is to friends most choice-worthy, Friendship being communion? Again, as a man is to himself so is he to his friend; now with respect to himself the perception of his own existence is choice-worthy, therefore is it also in respect of his friend.

And besides, their Friendship is acted out in intimacy, and so with good reason they desire this. And whatever in each man's opinion constitutes existence, or whatsoever it is for the sake of which they choose life, herein they wish their friends to join with them; and so some men drink together, others gamble, others join in gymnastic exercises or hunting, others study philosophy together: in each case spending their days together in that which they like best of all things in life, for since they wish to be intimate with their friends they do and partake in those things whereby they think to attain this object.

Therefore the Friendship of the wicked comes to be depraved; for, being unstable, they share in what is bad and become depraved in being made like to one another: but the Friendship of the good is good, growing with their intercourse; they improve also, as it seems, by repeated acts, and by mutual correction, for they receive impress from one another in the points which give them pleasure; whence says the Poet,

"Thou from the good, good things shalt surely learn."

Here then we will terminate our discourse of Friendship. The next thing is to go into the subject of Pleasure.

BOOK X

Chapter I.

Next, it would seem, follows a discussion respecting Pleasure, for it is thought to be most closely bound up with our kind: and so men train the young, guiding them on their course by the rudders of Pleasure and Pain. And to like and dislike what one ought is judged to be most important for the formation of good moral character: because these feelings extend all one's life through, giving a bias towards and exerting an influence on the side of Virtue and Happiness, since men choose what is pleasant and avoid what is painful.

Subjects such as these then, it would seem, we ought by no means to pass by, and specially since they involve much difference of opinion. There are those who call Pleasure the Chief Good; there are others who on the contrary maintain that it is exceedingly bad;[1] some perhaps from a real conviction that such is the case, others from a notion that it is better, in reference to our life and conduct, to show up Pleasure as bad, even if it is not so really; arguing that, as the mass of men have a bias towards it and are the slaves of their pleasures, it is right to draw them to the contrary, for that so they may possibly arrive at the mean.[2]

I confess I suspect the soundness of this policy; in matters respecting men's feelings and actions theories are less convincing than facts: whenever, therefore, they are found conflicting with actual experience, they not only are despised but involve the truth in their fall: he, for instance, who deprecates Pleasure, if once seen to aim at it, gets the credit of backsliding to it as being universally such as he said it was, the mass of men being incapable of nice distinctions.

Real accounts, therefore, of such matters seem to be most expedient, not with a view to knowledge merely but to life and conduct: for they are believed as being in harm with facts, and so they prevail with the wise to live in accordance with them.

But of such considerations enough: let us now proceed to the current maxims respecting Pleasure.

Chapter II.

Now Eudoxus thought Pleasure to be the Chief Good because he saw all, rational and irrational alike, aiming at it: and he argued that, since in all what was the object of choice must be good and what most so the best, the fact of all being drawn to the same thing proved this thing to be the best for all: "For each," he said, "finds what is good for itself just as it does its proper nourishment, and so that which is good for all, and the object of the aim of all, is their Chief Good."

(And his theories were received, not so much for their own sake, as because of his excellent moral character; for he was thought to be eminently possessed of perfect self-mastery, and therefore it was not thought that he said these things because he was a lover of Pleasure but that he really was so convinced.)

And he thought his position was not less proved by the argument from the contrary: that is, since Pain was in itself an object of avoidance to all the contrary must be in like manner an object of choice.

Again he urged that that is most choice-worthy which we choose, not by reason of, or with a view to, anything further; and that Pleasure is confessedly of this kind because no one ever goes on to ask to what purpose he is pleased, feeling that Pleasure is in

itself choice-worthy.

Again, that when added to any other good it makes it more choice-worthy; as, for instance, to actions of justice, or perfected self-mastery; and good can only be increased by itself.
